(1) Assumes canal facilities operate 24 hours per day, 7 days per week for 20 weeks, totaling 55,500 Ac-Ft.

(2) Assumes In-Lieu facilities operate during off-peak hours, totaling 9,250 Ac-Ft.

(3) 50,000 Ac-Ft storage + 9,250 Ft In-Lieu

(4) Assumes groundwater facilities operate 24 hours per day, 7 days per week.

The initial analysis estimated the electrical costs associated with operating the water banking program facilities 24 hours per day, 7 days per week. As presented in Table 1, significant savings maybe realized if the facilities were operated in a manner that minimizes peak demand charges.

### CONCEPTUAL ELECTRICAL ARRANGEMENT

Based on the electrical demands estimated in the energy evaluation, conceptual one-line diagrams have been prepared for the canal pumping facilities and the groundwater pumping facilities and are attached for reference. An order of magnitude cost estimate was prepared for the new electrical equipment required between the existing PG&E 12 kV distribution power line and the pumping equipment, totaling \$80,000 per site. This cost is generally accurate for both the groundwater wells and the canal pumping stations.

---

Typically, PG&E will install and maintain this equipment and will recover the costs in the monthly billings. Alternatively, the KDWD can install and maintain the facilities between the main distribution power line and the pumping facilities and be eligible for a "voltage discount" within their rate. Upon preliminary investigation, it is recommended that KDWD have PG&E provide, install, and maintain these facilities.

### **CONCLUSION**

A customized spreadsheet has been developed to estimate power requirements for the Kern Delta facilities. Currently, it is assumed that all facilities operate 24 hours per day seven days per week. However, significant savings may be realized if the facilities are operated to avoid peak demand periods. It is recommended that the model presented herein be used to evaluate the potential savings associated with minimizing peak demand charges.

Victor Tsai

**EXECUTIVE SUMMARY****PURPOSE**

The purpose of this memorandum is to evaluate the operations and maintenance (O&M) requirements associated with the Kern Delta Water District Water Banking Program components (Kern Delta Project). The recommended manufacturer O&M requirements and estimated replacement costs associated with operation of the major equipment components have been identified and tabulated. Actual maintenance history from similar facilities, and engineer's experience on similar projects were also utilized to define the O&M schedule for the facilities in the preferred project.

**BACKGROUND**

As part of the Water Banking Program, five new pump stations (Kern Delta pump stations No.1 through 5) would be built along the new Kern Delta Canal allowing conveyance of water between the Kern Water Bank Authority (KWBA) Canal and the Arvin-Edison Canal. The pumping plants would take water from a lower canal segment and lift it to the adjacent canal segment. During wet years, the proposed Kern Delta

Kern Delta Water District Water Banking Program  
O&M Costs, Replacement Costs

B&V Project 99241.100  
B&V File D.2  
January 9, 2002

canal system would allow for the diversion of water from the California Aqueduct to the Kern Delta agricultural canals and spreading basins.

An existing pump within the existing Arvin-Edison Forrest Frick Pump Station would also be used to meet irrigation demands in the eastern section of the Kern Delta service area through the in-lieu (pipeline) facilities. These facilities will allow the use of SWP water "in-lieu" of local groundwater.

Lastly, the project includes 32 new groundwater wells to recover previously stored water in the groundwater basin. The extraction wells would be located near existing water conveyance facilities.

### **OPERATION AND MAINTENANCE INVESTIGATION**

The water-banking project facilities that require O&M include the five pumping stations along a proposed canal conveyance facility, 32 new groundwater wells to withdraw stored supplies, and the existing pump within the Arvin-Edison Forrest Frick Pump Station.

A maintenance schedule for the preferred project components and a preliminary estimate for the corresponding O&M costs has been included. The schedule includes recommended procedures for operating the canal pump stations, groundwater pumps and motors, and the equipment within the Arvin-Edison Forrest Frick Pump Station. The procedures include placing the equipment in service and operating it under both normal and abnormal conditions.

#### **Operation & Maintenance Schedule**

The attached example O&M schedule is based on information and recommendations obtained from the equipment manufacturers, maintenance history from other agencies with similar equipment, and the engineer's experience on similar projects. The attached example schedule is intended to provide a general idea of the O&M procedures required for each of the major equipment components of the Water Banking Project. Prior to startup of these facilities, a more detailed O&M schedule should be developed based on specific manufacturer's manuals and shop drawing information.

#### **Estimated O&M Costs**

A preliminary estimate of the O&M costs associated with the recommended maintenance procedures for the proposed Water Banking equipment is summarized in

Kern Delta Water District Water Banking Program

Table 1.

**Table 1**  
**Annual Operation & Maintenance Costs**  
**(2002 Dollars)**

Description	Cost
<b>STORAGE MODE</b>	
Annual Power Costs	\$1,143,000
Labor (Personnel)	\$435,000
Annual Maintenance Costs <sup>(1)</sup>	\$54,000
<b>Total Annual O&amp;M Cost</b>	<b>\$1,632,000</b>
5 YR Minor overhaul of canal pumps	\$25,000
20 YR Major overhaul of canal pumps	\$57,000
50 YR Major canal / spreading basin equipment replacement	\$2,400,000
<b>Present Worth of Maintenance Costs<sup>(4)</sup></b>	<b>\$716,817</b>
<b>Cost per AC-FT of Stored Water</b>	<b>\$14</b>
<b>WITHDRAWAL MODE</b>	
Annual Power Costs	\$6,350,000
Labor (Personnel)	\$492,000
Annual Maintenance Costs <sup>(2)</sup>	\$67,000
<b>Total Annual O&amp;M Cost</b>	<b>\$6,909,000</b>
5 YR Minor Overhaul of GW Pumps	\$55,000
20 YR Major Overhaul of GW Pumps	\$124,000
50 YR Major groundwater pump equipment replacement	\$2,200,000
<b>Present Worth of Maintenance Costs<sup>(3)</sup></b>	<b>\$842,741</b>
<b>Cost per AC-FT of Recovered Water</b>	<b>\$53</b>

<sup>(1)</sup> Maintenance costs for storage mode include idle maintenance costs for the groundwater facilities.

<sup>(2)</sup> Maintenance costs for withdrawal mode include idle maintenance costs for the canal pumps.

<sup>(3)</sup> Assumes 3% inflation & 6% discount factor.

The power costs presented in Table 1 are based on the results presented in the KDWD Water Banking Program "Energy Requirements" Technical Memorandum. Personnel costs associated with operating and maintaining the Water Banking facilities are based on 5 additional staff positions during the storage model and 6 positions during the withdrawal mode. It may be possible to utilize existing staff to assist with the operation of these facilities and minimize the total number of additional staff required. The estimated annual maintenance and overhaul costs are based on typical maintenance costs for similar facilities. Table 2 summarizes O&M costs by component.

Shading denotes forward flow deliveries based on each point of entry into the CVC. / \_ / \_ denotes pools / pump plants utilized (for forward flow).

Cross Valley Canal - Tupman Turnout Water Balance  
State Water Project Deliveries  
Month of September 2011  
Subject to Adjustment

Main data table with columns: Data, Pool 1 (CVC Losses SVP, N-2 Siphon SVP, CVC Losses SVP, RRB 1 Turnout SVP, Stand Siphon SVP, North Stand Turnout SVP, South Stand Turnout SVP, KVWB P-11 Turnout SVP), Reach 2 (CVC Losses SVP, Nord Siphon SVP, Section 4 Pump SVP), Pool 5 (CVC Losses SVP, RTO 1 Turnout SVP), Pool 6 (CVC Losses SVP, RRB 2 Turnout SVP, RTO 2 Turnout SVP), Reach 3 (CVC Losses SVP, AEVSD Y.D. SVP, KTWB Siphon SVP), Pool 7 (Unlined Losses SVP, RTO 3 River SVP, RTO 4 Turnout SVP), Pool 8 (Unlined Losses SVP, Callaway Turnout SVP, Cawelo PSA SVP, Cawelo SWP SVP), and T/D Total SVP.

Summary table listing various water delivery points and their associated SVP values. Includes entries like 'Barrick Mesa WSD', 'Barrera Vista WSD', 'Improvement District No. 4', 'Lost Hills WSD', 'Rosedale Rio Bravo WSD', 'Santalitas WSD', 'Wheeler Ridge - Mariposa WSD', 'Serrano Creek', 'Ferryhill WSD', 'Barrick Mesa WSD', 'Barrera Vista WSD', 'Kern Delta WSD', 'Rosedale Rio Bravo WSD', 'Santalitas WSD', 'Wheeler Ridge - Mariposa WSD', 'County of Fresno - Arvin-Edison WSD', 'City of Fresno - Arvin-Edison WSD', 'Arvin-Edison WSD - Existing', 'Kern-Tulare Water District - KCWA MAU (1)', 'Belridge WSD', 'Barrick Mesa WSD', 'Barrera Vista WSD', 'Kern Delta WSD', 'Lost Hills WSD', 'Rosedale Rio Bravo WSD', 'Santalitas WSD', 'Wheeler Ridge - Mariposa WSD', 'Rosedale Rio Bravo WSD', 'Arvin-Edison WSD', 'Kern Delta WSD', 'Cawelo WSD', 'Belridge WSD', 'Kern Delta WSD', 'Kern County Water District', 'Belridge WSD', 'Belridge WSD', 'Barrick Mesa WSD', 'Barrera Vista WSD', 'Cawelo WSD - Arvin-Edison WSD (1)', 'Kern Delta WSD', 'Lost Hills WSD', 'Rosedale Rio Bravo WSD', 'Santalitas WSD', 'Wheeler Ridge - Mariposa WSD', and 'Total'.

NOTES:  
[1] Kern County Water Agency Member Units made deliveries of Federal Section 215 supplies utilizing Lower-Tule River Irrigation District, Philey Irrigation District and Kern-Tulare Water District capacities per long-term agreements which allow for KCWA MAU's to utilize unused capacities.  
[2] Deliveries of Arvin-Edison WSD and Kern Delta WSD SWP Table A supplies to River Turnout No. 1 and 2 were delivered to the City of Bakersfield in lieu of Rosedale Rio-Bravo WSD as part of an exchange to accommodate the City of Bakersfield Westside Parkway Project impacts to Rosedale Rio-Bravo WSD conveyance facilities. These deliveries will be paid back by the City to Rosedale Rio-Bravo WSD.  
[3] Deliveries of Cawelo WSD SWP Table A supplies delivered to the KVWB were transferred to Belridge WSD as part of an exchange of 4,000 af of Belridge WSD Federal supplies delivered off the Front-Kern Canal to Cawelo WSD.

Summary table with columns: WSD Name, CVC Losses SVP, N-2 Station, CVC Losses SVP, RRB 1 Turnout, Stand Siphon, Stand Turnout, KVWB P-11 Turnout, CVC Losses SVP, Nord Siphon, Section 4 Pump, CVC Losses SVP, RTO 1 Turnout, CVC Losses SVP, RRB 2 Turnout, RTO 2 Turnout, CVC Losses SVP, AEVSD T.O., KTWB Siphon, Unlined Losses, RTO 3 River, RTO 4 Turnout, Unlined Losses, Callaway Turnout, Cawelo PSA, Cawelo SWP, and T/D Total.

EXEMPT GOVERNMENT AGENCY Per Government Code Sec. 6103

By \_\_\_\_\_  
District Secretary, San Bernardino Valley Water Conservation District

**AGREEMENT TO DEVELOP AND OPERATE ENHANCED RECHARGE FACILITIES**

This Agreement to Develop and Operate Enhanced Recharge Facilities ("**Agreement**") is entered into and effective this 1st day of October, 2012 by and among the San Bernardino Valley Water Conservation District (the "**Conservation District**"), the San Bernardino Valley Municipal Water District ("**Valley District**") and Western Municipal Water District of Riverside County ("**Western**"). The Conservation District, Valley District and Western are each sometimes referred to as a "**Party**" and are collectively sometimes referred to as the "**Parties.**"

Recitals

A. General Purposes.

(1) The Parties each hold water rights to the waters of the Santa Ana River and each own and operate facilities that serve to divert and/or store the waters of the Santa Ana River. Furthermore, each Party possesses critical assets and unique skills that the other Parties do not possess.

28 (2) The Parties wish to collaboratively use all of their respective assets and  
 29 skills, including but not limited to water rights and facilities necessary or useful for the diversion  
 30 and storage of water, to improve the reliability of local water supplies for their respective  
 31 constituents by establishing a collaborative partnership to coordinate the use of their separate  
 32 resources for mutual advantage.

33  
 34 (3) The Parties specifically wish to collaborate by increasing opportunities to  
 35 recharge local surface water supplies, as well as State Project Water, in the San Bernardino Basin  
 36 Area (the "SBBA"); by reducing the time and cost required to permit and construct essential  
 37 public infrastructure (such as spreading basins); and by working together to achieve an efficient  
 38 division of labor in the operation and maintenance of water infrastructure.

39  
 40 (4.) The Parties acknowledge that their water resource management activities  
 41 in the Santa Ana River wash area proceed in concert with other uses of the lands in that area,  
 42 including the mining of sand and gravel mineral deposits pursuant to existing leases, and habitat  
 43 conservation and management, pursuant to a series of multi-agency cooperative initiatives  
 44 involving local, state, and federal resource management and control agencies. The Parties' goal  
 45 is to harmonize their water resource activities with these other uses, for the optimization of  
 46 coordinated use by all.

47  
 48 (5) The Parties wish to memorialize their joint understandings by means of  
 49 this Agreement.

50  
 51 B. Findings.

52  
 53 (1) The Parties agree that they must increase groundwater storage in the  
 54 SBBA in order to meet current and future demands for water among their constituents.

55  
 56 (2) In the past, reasonable disagreements among the Parties have added  
 57 unintentional and undesirable costs and complexity to the planning and permitting of important  
 58 water resources projects in the region.

59  
 60 (3) The Parties believe that it is in their best interests, and the best interest of  
 61 the public they serve, to cooperate in increasing the available water supply by establishing a new  
 62 and more productive working relationship.

63  
 64 (4) In certain years, wet weather conditions and increased availability of State  
 65 Project Water can create a limited opportunity to improve the reliability of local water supplies  
 66 by increasing recharge and storage to groundwater. These favorable conditions are temporary  
 67 and perishable. Therefore, time is of the essence. New inter-agency operating agreements  
 68 should be established immediately in order to make the most of this and future opportunities  
 69 because they occur on an irregular and unpredictable basis.

71 (5) Because of the limited and sporadic opportunities to augment local water  
72 supplies, the Parties intend for this Agreement to continue for a long period, thereby allowing the  
73 utilization of such limited water supplies.

74  
75  
76  
77

Agreements

78 1. *Term.* The term of this Agreement shall commence on the Effective Date first written  
79 above and shall continue for a term of twenty five (25) years (“Initial Term”) , unless  
80 terminated earlier as provided in this Agreement. This Agreement may be extended by  
81 written agreement among all parties for up to five additional, consecutive five year terms  
82 (“Extension Terms”), on the same terms and conditions stated herein, provided that prior  
83 to the expiration of the term then in effect, all parties agree in writing to the applicable  
84 extension, by action of their legislative bodies, to extend the Agreement for another term.

85 2. *Duties of the Conservation District.*

86 a. *Lease of Facilities for the Purpose of Groundwater Recharge to Valley District*  
87 *and Western.* The Conservation District hereby leases to Valley District and  
88 Western, for the term of this Agreement and on the terms specified herein, the  
89 surface of the lands shown on Exhibit 1 during the term of this Agreement  
90 ("**Leased Property**"). Exhibit 1A provides the legal description for the lands  
91 owned in fee by the Conservation District and Exhibit 1B provides the legal  
92 description of lands made available under existing easements under ownership by  
93 the Bureau of Land Management. Exhibit 1 is attached hereto and incorporated  
94 herein by reference. Valley District and Western shall have the right to enter  
95 upon and use the Leased Property, and any reasonably necessary subsurface areas  
96 incident thereto. Such entry and use shall be only for the purpose of recharging,  
97 storing or conveying water from any source (collectively "**recharging of water**"  
98 herein) into or through the percolation basins and other facilities owned or  
99 controlled by the Conservation District, whether existing as of the effective date  
100 of this Agreement, or as may be constructed pursuant to the terms of this  
101 Agreement, as such existing and contemplated future facilities are depicted in  
102 Exhibit 2, which is attached hereto and incorporated herein by reference). The  
103 Conservation District reserves all rights in and to the Leased Property not  
104 expressly conveyed as a part of this lease. Specific terms of this lease are as  
105 follows:

106 (1) Valley District and Western may construct, operate, maintain, repair,  
107 reconstruct and rehabilitate diversion facilities, recharge basins, pumps  
108 and other ancillary facilities or equipment located within the Leased  
109 Property as Valley District and Western may reasonably deem  
110 necessary for the recharging of water on the Leased Property,

111 recognizing that the Parties intend that the Conservation District shall  
112 be responsible for the operation and maintenance of such facilities.

113 (2) Included within this lease are all rights of reasonable ingress and egress  
114 as may be useful or necessary, in Valley District and/or Western's sole  
115 discretion, for the purpose of the recharging of water on the Leased  
116 Property, provided that such activities shall not interfere with: (i) any  
117 conservation easements that may now exist, or may be established  
118 consistent with the Conservation District's Upper Santa Ana River  
119 Wash Land Management and Habitat Conservation Plan, on said lands,  
120 or (ii) other easements existing as of the effective date of this  
121 Agreement.

122 (3) The designs for any such facilities or other tenant improvements must  
123 be approved, in advance by the Conservation District, which approval  
124 shall not be unreasonably withheld or delayed, and are subject to any  
125 limitations on the Conservation's District's holding of the Leased  
126 Property. The Conservation District shall cooperate reasonably with  
127 Valley District and Western to obtain local, state, or federal permits that  
128 may be required to construct or operate such facilities approved by the  
129 Conservation District.

130 (4) The Conservation District will utilize its best efforts under all existing  
131 and future lease agreements and easements with other individuals,  
132 organizations or entities operating on the Leased Property to harmonize  
133 the objective of Valley District and Western making full use of the  
134 facilities on the Leased Property for the recharge of water, consistent  
135 with the hydrological design limitations of these facilities, with any  
136 competing uses of the properties on which such facilities are or may be  
137 located.

138 (5) The Parties recognize that the Conservation District has negotiated lease  
139 agreements with mining companies that allow the Conservation District  
140 to engage in recharge of water that may periodically interfere with or  
141 prevent mining, without liability on the part of the Conservation  
142 District, which agreements are attached hereto as Exhibits 3 and 4. The  
143 Conservation District represents and warrants that these are the only  
144 current agreements that authorize mining on the Leased Property, and  
145 represents and warrants that the copies of these agreements attached as  
146 Exhibits 3 and 4 are true and correct copies of those agreements. Based  
147 on those representations, the Parties believe that they can  
148 collaboratively manage the recharge of water to avoid liability arising  
149 from any incompatibility between the recharging of water and any

150 activities otherwise authorized under the mining leases. Toward this  
151 end, the Parties agree as follows:

152 (a) During the winter season (from October 1 to March 31), the Parties  
153 will consult with each other on a regular basis to determine the  
154 quantity of water that may be recharged without interfering with  
155 mining operations.

156 (b) In the event that the recharging of water threatens to substantially  
157 limit or interfere with mining operations, the Parties shall  
158 immediately confer to determine how to maximize the recharge  
159 without unduly interfering with mining activity. Towards this end,  
160 the parties acknowledge that the Conservation District has the  
161 right, from time to time and as it deems necessary in the exercise  
162 of its reasonable discretion, to utilize all or any portion of the areas  
163 subject to the mining leases for its water recharge, conservation,  
164 spreading, and other operations, provided such activities are  
165 undertaken utilizing best efforts to avoid storing water so as to  
166 require temporary use of the mining lease areas. In connection  
167 with the exercise of their activities on the Leased Property  
168 hereunder, Valley District and Western shall assist the  
169 Conservation District to make every effort to minimize the time of  
170 any interruption of the mining lessees' activities on the Leased  
171 Property, to permit sufficient time for the Conservation District to  
172 observe all requirements for notice to mining lessees required  
173 under the applicable leases in the event of conflicts, and to  
174 harmonize their recharge of water with the then-current and  
175 anticipated immediate future excavation and other activities of the  
176 mining lessees, with the overall goal that the mining activity and  
177 the water conservation activity can harmoniously exist, without  
178 interruption to either.

179 (c) Any decisions about the proper scope, location, or amount of  
180 recharging of water after such consultation with appropriate  
181 agencies shall be made solely by the Conservation District in the  
182 exercise of its reasonable discretion, consistent with paragraph 4(d)  
183 (2) below, and consistent with the principle of ensuring that the  
184 optimum quantity of water possible is replenished within the San  
185 Bernardino Basin Area.

186 In the event the Conservation District determines, in the exercise  
187 of its reasonable discretion, that portions of the Leased Property  
188 cannot be made available to Valley District and Western, and such  
189 determination is made at a time when water supplies are otherwise

190 immediately available to Valley District and Western for recharge  
 191 into facilities on the leased land; Conservation District will not  
 192 object, directly or indirectly, to efforts by Valley District and/or  
 193 Western to deliver water supplies that cannot be spread on the  
 194 Leased Property to other locations, *provided that* in determining  
 195 where to deliver such water supplies, Valley District and Western  
 196 act consistent with the priority of first delivering water for direct  
 197 delivery or spreading within the SBBA, then delivering water for  
 198 direct delivery or spreading within the boundaries of Valley  
 199 District, then delivering water for direct delivery, spreading or  
 200 storage within Western, and then delivering water for direct  
 201 delivery, spreading or storage outside of Western.

202 In such event, the parties shall meet and confer in good faith, under  
 203 the auspices of the Joint Operations Committee provided for in  
 204 paragraph 4(b) below, regarding whether some proportional refund  
 205 to Valley District, Western, or both of a portion the gross lease fee  
 206 paid for the given year in which the Leased Premises were  
 207 unavailable for the recharge of water may be appropriate, and if so,  
 208 in what amount.

209 b. *Operation and Maintenance of Spreading Basins.* The Conservation District shall  
 210 operate and maintain all new and existing facilities, located on the areas depicted  
 211 in Exhibit 2 hereto, in good working condition, to ensure that the recharge of  
 212 water continues efficiently, in accordance with a mutually-agreed schedule of  
 213 regular maintenance and any supplemental agreements governing special or  
 214 emergency maintenance responsibilities. The Conservation District shall set aside  
 215 a portion of the gross lease fee provided for in Paragraph 3(a) below received  
 216 from Valley and Western, in accordance with the Conservation District's Reserve  
 217 Policy, to ensure sufficient funds are available to meet the agreed maintenance  
 218 obligations.

219 c. *Ownership of New Facilities* Upon expiration or other proper termination of this  
 220 Agreement, however, improvements made on land owned or controlled by the  
 221 Conservation District shall become Conservation District property, to be used by  
 222 the Conservation District for water management and the recharge of water.

223 d. *Groundwater Charge.* All parties producing water in the Conservation District's  
 224 jurisdictional boundaries shall be subject to all then-applicable groundwater  
 225 charges, and this Agreement shall not exempt nor excuse any party, including  
 226 Valley District and Western, from the levy or payment thereof. Notwithstanding,  
 227 the parties recognize that they do not intend that groundwater charges would be  
 228 required to be paid on production of water pursuant to measures taken for the  
 229 emergency alleviation of high groundwater conditions, or the implementation of

230 other basin management objectives as may be approved by the Basin Technical  
231 Advisory Commission (“BTAC”) or other similar organization including all of  
232 the parties hereto that may perform a substantially similar role under any  
233 Conjunctive Use Plan that may be implemented for the SBBA. The Conservation  
234 District agrees to consider implementing reasonable measures to reduce or  
235 eliminate groundwater charges for groundwater production devoted to such  
236 agreed purposes, whether by exemption, or refund of charges otherwise paid, as  
237 may be consistent with applicable law.

238 3. *Duties of Valley District and Western.*

239 a. *Gross Lease Fee.* Valley District and Western shall together pay to the  
240 Conservation District a gross lease fee of \$350,000/year for the right to the  
241 recharge of water through the existing percolation basins and other facilities  
242 owned by the Conservation District, and the right to construct and have operated  
243 additional recharge and conveyance facilities on the Leased Property. The parties  
244 acknowledge and affirm that the gross lease fee is a lease payment for access to  
245 and use of the Leased Property, only, and for partial offset to the costs of  
246 operation and maintenance of facilities thereon same by the Conservation District.  
247 The gross lease fee does not include, and is not intended to replace or offset, any  
248 charges for the acquisition, conveyance, storage, or production of water, that may  
249 otherwise apply by or among the parties, or third parties, whether now or in the  
250 future.

251 b. Valley District and Western, or either of them, shall pay the gross lease fee, in  
252 advance, by October 1<sup>st</sup> of each year, which sum may be apportioned by the  
253 Conservation District to its Groundwater Enterprise and other funds.

254 (1) Valley District and Western shall annually adjust the gross lease fee to  
255 account for inflation using the U.S. Bureau of Labor Statistics  
256 Consumer Price Index (CPI-U) for the Los Angeles District. The base  
257 year for such payments will be 2012.

258 (2) In the event that Valley District and/or Western construct new  
259 percolation basins or other facilities useful or necessary for the recharge  
260 of water, the Parties shall adjust the gross lease fee proportionally to  
261 reflect the additional operation and maintenance costs that will be  
262 incurred by the Conservation District in operating and maintaining  
263 those new facilities, as may be agreeable to the Parties.

264 c. *Permitting for New or Augmented Spreading Basins.* Valley District and Western  
265 shall be responsible for obtaining all federal, state and local permits (including  
266 conducting environmental review under the California Environmental Quality Act  
267 or the National Environmental Policy Act) that may be required to construct

268 additional facilities for the recharge of water supplied by Valley and Western. If,  
269 after 10 years, Valley and Western have been unable to obtain the necessary  
270 permits, either or both may terminate this lease agreement subject to the  
271 provisions of paragraph 9.c. below. Valley District and Western shall bear all  
272 costs associated with protecting, repairing or replacing the material infrastructure  
273 improvements (including pipelines, gates, valves, weirs, fencing, gauges, etc.)  
274 installed by Valley District and Western on lands owed by the Conservation  
275 District.

276 d. *Resource Management.*

277 (1) Valley District and Western shall coordinate their operations to  
278 harmonize with mineral resource extractions, to avoid any potential  
279 liability under mineral leases, or other uses authorized by the  
280 Conservation District on the Leased Property.

281 (2) Valley District and Western shall negotiate supplemental payments to  
282 the Conservation District where unusual and unforeseen circumstances  
283 necessitate extraordinary maintenance expenses that are in excess of the  
284 budget prepared and approved by the Joint Operations Committee.

285 (3) Valley District and Western shall cooperate with the Conservation  
286 District in developing a long-term resource management plan to govern  
287 multiple-use activities in Reach 5 of the Santa Ana River wash (i.e., the  
288 Upper Santa Ana River Wash Land Management and Habitat  
289 Conservation Plan).

290 4. *Duties of All Parties*

291 a. *No Rights to Other Party(ies)' Water or Facilities.* Except as provided for in  
292 paragraph 2(c) above, the Conservation District will not assert any claim to own  
293 or control the new facilities constructed, or the additional water recharged by,  
294 Valley District and Western under the terms of this Agreement, provided that  
295 these activities occur in conformance with this Agreement. Valley District and  
296 Western will not assert any claim to own or control any water that is percolated in  
297 the new or existing recharge basins that is not supplied by Valley District or  
298 Western, nor make any attempt to acquire or control land or facilities owned by  
299 the Conservation District.. Valley District and Western acknowledge and  
300 represent to Conservation District that this Agreement provides for and constitutes  
301 "compatible use" of the Conservation District's property and facilities, as that term  
302 is utilized in California Code of Civil Procedure sections 1240.510 et seq.,  
303 thereby eliminating any need for any exercise of eminent domain by any party to  
304 acquire any additional interest in the Leased Property from any other party.

- 305           b.     *Establishment of Joint Operations Committee.* The Parties shall establish and  
 306           participate in a Joint Operations Committee (the "JOC") to serve in an advisory  
 307           capacity to the Conservation District, which shall assist the Conservation District  
 308           to develop a schedule and budget for planned operation and maintenance  
 309           activities relating to the recharge of water on the Leased Property, and perform  
 310           other functions as otherwise specified herein, under such rules and procedures as  
 311           it shall formulate and unanimously approve. The JOC shall meet at least twice a  
 312           year to plan water recharge, review financial and water accounting matters  
 313           implicated hereunder, and review performance.
- 314           c.     *Joint Reporting.* The Parties shall jointly provide planning documents,  
 315           monitoring reports, and other records that may be requested by authorized  
 316           agencies to demonstrate compliance with federal, state or local laws and  
 317           regulations. Specifically, the Parties shall continue to cooperate in the preparation  
 318           and submission of annual reports to the California State Water Resources Control  
 319           Board, which reports will follow the format used by the Parties in reporting the  
 320           use of water for calendar year 2010. A copy of the report filed with the California  
 321           State Water Resources Control Board is attached hereto as Exhibit 5 and  
 322           incorporated herein by reference.
- 323           d.     *Water Resources Management.*
- 324                   (1)    The Parties will continue to coordinate all recharge of water with one  
 325                   another to protect and enhance the safe yield in the SBBA.  
 326                   Specifically, the Parties will: (i) jointly develop the Regional  
 327                   Conjunctive Use Plan (or its equivalent) through the Basin Technical  
 328                   Advisory Committee, (ii) seek additional opportunities to increase safe  
 329                   yield in the SBBA by engaging in cooperative joint development of new  
 330                   water supply projects or conservation programs in the region, and (iii)  
 331                   cooperate with one another to document the water resource  
 332                   management benefits accrued by establishing and implementing this  
 333                   Agreement.
- 334                   (2)    The parties agree to dedicate and use the water made available pursuant  
 335                   to their respective water rights in and to the Santa Ana River to give  
 336                   priority to preserving the safe yield of the SBBA, as part of the  
 337                   reasonable and prudent management of their entire portfolio of water  
 338                   resources. All parties shall refrain from contesting any water rights  
 339                   claimed or held by one another at any time during the term of this  
 340                   Agreement, so long as such water rights are exercised in the manner  
 341                   consistent with this Agreement.
- 342                   (3)    The Parties will not export native water from the SBBA, or recharge  
 343                   water on behalf of agencies located outside the SBBA, except as

344 provided for by the 1969 *Western* Judgment and/or by the Regional  
345 Conjunctive Use Plan (or its equivalent).

346 5. *Amendments.* The Parties will negotiate amendments, including but not limited to areal  
347 expansion of the scope of activities, to this Agreement in good faith and not unreasonably  
348 withhold consent.

349 6. *Liberal Construction.* The Parties shall construe all terms and conditions in this  
350 Agreement in a manner which most favors increasing available water supplies by  
351 encouraging greater recharge of water in the area.

352 7. *Indemnification*

353 a. *Generally.* Each Party shall indemnify, defend and hold harmless the other  
354 Parties, their directors, officers, employees and agents from and against all  
355 damages, liabilities, claims, actions, demands, costs and expenses (including, but  
356 not limited to, costs of investigations, lawsuits and any other proceedings whether  
357 in law or in equity, settlement costs, attorneys' fees and costs), and penalties or  
358 violations of any kind, which arise out of, result from, or are related to a Party's  
359 performance of its obligations under this Agreement. In extending such  
360 indemnification, however, no party hereto waives any sovereign or governmental  
361 immunities, privileges, or rights that they may have or enjoy under any applicable  
362 law, including but not limited to California Government Code sections 810 et  
363 seq., and except as otherwise specifically provided for hereunder, and each party  
364 reserves all such immunities, privileges and rights , and any claims or other  
365 procedures applicable to same, that may presently exist or hereafter be created, to  
366 themselves, as against each of the other parties, and as against any third party.

367 b. *Indemnification Procedures.* Any Party that is an indemnified party (the  
368 "**Indemnified Party**") that has a claim for indemnification against the other Party  
369 (the "**Indemnifying Party**") under this Agreement, shall promptly notify the  
370 Indemnifying Party in writing, specifying the nature of the claim, the grounds  
371 upon which the Indemnified Party believes the Indemnifying Party is liable in  
372 whole or in part for the liability or other obligation asserted under the claim, and  
373 including any appropriate demand for defense or indemnification, or both. No  
374 delay on the part of the Indemnified Party in notifying the Indemnifying Party  
375 shall relieve the Indemnifying Party from any obligation unless (and then solely to  
376 the extent) the Indemnifying Party is prejudiced. Further, the Indemnified Party  
377 shall promptly notify the Indemnifying Party of the existence of any claim,  
378 demand, or other matter to which the indemnification obligations apply, and shall  
379 give the Indemnifying Party a reasonable opportunity to defend the same at its  
380 own expense and with counsel of its own selection, *provided* that the Indemnified  
381 Party shall at all times also have the right to fully participate in the disputed  
382 matter at its own expense. If the Indemnifying Party refuses to provide the

383 indemnity, or within a reasonable time after written notice from the Indemnified  
 384 Party, fails to defend a claim, demand or other matter to which the  
 385 indemnification obligations apply, the Indemnified Party shall have the right, but  
 386 not the obligation, to undertake the defense of, and to compromise or settle  
 387 (exercising reasonable business judgment), the claim or other matter, on behalf, or  
 388 for the account, and at the risk, of the Indemnifying Party. If the claim is one that  
 389 cannot by its nature be defended solely by the Indemnifying Party, then the  
 390 Indemnified Party shall make available all information and assistance to the  
 391 Indemnifying Party that the Indemnifying Party may reasonably request. In the  
 392 event of any dispute between the Indemnified party and the Indemnifying Party as  
 393 to whether the claim is one to which the indemnification obligations apply, the  
 394 matter shall be resolved in the manner of resolution of disputes, as provided in  
 395 paragraph 9 hereunder. Except as specifically provided otherwise in Paragraph  
 396 9(b) (4) below with respect to tolling of limitations periods, the notice provided  
 397 for hereunder shall be in addition to, and not in place of, any other notice that may  
 398 be provided for or otherwise required under law.

399 8. *Force Majeure.* In addition to any other specific provisions of this Agreement, a Party  
 400 hereto shall not be deemed to be in default under this Agreement where failure or delay in  
 401 performance of any of such Party's obligations under this Agreement is caused by floods,  
 402 earthquakes, winds, other Acts of God, power outages, equipment failure, acts of  
 403 vandalism, fires or other casualties, wars, riots or similar hostilities, strikes and other  
 404 labor difficulties beyond the Party's control, (including the Party's employment force),  
 405 enactment of new or conflicting, laws or regulations, including any new listing of  
 406 endangered species or designation of critical habitat for endangered species, court actions  
 407 (such as restraining orders or injunctions), judicial actions such as issuance of restraining  
 408 orders and injunctions, or other causes beyond such Party's control. If any one or more of  
 409 such events occur, the term of this Agreement and the time for performance by any Party  
 410 of any of its obligations hereunder shall be extended by the period of time that such one  
 411 or more events prevented or delayed such performance, provided that the term of this  
 412 Agreement shall not be extended under any circumstances for more than five (5) years.  
 413 In the event that said period of time must be extended by more than five years, this  
 414 Agreement shall automatically terminate.

415 9. *Administration of Agreement*

416 a. *Books and Records.* Each Party shall have access to and the right to examine any  
 417 of the other Party's pertinent books, documents, papers or other records  
 418 (including, without limitation, records contained on electronic media) relating to  
 419 the performance of that Party's obligations pursuant to this Agreement. Each  
 420 Party shall retain all such books, documents, papers or other records to facilitate  
 421 such review in accordance with that Party's record retention policy. Access to  
 422 each Party's books and records shall be during normal business hours only.

423 Nothing in this paragraph shall be construed to operate as a waiver of any  
424 applicable privileges.

425 b. *Disputes.* The Parties recognize that there may be disputes regarding the  
426 obligations of the Parties or the interpretation of this Agreement. The Parties  
427 agree that they may attempt to resolve disputes as follows:

428 (1) *Statement Describing Alleged Violation of Agreement.* A Party or  
429 Parties alleging a violation of this Agreement (the "**Initiating**  
430 **Party(ies)**") shall provide a written statement describing all facts that it  
431 believes constitute a violation of this Agreement to the Party(ies)  
432 alleged to have violated the terms of this Agreement (the "**Responding**  
433 **Party(ies)**").

434 (2) *Response to Statement of Alleged Violation.* The Responding Party(ies)  
435 shall have sixty days from the date of the written statement to prepare a  
436 written response to the allegation of a violation of this Agreement and  
437 serve that response on the Initiating Party(ies) or to cure the alleged  
438 violation to the reasonable satisfaction of the Initiating Party(ies). The  
439 Initiating Party(ies) and the Responding Party(ies) shall then meet  
440 within thirty days of the date of the response to attempt to resolve the  
441 dispute amicably.

442 (3) *Mediation of Dispute.* If the Initiating Party(ies) and the Responding  
443 Party(ies) cannot resolve the dispute within ninety days of the date of  
444 the written response, they shall engage a mediator, experienced in  
445 water-related disputes, to attempt to resolve the dispute. Each Party  
446 shall ensure that it is represented at the mediation by a Director or  
447 Councilperson. These representatives of the Initiating Party(ies) and the  
448 Responding Party(ies) may consult with staff and/or technical  
449 consultants during the mediation and such staff and/or technical  
450 consultants may be present during the mediation. The costs of the  
451 mediator shall be divided evenly between the Initiating Party(ies) and  
452 the Responding Party(ies).

453 (4) *Prior to Claims Under California Tort Claims Act.* The Parties agree  
454 that the procedure described in this paragraph represents an effort to  
455 resolve disputes without the need for a formal claim under the  
456 California Tort Claims Act or other applicable law. The period of time  
457 for the presentation of a claim by one Party against another shall be  
458 tolled for the period from the date on which the Initiating Party(ies) file  
459 a written statement until the date upon which the mediator renders a  
460 decision.

461 (5) *Reservation of Rights.* Nothing in this paragraph shall require a Party to  
 462 comply with a decision of the mediator and, after the completion of the  
 463 mediation process described above, each Party shall retain and may  
 464 exercise at any time all legal and equitable rights and remedies it may  
 465 have to enforce the terms of this Agreement; provided, that prior to  
 466 commencing litigation, a Party shall provide at least five calendar days'  
 467 written notice of its intent to sue to all Parties.

468 c. *Termination of Agreement*

469 (1) *Failure to Obtain Permits.* The Parties recognize and acknowledge that  
 470 the implementation of this Agreement may require one or more Parties  
 471 to obtain permits or other regulatory approvals from one or more local,  
 472 state or federal regulatory agencies, including but not limited to the  
 473 Regional Water Quality Control Board, the California Department of  
 474 Fish & Game and the U.S. Fish & Wildlife Service or the U.S. Army  
 475 Corps of Engineers. Because of the significant regulatory uncertainties  
 476 associated with obtaining these permits or regulatory approvals, the  
 477 Parties agree that, if Valley District and Western have not received all  
 478 regulatory permits or approvals required or useful for groundwater  
 479 replenishment on the Leased Property within ten years from the  
 480 effective date of this Agreement, Valley District and/or Western may  
 481 terminate this Agreement at any time by providing the Conservation  
 482 District with one-year's written notice of such termination. In the event  
 483 that Valley District or Western, but not both wish to terminate this  
 484 Agreement, the Party wishing to terminate this Agreement shall be  
 485 allowed to terminate the Agreement as to itself and the remaining two  
 486 Parties may continue the Agreement on such terms as they deem to be  
 487 equitable.

488 (2) *Material Breach.* If one Party deems that another Party has materially  
 489 breached one of the provisions of this Agreement, the Parties shall use  
 490 the dispute resolution procedures set forth in paragraph 9. b. above in  
 491 an effort to resolve the dispute amicably. If, the dispute resolution  
 492 process described in paragraph 9. b. above is not successful in  
 493 resolving the dispute, any Party may terminate this Agreement for  
 494 material breach thereof, and may seek any remedy that it would  
 495 otherwise be entitled to in a court of law.

496 d. *Recordation of Agreement.* All Parties agree that this Agreement constitutes a  
 497 lease of certain lands by the Conservation District to Valley District and Western  
 498 for the purpose of constructing, operating, maintaining, repairing and  
 499 rehabilitating percolation basins and ancillary facilities on the Leased Property,  
 500 and consequently, all Parties agree that this Agreement should be recorded in the

501 Official Records of the County of San Bernardino. Valley District shall, within  
502 ten days of the effective date of this Agreement, cause this agreement to be  
503 recorded in the Official Records of the County of San Bernardino and shall  
504 promptly provide the Conservation District and Western with recorded copies of  
505 this Agreement upon receipt of such copies from the County of San Bernardino.

506 10. *General Provisions.*

507 a. *Authority.* Each signatory of this Agreement represents that s/he is authorized to  
508 execute this Agreement on behalf of the Party for which s/he signs. Each Party  
509 represents that it has legal authority to enter into this Agreement and to perform  
510 all obligations under this Agreement.

511 b. *Amendment.* This Agreement may be amended or modified only by a written  
512 instrument executed by each of the Parties to this Agreement.

513 c. *Jurisdiction and Venue.* This Agreement shall be governed by and construed in  
514 accordance with the laws of the State of California, except for its conflicts of law  
515 rules. Any suit, action, or proceeding brought under the scope of this Agreement  
516 shall be brought and maintained to the extent allowed by law in the County of San  
517 Bernardino, California.

518 d. *Headings.* The paragraph headings used in this Agreement are intended for  
519 convenience only and shall not be used in interpreting this Agreement or in  
520 determining any of the rights or obligations of the Parties to this Agreement.

521 e. *Construction and Interpretation.* This Agreement has been arrived at through  
522 negotiations and each Party has had a full and fair opportunity to revise the terms  
523 of this Agreement. As a result, the normal rule of construction that any  
524 ambiguities are to be resolved against the drafting Party shall not apply in the  
525 construction or interpretation of this Agreement.

526 f. *Entire Agreement.* This Agreement constitutes the entire agreement of the Parties  
527 with respect to the subject matter of this Agreement and, save as expressly  
528 provided in this Agreement, supersedes any prior oral or written agreement,  
529 understanding, or representation relating to the subject matter of this Agreement.

530 g. *Partial Invalidity.* If, after the date of execution of this Agreement, any provision  
531 of this Agreement is held to be illegal, invalid, or unenforceable under present or  
532 future laws effective during the term of this Agreement, such provision shall be  
533 fully severable. However, in lieu thereof, there shall be added a provision as  
534 similar in terms to such illegal, invalid or unenforceable provision as may be  
535 possible and be legal, valid and enforceable.

- 536 h. *Successors and Assigns.* This Agreement shall be binding on and inure to the  
537 benefit of the successors and assigns of the respective Parties to this Agreement.  
538 No Party may assign its interests in or obligations under this Agreement without  
539 the written consent of the other Parties, which consent shall not be unreasonably  
540 withheld or delayed.
- 541 i. *Waivers.* Waiver of any breach or default hereunder shall not constitute a  
542 continuing waiver or a waiver of any subsequent breach either of the same or of  
543 another provision of this Agreement and forbearance to enforce one or more of  
544 the rights or remedies provided in this Agreement shall not be deemed to be a  
545 waiver of that right or remedy.
- 546 j. *Attorneys' Fees and Costs.* The prevailing Party in any litigation or other action  
547 to enforce or interpret this Agreement shall be entitled to reasonable attorneys'  
548 fees, expert witnesses' fees, costs of suit, and other and necessary disbursements  
549 in addition to any other relief deemed appropriate by a court of competent  
550 jurisdiction.
- 551 k. *Necessary Actions.* Each Party agrees to execute and deliver additional  
552 documents and instruments and to take any additional actions as may be  
553 reasonably required to carry out the purposes of this Agreement.
- 554 l. *Compliance with Law.* In performing their respective obligations under this  
555 Agreement, the Parties shall comply with and conform to all applicable laws,  
556 rules, regulations and ordinances.
- 557 m. *Third Party Beneficiaries.* This Agreement shall not create any right or interest in  
558 any non-Party or in any member of the public as a third party beneficiary.
- 559 n. *Counterparts.* This Agreement may be executed in one or more counterparts,  
560 each of which shall be deemed to be an original, but all of which together shall  
561 constitute but one and the same instrument.
- 562 o. *Notices.* All notices, requests, demands or other communications required or  
563 permitted under this Agreement shall be in writing unless provided otherwise in  
564 this Agreement and shall be deemed to have been duly given and received on: (i)  
565 the date of service if served personally or served by facsimile transmission on the  
566 Party to whom notice is to be given at the address(es) provided below, (ii) on the  
567 first day after mailing, if mailed by Federal Express, U.S. Express Mail, or other  
568 similar overnight courier service, postage prepaid, and addressed as provided  
569 below, or (iii) on the third day after mailing if mailed to the Party to whom notice  
570 is to be given by first class mail, registered or certified, postage prepaid

**LEGAL DESCRIPTION**  
**SBVWCD LANDS**

THOSE PORTIONS OF SECTIONS 4, 6, 7 AND 8, TOWNSHIP 1 SOUTH, RANGE 2 WEST, SAN BERNARDINO MERIDIAN AND THOSE PORTIONS OF SECTION 12, TOWNSHIP 1 SOUTH, RANGE 3 WEST, SAN BERNARDINO MERIDIAN, IN THE CITY OF HIGHLAND, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, ACCORDING TO THE OFFICIAL PLAT THEREOF, DESCRIBED AS FOLLOWS:

**PARCEL S1:** (A.P. NO. 0297-041-07)

THAT PORTION OF THE SOUTHWEST QUARTER OF THE SOUTHWEST QUARTER OF SAID SECTION 4, SAID PORTION LYING SOUTHEASTERLY OF THE FOLLOWING DESCRIBED LINE:

BEGINNING AT THE NORTHEAST CORNER OF SAID SOUTHWEST QUARTER OF THE SOUTHWEST QUARTER; THENCE SOUTHWESTERLY TO THE SOUTHWEST CORNER OF SAID SECTION 4.

**PARCEL S2:** (A.P. NO. 0297-061-01)

THE NORTH HALF OF THE SOUTHWEST QUARTER OF THE NORTHEAST QUARTER OF SAID SECTION 8.

**PARCEL S3:** (A.P. NO. 0297-051-06)

THE NORTH HALF OF THE SOUTHWEST QUARTER OF THE NORTHEAST QUARTER OF SAID SECTION 7, COMPRISING 20 ACRES, MORE OR LESS.

**PARCEL S4:** (A.P. NO. 0297-051-05)

THE SOUTH 20 ACRES OF THE NORTH OF THE NORTHEAST QUARTER OF SAID SECTION 7.

**PARCEL S5:** (A.P. NO. 0297-061-03)

THE SOUTH HALF OF THE NORTH HALF OF THE NORTHWEST QUARTER OF SAID SECTION 8, COMPRISING 40 ACRES, MORE OR LESS.

**PARCEL S6:** (A.P. NO. 0291-151-02)

THE NORTHEAST QUARTER OF SAID SECTION 12, EXCEPT RAILROAD RIGHT-OF-WAY AND EXCEPT STATION AT APLIN AND COMPRISING 157 ACRES, MORE OR LESS.

**PARCEL S7:** (A.P. NO. 0291-151-01)

THE NORTHWEST QUARTER OF SAID SECTION 12, EXCEPT RAILROAD RIGH-OF-WAY.

**PARCEL S8:** (A.P. NO. 0291-161-04)

THE SOUTHEAST QUARTER OF THE SOUTHWEST QUARTER OF SAID SECTION 12.

**PARCEL S9:** (A.P. NO. 0297-051-07, 0297-051-08, 0297-051-09, 0297-051-10, 0297-071-09, 0297-071-10, 0297-071-13, 0297-071-14, 0297-071-16, 0297-071-17)

LOTS 1 THROUGH 6 AND LOTS 9 THROUGH 12 OF VAN BUREN TRACT, AS SHOWN ON A MAP RECORDED IN BOOK 8, PAGE 69 OF MAP IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

**PARCEL S10:** (A.P. NO. 0297-071-08)

THE WEST HALF OF THE SOUTHEAST QUARTER OF SAID SECTION 7, COMPRISING 80 ACRES, MORE OR LESS.

## MINERAL LEASE FOR EXTRACTION OF SAND AND GRAVEL MATERIALS

THIS MINERAL LEASE FOR EXTRACTION OF SAND AND GRAVEL MATERIALS ("Lease") is entered into this 1 day of November, 2011, by and between SAN BERNARDINO VALLEY WATER CONSERVATION DISTRICT ("District") and CEMEX CONSTRUCTION MATERIALS PACIFIC, LLC ("Lessee"). This Lease is entered into in consideration of all of the following:

A. District is a California Water Conservation District, duly formed and existing under California Water Code section 74000 et seq. District has the authority to enter into leases of property it owns pursuant to provisions of California Water Code section 74550, and other provisions of law. Lessee is a limited liability corporation, with its principal place of business located in El Dorado Hills, California. Lessee is the successor-in-interest to a prior lease agreement between the District and C. L. Pharris Sand & Gravel, Inc.

B. District's and Lessee's predecessor-in-interest, C. L. Pharris Sand & Gravel, Inc., entered into a "Lease Agreement" dated September 10, 1979. That Lease Agreement authorized various excavation and sale of sand, gravel, and related material from property owned by the District, on terms and conditions stated therein, and incorporating prior leases between the parties (collectively "Original Lease").

C. The Original Lease was amended variously between the parties over time, culminating on a "Lease Amendment" dated July 10, 1997. Under the "Lease Amendment," the term of the lease was defined as an initial term ending June 1, 2011, with nine (9) additional successive five (5) year options to renew. The Lease Amendment required renewal notices to be in writing, made no later than six (6) months prior to the expiration of the then-existing term. The parties followed these procedures through the first five (5)-year extension of the term.

D. A dispute then arose between Lessee and the District regarding Lessee's expressed intent to enter an additional five (5)-year term under the lease. District rejected Lessee's attempt to exercise an additional five (5)-year option as untimely, and considers the lease effectively terminated as of June 1, 2011. Lessee believes that the option for an additional five (5)-year period under the lease was properly exercised, and that the term of the original lease, as modified by the Lease Amendment, continues until June 1, 2016.

E. The parties have met and conferred pursuant to a "Tolling Agreement Re Lease Dispute," they entered into on or about June 1, 2011 and extended on August 31, 2011 to resolve their differences. Pursuant to such discussions, the parties have now determined to enter into a new lease, defining new terms, and replacing, superseding, and rendering of no further effect the Original Lease, the Lease Amendment, and all previous agreements between District and Lessee with respect to lease of the District's property.

NOW, THEREFORE, in consideration of all of the foregoing, the parties do hereby set forth the terms of their new and sole lease agreement as follows:

1.0 Definitions. As used herein, the following terms shall have the following defined meanings:

1.1. "DISTRICT" shall mean the San Bernardino Valley Water Conservation District.

1.2. "LESSEE" shall mean Cemex Construction Materials Pacific, LLC, and its successors and assigns.

1.3. "PREMISES" shall mean all those properties owned by DISTRICT, more specifically described in the legal description attached hereto as Exhibit "A" and as more specifically depicted in the plat map attached hereto as Exhibit "B," with the exception of the northeasterly one-quarter of Section 12, which shall not be included within the PREMISES.

1.4. "MATERIAL" shall mean sand, rock, gravel, and kindred substances, lying on or under the PREMISES, and suitable for commercial extraction, processing, and sale, and any saleable by-products from same.

1.5. "Ton" shall mean a measurement of 2,000 pounds of material aggregate, by weight.

1.6. "INDEX" shall mean the Bureau of Labor Statistics Producer Price Index for Mining (Except Oil and Gas): NAICS 212, or if such index is no longer published or kept, such similar index as may be agreed to by the parties.

1.7. "FAIR MARKET ROYALTY" shall mean the prevailing market royalty rate being paid for Material within the markets served or able to be served by Material from the Premises, and such markets as may be reasonably comparable thereto, as of a then-present data value.

1.8. "WASH PLAN" shall mean the Upper Santa Ana River Wash Land Management and Habitat Conservation Plan, a comprehensive land use, property exchange, and mining and related permitting effort undertaken by District, Lessee, and a number of other public and private entities for realignment of prior leases for sand and gravel extraction, and for accommodation of water conservation and species habitat preservation.

1.9. "TRANSFER PREMISES" shall mean those properties which District and Lessee agree are appropriate for replacement of any portion of the Premises which may be exchanged to the federal government, Bureau of Land Management, or other entity, under the implementation and effectuation of the Wash Plan, or otherwise rendered unavailable for extraction, processing, and sale of Material. The parties contemplate that the Transfer Premises will consist of a portion of those properties already proposed to be exchanged from the Bureau of Land Management to the District under the Wash Plan, or otherwise transferred from the federal government to the District for the purposes of making such transferred areas available for mining. District and Lessee agree, however, that availability of, and the specific areas of the Transfer Premises cannot be determined precisely at this time, and that the exact areas, locations and parameters of the Transfer Premises will have to be determined in connection with the ultimate approvals that might be obtained through the Wash Plan.

1.10. "COMMENCEMENT DATE" shall be the date this Lease becomes effective, November 1, 2011.

1.11. "LEASE YEAR" shall mean the year following the commencement date in the first year of this Lease, and for every subsequent year, the period beginning each year on the anniversary of the Commencement Date, and continuing one (1) year thereafter.

1.12. "ORANGE STREET PLANT SITE" shall mean that area generally described in the legal description and depicted on the plat map collectively attached as Exhibit "D" hereto, consisting of approximately 100 acres, on which Lessee has, as of the Commencement Date, established and maintains a mining processing plant.

1.13. "REDLANDS AGGREGATES SITE" shall mean the area generally described in the legal description and depicted on the plat map collectively attached as Exhibit "E" hereto.

## 2.0 Lease of Premises and Rights Conferred.

2.1. Under this Lease, District hereby grants to Lessee the right to come onto the Premises, and to dig, excavate, transport, wash, process, crush, convey, stockpile, and sell all Material on the Premises, consistent with any applicable federal, state, or local regulations, and conditions of any permits that may be applicable thereto. This Lease includes the right to maintain all processing plants, structures, facilities, and equipment legally established by Lessee and existing on the Premises as of the Commencement Date, as are necessary or suitable for the defined purposes of the Lease. Lessee may also establish such other plants, buildings, paved roadways, structures, or other permanent improvements, or any silt ponds or places for the deposition of impermeable materials (collectively "Improvements") on the Premises, as may be necessary or appropriate for accomplishment of the purposes of the Lease, subject to the prior

written approval of the District as to the location, extent, specifications, and composition of such improvements. District's approval shall not be unreasonably withheld, conditioned or delayed. District's approval of Lessee's Improvements shall be directed to District's reserved water spreading and other reserved rights in, to, and for the Premises under this Lease, and the compliance and consistency of such Improvements with the terms and conditions of this Lease, and shall not be directed to the suitability of such Improvements for Lessee's purposes, nor the design, effectiveness, safety, nor engineering suitability of such Improvements, except insofar as District may, but is not required to, confirm that such Improvements as proposed meet otherwise applicable legal requirements and standards. Lessee shall not undertake any construction of such improvements without prior District review and approval of the plan for the location and other specifications for such improvements. District shall have a period of 45 days after submission of the complete construction plans and working drawings by Lessee of any proposed improvement construction to approve, conditionally approve, or disapprove such proposed improvements. Any disapproval by District shall be accompanied by written statement of the reasons therefor, including an explanation of what would be required for approval. Upon District's failure to approve, conditionally approve, or disapprove the Improvements construction within the 45 day period, the plans shall be deemed approved as submitted, so long as they are consistent with all other applicable legal requirements and standards. Lessee may relocate any Improvements located on the Premises, subject to District's approval, in the same manner as for Lessee's original establishment of Improvements. District may require Lessee to remove any Improvements placed on the Premises for which Lessee failed to provide the 45 day notice and opportunity for review and approval of District called for hereunder to the extent such Improvements violate applicable legal requirements, without any liability of District to Lessee. Such Improvements so constructed shall be the property of Lessee during the duration of the Lease, and shall be removed by Lessee upon the expiration or earlier termination of this Lease; provided, however, District may in writing elect to permit Lessee to leave any or all of the Improvements on the Premises after expiration of the Lease, in which case all such Improvements shall become the property of the District. Lessee shall assume all maintenance and insurance responsibilities for any Improvements constructed on the Premises. In addition, Lessee shall provide District no less than forty-five (45) days' notice before Lessee establishes any staging areas, processing areas, unpaved but graded and compacted haul routes, and equipment servicing areas which do not otherwise fit the definition of Improvements provided above, though such facilities shall not require District's prior approval before Lessee may be permitted to place them on the Premises. Further, Lessee shall provide to District no less than fifteen (15) days' notice before Lessee establishes any portable crushing or processing sites, which do not otherwise fit the definition of Improvements provided above, though such facilities shall likewise not require District's prior approval before Lessee may be permitted to place them on the Premises.

2.2. Premises Leased in "As Is" Condition. Lessee acknowledges that it is granted lease rights to the Premises, and the right to move Material therefrom, on an "as is" basis, and Lessee takes and operates the Premises without reliance on any representation by the District, or any of its officers, employees, agents, or representatives, or any other person, concerning the extent or quality of the Material on the Premises, its fitness for Lessee's intended use, or any particular purpose or use, its income producing history, potential, or capabilities, its value, or any other promise, representation, or inducement not expressly set forth in writing in

this Lease. District represents and warrants that it has not caused nor is aware of any environmental conditions relating to the Premises.

2.3. No Warranty. Lessee acknowledges that neither the District, nor any of its officers, employees, agents, or representatives, has made any written or oral representation, promise, or warranty, express or implied, arising out of or in connection with the Material on the Premises, or the transfer of Premises, if any, its fitness for Lessee's intended use, or any purpose or use, its income producing history, potential or capabilities, its value, the likely success or outcome of the Wash Plan, or any other matter not expressly set forth in writing in this Lease. Lessee acknowledges it has inspected, and occupied, the Premises prior to the execution of this Lease. Lessee acknowledges it takes and accepts the Premises in the condition in which the Material on the Premises (or lack thereof) exists as of the Commencement Date this Lease. Lessee assumes that any and all change in the condition of the rock on the Premises either before the Commencement Date or during the term of this Lease.

### 3.0 Lease Term.

3.1. Original Term. This lease shall begin on the Commencement Date, and shall continue in full force and effect for a period of four (4) years thereafter.

3.2. Options to Renew and Right of First Refusal. So long as Lessee shall not be in material breach of this Lease, Lessee shall have one (1) additional, successive six -year option to renew ("Option to Renew"). The renewal shall be on the terms of this Lease, or such additional or revised terms as the parties may then agree to.

### 3.3. Procedure for Exercise of Options.

(a) Initial Option. In the event Lessee elects to exercise the Option to Renew, Lessee shall provide written notice to District in writing. Such Option to Renew shall be made no later than one hundred eighty (180) days prior to the expiration of the Original Term of this Lease, to the person and in the manner set forth herein for the provision of Notices in Section 14.1 below.

(b) Exclusive Negotiation Period. In the event Lessee fails to exercise the six (6) year option provided for above, this Lease shall terminate as of the expiration of the initial four-year term. In the event Lessee does exercise the six (6) year option, Lessee shall have an Exclusive Negotiation Period with the District to meet and confer with District regarding the terms and conditions of a renewal or replacement lease for the Premises. Such Exclusive Negotiation Period shall run concurrently with the final ninety (90) days of the six (6) year option period so exercised by Lessee. The Exclusive Negotiation Period shall arise only upon the expiration of the exercised six (6) year option term; there shall be no Exclusive Negotiation Period upon the termination of the Lease, for whatever reason, or in the event of a Lessee default. During the Exclusive Negotiation Period, District shall not make any effort to sell, lease, offer, market, or solicit proposals with or from any party for the excavation, processing, or sale of Material from the Premises, except Lessee. Neither District nor Lessee shall be

obligated to enter into any type of an agreement during or as a result of the Exclusive Negotiation Period, but the parties shall meet and confer in good faith to discuss and explore the possibility of entering into such an agreement, should the parties determine that doing so would be in their mutual benefit.

(c) Right of First Refusal. In the event the Exclusive Negotiation Period occurs, and fails to result in an agreement between District and Lessee, and only in such event, Lessee shall have a Right of First Refusal upon any offer District may make to any other party for the right to excavate, process, or sell Material from all or any part of the Premises. Such Right of First Refusal shall entitle Lessee to priority acceptance of any such offer District may make to any other party, on the identical terms, conditions, requirements, and stipulations as the District makes, and is willing to accept, from any other party. The Right of First Refusal shall begin on the expiration of the Exclusive Negotiation Period, and shall continue for a period of three (3) years thereafter. District shall, prior to making or soliciting any offer for the right to excavate, process, or sell Material from the Premises advise the party or parties with whom it is dealing of the Lessee's Right of First Refusal. District shall require any offer it receives from any party to excavate, process, or sell Material from all or a portion of the Premises, and which it is prepared to accept and is authorized by its legislative body to accept, to be reduced to writing, and shall within thirty (30) days of any such offer, provide a written copy to Lessee, to the person and in the manner provided for in Section 14.1, Notices, below. Lessee shall have thirty (30) days thereafter to accept or reject the offer. In the event Lessee accepts the offer, District and Lessee shall enter into an agreement, on the identical terms as proposed to District and conveyed to Lessee. In the event Lessee rejects the offer, the Right of First Refusal shall thereupon terminate, and be of no further force and effect.

#### 4.0 Royalty and Rental Payments.

4.1. Orange Street Plant Site Rent. Lessee shall pay to District, throughout the entire term of this Lease and any holdover period, the sum of Four Thousand Dollars (\$4,000.00) per month for the lease of the Orange Street Plant Site ("Orange Street Plant Site Rent"). Such rent shall be in addition to, and shall not be credited against, any royalty amounts due, including guaranteed annual minimum royalty, which may be otherwise due and owing under this Lease.

4.2. Royalty. In addition to the plant site rent, Lessee shall pay a royalty to District, for every ton of Material removed from the Premises, as measured by State certified truck scales and recorded by a standardized, nationally recognized ticketing system whose mechanics and accuracy are disclosed and available to, and verifiable by, District. Lessee shall keep true, complete, and accurate records of all Material excavated on and removed from the Premises, and an accounting of all Material excavated and removed from the Redlands Aggregates Site. Lessee shall report such figures, under penalty of perjury, to District on a monthly basis, in a form as District may reasonably specify and require. The parties shall track, calculate, and collect the royalty due on the excavated Material based on the amount of tonnage of Material sold or otherwise removed from the Premises and the Redlands Aggregates Site.

Any differences between the amount of Material excavated and the amount of Material sold or otherwise removed from the Premises shall be reconciled by way of a biannual audit. On or before ninety (90) days following the execution of this Agreement by both parties, District and Lessee shall jointly select and retain a party to perform a baseline aerial topographic survey of the Premises and the Redlands Aggregates Site. The parties shall share equally in the expense of the baseline aerial topographic survey, and once it is generated and delivered, the parties shall meet and confer to work out any issues or disagreements they may have regarding it, and both shall indicate in writing their approval of same, once any issues with the baseline survey that may arise are resolved. Once approved by both parties, the baseline aerial topographic survey shall serve as the beginning survey for later aerial topographic surveys to be performed under this Lease, for volumetric calculations of material excavated, inventoried, deposited into silt ponds, and removed from the premises by deduction. The volumetric results will be used to assess, compare, and reconcile the truck scale weight measurements. Based upon the results of the area topographic survey, Lessee and District shall reconcile the amounts paid on the tonnage sold or otherwise removed from the Premises and the Redlands Aggregates Site, and make any necessary adjustments to account for differences in the royalties due for Material from the Premises, and that from the Redlands Aggregates Site, and reconcile any amounts due or any credit for any amounts that may be overpaid during the immediately preceding twenty-four (24) month period. In the event the parties are unable to come to an agreement on such reconciliation, the matter shall be submitted to binding arbitration, as provided for herein.

4.3. Royalty Rate. For the first twelve (12) month period following the Commencement Date, the royalty rate shall be set at Fifty-Five Cents (\$0.55) per ton. As of the first anniversary of the Commencement Date, the royalty rate shall be the Fair Market Royalty. On or before ninety (90) days prior to the first anniversary of the Commencement Date, the parties shall meet and confer, in an attempt to come to an agreement on the Fair Market Royalty. The parties shall provide, one to the other, any and all market analyses, appraisals, or other valuation Materials or opinions upon which their proposed Fair Market Royalty is based. If no agreement is reached within thirty (30) days of the parties' exchange of such information, the matter shall be submitted to binding arbitration, as provided for herein. The arbitrator shall select either one or the other of the parties' original Fair Market Royalty proposals, and the Fair Market Royalty rate so selected shall be the royalty rate paid by Lessee to the District for the remainder of the term, subject to any Index adjustment. The arbitrator shall not have the authority or discretion to compromise between the two parties' proposals, nor to come to an independent determination of the Fair Market Royalty rate. In the arbitration, no party may rely on, or submit to the arbitrator, any Material which was not originally exchanged pursuant to the exchange of Fair Market Royalty proposals ninety (90) days before the Commencement Date. The arbitrator shall only select one of the parties' Fair Market Royalty rates, which he or she determines most accurately determines the appropriate Fair Market Royalty.

4.4. Index Adjustment. All royalty rates shall be adjusted annually, on each anniversary of the Commencement Date, by any change in the Index, using 2012 as the base year. In no event, however, shall such change in any one year amount to a change in the applicable royalty rate more than fifty percent (50%), higher or lower, than the immediately preceding Fair Market Royalty rate. Such fifty percent limitation shall operate only to serve as the cap or floor for the year in which the change in the Index results in a change in the royalty rate of 50% or more, and not to change prospectively the Index calculation for succeeding years.

4.5. Guaranteed Annual Royalty; Orange Street Plant Site Material as Recovery of Credits.

(a) Guaranteed Annual Royalty Payments. Notwithstanding the level of excavation or sale of Material from the Premises, Lessee shall pay to District a guaranteed annual royalty, in addition to the Orange Street Plant Site rent. Such guaranteed annual royalty shall be in the amount of One Hundred Fifty Thousand Dollars (\$150,000.00) for the first year of the Lease, and shall increase by an additional One Hundred Thousand Dollars (\$100,000.00) on each anniversary of the Commencement Date thereafter; provided, however, such guaranteed annual royalty shall not exceed \$550,000.00 annually. Such guaranteed annual royalty shall be paid in equal monthly installments, and shall be submitted along with all reporting by Lessee of its excavation and sales activities on the Premises and the Redlands Aggregate Site, comparing the amounts of guaranteed annual royalty paid, against the actual amount of Material excavated, and the actual amount of Material sold or otherwise removed from the Premises. The guaranteed annual royalty amount shall be paid by Lessee to the District; provided, however, to the extent District has Annual Royalty Credits in excess of Three Million Four Hundred Thousand Dollars (\$3,400,000.00) ("Royalty Credits Cap"), Lessee's obligation to pay Guaranteed Annual Royalty Payments shall be suspended until such time as the Annual Royalty Credits are reduced below the Royalty Credits Cap., All per-ton royalty rates applicable to Material excavated by Lessee in excess of the guaranteed annual royalty rate shall be paid at the then-prevailing royalty rate, in addition to guaranteed annual royalty.

(b) Guaranteed Annual Royalty Credits. To the extent the per-ton royalty rate paid by Lessee in any given Lease Year is less than the amount of guaranteed annual royalty, Lessee shall be credited for the difference against any per-ton royalties otherwise due in any succeeding Lease Years above the guaranteed annual royalty due in such Lease Year, until all such credits have been offset against per-ton royalties in excess of applicable guaranteed annual rental. In no event shall such credit ever diminish or decrease the amount of guaranteed annual royalty due.

(c) Orange Street Plant Site Holdover to Retire Guaranteed Annual Royalty Credits. Except in the event of a Lessee default under Section 10.1 below, should this Lease expire or otherwise terminate prior to the time Lessee's guaranteed annual royalty credits have been retired, Lessee shall have the right, but not the obligation, to hold over and continue to occupy the Orange Street Plant site only, to remove any Improvements or other equipment or operations thereon, and to excavate and sell Material from such site. Such holdover right shall begin on the date the Lease expires or is terminated for any reason, including Lessee's exercise of its right of termination under Section 10.3 below. No guaranteed annual royalty or other royalty amounts shall be paid to District on the Material excavated and sold by Lessee from the Orange Street Plant Site during the holdover period, and such amounts of such per-ton royalties as would otherwise be applicable to the Material, as adjusted by the Index through and

including the holdover period, shall be applied to reduce the credits for guaranteed annual royalty payments made in excess of royalties paid on a per-ton basis. Lessee shall pay the Orange Street Plant site rent for all time that Lessee occupies the Orange Street Plant site during such holdover period, and such Orange Street Plant Site rental shall be adjusted by the Index, using the Effective Date as the base period and the beginning of the holdover period as the adjustment date for application of the Index adjustment. Thereafter, on each anniversary date of the beginning of the holdover period, the Orange Street Plant Site rent shall be adjusted again, per the Index. Such Orange Street Plant Site rent shall not be offset against or reduced to retire any guaranteed annual royalty credits. Lessee's right to hold over on the Orange Street Plant site shall continue only until the per-ton royalty amounts applicable to such Material excavated and sold by Lessee from the Orange Street Plant Site during the holdover period are equal to the sum total of guaranteed annual royalty credits for Lessee's payments of guaranteed annual royalty in excess of per-ton royalty, which accrued prior to the holdover period, but in no event longer than five (5) years from the time of the Lease's expiration or earlier termination. Any guaranteed annual royalty credits not retired within the applicable holdover period shall be lost, and forfeited without any further liability from District to Lessee.

4.6. Late Payments. Any payment due hereunder shall be made within thirty (30) days of the expiration of the month during which the excavations occurred, or the sales or other transfers occurred. Late payments shall incur a one and one-half percent per month late charge, which charge shall be added to, and considered to be additional, rent.

## 5.0 Permits.

5.1. Wash Plan Processing. As of the Commencement Date the parties are cooperating as part of the Upper Santa Ana River Wash Land Management and Habitat Conservation Plan Task Force ("Task Force") to process and secure approval of the Wash Plan. Under the agreement forming the Task Force, each of the participants was assigned a certain percentage of allocation for the overall costs of the Wash Plan. Beginning on the Commencement Date, and continuing until the Wash Plan gets final approval, or either parties' participation in the Task Force agreement shall have been finally terminated, either as provided in paragraph 23 of that agreement, or upon dissolution of the Task Force pursuant to paragraph 22 of the Task Force agreement, Lessee shall advance to District one-half of District's share of the Wash Plan processing and consultant costs, under the allocation as defined in the Task Force agreement. All such advanced costs shall be credited against any guaranteed annual royalty otherwise owing from Lessee to District, and to the extent such advanced costs exceed the amount of guaranteed annual royalty, shall be credited against future years' guaranteed annual royalty, until the entire amount of such advanced costs has been retired.

5.2. Lessee's Obligation to Secure Permits. Notwithstanding the parties' mutual efforts to effectuate the Wash Plan, it is and shall be the Lessee's sole responsibility to secure any and all land entitlements, SMARA permits or approvals, conditional use permits, or any and all discretionary permits required for Lessee to operate and maintain its operations on the Premises for the excavation, processing, removal, and sale of Material therefrom, including

any reclamation plans, or requirements, from all applicable federal, state and local jurisdictions (collectively "permits" herein). In the event the Wash Plan fails to result in the grant of such permits, Lessee shall diligently and continuously take all other actions necessary to obtain all permits required to accomplish the Material excavation purposes set forth herein, and shall obtain such permits at Lessee's sole cost and expense. Lessee shall submit to District, no less than forty five (45) days prior to submission of any permit application, or forty five (45) days prior to accepting any conditions that may be imposed on any such permit, all information, studies, applications, and other information relative to the permit or the proposed terms and conditions proposed to be imposed on same, for District's prior, written approval. District's review shall be limited to such permit applications, and / or permit conditions that the District determines, in the exercise of its reasonable discretion, could impair its ability to perform its water storage, conservation or spreading activities, or District's other reserved rights and uses in the Premises under this Lease, and / or impact the Premises beyond the term of this Lease. District shall not unreasonably disapprove the permit nor the conditions thereto. Lessee shall not finalize the permit, nor take any action in furtherance of conducting activities pursuant to any permit, until the District has approved the permit and any conditions thereto. In the event District fails to approve or disapprove any permit submitted to it by Lessee, provided that all proposed conditions have been documented and forwarded to District, within forty five (45) days from District's receipt of same from Lessee, the permit and conditions thereto shall be deemed approved by the District.

5.3. District Cooperation With Permits. District agrees that within the bounds of its reasonable discretion as reserved in Section 5.2 above, it will reasonably cooperate with Lessee and Lessee's efforts to obtain applicable permits and land use entitlements to allow Lessee to fulfill the purposes of this Lease, including, but not limited to, execution of petitions, applications or authorizations for applications. No consent given under this Lease by the District shall affect or limit Lessee's obligations under this Lease, nor shall any approvals or consents given by the District, in its capacity as the owner of the Premises, be deemed to be approval as to compliance or conformance of any application or any permit with applicable governmental codes, laws, orders, rules, or regulations.

5.4. Habitat Mitigation Dedications. District and Lessee acknowledge that effectuation of the Wash Plan, or potentially other permits should the Wash Plan not come fruition, may require the dedication by District of various areas, within or without the Premises, for endangered or threatened species habitat preservation or management. Notwithstanding this, however, District and Lessee agree to cooperate reasonably in an effort to effectuate the Wash Plan, as consistently as possible with the identified mitigation areas from the Final Environmental Impact Report for the Wash Plan certified by the District in 2008. The parties acknowledge the need to meet and confer, between themselves and other members of the Task Force, regarding the proper identification of any such required mitigation areas, the degree of reserved water conservation activity the District may require as a result of any encumbrance of District property for such purposes, and the nature and cost of habitat management strategies appropriate for such areas, none of whose specifics is presently known at this time. District and Lessee agree to cooperate reasonably on such subjects, in an attempt to effectuate the purposes of the Wash Plan and the purposes of this Lease.

5.5. Lessee Indemnification re Permit Challenges. Except as to such permits as may be obtained by the parties pursuant to the Wash Plan, Lessee shall indemnify, defend and hold the District harmless from any action, judicial or otherwise, contesting the validity of any permit granted to Lessee by the District or any other permitting jurisdiction, and Lessee shall promptly pay any judgment or award against the District in any such action, and shall take all other measures necessary to diligently defend and resolve any challenge to the validity of any such permit.

5.6. Transfer of Permits. Upon the expiration or earlier termination of this Lease, all transferable permits applicable to the Premises shall immediately transfer to the District, and Lessee shall take all actions required to complete such transfer, and otherwise cooperate fully with the District in accomplishing everything required to complete such transfer.

#### 6.0 Use and Operation of Premises.

6.1. Safeguards. Lessee shall, at all times during this Lease, maintain proper and adequate safeguards on the Premises to assure its orderly use, and to prevent intrusion from trespassers, playing children and vandals.

6.2. No Waste or Nuisance. Lessee shall not maintain, commit or permit the maintenance of or commission of any waste or any nuisance (as defined in California Civil Code section 3479) within the premises. Lessee shall not use or permit the use of the Premises for any unlawful purpose.

6.3. Hazardous Materials Lessee shall not cause, permit or suffer the release or dumping of any Hazardous Materials on the Premises at any time. As used in this Lease, the term "Hazardous Materials" shall mean:

(a) Hazardous wastes, hazardous materials, hazardous substances, hazardous constituents, toxic substances or related materials, whether solids, liquids or gases, including but not limited to, substances deemed as "hazardous wastes," "hazardous materials," "hazardous substances," "toxic substances," "pollutants," "contaminants," "radioactive materials," or other similar designations in, or otherwise subject to regulation under, the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended ("CERCLA"), 42 U.S.C. §§ 9601 *et seq.*; the Toxic Substance Control Act ("TSCA"), 15 U.S.C. § 2601, *et seq.*; the Hazardous Materials Transportation Act, 49 U.S.C. § 1802; the Resource Conservation and Recovery Act ("RCRA"), 42 U.S.C. § 9601, *et seq.*; the Clean Water Act ("CWA"), 33 U.S.C. § 1251, *et seq.*; the Safe Drinking Water Act, 42 U.S.C. § 300, *et seq.*; the Clean Air Act ("CAA"), 42 U.S.C. § 7401, *et seq.*; the Hazardous Waste Control Law, California Health & Safety Code § 2025, *et seq.* and Health & Safety Code § 33349; the Carpenter-Presley-Tanner Hazardous Substance Account Act, California Health & Safety Code Div. 20, Ch. 6.8; the Hazardous Materials Release Response Plans and Inventory Act, California Health & Safety Code Div. 20, Ch. 6.95; the Underground Storage of Hazardous Substances Act, California Health & Safety Code Div. 20, Ch. 6.7; the Porter-Cologne Act, California Water

Code § 13050, *et seq.*; and in any permits, licenses, approvals, plans, rules, regulations, or ordinances adopted, or other criteria and guidelines promulgated pursuant to, the preceding laws (collectively, the “Environmental Laws”); and

(b) Any other substances, constituents or wastes subject to any applicable federal, state or local law, regulation or ordinance, including any Environmental Law now in effect, including but not limited to petroleum, refined petroleum products, waste oil, waste aviation or motor vehicle fuel, asbestos, lead in water, paint or elsewhere, radon, polychlorinated biphenyls (PCBs), and ureaformaldehyde.

Lessee shall defend, indemnify, and hold District harmless for any release of any Hazardous Materials on the Premises caused by or arising from Lessee’s possession of the Premises, or any of its activities undertaken thereunder except cause by the negligence or willful misconduct of District or any breach of District’s warranties. Such indemnification shall include promptly paying any and all costs for site characterization, remediation, and any and all judgments for damages to persons or property, including any penalties, regulatory fines, or any other liabilities which may arise out of the Hazardous Materials released.

6.4. Maintenance and Perimeter Controls. Lessee shall, to the satisfaction of the District, keep and maintain the Premises and all improvements of any kind thereon in a state of good repair, clean, safe, and in compliance with all regulatory standards, laws, ordinances, statutes, and regulations applicable thereto, and any licenses or permits in connection therewith. Lessee shall maintain, and repair, fencing around the exterior boundaries of any active excavation on the Premises, so as to prevent purposeful or accidental intrusion by unauthorized persons or parties; provided, however, Lessee shall not be responsible or liable for maintenance, repair, or fencing around any portion of the Premises devoted to District’s water spreading facilities on which no active excavation occurs. District shall be given keys, combinations, or other means of access through any such gates that may be connected or maintained pursuant to this requirement. Lessee and District shall each indemnify the other for any claims, liabilities, losses, or damages to persons or property caused by the indemnifying party’s negligence or willful misconduct regarding such perimeter controls.

6.5. Mining Controls. In addition to complying with the conditions of any mining permit or other governmental approval relating to its mining activities, Lessee shall conduct its mining activities on the Premises subject to the following conditions and limitations:

(a) Timing. Lessee will notify the District in writing regarding which specific areas of the Lease Property will be mined, and at what times. Such notice shall be for the purpose of permitting the District to utilize portions of the Premises which are not actively being mined by Lessee, for water spreading activities or other activities which do not unreasonably inhibit or interfere with Lessee’s proposed mining activity, which right is specifically granted to and reserved by the District. District and Lessee agree to reasonably coordinate their respective activities to minimize any interference with both groundwater recharge activities and mining activities.

(b) Mining Within Acceptable Distance to Groundwater.

(i) For all mining areas, Lessee shall establish, at its own cost, groundwater monitoring wells, at such times, and in such locations and numbers, as may be reasonably required by District to determine groundwater levels in the vicinity of active mining areas. Such wells shall be established in numbers and at locations sufficient to provide information regarding groundwater levels throughout the full extent of Lessee's active mining operations. District shall at all times have access to such wells, and may utilize such wells at any time to monitor or characterize groundwater levels; provided, however, District shall promptly replace or repair any damage caused by the District to the monitoring wells. Lessee does not warrant or confirm the accuracy of the monitoring wells and the District assumes all risk in utilizing the information obtained from the monitoring wells. District shall operate and maintain such wells, provided that Lessee shall not conduct any operations on the Premises which could damage or destroy such monitoring wells. Lessee shall promptly repair or replace any wells damaged by Lessee's mining or other activities, at Lessee's cost.

(ii) In the event groundwater levels in or around Lessee's mining operations rise to a point that is within twenty feet (20') of any active excavation, all such operations shall thereupon immediately be halted by Lessee, until such time as the groundwater table level drops to a point more than twenty feet (20') below the level of any active mining operations. Lessee shall be released from any payment obligations which accrue during any period in which Lessee is required to halt excavation activities under this subsection (ii). In addition, Lessee's Guaranteed Annual Royalty shall be reduced proportionally based on the number of days Lessee is required to cease excavation activities.

(iii) In the event of any unplanned cessation of mining activity by Lessee because of groundwater levels, District shall use its best efforts to redirect surface water recharge to areas which will not exacerbate high groundwater conditions in areas of active mining operations, and shall continue to do so until 1) the high groundwater conditions have abated, and mining activities can resume within the necessary twenty foot (20') separation between mining activities and groundwater levels in the affected area of active mining operations, or 2) it appears that District's operations are not affecting groundwater levels in the affected area of active mining operations, or 3) District has no reasonable alternative to spreading water in or around the areas of active mining operations.

(c) Depths. The Premises shall be mined in phased depths, as follows:

(i) In the initial phase, all of the Premises may be mined to a maximum depth of seventy-five feet (75').

(ii) In the second phase, all of the Premises may be mined to an additional depth of twenty-five feet (25'), provided:

(a) No more than fifteen percent (15%) of reserves are available to Lessee in the Premises above the Phase I depth limit of seventy-five feet (75') (excluding any reserves that are located at the Orange Street Plant Site which), lands are being utilized for processing, shipping, and storage of Materials; and

(b) Groundwater monitoring well information indicates such additional twenty-five foot depth can be achieved without posing an unreasonable risk of contamination, evaporation, or other risk, to groundwater.

(iii) The third phase will permit mining of the Lease Property to an additional depth of twenty feet (20'), provided:

(a) No more than fifteen percent (15%) of reserves are available to Lessee in the Premises above the Phase II depth limit of one hundred feet (100') (excluding any reserves that are located at the Orange Street Plant Site), which lands are being utilized for processing, shipping, and storage of Materials; and

(b) Groundwater monitoring wells indicate such additional depth can be achieved without posing an unreasonable risk of contamination, evaporation, or other risk, to groundwater.

(d) Side Slopes. For all portions of the Premises which are located in Section 12, mining shall be conducted in such manner that the ultimate side slope excavations and pit bottoms are never at any time steeper than 3:1 as measured from permitted setbacks. For those portions of the Premises located in Section 9, 10, and 11, side slopes shall be no steeper than 2:1 except existing slopes mined prior to the Effective Date left a finished slope steeper than 2:1, and the parties agree that Lessee has no obligation to correct those slopes. The ultimate side slopes, except at the Northwest corner of the Redlands Aggregate North parcel (south ½ of the northeast ¼ of Section 11, T1S, R3w, SBBM), and except where such side slopes were already in their final configuration as of the Effective Date of the July 10, 1997 Lease Amendment, shall be maintained in their natural condition, not reconstructed or recompacted.

6.6. Silt Deposits. District agrees that Lessee may deposit silt or impermeable fines within the Premises, only as follows:

(a) Alabama Pit No. 2 may be filled to its full capacity.

(b) The existing silt located along the north edge of the Johnson South Parcel and the existing silt pond on the Johnson North Parcel (consisting of the 80 acre parcel located in the South one-half of the Northwest one-quarter of

Section 11, T1S, R3W, SBBM), as shown and delineated in Exhibit "C" hereto, may remain, and effective on the Effective Date District waives any demand or claim for removal of silts deposited in such area by Lessee. District's waiver is of District's right, if any, to demand removal of such silts under its contractual rights as Lessor, and District makes no further representation or warranty regarding Lessee's ability to maintain any silts already deposited or whether such deposits comply with any applicable laws, statutes, regulations, or permit conditions of any kind. In addition, Lessee may use the Johnson North Parcel (but no portion of the Johnson South Parcel) for future deposit of silts or impermeable fines. Lessee shall not conduct any mining activity on the Premises north of the existing Johnson North parcel silt pond, except as may ultimately be allowed under the Wash Plan. The existing silt pond on the Johnson North Parcel (consisting of the 80 acre parcel located in the South one-half of the Northwest one-quarter of Section 11, T1S, R3W, SBBM), may remain. In addition, Lessee may use this area for future deposit of silts or impermeable fines. Lessee shall not conduct any mining activity on the Premises north of the existing Johnson North parcel silt pond.

(c) For both the Alabama Pit No. 2 and the Johnson North Parcel silt ponds, Lessee shall reclaim the areas by grading the top level of such silts or impermeable Materials according to the reasonable specifications of District, and by backfilling with non-silt, pervious earth Material of at least ten feet (10') of depth, and construct shallow water percolation basins and dikes thereon above the ten feet of pervious Material, all to the reasonable specifications of the District, so as to make the reclaimed land usable for spreading water in shallow surface ponds. Lessee shall not be responsible for payment of royalty for any Material excavated exclusively for such purposes.

(d) All pit bottoms shall be scarified to a depth of two feet (2'), as part of Lessee's reclamation activities, prior to quitting any mining site.

6.7. Lessee Production of Water. In addition to the groundwater monitoring wells provided for in Section 6.5 (2) (i), Lessee may sink such groundwater wells, or otherwise produce water from the Premises, as may be reasonably required in the quarrying, processing, and transportation of Material excavated and sold or removed from the Premises. Any wells established by Lessee on the Premises shall be considered improvements, and shall be subject to the requirements of Section 2.1 above. Lessee shall, in addition to any and all other payments due under this Lease, pay any groundwater charges associated with production of groundwater from the Premises, at then-applicable rates, and shall pay any and all other permitting or other charges required to establish and operate such wells. In connection with such wells, Lessee shall, upon reasonable request by the District, provide such information regarding groundwater levels, or water quality, produced from such wells, as Lessee otherwise does or is required to produce as a well operator, at no additional charge to District

## 7.0 District's Reservations.

7.1. District's Reservation for Water Conservation Activities. District reserves the right, from time to time and as it deems necessary in the exercise of its reasonable discretion, to utilize all or any portion of the Premises for its water recharge, conservation, spreading, and other operations. In connection with the exercise of this reserved right, the Conservation District shall make every effort to harmonize its water conservation activities with the then-current and anticipated immediate future excavation and other activities of Lessee, with the goal that the mining activity and the water conservation activity can harmoniously exist, without interruption to either. In the exercise of these reserved conservation rights, District shall do all of the following:

(a) Provide Lessee no less than forty-eight (48) hours' notice of its need to utilize portions of any active excavation areas, or areas of active haul road or other transport of excavated Material to and from areas of excavation and the plant site or stockpiling sites utilized in connection with the same.

(b) District shall not take all then-permitted portions of the Premises, which at that time Lessee is or could actively mine, out of production.

(c) Except in circumstances of sudden threatening precipitation, threat of immediate flooding from dam releases or other causes, or other immediate danger to persons or property, District shall meet and confer with Lessee to determine the appropriate areas for the exercise of the District's reserved water spreading rights as they impact active areas of excavation or other Lessee activities, to harmonize the need for areas of spreading with the needs of portions of the Premises for the activities permitted or authorized by this lease.

7.2. No Liability. Notwithstanding the procedural restrictions above, District shall have no liability to Lessee for any interruptions to excavations, or any other activities Lessee may undertake on the Lease, from the exercise of its reserved water spreading rights except as otherwise provided herein.

7.3. Inspection and Monitoring. District shall have the right, at all times during the pendency of this Lease, and at its own expense, to have an inspector remain on the Premises, including any plant site, scales, or sales areas, to observe, monitor, and inspect all aspects of Lessee's operations, and to confirm the validity and accuracy of Lessee's record keeping with respect to excavation and sale and removal of Material, and Lessee's compliance with all other aspects of the Lease. Such inspector shall be required to have all reasonable safety clearances or certifications required to access such areas of the Premises as District desires to monitor, as may be required under federal, state, or local statute, ordinance, or regulation. In addition, the inspector shall comply with Lessee's reasonable operating procedures and regulations, and shall undertake its monitoring activities in such a way as not to unduly disrupt, delay, or interfere with Lessee's operations.

7.4. Periodic Inspections. Whether or not District exercises its right to have an inspector on the Premises, District may, at any time during the pendency of this Lease, and upon no less than twenty four (24) hours' notice, come on to the Premises to assure compliance with permit conditions, conditions of the Lease, or the proper counting of tonnages excavated or sold.

7.5. Confidentiality of Information. All information received by the District pursuant to any inspector it maintains on the Premises, or any of its periodic inspections, shall be used solely for the purpose of assuring compliance with the terms of the Lease, and shall be considered confidential to Lessee, and kept confidential by District to the full extent permitted by the law. In connection with the receipt of such information, both District and Lessee specifically intend that the information is considered to be protected under Government Code section 6254(e), and shall not constitute a public record.

7.6. Audit. District may, no more frequently than once every two (2) years, and at its own expense require a full audit of Lessee's books, records, receipts, accounts, and any or all other information pertinent to the payment of plant site rent, royalties, or guaranteed annual royalty hereunder, including tonnages of Material excavated, sold, or otherwise transferred from the Premises the Redlands Aggregates Site, or both. Lessee shall reasonably and promptly cooperate with any and all requests made by District in connection with such audit, and any and all information received by the District in connection with such audit shall be considered confidential, as provided in the immediately preceding Section. To the extent the audit reveals any discrepancies between the amounts of plant site rent, royalty, or guaranteed annual royalties due, or any claimed offsets for Wash Plan processing costs or other items that may be agreed to between the parties as a legitimate offset to any amounts otherwise owing under the Lease, the party from whom either payment or refund is owing shall promptly pay the amount indicated by the audit. In the event of any disagreement as to the accuracy or results of the audit, the matter shall be submitted to binding arbitration, as provided for herein.

8.0 Binding Arbitration. In the event of any dispute arising under this Lease, including but not limited to disputes with respect to tonnages of Material excavated or sold or otherwise removed from the site, amounts of plant site rent, per-ton royalty, or guaranteed annual royalty, advanced costs for Wash Plan processing, or other amounts claimed due from one party to the other under this Lease, the determination of Fair Market Royalty, or any other controversy or dispute arising under this Lease, the matter shall be submitted to binding arbitration. To the extent not otherwise provided herein, any party wishing to submit any disagreement or alleged breach or noncompliance with any of the covenants or other provisions of this Lease shall first make demand upon the other party, in writing, specifying the issue, the amounts claimed due if known, and the steps it requires of the other party to resolve the dispute. Following such written notice, the parties shall, unless a different time period is specifically provided for otherwise herein, meet and confer in an attempt to resolve the dispute for a period of fourteen (14) days thereafter. In the event parties are unable to come to resolution, either party may demand that the matter may be submitted to binding arbitration. If such a demand is made, both parties shall, within five (5) business days of the receipt of the written demand to submit to arbitration, submit to the other a list of three (3) proposed arbitrators. Following exchange of such lists, the parties shall attempt to mutually select a single arbitrator to arbitrate the dispute. In the event the parties are unable to do so, each of the parties shall strike two arbitrators from the list of the other party, and the two remaining listed arbitrators shall thereupon decide upon a third arbitrator, who shall be someone other than the three originally listed by either party. Arbitrations regarding Fair Market Royalty shall proceed as provided for in Section 4.3 above. Arbitrations on all other subjects shall proceed according to such rules as the parties may reasonably agree to, and in the absence of their ability to agree, upon such rules as may be imposed by the single selected arbitrator. The decision of the arbitrator shall be final and binding, with each party waiving any

right to jury or other judicial determination of the dispute, except that the award may be corrected, or vacated, as provided by Code of Civil Procedure sections 1280 et seq. Notwithstanding Code of Civil Procedure section 1286.4 and 1286.8, the award may also be vacated or corrected if it is clearly contrary to law. Each party shall initially bear its own costs and fees in connection with the prosecution and hearing of the arbitration, and shall pay one-half (1/2) of the costs of the arbitrator. The advanced share of the arbitrator's costs and expenses, and attorneys' fees, expert witness fees, and the fees of any audit shall be considered as recoverable costs of the arbitration, and the reasonable costs thereof shall be recoverable by the prevailing party, in addition to any other relief that might be awarded.

9.0 Insurance. Lessee shall maintain, and keep in effect, all of the following policies of insurance at all times it occupies the Premises:

9.1. Workers' Compensation Insurance. By signature hereunder, Lessee certifies that Lessee is aware of the provisions of Section 3700 of the Labor Code, which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and Lessee will comply with such provisions before commencing the performance or the work of this Agreement.

9.2. Workers' Compensation and Employer's Liability Insurance. Lessee, its agents, and its sub-contractors shall cover or insure under the applicable laws relating to workers' compensation insurance, all of their employees employed directly by them or through subcontractors in carrying out the work contemplated under this Agreement, all in accordance with the Workers' Compensation and Insurance Act, Division IV of the Labor Code of the State of California and any Acts amendatory thereof. Lessee shall provide employer's liability insurance in the amount of, at least, \$1,000,000 per accident for bodily injury and disease.

9.3. Liability Insurance. Lessee shall provide and maintain at all times during the performance of this Agreement, the following commercial general liability insurance:

(a) Coverage. Coverage shall be at least as broad as the following:

(1) Commercial General Liability. Commercial General Liability coverage (Occurrence Form CG 0001) in the amount of two million dollars (\$2,000,000) per occurrence for bodily injury, personal injury, and property damage. If Commercial General Liability Insurance or other form with a general aggregate limit is used, either the general aggregate limit shall apply separately to the project/location (with the ISO CG 2501 or insurer's equivalent endorsement provided to the District) or the general aggregate limit shall be twice the required occurrence limit.

(2) Required Provisions. All policies specified hereunder shall state or be endorsed to state that coverage shall not be canceled by either party, except after thirty (30) days (10 days for nonpayment of premium) prior written notice by U.S. mail has been given to the District.

(3) Required Format. All of the liability insurance shall be provided on policy forms satisfactory to the District. All insurance

correspondence, notations, certificates, or other documents from the insurance carrier or agent/broker shall each separately reference the District project number.

(4) Deductibles and Self-Insured Retention. Any deductible or self-insurance retention must be declared to and approved by the District. At the option of the District, the insurer shall reduce or eliminate such deductibles or self-insured retention.

(5) Acceptability of Insurers. Insurance is to be placed with insurers having a current A.M. Best's rating of no less than A-VII or equivalent or as otherwise approved by the District.

(6) Evidences and Cancellation of Insurance. Prior to execution of this Agreement, Lessee shall file with the District evidence of insurance satisfactory to the District. The insurer will give by U.S. mail written notice to the District at least thirty (30) days prior to the effective date of any cancellation, except for nonpayment of premium for which ten (10) days prior written notice will be given. Lessee shall, upon demand of the District, deliver to the District all such policy or policies of insurance and the receipts for payment of premiums thereon.

9.4. Subcontractors. In the event that Lessee employs other contractors as part of the services covered by this Agreement, it shall be the Lessee's responsibility to confirm that each subcontractor meets the minimum insurance requirements specified above.

#### 10.0 Default or Termination.

10.1. Default by Lessee. Each and every covenant and agreement contained in this Lease is declared to be a condition to the Lease, and to the rights hereby granted to Lessee. Lessee shall be considered to have materially breached this Lease, giving the District the remedies set forth in Section 10.2 below, in the event that any one or more of the following occur:

(a) Lessee fails or refused to pay to the District any royalties or other rentals due hereunder when due, and such royalty or rent remains unpaid for thirty (30) days after written notice by the District to Lessee; or

(b) Lessee defaults in the performance of or breaches any covenant, condition, or provision contained in this requirement other than set forth in Section 10.1 (a) hereinabove, and such default or breach is not cured within thirty (30) days after written notice thereof is served by the District on Lessee, or if such cure is physically impossible to cure within thirty (30) days, Lessee has begun and diligently prosecuted such cure.

(c) Lessee becomes insolvent. For the purposes of this Lease, Lessee shall be conclusively presumed to have become insolvent if (i) a receiver is appointed to take possession of all or substantially all of Lessee's property

because of insolvency; or (ii) Lessee makes a general assignment for the benefit of creditors; or (iii) Lessee allows any judgment against Lessee to remain unsatisfied or unbonded for a period of thirty (30) days or longer; or (iv) an attachment or execution is levied upon or against any or all of Lessee's right, title, or interests in or under this Lease, and the same shall not have been released within thirty (30) days from the date thereof; or (v) proceedings or receivership in bankruptcy have been instituted against Lessee; or (vi) Lessee is adjudicated bankrupt.

(d) Any disagreement between the parties as to whether a default has occurred shall be decided by binding arbitration, as provided for herein.

10.2. Remedies on Lessee's Default. Should Lessee breach this Lease, the District may, in addition to any other remedy given the District by law or in equity:

(a) Continue this Lease in effect by not terminating Lessee's right to possession of the Premises, in which event District shall be entitled to enforce all of the District's rights and remedies under this Lease, including the right to recover the royalties and other rental payments specified herein, as such royalties and payments become due under this Lease; or

(b) Terminate this Lease and Lessee's right to possession of the Premises;

(c) In the event Lessee becomes insolvent, the District may, by giving thirty (30) days' written notice to Lessee or to the person appointed to manage Lessee's affairs at the address for such person appearing in the official records of the court that appointed such person, terminate this Lease and forfeit Lessee's rights under the Premises and in any Improvements or facilities on or appurtenant to the Premises.

The remedies herein shall not be exclusive, but shall be cumulative and in addition to any and all of the remedies now or hereafter allowed by law or otherwise authorized in this Lease, and the exercise of one or more of said rights, powers, elections, or remedies shall not impair the District's right to exercise any other right, power, election, or remedy.

10.3. Lessee's Right of Termination. Lessee may terminate this Lease, with or without cause, at any time after the first anniversary of the Commencement Date, by providing District no less than one hundred and eighty (180) days' written notice. Upon giving such notice, and until the one hundred eighty day period passes, the Lease shall remain in effect, and Lessee shall fulfill all obligations of Lessee hereunder which accrues during the one hundred eighty (180) days, including the payment of Orange Street Plant Site rent, guaranteed annual royalty and any per-ton royalty amounts.

10.4. Surrender of Possession. At the expiration or termination of this Lease, for whatever reason, Lessee shall execute, acknowledge, and deliver to the District a Quitclaim Deed conveying all right, title, and interest of the Lessee to the Premises, both land and improvements. Thereafter, Lessee shall promptly, but in any event no later than six (6) months

following the expiration or earlier termination of the Lease, remove all Improvements (unless the requirements for such removal has been waived in writing by District), portable buildings, equipment, and personal property placed on the Premises by Lessee, and clear the Premises of all debris, and otherwise surrender to the District the Premises in good order and clean condition.

10.5. Quiet Enjoyment. District represents, covenants and warrants that Lessee, upon paying the rent and performing the covenants herein provided, shall peacefully and quietly have, hold and enjoy the Premises, subject to District's reserved rights hereunder.

11.0 Encumbrance, Assignment, and Subletting.

11.1. Hypothecation.

(a) Lessee shall have the right at any time, from time to time, and subject to prior written approval of the District (except to the extent any Improvements are subject to an encumbrance prior to the execution of this Lease), to subject the leasehold estate and any or all Improvements placed or to be placed on the Premises to one or more deeds of trust or other security instruments (collectively "Leasehold Deed of Trust" herein) as security for a loan or loans or other obligation of Lessee, provided that:

(i) The Leasehold Deed of Trust and all rights acquired under it shall be subject and subordinate to each and all of the covenants, conditions, and restrictions stated in this Lease, and to all rights and interest of the District except as otherwise provided herein, and

(ii) Lessee shall give District prior notice of any such Leasehold Deed of Trust, and shall accompany the notice with a true copy of the note and deed of trust.

11.2. Assignment and Sublease; Transfer Restrictions. Lessee may assign or sublease all or a portion of its interest hereunder to any other entity, but only with the prior written permission of the District. For the purposes of this Lease, an "assignment" shall include a transfer to any person or group of persons acting in concert, of more than twenty-five percent (25%) of the present ownership and/or control of Lessee in the aggregate, taking all transfers into account on a cumulative basis, except transfers of such ownership or control interest between members of the same immediate family, or transfer to a trust, testamentary or otherwise, in which the beneficiaries are limited to members of the transferor's immediate family. In the event Lessee or its successor is a corporation or trust, such transfer shall refer to the transfer of the issued and outstanding capital stock of Lessee, or of the beneficial interests of such trust; in the event that Lessee or its successor is a limited or general partnership, such transfer shall refer to the transfer of more than twenty-five percent (25%) of the limited or general partnership interest; in the event that Lessee or its successor is a joint venture, such transfer shall refer to the transfer of more than twenty-five percent (25%) of the ownership and/or successor control of any such joint venture partner, taking all transfers into account on a cumulative basis.

11.3. Licenses. Lessee shall have the right to grant licenses for ingress and egress to the Premises in connection with any assignment or sublease, provided such licenses are

made specifically subject to the covenants contained in this Lease, and do not extend beyond the term of this Lease. Upon any assignment, the assigning Lessee shall have no further obligation or liability under this Lease with respect to the portion assigned, except for such obligations that arose from the period of such assigning Lessee's occupancy of the Premises, and the new Lessee shall agree in writing to be bound by all terms and conditions hereof.

12.0 Transfer Premises. The parties agree to cooperate reasonably in defining the Transfer Premises, either before or upon the final approval of the Wash Plan, if the Wash Plan becomes effectuated. The Transfer of Premises shall be identified by way of appropriate legal description and plat maps, and shall be incorporated as Premises to which this Lease applies by way of a written amendment to this Lease. The Transfer of Premises shall not be replaced for any portion of the Premises without the mutual agreement of District and Lessee.

13.0 Condemnation. If during the term of this Lease, all or any portion of the Premises is acquired for public use by the use of eminent domain, or transfer under threat of eminent domain, the following shall apply:

(a) District shall be entitled to all compensation awarded for the taking of the Premises, including any leasehold bonus value, except that Lessee shall be entitled to any portion of the award representing the value of its leasehold improvements (less any reversionary value allocable to District upon the scheduled end of the lease term), moveable equipment, inventory, moving expenses or relocation benefits, any award for loss of Lessee's business goodwill, and any separately-assessed attorneys fees or costs which are awarded solely to Lessee.

(b) If the entire Premises are taken pursuant to any condemnation proceeding, or acquisition under threat of condemnation, the Lease shall terminate in its entirety, effective on the date the acquiring entity takes actual possession of the Premises. If only a part of the Premises is taken pursuant to any condemnation proceeding, or acquisition under threat of condemnation, and the part taken is so essential that the remainder Premises subject to the Lease is no longer suitable for the purposes of the Lease, Lessee shall have the option to terminate this Lease. Such option shall be exercised in writing, no later than: (1) thirty (30) days after the filing of any complaint in eminent domain and service of same upon Lessee; or (2) within thirty (30) days of Lessee being notified, by District or any other party, of the acquiring entity's intent to acquire by eminent domain, accompanied by a legal description or other detailed indication of the specific area and property interests the acquiring entity proposes to take, whichever of the two occurs earlier. Any dispute between the District and Lessee as to whether a part taking taken is so essential that the remainder Premises subject to the Lease is no longer suitable for the purposes of the Lease shall be submitted to binding arbitration as provided herein if no condemnation action is then pending, and if such an action is pending, by the court hearing and determining such action.

(c) If only a part of the Premises is taken pursuant to a condemnation proceeding or acquisition under threat of condemnation, and there is either (1) no such material impairment of Lessee's use of the remaining portion of the Premises, or (2) Lessee otherwise elects not to terminate this Lease as provided in this Section, then the Lease shall terminate only as to the portion taken, effective on the date the acquiring entity takes actual possession of the portion taken, and the Lease shall continue in full force and effect as to the remaining portion of the Premises.

(d) If any portion of the plant site is taken as part of a partial taking, the plant site rent shall be reduced, in a percentage equal to the percentage the land taken area from the plant site bears to the total area of the plant site before the taking, such reduction to be effective on the date the Lease terminates as to the portion of the plant site taken. There shall be no reduction to the guaranteed annual royalty or the per-tonnage royalty, however.

14.0 Assignment and Transfer. The qualifications and identity of Lessee are of particular concern to District. It is because of those qualifications and identity that District has entered into this Agreement with Lessee. Accordingly, except as expressly set forth herein, Lessee shall not, whether voluntarily, involuntarily or by operation of law, assign, transfer or convey all or any part of this Agreement or any rights hereunder or in this Lease or the Premises without District's prior written approval, which shall not be unreasonably withheld, delayed or conditioned on items not related to the prospective assignee's financial ability to perform Lessee's requirements and obligations under this Lease, or the prospective assignee's ability to comply with the terms, conditions, or requirements of any applicable permit, entitlement, development condition, or provision of law governing the mining activities to be carried out on the premises under this Lease. Notwithstanding the foregoing, Lessee may assign its interest in this Lease to (a) an entity whose majority interest is owned or controlled by Lessee; or (b) a limited partnership or limited liability company whose general partner or managing member is Lessee. The term "control," as used in the immediately preceding sentence, means, with respect to a person that is a corporation, the right to exercise, directly or indirectly, at least 50% of the voting rights attributable to the shares of the controlled corporation, and, with respect to a person that is not a corporation, the possession, directly or indirectly, of the power to direct or cause the direction of the management or policies of the controlled person

If District approves the assignment, the approval shall be subject to the satisfaction of the following conditions ("**Transfer Conditions**"):

(a) All of the obligations of this Lease shall have been assumed by the transferee pursuant to a written assignment and assumption agreement(s) in a form reasonably approved by District's legal counsel.

(b) The organizational documents of the transferee and a good standing certificate of the transferee shall have been submitted to District.

(c) There shall be no default of Lessee of this Agreement and no event has occurred that would constitute a default with the giving of notice or the passage of time.

15.0 Miscellaneous Provisions.

15.1. Notices. As expressly provided to the contrary herein, any notice, consent, report, demand document, or other such item to be given, delivered, furnished, or received hereunder, shall be deemed given, delivered, furnished, or received when given in writing and personally delivered to an authorized agent of the applicable party, or upon delivery by United States Postal Service, first class registered or certified mail, postage prepaid, return receipt requested, or by national "overnight courier," such as Federal Express, at the time of delivery shown upon receipt, and in any case, delivered to the address, addresses, and persons as each party may from time to time, by written notice designate to the other, and who initially are:

If to District: San Bernardino Valley Water Conservation District

15.2. Interpretation. The terms of this Lease shall be construed in accordance with the meaning of the language used, and shall not be construed for or against either party by reason of authorship. This lease contains the full agreement of the parties with respect to the subject matter contained herein, and supersedes all prior leases, negotiations, agreements, and/or representations, whether oral or written. Specifically, this Lease supersedes the "Lease Agreement" dated September 10, 1979, between the District and C. L. Pharris Sand and Gravel, Inc., the "Lease Amendment" dated July 10, 1997 between the District and C. L. Pharris Sand

and Gravel, Inc., dba Sunwest Materials, and any other prior lease agreements between the parties with respect to any portion of the Premises. All such prior lease agreements are superseded and replaced by this Lease Agreement, including any options, rights of first refusal, or other rights that may arise thereunder, all of which are of no force or effect. This Lease constitutes the entire lease agreement between District and Lessee.

15.3. Amendment. This Lease may be amended at any time by mutual agreement of the parties, by an instrument in writing, signed by both parties, and referencing that it is an amendment to this Lease.

15.4. Corporate Authority. The persons executing this Lease on behalf of the parties hereto warrant that (i) the party on whose behalf the signature appears is duly organized and existing; (ii) such party is authorized to execute and deliver this Lease on behalf of such party; (iii) by so executing this Lease, such party is bound to the provisions of this Lease; and (iv) by entering into this Lease, such party does not violate any provision to any other agreement to which said party is bound. .

15.5. Binding on Successors. Subject to the transfer restrictions stated elsewhere in this Lease, this Lease shall be binding upon each party's respective successors and assigns.

15.6. Time is of the Essence. Time is of the essence in this Lease. Failure to comply with any requirement, including but not limited to any time requirement of this Lease shall constitute a material breach of the Lease.

15.7. Severability. The invalidity or illegality of any provision of this Lease shall not affect the remainder of the Lease. The parties hereby declare that it is their intent that, in the event one or more portions of the Lease is declared invalid or unenforceable, they intend that the remainder of the Lease continue to bind both parties, unless the severed remainder is so essential to the terms of this Lease that additional performance of the Lease is impossible or so uncertain as to render meaningful performance impossible or unrealistic.

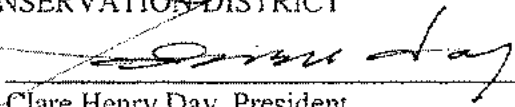

15.8. Force Majeure. The time limits provided herein for performance of any actions required hereunder shall be extended during any time, but only during such time, as a party is unable to perform obligations to war, insurrection, strikes, lock-outs, riots, floods, earthquakes, fires, casualties, acts of the public enemy, epidemics, quarantine restrictions, freight embargoes, inaccessibility of transportation or critical infrastructure, governmental restrictions or priority litigation, acts of God, or other similar causes beyond the control of, and without the fault of, the party charged to perform. The party to perform shall continue to exercise reasonable diligence to minimize the period of delay during any period of force majeure. An extension of time for any such cause shall be limited to the period of the delay, and shall commence to run from the time of the commencement of the force majeure, provided notice by the party be to perform claiming such extension is sent to the other party within ten (10) days of the commencement of the cause.

15.9. Attorneys' Fees. In the event of any suit to enforce any provision of this Lease, or to prevent or to correct any breach of this agreement, the prevailing party in such

action or proceeding, in addition to any other relief which may be granted, legal or equitable, shall be entitled to reasonable attorneys' fees. As used herein, "attorneys' fees" shall include costs for legal services, and all other reasonable costs for investigating the action, including the taking of depositions and discovery, and any other recoverable costs. All such fees shall be deemed accrued on the commencement of such action, and shall be enforceable whether or not such action is prosecuted to final judgment. The court in any such action shall be requested to name a prevailing party.

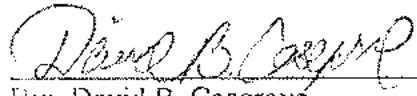

15.10. Counterparts. This Lease may be executed in two or more counterparts, each of which shall be an original, but all of which shall constitute one and the same instrument.

## AGREEMENT

This Agreement is made on this 14 day of August, 2003, by and between San Bernardino Valley Water Conservation District ("District") and Robertson's Ready Mix, Ltd., ("Robertson's"), together "Parties" or individually, "Party".

## RECITALS

A. District is a California water conservation district duly formed and operating under Sections 74000, et seq., of the California Water Code, and operating as a water conservation district, having as a purpose the recharge of ground water supply and maintenance of groundwater basins underlying its jurisdiction area.

B. Robertson's is a California limited partnership, duly formed and organized pursuant to the laws of the State of California, with its principal place of business in Corona, California. Robertson's engages in the business of excavating, processing, and selling rock, sand, gravel and other like substances ("Aggregates").

C. On or about October 5, 1992, the Parties entered into a Lease Agreement for Mineral Extractions ("Cone Camp Lease") pursuant to which Robertson's, on the satisfaction of certain conditions, would have the right to extract Aggregates from that property defined as the "Premises" in the Cone Camp Lease, and commonly referred to as "Cone Camp Quarry." A copy of the Cone Camp Lease is appended hereto, denoted Exhibit "A".

D. Some time in or about 1993, the Parties, together with other entities interested in mining, flood control, resource management and conservation, and municipalities, formed the Santa Ana River Wash Area Coordinated Planning Activities Committee ("Wash Committee") to address land use issues related to the Upper Santa Ana River Wash ("Wash").

E. The Wash Committee examined the most appropriate manner in which to use the Wash for the benefit of all landowners without regard to the existing interests in real property situated in the Wash. The Wash Committee determined that there should be a balance of land uses to accommodate the varied and competing concerns. The Wash Committee further determined that in order to achieve land use balance, the existing and potential uses must be reallocated among specific portions of the Wash.

F. Deliberations of the Wash Committee resulted in the drafting, circulation, and approval of a "Proposed Land Management and Habitat Conservation Plan for the Upper Santa Ana River Wash" ("Concept Plan"), which sets out concepts for realignment of mining, water conservation, recreation, habitat preservation, and other uses in the Santa Ana River Wash and was conceptually endorsed by all members of the Wash Committee, including the Parties. A copy of the Concept Plan as presently conceived is attached as Exhibit "B." This Concept Plan is subject to revision as the parties impacted continue to refine and negotiate its parameters. Implementation of the Concept Plan, as it may evolve over time, will require the formation of a Task Force, of which the Parties shall be members, to fund studies for environmental review of proposed mining, transfer of various property ownerships and lease interests, habitat conservation plans, recreational facilities, regional infrastructure, and water supply and conservation activities, and to implement such activities. A Task Force Agreement has been

prepared and circulated among applicable Wash Committee members, including the Parties, to guide and fund implementation of the Concept Plan. It has been reviewed and approved by the Parties, in the form attached hereto as Exhibit "C," and shall be executed by the Parties upon or prior to execution of this Agreement.

G. The Parties have found and determined that it is in their individual best interests to join together with other members of the Task Force to manage activities in connection with the planning, environmental review, and implementation of the Concept Plan (collectively the "Project").

H. The Cone Camp Lease requires that Robertson's "diligently and continuously take all actions necessary to obtain any and all licenses, permits, or other governmental entitlements.... required to accomplish the excavation purpose set out [therein]". There is currently pending before the city of Highland Robertson's application ("Cone Camp Application") for entitlements to mine Aggregates from the Cone Camp Quarry.

I. Robertson's has represented to the District that it has reached an agreement with Cemex Construction Materials, LP ("Cemex"), an entity engaged in business similar to that in which Robertson's is engaged, concerning the allocation, between Robertson's and Cemex, of the right to extract Aggregates from property which is contemplated for the excavation of Aggregates under the Concept Plan.

NOW, THEREFORE, IN CONSIDERATION OF THE MUTUAL COVENANTS CONTAINED HEREIN THE PARTIES AGREE AS FOLLOWS:

Section 1. Definitions.

In addition to capitalized terms defined elsewhere in this Agreement, the following terms shall be defined as follows:

1.1 "Effective Date" shall mean the date on which both Parties have executed the Task Force Agreement and this Agreement.

1.2 "Section," except as may be qualified to refer to the Cone Camp Lease, shall be deemed to be a reference to a portion of this Agreement.

1.3 "WPA" shall mean the Wash Planning Area, as that term is used and defined in the Concept Plan.

1.4 "Robertson's WPA Allocation" shall mean that portion of the WPA which is allocated, through written agreement between Robertson's and Cemex attached as Exhibit "D", to Robertson's for the mining of Aggregates. Robertson's agrees it must obtain approval from District for any substantial changes to this allocation prior to such changes being effective. Any change within the land acreage specifically dimensioned in Exhibit "D" as 1847' x 1303', that does not change the amount allocated to Robertson's for mining by more than 50% of the area of that dimensioned parcel, shall not constitute a substantial change; all other changes to the allocation agreement shall be considered substantial. The "Robertson's WPA Allocation" specifically excludes the real property located within the WPA and owned by Robertson's,

and/or its affiliate RRM Properties, Ltd., A California limited partnership, in fee as of the Effective Date.

1.5 “Premises Transfer Date” shall occur upon transfer of ownership of interest to the District of those portions of the WPA that fall within Robertson’s WPA Allocation, and which, as of the date of this Agreement, are owned by the United States, through the Bureau of Land Management.

1.6 “Concept Plan Termination Date” shall mean any date prior to the Premises Transfer Date upon which either Party’s participation in the Task Force Agreement shall have been finally terminated, as provided in Paragraph 23 of the Task Force Agreement, or upon dissolution of the Task Force pursuant to Paragraph 22 of the Task Force Agreement. Upon occurrence of the Premises Transfer Date, there shall be no Concept Plan Termination Date.

1.7 “Concept Plan Term” shall mean the period between the Effective Date and the occurrence of the earlier of the (1) Concept Plan Termination Date; or (2) Premises Transfer Date.

## Section 2. Obligations During Concept Plan Term.

2.1 Prosecution of Concept Plan. The Parties, and each of them, agree that for so long as the Concept Plan, as may be modified consistent with the provisions of Section 2.3, below, but otherwise in substantially the same form as set forth in the Task Force Agreement, is being diligently and in good faith pursued, they will not, prior to January 1, 2006, terminate their participation under the Task Force Agreement pursuant to Paragraph 23 of the Task Force Agreement. Notwithstanding the foregoing, in the event that prior to January 1, 2006, Robertson’s contribution to the total Task Force funding exceeds that required to be paid by CEMEX, or exceeds, by more than 0.25 percent of the total Task Force funding, that required to be paid by the District, Robertson’s shall be free to exercise its rights of termination under Paragraph 23 of the Task Force Agreement. . During the Concept Plan Term each of the Parties shall use their best efforts to achieve the Premises Transfer Date; provided, however, that neither Party shall be considered to be in breach of this provision unless a party who believes that a breach has occurred first provides to the other Party written notice informing the notified Party of the specific nature of the alleged breach of this provision, the reasons therefore, the actions the notifying Party alleges must be taken to cure the alleged breach and provides to the noticed Party either, (a) reasonable opportunity to cure the breach, or (b) in the event the breach is of the nature that a cure cannot be promptly effected, reasonable opportunity to prepare and prosecute a plan pursuant to which the breach will be cured, or (c) in the event the alleged breach is one that cannot be cured, a good faith effort to meet and confer regarding whether mutually satisfactory alternative arrangements can be made. In the event of any dispute regarding either Party’s alleged breach of this “best efforts” obligation, the matter shall be resolved through the binding arbitration mechanism set forth in Section 8.06 of the Cone Camp Lease.

2.2 Suspension of Robertson’s Duty to Obtain Permits. During the Concept Plan Term, Robertson’s obligations pursuant to paragraph 5.05 of the Cone Camp Lease, to diligently and continuously take all actions necessary to obtain any and all licenses, permits, or other governmental entitlements required to accomplish the excavation purpose set out in the Cone

Camp Lease, shall be suspended. Such suspension shall begin on the Effective Date and shall continue until the earlier occurrence of: A) the Premises Transfer Date or B) the Concept Plan Termination Date. Robertson's shall not pursue such licenses, permits, or other governmental entitlements for any excavation of any portion of the "Premises," as originally defined in the Cone Camp Lease, at any time during the Concept Plan Term.

2.3 District to Support Robertson's Attempt to Amend Concept Plan. Robertson's has advised District that during the Concept Plan Term, Robertson's will seek Task Force Approval to amend the present iteration of the Concept Plan, to expand the Concept Plan mining area to include additional property owned by Robertson's. District agrees that it will support Robertson's attempt to so amend the Concept Plan, provided it is consistent with District's water conservation and land management objectives.

2.4 Incorporation of Defined Terms into Cone Camp Lease. Beginning on the Effective Date hereof, the following terms, as they are defined herein, shall be deemed incorporated, as applicable, into the Cone Camp Lease: Premises Transfer Date, Concept Plan Term; Concept Plan Termination Date; Robertson's WPA Allocation; and Cone Camp Quarry.

### Section 3. Rights and Obligations on Premises Transfer Date

3.1 Transfer of Premises. The Premises shall, upon the Premises Transfer Date, immediately and automatically be deemed to mean and refer to the Robertson's WPA Allocation and the Cone Camp Lease shall no longer apply to the Cone Camp Quarry. Upon the Premises Transfer Date, the parties shall prepare, and may record, such documents as may be necessary or appropriate to reflect the proper legal descriptions or other identification of the transferred Premises, but the transfer of the Premises from the area originally defined in the Cone Camp Lease to the Robertson's WPA Allocation shall not be conditioned or dependent upon such documentation, but rather shall occur immediately upon occurrence of the Premises Transfer Date.

3.2 Revival of Robertson's Duty to Obtain Permits on Premises Transfer Date. Immediately upon the Premises Transfer Date, Robertson's obligations pursuant to Section 5.05 of the Cone Camp Lease, to diligently and continuously take all actions necessary to obtain any and all licenses, permits, or other governmental entitlements required to accomplish the excavation purpose set out in the Cone Camp Lease, shall revive, and shall apply to the Robertson's WPA Allocation, as provided in Section 3.1 of this agreement.

3.3 Commencement Date on Premises Transfer Date. Immediately upon occurrence of the Premises Transfer Date, Section 1.01 of the Cone Camp Lease shall be automatically amended to read as follows:

1.01 Commencement Date. The Commencement Date of the Lease Term shall be the date sixty (60) days after occurrence of the Premises Transfer Date.

In applying the foregoing provision it is the intention of the Parties that in the event that Premises Transfer Date does not occur by January 1, 2007, the Cone Camp Lease shall not be terminated, but shall survive, subject to modification triggered by the happening of either Premises Transfer Date or Concept Plan Termination Date.

Section 4. Rights and Obligations on Concept Plan Termination Date.

4.1 Revival of Robertson's Duty to Obtain Permits on Concept Plan Termination Date. Immediately upon the Concept Plan Termination Date, Robertson's obligations pursuant to Section 5.05 (A) of the Cone Camp Lease, to diligently and continuously take all actions necessary to obtain any and all licenses, permits, or other governmental entitlements required to accomplish the excavation purpose set out in the Cone Camp Lease, shall revive.

4.2 Commencement Date on Concept Plan Termination Date. Immediately upon occurrence of the Concept Plan Termination Date, Section 1.01 of the Cone Camp Lease shall be amended to read as follows:

1.01 Commencement Date. The Commencement Date of the Lease Term shall, at Robertson's election, either be (x) the date sixty (60) days after the Concept Plan Termination Date, or (y) January 1, 2003, provided, however, that in no event shall District be required to refund any portion of the Phase I Payment before the expiration of one (1) full year following the date Robertson's provides to District written notice of its election hereunder. Robertson's election shall be made in writing and delivered to District prior to the 60<sup>th</sup> day following Concept Plan Termination Date.

In applying the foregoing provision it is the intention of the Parties that in the event that Concept Plan Termination Date does not occur by January 1, 2007, the Cone Camp Lease shall not be terminated, but shall survive, subject to modification triggered by the happening of either Premises Transfer Date or Concept Plan Termination Date.

Section 5. Mancino Property. Effective immediately upon the Effective Date, the original Cone Camp Lease shall be amended to exclude from the definition of "Premises" therein, all of the property more specifically described in Exhibit "E" hereto (the "Mancino Property").

Section 6. Waiver. Each of the Parties herein fully waives its right to claim that any act, omission, or inaction of the other Party, prior to the Effective Date, constituted: (a) a breach of any of the provisions of the Cone Camp Lease, or any obligation arising thereunder or in connection therewith, or (b) any basis for reformation or rescission of all or any part of the Cone Camp Lease, for which any relief, legal or equitable, and specifically, but not by way of limitation, monetary damages, were or could have been available, either as affirmative relief, or as an offset against any other claim. This waiver extends to all claims or causes of action, whether presently known or unknown, and in connection with such waiver, both parties specifically waive any operation or applicability of California Civil Code section 1542, which provides:

"A general release does not extend to claims which the creditor does not know or suspect to exist in his favor at the time of executing the release, which if known by him must have materially affected his settlement with the debtor."

Each Party represents and warrants it has consulted with counsel regarding the nature and consequences of waiving the operation of Civil Code section 1542, and knowingly and willingly has decided to waive it.

Section 7. No Obligation on Robertson's to Transfer. Robertson's execution of this Agreement, its execution of the Task Fore Agreement, anything expressed or implied in either document, and/or its participation in advancing the Concept Plan, whether taken individually or collectively in any combination, shall not be construed or interpreted to require Robertson's to transfer, encumber or agree to any use restrictions being placed upon any real property Robertson's owns in fee on the Effective Date; or to cause any such real property be transferred, encumbered, or restricted as to use. Nothing in this Section 7 affects or relieves Robertson's obligation to transfer the Premises, as provided in section 3 above, however.

Section 8. Notices. All notices required to be provided hereunder, shall be in writing, and either served personally or sent by United States Mail. For these purposes, the addresses for the Parties are as follows:

<u>As to Robertson's Ready Mix, Ltd.</u>	<u>As to District</u>
President	General Manager
Robertson's Ready Mix, Ltd.	San Bernardino Valley Water
200 South Main Street	Conservation District
Suite 200	1630 West Redland Blvd., Suite A
Corona CA 92878	Redlands CA 92373

Notices shall be deemed delivered on the date of personal service or on the third day following deposit in the United States Mail. Any Party may change the address or person to whom notices are to be directed hereunder, by written notice to the other Party.

Section 9. Entire Agreement. This Agreement, in connection with the unaffected portions of the original Cone Camp Lease, contains the entire agreement of the Parties hereto with respect to the matters contained herein and supersedes all negotiations, prior discussions, and preliminary agreements or understandings, written or oral. No waiver or modification of this Agreement shall be binding unless consented to by the Parties in writing.

Section 10. Cooperation; Further Acts. The Parties agree to use reasonable care and diligence to perform their respective obligations under this Agreement. The Parties agree to act in good faith to execute all instruments, prepare all documents, and take all actions as may be reasonably necessary, appropriate or convenient to carry out the purposes of this Agreement.

Section 11. Governing Law. This Agreement shall be governed by and construed under the laws of the State of California.

Section 12. Attorneys' Fees. In an action or proceeding involving a dispute between the Parties arising out of this Agreement, including arbitration, the prevailing Party shall be entitled to receive from the other Party, reasonable attorneys' fees. The term "attorneys' fees" shall include reasonable costs for investigating the action, conducting discovery, cost of appeal, costs

and fees for expert witnesses, and all other normally allowable costs incurred in such litigation, whether or not such litigation is prosecuted to final judgment.

Section 13. No Third Party Beneficiaries. There are no intended third party beneficiaries of any right or obligation assumed by the Parties.

Section 14. Construction: Captions. The language of this Agreement shall be construed according to its fair meaning, and not for or against any Party hereto based on authorship. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

Section 15. Severability. Each provision of this Agreement shall be severable from the whole. If any provision of this Agreement shall be found contrary to law, it is the intention of the Parties that the remainder of this Agreement shall continue in full force and effect.

Section 16. Incorporation of Recitals. The Recitals are incorporated herein and made an operative part of this Agreement.

Section 17. Authority to Enter into Agreement. The Parties warrant they have all requisite power and authority to execute and perform this Agreement. Each person executing this Agreement on behalf of their party warrants that he or she has the legal power, right, and authority to make this Agreement and bind his or her respective Party, and that in so doing, such Party is not thereby in breach of any other contract or agreement.

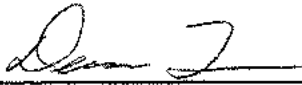

Section 18. Counterparts. This Agreement may be signed in counterparts, each of which shall constitute an original.

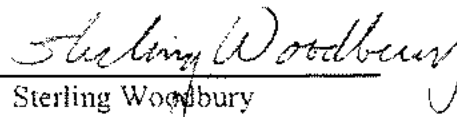

Section 19. Assignment. Neither Party shall assign its rights or delegate its responsibilities hereunder without the express written consent of the other Party, which consent shall not be unreasonably withheld. This Agreement, including the rights of first refusal and options granted hereunder, shall be binding on all successors and is intended to and shall run with the land.

Section 20. Recordation. Within fifteen (15) days of the Effective Date, the Parties shall have this Agreement recorded with the County Recorder for the County of San Bernardino, State of California.

## SWRCB Annual Water Rights Report

### Annotation to Accompany Filings by SBVWCD and SBVMWD/WMWD

During 2010, the San Bernardino Valley Water Conservation District (SBVWCD) and San Bernardino Valley Municipal Water District (SBVMWD)/Western Municipal Water District (WMWD) diverted water at the Cuttle Weir to replenish the groundwater basin. Each agency's season of diversion, total quantity of diversion and water rights are listed in the following table.

Agency	Season of Diversion	Total Quantity of Water Diverted	Water Right
SBVWCD	1/1/10 to 5/31/10	5,671 af	License No. 2831
SBVMWD/WMWD	6/29/10 to 12/31/10*	14,934 af	Permit No. 21264
SBVWCD	10/1/10 to 12/31/10	307 af	License No. 2832

\* The State Water Resources Control Board issued Permit No. 21264 on June 29, 2010.

Diversion of approximately 882 acre feet to replenish the groundwater basin were shifted outside the Season of Diversion due to operations of the Seven Oaks Dam by the USACOE and are not being accounted for in this table. Such diversions occurred under water rights, jointly utilized under the Santa Ana River and Mill Creek Cooperative Water Project.

Additionally, SBVMWD/WMWD and SBVWCD are finalizing negotiations to expand our contractual relationships to cooperatively utilize and expand District facilities to maximize the water diverted for recharge jointly under these permits and licenses. Notwithstanding our intentions, should these negotiations for cooperative agreement not be fruitful, both districts may need to revise their filings.

**AGREEMENT FOR THE COOPERATIVE USE OF UNUSED WELL CAPACITY, THE TEXAS GROVE  
RESERVOIR AND THE CENTRAL FEEDER**

This Agreement for the Cooperative Use of Unused Well Capacity, the Texas Grove Reservoir and the Central Feeder (“Agreement”) is entered into and effective this 2nd day of April, 2013 (“Effective Date”) by and between the City of Redlands (“City”) and San Bernardino Valley Municipal Water District (“Valley District”). City and Valley District are sometimes individually referred to herein as a “Party” and, together, as the “Parties.”

Recitals

- A. City owns the 3.9 million gallon Texas Grove Reservoir, which is shown on the map attached hereto as Exhibit “A” and incorporated herein by reference. The Texas Grove Reservoir is located adjacent to the Valley District Redlands Pump Station.
- B. Valley District desires to purchase 2.3 million gallons of capacity in the existing City of Redlands' Texas Grove Reservoir which is already intertwined with the Valley District Central Feeder system.
- C. City is willing to sell Valley District 2.3 million gallons of capacity in the Texas Grove Reservoir.
- D. City owns various water wells that deliver water to the Texas Grove Reservoir.
- E. Valley District has constructed the Central Feeder Project Phase 1, which includes the Redlands Pump Station and a 78-inch pipeline (the “**Central Feeder**”) that connects to the Metropolitan Water District of Southern California’s Inland Feeder Pipeline and the East Branch Extension of the State Water Project. The Central Feeder is shown on the map attached hereto as Exhibit “A.” Valley District further intends to construct new wells in the San Bernardino Basin Area (the “**SBBA**”), in, or upstream of, the Area of Historic High Groundwater (the “**AHHG**” or the “**Pressure Zone**”) that could deliver water to the Central Feeder.
- F. From time to time, Valley District intends to use its proposed wells to dewater the AHHG during periods when the Boards of Directors for Valley District and Western Municipal Water District (“**Western**”) agree additional extractions are needed to mitigate the risks associated with high groundwater which include the flooding of basements and the increased risk of property damage and personal injury from soil liquefaction during an earthquake. These Valley District wells may also be used to extract: (i) State Water Project water that has been “banked” in the SBBA, (ii) Western’s portion of Santa Ana River water diverted and stored in the SBBA under State Water Resources Control Board permits 21264 and 21265, or (iii) “new conservation water,” as defined in the *Western Judgment (Western Municipal Water District et al. v. East San Bernardino County Water District et al., Riverside County*

Redlands Facilities/Central Feeder  
March 2013  
Page 1

SBVMWD LEGAL  
DOCUMENT 2392

Superior Court Case No. 78426, April 17, 1969) and determined by the Western-San Bernardino Watermaster that is banked in the SBBA. Additionally, Valley District intends to consult with other water agencies with interests in the SBBA, by working with the Basin Technical Advisory Committee, in order to ensure Valley District and Western Boards of Directors are provided with the most up-to-date technical information upon which to base decisions.

- G. To postpone the need to construct its own wells and related transmission pipelines, Valley District desires to utilize the City's water wells when the City is not using such wells (unused capacity) to pump and deliver water to the Central Feeder via the Texas Grove Reservoir and Redlands Pump Station.
- H. City wishes to make its unused water well capacity available to Valley District provided that it does not cause lower water levels and, thereby, increase pumping costs for City's own customers nor cause water quality degradation for Total Dissolved Solids ("TDS") in the SBBA that causes Redlands Wastewater Treatment Plant discharges to exceed permitted concentrations.
- I. City and Valley District, in addition to other parties, entered into the "Settlement Agreement Relating to the Diversion of Water From the Santa Ana River System (the **"Seven Oaks Accord"**)" on July 21, 2004. One of the provisions of the Seven Oaks Accord provides for participation in a "groundwater spreading program" that would, among other things, maintain groundwater levels at relatively constant levels in the SBBA.
- J. Valley District and the Santa Ana Regional Water Quality Control Board entered into the "Cooperative Agreement to Protect Water Quality and Encourage the Conjunctive Uses of Imported Water in the Santa Ana River Basin" (the **"RWQCB Agreement"**) on January 16, 2008, which requires preparation of a report on water quality conditions in the SBBA every three years.
- K. City and Valley District wish to cooperate in the operation of facilities for the mutual benefit of the Parties.

#### Agreements

- 1. *Valley District Purchase of Storage Rights in the Texas Grove Reservoir*
  - a. *Storage Rights.* City hereby sells, and Valley District hereby purchases, all rights to the use of the upper 2.3 million gallons of usable storage capacity in the existing Texas Grove Reservoir, for the life of the reservoir, which capacity is understood by the Parties to be at, or above, elevation 1338.9 feet MSL NGVD. City shall retain all storage rights to the use of that portion of the Texas Grove Reservoir below elevation 1338.9 feet MSL NGVD. Neither Party shall interfere

Redlands Facilities/Central Feeder  
March 2013  
Page 2

with the other Party's use of its share of the storage capacity of the Texas Grove Reservoir, unless such storage capacity is needed to meet fire fighting demands by City. In such instances, City shall have the right to use all water available in the Texas Grove Reservoir. City shall cooperate with Valley District and allow Valley District to construct City-approved facilities necessary to utilize Valley District's full storage rights in the Texas Grove Reservoir.

- b. *Payment by Valley District for Storage Rights.* Valley District shall pay City the sum of \$2,168,426 for the rights described in paragraph 1a within 30 calendar days after the Effective Date of this Agreement. Valley District will make such payment by electronic funds transfer into a fund approved by City. City shall provide Valley District with a written receipt, acknowledging payment in full, within 7 calendar days of the electronic funds transfer.
- c. *Operation and Maintenance.* City shall be responsible for the day to day operation and maintenance of the Texas Grove Reservoir, except for the 42-inch nozzle connecting the Texas Grove Reservoir to Valley District's Redlands Pump Station which shall be the responsibility of Valley District.
- (1) *Ordinary Operation and Maintenance.* City shall operate the Texas Grove Reservoir in accordance with the terms of this Agreement and in accordance with good engineering practices, including normal maintenance of the reservoir.
  - (2) *Substantial Work.* In the event City determines, in its reasonable engineering judgment, that substantial work (i.e., more than \$50,000 in a calendar year) is needed to properly maintain the Texas Grove Reservoir, City shall promptly consult with Valley District and, before commencing any work, City shall give written notice to Valley District of: (i) the work to be performed, (ii) the estimated cost of the proposed work, and (iii) the contractor(s) that will perform work. City may only commence such work upon receipt of written approval from Valley District, which approval shall not be unreasonably withheld or delayed.
  - (3) *Emergency Circumstances.* Nothing in paragraph 1c(2) shall be construed to prevent City from taking any action it reasonably believes necessary in the event of an emergency. City shall notify Valley District of the existence of an emergency as soon as reasonably possible and shall, to the extent feasible under the circumstances, coordinate a response with Valley District.
  - (4) *Reimbursement by Valley District.* Valley District shall reimburse City for 63% of the costs to operate and maintain the Texas Grove Reservoir, as determined based on the calculations attached hereto as Exhibit "B" and

Redlands Facilities/Central Feeder  
 March 2013  
 Page 3

entitled "City of Redlands Reservoir #1 (Texas Grove Reservoir)." Reimbursable costs shall include, but not be limited to, actual and reasonable costs of City staff, consultants and contractors for operating and maintaining the Texas Grove Reservoir.

- (5) *Invoices to Valley District.* City shall invoice Valley District for such operation and maintenance costs quarterly in arrears and Valley District shall pay such invoices within 30 calendar days of the date of the invoice. Invoices shall indicate, in reasonable detail, the cost of each action undertaken by City to operate and maintain the Texas Grove Reservoir, including the date of the service, the individuals performing the service, the hourly rate of such individuals, and the costs of any materials. In the event Valley District objects to any costs identified on an invoice, Valley District shall pay the undisputed costs and shall invoke the dispute resolution process described in paragraph 10c below for the objectionable costs.
2. *Term of Agreement.* This Agreement shall have an initial term of five years from its Effective Date and shall automatically renew for subsequent five-year terms thereafter unless terminated as provided for in paragraph 8 below.
3. *Cooperative Operation of City Wells and the Central Feeder*
  - a. *Delivery of Water by City to Valley District.*
    - (1) *Estimate of unused capacity by City.* No later than each November 1, City shall provide Valley District with a written estimate of the availability of water during the following calendar year, up to a maximum of 20,000 acre-feet. City shall make this estimate in its sole and reasonable discretion. City may base its estimate on hydrologic conditions, groundwater levels, facility limitations, demand for water within City, or any other reasonable factor.
    - (2) *Valley District Water Order.* No later than each December 1 of each year, Valley District shall provide City with a written order for water for the following calendar year, up to a maximum amount equal to City's estimate of unused capacity.
    - (3) *Water delivery to Texas Grove Reservoir.* City shall operate its water production and distribution systems to provide Valley District with the amount of water ordered by Valley District at the Texas Grove Reservoir. Valley District shall install or cause to be installed a meter to measure deliveries by City to Valley District. City shall have the right to read the

meter on a monthly basis and inspect the meter at least annually in order to ensure the accurate calculation of water delivered to Valley District.

(4) *Modification of City's Estimate.* The Parties understand and acknowledge that a number of factors, including but not limited to greater/lesser precipitation or changes in customer demand for water, may modify City's ability to supply Valley District with ordered water. It is the intent of the Parties that this Agreement not interfere with City's obligation to serve its customers.

(a) City may increase or decrease its estimate of water available to Valley District at any time during a calendar year as may be reasonable to provide water service to City's customers. City will use reasonable, good faith efforts to meet Valley District's water demands.

(b) In the event of an emergency, as defined in California Public Contract Code Section 1102, City may take any actions it deems reasonably necessary to respond to the emergency and provide water service to its customers. City shall promptly consult with Valley District and jointly develop a plan that will provide Valley District water as soon as practicable after the conclusion of the emergency.

b. *Payment by Valley District for Water.* Valley District shall pay City the actual production cost, as determined pursuant to paragraph 3b(1) below, and the Operations, Maintenance and Repair ("**OMR**") cost, as determined pursuant to paragraph 3b(2) below, for water delivered to Valley District at the Texas Grove Reservoir.

(1) *Payment for Production Cost.* Valley District shall pay City for City's actual cost of producing water pursuant to this Agreement. Such actual costs may be determined by using either: (i) energy and treatment costs for the water production facilities that City specifically operates to meet Valley District's water order or (ii) a weighted average cost of energy and treatment for all City facilities producing water during a period in which City delivers water to Valley District. City shall determine, and notify Valley District in writing, which method will be used to determine the actual cost of producing water for Valley District prior to delivery of water to Valley District. Absent notification, the Parties shall use method (ii) above until notice is given.

(2) *Payment for OMR Cost.* Valley District shall pay City's actual costs to operate, maintain and repair its water production and distribution facilities

(including, without limitation, production wells, booster pumps, treatment facilities, etc.) for the benefit of Valley District. Specifically, Valley District shall pay all costs, including staff time, associated with City's operation of its water production and distribution facilities to deliver water to Valley District. In addition, Valley District shall pay its fair share of City's costs to maintain and repair its water production and distribution facilities. This cost shall be equal to the City's actual per acre-foot cost for maintenance and repair of its water production and distribution facilities over the preceding three calendar years, multiplied by the number of acre-feet ordered by Valley District.

- (3) *Invoices to Valley District.*
- (a) *Production Cost Invoices.* City shall invoice Valley District for production costs at least quarterly in arrears and Valley District shall pay such invoices within 30 calendar days of the date of the invoice. Invoices shall indicate, method used to determine production costs as described in paragraph 3b(1), facilities used to provide Valley District water, and cost for chemicals and power used. In the event Valley District objects to any costs identified on an invoice, Valley District shall pay the undisputed costs and shall invoke the dispute resolution process described in paragraph 10c below for the objectionable costs.
- (b) *OMR Cost Invoices.* City shall invoice Valley District for OMR costs at least quarterly in arrears and Valley District shall pay such invoices within 30 calendar days of the date of the invoice. Invoices shall indicate, in reasonable detail, the information necessary to calculate costs as described in paragraph 3b(2). For expenses and work outside of what should normally be expected, City shall identify expenses and/or work performed and include date expense was made or work was performed, facilities involved, the individuals or company performing the service, hourly rate of such individuals or company, and costs of any materials or service using the methodology provided on Exhibit "C." In the event Valley District objects to any costs identified on an invoice, Valley District shall pay the undisputed costs and shall invoke the dispute resolution process described in paragraph 10c below for the objectionable costs.
- c. *Water Quality Reporting.* The City shall provide Valley District with copies of all reports submitted to the Santa Ana Regional Quality Control Board.

- d. *Future Actions.* The Parties understand and acknowledge that this Agreement is intended not only to serve as the basis for cooperative operations beginning in 2013, but is also intended to serve as the basis for long-term cooperation. The Parties agree they will consider amending this Agreement at appropriate times to reflect additional facilities and new opportunities to improve the conjunctive management of the SBBA and/or water supply reliability for the San Bernardino Valley.
4. *Water Level and Water Quality Monitoring.* The Parties shall cooperate in monitoring water levels and water quality to ensure that the terms of this Agreement do not have an adverse impact on water levels or water quality in the SBBA.
- a. The Parties shall monitor water levels using the Basin Technical Advisory Committee annual Regional Water Management Plan and/or, independently, to ensure compliance with the water level requirements of the Seven Oaks Accord.
- b. The Parties agree to monitor any water quality impacts to Total Dissolved Solids (“TDS”) using data provided in the triennial report prepared for the Santa Ana Regional Water Quality Control Board pursuant to the Santa Ana Regional Water Quality Control Board Agreement.
5. *Impacts to Water Levels.* If it is determined by the Parties that the water level requirements in the Seven Oaks Accord are not being met, Valley District will take one of the following actions:
- a. *Stop taking deliveries.* Valley District will cease to water through City facilities until water levels are in compliance with the requirements of the Seven Oaks Accord.
- b. *Deliver Exchange Water to City.* To offset the pumping costs associated with lower water levels, Valley District will provide water to City, on a 1:1 basis (“**Exchange Water**”), for deliveries made to Valley District after water levels are determined to be out of compliance with the Seven Oaks Accord and up until the point water levels are determined to be in compliance with the Seven Oaks Accord.
- (1) *Sources of Exchange Water.* Valley District may obtain such Exchange Water from the State Water Project, from the Santa Ana River, from Mill Creek, from sources outside the SBBA or from “new conservation” as that term is defined in the *Western Judgment (Western Municipal Water District et al. v. East San Bernardino County Water District et al.* (Riverside County Superior Court No. 78426, April 17, 1969). The selection of sources of Exchange Water shall be within the sole discretion of Valley District but water diverted from the Santa Ana River shall not

comprise more than 50% of the Exchange Water delivered to City during any three-year reporting period, as defined in paragraph 4a below.

- (2) *Delivery of Exchange Water.* Valley District shall deliver Exchange Water to City as soon as feasible but no later than three calendar years after the calendar year in which City delivered water to Valley District. Valley District shall deliver Exchange Water to one or more of the following agreed upon locations:
- (a) San Bernardino Valley Water Conservation District Mill Creek Spreading Grounds;
  - (b) San Bernardino Valley Water Conservation District Santa Ana River Spreading Grounds;
  - (c) Bear Valley Mutual Water Company Airport Spreading Grounds;
  - (d) City's San Bernardino Avenue Spreading Grounds (formerly Bear Valley Mutual Water Company Judson Ponds);
  - (e) Such other spreading grounds that directly benefit City's wells and other wells in the surrounding area, as the Parties may determine through mutual consent in the future.

Valley District shall calculate and document deliveries of Exchange Water to City at the above locations in a manner that both Parties agree to be reasonable, recognizing that several of the above locations are owned by non-parties to this Agreement.

In the event Valley District is unable to deliver Exchange Water to City within a three consecutive calendar year time period, Valley District shall increase the amount of Exchange Water delivered to City by 5% of the overdue balance for every calendar year beyond the three calendar years allowed until the Exchange Water is delivered. The Parties shall use a "first-in, first-out" accounting to track Exchange Water for multiple years.

- (3) *In-Lieu Recharge.*
- (a) In the event spreading of Exchange Water is not prudent: (i) due to high groundwater conditions in the pressure zone, (ii) because such spreading would have adverse impacts on groundwater contaminants, or (iii) because City determines it would be beneficial for City to take deliveries of Exchange Water at a water treatment plant in lieu of the spreading grounds identified in

paragraph 5b(2), City may take deliveries of up to 50% of Exchange Water at its Horace Hinckley Surface Water Treatment Plant or Henry Tate Surface Water Treatment Plant, at its sole discretion. Valley District shall deliver the remaining Exchange Water to such locations that Valley District, in its sole discretion, determines appropriate for sound management of the SBBA.

- (b) If City chooses to take delivery of Exchange Water at the Henry Tate Surface Water Treatment Plant, City may receive up to 10% of the total Exchange Water delivered in a calendar year at Henry Tate Surface Water Treatment Plant at no cost to the City.

6. *Impacts to Water Quality.* If it is determined by the Parties that pumping by City for delivery to Valley District, under the terms of this Agreement, is the sole cause for the City violating one or more of its permits from the Santa Ana Regional Water Quality Control Board, Valley District will take one of the following actions:
  - a. *Stop taking deliveries.* Valley District will cease to water through City facilities until water levels are in compliance with the Seven Oaks Accord.
  - b. *Recharge high quality water.* Valley District will recharge lower TDS water in a mutually agreeable locations until TDS has returned to acceptable levels.
  - c. *Any combination.* Valley District may use one, or both, of the above, at its discretion, to reduce the TDS level until the TDS has returned to mutually agreed upon acceptable levels.
  - d. *Violation of Santa Ana Regional Water Quality Control Board TDS discharge limit on Redlands wastewater plant.* In the event the Santa Ana Regional Water Quality Control Board orders City to remedy an increase in the TDS limit for City's wastewater treatment plant that the Parties agree has been caused by conditions derived by the activities associated with this Agreement, Valley District shall take any or all of the actions identified in subparagraphs a-c above until water quality has returned to acceptable levels. Additionally, Valley District and City will work together to resolve the condition with the Santa Ana Regional Water Quality Control Board identify a solution to the condition, and fund an appropriate solution.
  
7. *Natural Disaster or Civil Unrest.* In the event that the Texas Grove Reservoir suffers from substantial damage due to natural disaster (e.g., earthquake, flooding or otherwise) or due to civil unrest (e.g., rioting, terrorist attack, or otherwise), neither Party shall be obliged to rebuild/reconstruct the Texas Grove Reservoir in its current configuration or to its current capacity. Instead, the Parties shall promptly meet and confer, determine a rebuilding plan/configuration that is reasonable and financially feasible under the

circumstances at the time, and then rebuild/reconstruct the Texas Grove Reservoir as quickly as practicable.

8. *Termination of Agreement.* Either Party may terminate this Agreement, with or without cause, by providing written notice of termination to the other Party at least one year prior to the conclusion of the then-current term of this Agreement. Valley District's purchase of storage rights at, or above, elevation 1338.9 feet MSL NGVD shall survive termination of this Agreement and, after termination, Valley District may use its storage rights by supplying water available to Valley District from any source. In the event that Valley District has not completed its delivery of Exchange Water to City as required by paragraph 5b above, that obligation shall survive any termination of this Agreement.
9. *Indemnification.* Each Party shall defend and indemnify the other Party and the other Party's elected officials, officers, employees, agents and authorized volunteers from and against all claims, demands, or liability for damages arising out of the Party's performance of the terms of this Agreement where such liability is caused or claimed or alleged to be caused by the willful misconduct, sole negligence or active negligence of the Party or any person or organization for whom or which the Party is legally liable.

In particular, Valley District shall defend and indemnify City's elected officials, officers, employees, agents and authorized volunteers for any and all claims, demands or liability arising from: (i) Valley District or its contractors' construction of the Central Feeder; (ii) the movement of groundwater contaminants due to the spreading of Exchange Water by Valley District and increased pumping; or (iii) a reduction in static groundwater levels due to extraction of water by City for delivery to Valley District.

The provisions of this Section 9 shall survive any termination of this Agreement.

10. *Administration of Agreement*
  - a. *Workers' Compensation.* Each Party certifies that it is aware of the provisions of section 3700 of the California Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code and each Party shall comply with such provisions before commencing the performance of any work under this Agreement. Each Party and any contractors or subcontractors shall keep workers' compensation insurance for their employees in effect during all work covered by this Agreement. Upon request, each Party shall provide the other with the certificate required by Labor Code section 3700.
  - b. *Books and Records.* Each Party shall have access to and the right to examine the other Party's pertinent books, documents, papers or other records (including, without limitation, records contained on electronic media) relating to the performance of that Party's obligations pursuant to this Agreement. The Parties

shall each retain all such books, documents, papers or other records to facilitate such review. Access to each Party's books and records shall be during normal business hours only. Nothing in this paragraph shall be construed to operate as a waiver of any applicable privileges.

- c. *Disputes.* The Parties recognize there may be disputes regarding the obligations of the Parties or the interpretation of this Agreement. The Parties agree they may attempt to resolve disputes as follows:
- (1) *Statement Describing Alleged Violation of Agreement.* A Party alleging a violation of this Agreement (the "**Initiating Party**") shall provide a written statement describing all facts it believes constitute a violation of this Agreement to the Party alleged to have violated the terms of this Agreement (the "**Responding Party**").
  - (2) *Response to Statement of Alleged Violation.* The Responding Party shall have sixty calendar days from the date of the written statement to prepare a written response to the allegation of a violation of this Agreement and serve that response on the Initiating Party or to cure the alleged violation to the reasonable satisfaction of the Initiating Party. The Initiating Party and the Responding Party shall then meet within thirty calendar days of the date of the response to attempt to resolve the dispute amicably.
  - (3) *Mediation of Dispute.* If the Initiating Party and the Responding Party cannot resolve the dispute within ninety calendar days of the date of the written response, they shall engage a mediator, experienced in water-related disputes, to attempt to resolve the dispute. Each Party shall ensure that it is represented at the mediation by an employee of such Party. These representatives of the Initiating Party and the Responding Party may consult with staff and/or technical consultants during the mediation and such staff and/or technical consultants may be present during the mediation. The costs of the mediator shall be borne by the unsuccessful Party.
  - (4) *Reservation of Rights.* Nothing in this paragraph 10c shall require a Party to comply with the dispute resolution process contained herein, and each Party retains and may exercise at any time all legal and equitable rights and remedies it may have to enforce the terms of this Agreement.

## 11. *CEQA Compliance.*

The Parties have determined that, because the activities contemplated under the terms of this Agreement involve the cooperative use of existing facilities within the capacity of those

facilities and within the limits established by existing regulations, the implementation of this Agreement is exempt from environmental review pursuant to Title 14, section 15301 of the Code of California Regulations. Within five business days of the Effective Date of this Agreement, the Parties will file a Notice of Exemption with the County Clerk for the County of San Bernardino, which Notice is attached hereto as Exhibit "D" and incorporated herein by reference.

12. *General Provisions.*

- a. *Authority.* Each signatory of this Agreement represents that he is authorized to execute this Agreement on behalf of the Party for which he signs. Each Party represents that it has legal authority to enter into this Agreement and to perform all obligations under this Agreement.
- b. *Amendment.* This Agreement may be amended or modified only by a written instrument executed by each of the Parties to this Agreement.
- c. *Jurisdiction and Venue.* This Agreement shall be governed by and construed in accordance with the laws of the state of California, except for its conflicts of law rules. Any suit, action, or proceeding brought under the scope of this Agreement shall be brought and maintained to the extent allowed by law in the County of San Bernardino, California.
- d. *Headings.* The paragraph headings used in this Agreement are intended for convenience only and shall not be used in interpreting this Agreement or in determining any of the rights or obligations of the Parties to this Agreement.
- e. *Construction and Interpretation.* This Agreement has been arrived at through negotiations and each Party has had a full and fair opportunity to revise the terms of this Agreement. As a result, the normal rule of construction that any ambiguities are to be resolved against the drafting Party shall not apply in the construction or interpretation of this Agreement.
- f. *Entire Agreement.* This Agreement constitutes the entire agreement of the Parties with respect to the subject matter of this Agreement and supersedes any prior oral or written agreement, understanding, or representation relating to the subject matter of this Agreement.
- g. *Partial Invalidity.* If, after the Effective Date of this Agreement, any provision of this Agreement is held to be illegal, invalid, or unenforceable under present or future laws effective during the term of this Agreement, such provision shall be fully severable. However, in lieu thereof, there shall be added a provision as similar in terms to such illegal, invalid or unenforceable provision as may be possible and be legal, valid and enforceable.

- h. *Successors and Assigns.* This Agreement shall be binding on and inure to the benefit of the successors and assigns of the respective Parties to this Agreement. No Party may assign its interests in or obligations under this Agreement without the written consent of the other Party, which consent shall not be unreasonably withheld or delayed.
- i. *Waivers.* Waiver of any breach or default hereunder shall not constitute a continuing waiver or a waiver of any subsequent breach either of the same or of another provision of this Agreement and forbearance to enforce one or more of the remedies provided in this Agreement shall not be deemed to be a waiver of that remedy.
- j. *Attorneys' Fees and Costs.* The prevailing Party in any litigation or other action to enforce or interpret this Agreement shall be entitled to reasonable attorneys' fees (including fees for use of in-house counsel by a Party), expert witnesses' fees, costs of suit, and other necessary disbursements in addition to any other relief deemed appropriate by a court of competent jurisdiction.
- k. *Necessary Actions.* Each Party agrees to execute and deliver additional documents and instruments and to take any additional actions as may be reasonably required to carry out the purposes of this Agreement.
- l. *Representations and Warranties.* Each representation and warranty contained herein or made pursuant hereto shall be deemed to be material and to have been relied upon and shall survive the execution, delivery and termination of this Agreement.
- m. *Compliance with Law.* In performing their respective obligations under this Agreement, the Parties shall comply with and conform to all applicable laws, rules, regulations and ordinances.
- n. *Third Party Beneficiaries.* This Agreement shall not create any right or interest in any non-Party or in any member of the public as a third party beneficiary.
- o. *Counterparts.* This Agreement may be executed in one or more counterparts, each of which shall be deemed to be an original, but all of which together shall constitute but one and the same instrument.
- p. *Notices.* All notices, requests, demands or other communications required or permitted under this Agreement shall be in writing unless provided otherwise in this Agreement and shall be deemed to have been duly given and received on: (i) the date of service if served personally or served by facsimile transmission on the Party to whom notice is to be given at the address(es) provided below, (ii) on the first day after mailing, if mailed by Federal Express, U.S. Express Mail, or other

similar overnight courier service, postage prepaid, and addressed as provided below, or (iii) on the third day after mailing if mailed to the Party to whom notice is to be given by first class mail, registered or certified, postage prepaid, addressed as follows:

Project Title: Agreement for Use of Water Facilities

Project Location - Specific: City of Redlands - Texas Grove Reservoir

Project Location - City: Redlands

Project Location - County: San Bernardino

**Description of Nature, Purpose and Beneficiaries of Project:** The Project is an agreement between the San Bernardino Valley Municipal Water District ("Valley District") and the City of Redlands ("City") (collectively, the "Parties") providing for the cooperative use of existing water storage facilities and well capacity. Under the agreement, Valley District will purchase 2.3 million gallons of capacity in the City's existing Texas Grove Reservoir which is connected to Valley District's Redlands Pump Station that delivers water to Valley District's Central Feeder Pipeline. Valley District will have an annual option of purchasing up to 20,000 acre-feet of existing well capacity to the extent such capacity is not needed by the City in any given year. The purpose of the Project is to postpone the need for Valley District to construct new water facilities in the area. The project involves the operation of existing facilities within existing limits established by applicable laws, regulations, agreements, and permits.

Name of Public Agency Approving Project: San Bernardino Valley Municipal Water District and City of Redlands

Name of Person or Agency Carrying Out Project: San Bernardino Valley Municipal Water District, City of Redlands

**Exempt Status: (check one)**

- Ministerial (Sec. 21080(b)(1); 15268);
- Declared Emergency (Sec. 21080(b)(3); 15269(a));
- Emergency Project (Sec. 21080(b)(4); 15269(b)(c));
- Categorical Exemption.** State type and section number: Sec. 15301, 15303
- Statutory Exemptions.** State code number: \_\_\_\_\_

**Reasons why project is exempt:** The Project is categorically exempt under section 15301 of the CEQA Guidelines because it involves the operation of existing facilities within existing limits established by applicable laws, regulations, agreements, and permits. Valley District will make use of existing storage and well capacity not needed by the City, thus there will be no expansion of those facilities. The connection between the Reservoir and existing pipelines is categorically exempt under section 15301 as an addition to existing structures, and alternatively is categorically exempt under section 15303 as an extension of an existing pipeline of the length necessary to serve the Reservoir.

**2013 AGREEMENT REGARDING ADDITIONAL EXTRACTIONS  
OF NEW CONSERVATION WATER  
FROM THE SAN BERNARDINO BASIN AREA  
BETWEEN  
WESTERN MUNICIPAL WATER DISTRICT OF RIVERSIDE COUNTY  
AND  
SAN BERNARDINO VALLEY MUNICIPAL WATER DISTRICT**

**2013 AGREEMENT REGARDING ADDITIONAL EXTRACTIONS  
OF NEW CONSERVATION WATER  
FROM THE SAN BERNARDINO BASIN AREA**

This Agreement is entered into between San Bernardino Valley Municipal Water District (“Valley District”) and Western Municipal Water District of Riverside County (“Western”) on July 17, 2013.

**RECITALS**

A. Western and Valley District are parties to the Judgment in the case of *Western Municipal Water District of Riverside County v. East San Bernardino County Water District, et al.*, Riverside Superior Court No. 78426 (“Western Judgment” or “Judgment”).

B. The Judgment is administered and enforced by a Watermaster, consisting of a committee of two persons, one representative nominated by Valley District, and one by Western.

C. The Judgment further implements the physical solution in the related Orange County Water District action, as well as determines the rights of the named Plaintiffs to extract water from the San Bernardino Basin Area (“SBBA”), and provide replenishment of the area above Riverside Narrows. Among other provisions, the Judgment provides that the annual “adjusted right” of each Plaintiff to extract and export water from the SBBA is the sum of (a) its base right, which was adjusted based on a determination of safe yield and is currently expressed as a percentage of safe yield; and (b) an equal percentage of any new conservation, provided the conditions described in the Judgment are met. Similarly, the Judgment provides that Valley District shall provide imported water for replenishment of the SBBA at least equal to the amount by which extractions in any five year period exceed the 1959-1963 “base period” extractions (such amount was reduced based on a determination of safe yield and may be increased by the amount of any new conservation).

D. “New Conservation” is defined in the Judgment as “[a]ny increase in replenishment from natural precipitation which results from operation of works and facilities not now in existence, other than those works installed and operations which may be initiated to offset losses caused by increased flood control channelization.”

E. The Seven Oaks Dam is a component of the Santa Ana River Mainstem Project and was originally conceived as a way to address anticipated flooding on the Santa Ana River. In addition to providing flood control benefits and related incidental water conservation, Western and Valley District wished to formally include water conservation as an element of the facility. In 1991, Western and Valley District jointly filed an application to appropriate water conserved as part of the Seven Oaks project. The State Water Resources Control Board approved the application and issued permits to Western and Valley District in 2010.

F. Construction on the Dam began in the mid 1990s. Western, Valley District and Plaintiffs in the above-referenced action agreed to a methodology for participation in the project and a cost sharing formula pursuant to Paragraph VI(b)2 of the Judgment. Based on the cost sharing formula, Western, Valley District and Plaintiffs entered cost sharing agreements to study the feasibility of water conservation and to fund the physical improvements necessary to achieve water conservation in connection with the operation of the Dam.

G. The acquisition of the water rights permit and the related infrastructure improvements allow Western and Valley District to fully utilize water conserved by the project for replenishment of the SBBA.

H. As part of the 1991-2010 water rights permitting process, Western and Valley District developed models and other analytical tools to forecast hydrology and calculate water conservation. Over the last 2 years, a collaborative group of stakeholders has been meeting to further develop the models and procedures necessary to forecast long-term average New Conservation.

I. In addition to utilizing the recently-developed models and analytical tools to project future long-term average New Conservation, Watermaster has utilized the models and analytical tools to calculate the amount of New Conservation that occurred from 1998 through 2012. Watermaster was previously unable to calculate such New Conservation because the models and analytical tools were still being developed.

J. Consistent with the Judgment and cost-sharing agreements, Plaintiffs have paid their proportionate share of New Conservation-related costs through December 31, 2012 and are therefore entitled to the benefits associated with their allocated share of New Conservation that occurred from 1998 through 2012 due to operation of the Dam.

K. The Judgment does not provide a mechanism by which to allocate New Conservation retroactively. However, Paragraph VI(b)6 of the Judgment provides that Western and Valley District may enter into agreements providing for additional extractions from the SBBA. Western and Valley District have utilized Paragraph VI(b)6 in the past to allow additional extractions from the SBBA.

L. In addition, Western, Valley District and the City of Riverside are parties to an "Agreement Relating to the Diversion of Water from the Santa Ana River System" ("Diversion Agreement") dated March 20, 2007, wherein the parties acknowledge that water conservation in the SBBA associated with the operation of Seven Oaks Dam may cause adverse impacts on the Riverside Basin. The parties agreed that one method of mitigating such adverse impacts was to provide for additional Plaintiff extractions in the SBBA in an amount equal to the amount of replenishment in the SBBA that would have occurred in the Riverside Basin in the absence of the Seven Oaks Project, in exchange for a like amount of reduction in extractions in the Riverside Basin near the key wells used to measure Valley District's compliance with the Judgment objectives

M. Parties to the Diversion Agreement also agreed to implement an accounting methodology under the Western Judgment that will allow Plaintiffs to fully utilize their water

rights in the SBBA. In conjunction with this Agreement, the full use of such water rights could be facilitated by amending the August 18, 2004 Paragraph VI(b)6 agreement entitled “Western Replenishment and Extraction Agreement” which would allow Plaintiffs, in any year in which their entitlement was not fully used, to return any amount of water up to the amount of imported water previously acquired from Western.

N. The primary purpose of this Agreement is to provide for additional extractions of water from the SBBA by Plaintiffs and users within Valley District without replenishment by Valley District in amounts equal to the amount of New Conservation determined by Watermaster to have occurred from 1998 through 2012 due to operation of the Dam. As to future New Conservation associated with the operation of the Dam, Watermaster will utilize Paragraph VI(b)1, VI(b)2, and VI(c) to account for such New Conservation, as provided herein. In addition, another purpose of this Agreement is to ensure implementation of specific provisions of the 2007 Diversion Agreement related to New Conservation, as referenced in Recitals L and M, above.

O. Although the Judgment does not require court approval of Paragraph VI(b)6 agreements, the parties have historically sought court approval of such agreements.

NOW, THEREFORE, in consideration of the mutual covenants of the parties, and based upon the recitals above, IT IS HEREBY AGREED TO AS FOLLOWS:

1. Definition of Additional Extractions. As used herein, the term “additional extractions” means any extraction of water by Plaintiffs in the above-referenced action in excess of the amounts permitted by the Judgment; with respect to entities other than Plaintiffs in such action, the term means any extractions in excess of the total amount of water that can be produced from the SBBA without any replenishment obligation. No replenishment obligations shall be incurred on account of any additional extractions made pursuant to this Agreement.

2. Amount of Additional Extractions. Watermaster has determined that the total quantity of New Conservation resulting from operation of the Seven Oaks Dam for the period of 1998 through 2012 is 42,840 acre-feet. Consistent with the Judgment, such amount may be extracted by Plaintiffs and non-plaintiff entities producing water within the SBBA as additional extractions pursuant to this Agreement.

3. Allocation of Additional Extractions to Plaintiffs. Plaintiffs may make additional extractions from the SBBA for use within Western in any future year in the aggregate amount of 11,974 AF, or 27.95% of the 1998-2012 New Conservation water. Such amount shall be allocated among individual Plaintiffs as follows:

- a. City of Riverside 9,635 AF
- b. Meeks and Daley Water Co. 1,448 AF
- c. Riverside Highland Water Co. 793 AF
- d. Regents of University of California 98 AF

Such individual allocations are in proportion to Plaintiffs' respective shares of the safe yield of the SBBA.

4. Allocation of Additional Extractions to Other Entities. Entities in San Bernardino County other than Plaintiffs who produce water within the SBBA may make additional extractions from the SBBA in any future year in the amount of 30,866 AF, or 72.05% of the 1998-2012 New Conservation water.

5. Periodic Changes in Paragraph VI(b) and VI(c) Allowable Extractions. Periodically Watermaster shall consider making changes in:

(a) the portion of Plaintiffs' "adjusted right" related to New Conservation determined pursuant to Paragraph VI(b); and

(b) the New Conservation to which users in Valley District are entitled pursuant to Paragraph VI(c).

Such periodic consideration and any resulting changes shall be made to ensure that over a long-term period, equal to or greater than the number of years used to forecast the average amount of New Conservation, the amount of New Conservation allowed to be extracted is the same as it would have been if the New Conservation had been made available to Plaintiffs and users within Valley District each year in amounts equal to the actual amount of conserved water that is replenished. Any change shall be made prospectively in order to ensure that such change does not result in a change or reconciliation of a prior year "adjusted right" for Plaintiffs or an amount of New Conservation available for use by users within Valley District.

Periodic consideration of changes in the allowable extractions related to New Conservation shall occur for the duration of the forecast period at intervals of not less than five years nor more than ten years. The periodic consideration of change in the long-term average increase in allowable extractions related to New Conservation shall account for physical improvements in storage, diversion or recharge capability that may result in an increase in the forecast of the long-term average amount of New Conservation; and prospectively account for changes in the long-term forecast that arise from annual determinations of actual New Conservation and/or improvements in the data base and the analytical tools and procedures used to forecast New Conservation.

6. Paragraph VI(b) Service Area Delivery Limitations. The service area delivery limitations provided in Paragraphs V and VI of the Western Judgment shall not apply to New Conservation.

7. Assignment. Any Plaintiff may assign all or a portion of that Plaintiff's right to make additional extractions, as provided in Paragraph 3 herein, to any other Plaintiff.

8. Potential Reductions in Additional Extractions. If at any time prior to the extraction of all additional extractions pursuant to this Agreement Watermaster determines that New Conservation that occurred from 1998-2012 is causing a decrease in the natural safe yield of the SBBA by increasing subsurface outflow or rejecting native recharge that would have

occurred in the absence of Seven Oaks Dam, then Watermaster shall reduce the then-remaining amount of additional extractions provided for in Paragraph 2 and the subsequent amounts allocated to Plaintiffs and Valley District in Paragraphs 3 and 4 by an amount equal to the increase in subsurface outflow or rejected native recharge.

9. Annual Reports. Watermaster shall exclude any additional extractions under this Agreement from extractions in the Annual Report Tables 3A through 3D showing extractions by Plaintiffs. Watermaster shall also exclude additional extractions by entities other than Plaintiffs from the determination of extractions in Table 2 of the Annual Report.

10. Riverside Basin Mitigation Account. Any amount of replenishment in the SBBA resulting from the operation of Seven Oaks Dam and related diversion and spreading facilities that, in the absence of such operation, would have been replenished in the Riverside Basin, shall not be considered New Conservation and shall not be allocated for use by Plaintiffs and users within Valley District and shall instead be included in a Riverside Basin Mitigation Account. Watermaster shall maintain a record of the amount of water in the Riverside Basin Mitigation Account. Western shall maintain in force an agreement with the City of Riverside that provides for the City to increase extractions from its wells in the SBBA by a specified amount and reduce extractions from its Flume Tract wells in the Riverside Basin by the same amount. The agreement shall provide that such change in the location of extractions is subject to the following:

(a) Western and Valley District will jointly determine the specified amount of the change in extractions and the time period for such change; and

(b) The City of Riverside will change the location of extractions as determined by Western and Valley District unless Riverside is unable to do so because of physical or prior contractual constraints.

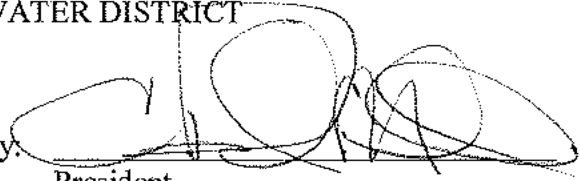

Watermaster shall account for the required extractions from the SBBA as additional extractions pursuant to Section 9 of this agreement and shall include the amount of the additional SBBA extractions as an extraction by the City of Riverside from Riverside North in the Annual Report Table 5.

11. Amendment to the Paragraph VI(b)6 Western Replenishment and Extraction Agreement. Paragraph 5 of the “Western Replenishment and Extraction Agreement” dated August 18, 2004 is hereby amended to also provide that, “Any Plaintiff at its option may assign and transfer to Western an amount of water equal to its unused water right in the SBBA in any year provided the aggregate amount of such transfers may not exceed the Plaintiffs aggregate amount of previously transferred right to extract imported water pursuant to this paragraph.”

**REPORT/RECOMMENDATION TO THE BOARD OF SUPERVISORS  
OF THE SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT  
AND RECORD OF ACTION**

July 23, 2013

**FROM: GERRY NEWCOMBE, Director  
Flood Control District**

**SUBJECT: PLANNING MEMORANDUM OF UNDERSTANDING BETWEEN THE SAN  
BERNARDINO COUNTY FLOOD CONTROL DISTRICT AND THE SAN  
BERNARDINO VALLEY MUNICIPAL WATER DISTRICT**

**RECOMMENDATION(S)**

Acting as the governing body of the San Bernardino County Flood Control District, approve a ten year Planning Memorandum of Understanding (**Agreement No. 13-608**) between the San Bernardino County Flood Control District and the San Bernardino Valley Municipal Water District for the purpose of working together in the planning and evaluation of San Bernardino County Flood Control District facilities for joint use by the San Bernardino County Flood Control District and the San Bernardino Valley Municipal Water District for both flood control and groundwater replenishment operations.

(Presenter: Gerry Newcombe, Director, 387-7906)

**BOARD OF SUPERVISORS COUNTY GOALS AND OBJECTIVES**

**Pursue County Goals and Objectives by Working with Other Public Agencies.  
Implement the Countywide Vision.**

**FINANCIAL IMPACT**

Approval of this item will not result in the use of Discretionary General Funding (Net County Cost). The Planning Memorandum of Understanding (MOU) does not commit the San Bernardino County Flood Control District (FCD) to any expenditure other than staff time which has been accounted for in the 2013-14 budget. Site specific agreements may be brought to the Board of Supervisors at a later date that will contain provisions bringing revenue to FCD.

**BACKGROUND INFORMATION**

Approval of this item will authorize FCD to enter into an MOU with the San Bernardino Valley Municipal Water District (Valley District) to work cooperatively in the planning and evaluation of the possible joint use of FCD's facilities for both flood control and groundwater replenishment operations. The MOU does not bind FCD to any project. Any proposed use of FCD properties by Valley District that originates from this MOU is at the sole discretion of FCD.

**PLANNING MEMORANDUM OF UNDERSTANDING BETWEEN THE SAN  
BERNARDINO COUNTY FLOOD CONTROL DISTRICT AND THE SAN  
BERNARDINO VALLEY MUNICIPAL WATER DISTRICT  
JULY 23, 2013  
PAGE 2 OF 2**

FCD owns and operates a number of flood control facilities within Valley District's operational boundaries. Valley District and FCD first entered into a cooperative agreement for Valley District to deliver water to several FCD detention basins for purposes of recharging the groundwater basin in 1972, and both agencies have continued to cooperatively use these facilities ever since. Valley District is now interested in expanding the number of facilities used in this effort, in addition to upgrading the facilities currently used, in order to maximize the amount of water recharge performed while acknowledging the primary goal of FCD facilities is to maintain adequate flood protection for the safety and protection of the public. FCD and Valley District wish to jointly explore the opportunities to use existing flood control basins and perhaps other facilities owned by either party, for the combined purposes of adequate flood control and useful and beneficial water replenishment operations. The MOU establishes the framework for FCD and Valley District to work together to plan and evaluate the environmental, operational and financial impacts of such combined use of their facilities. The MOU does not authorize or guarantee any specific project and the parties will comply with the California Environmental Quality Act (CEQA) prior to approving any specific project. Any future use of a facility shall be subject to the parties' approval of a site specific agreement. The MOU remains in effect for a term of ten years and provides that the parties may agree to extend the MOU for subsequent ten-year periods. Either party may terminate the MOU prior to its expiration date, but only if there is cause (e.g. breach of the agreement), and after providing the other party a 60-day written notice and opportunity to cure.

**REVIEW BY OTHERS**

This item has been reviewed by County Counsel (Scott Runyan, Deputy County Counsel, 387-5455) on June 28, 2013, County Administrative Office (Cory Nelson, Administrative Analyst, 387-4378) on July 1, 2013, and Finance and Administration (Mary Jane Olhasso, Assistant Executive Officer, 387-4599) on July 8, 2013.

**Planning Memorandum of Understanding  
San Bernardino County Flood Control District (FCD) and  
San Bernardino Valley Municipal Water District (Valley District)**

1. *Recitals*

- a. WHEREAS, the FCD was created by the San Bernardino County Flood Control Act of 1939, found in Chapter 43 of the California Water Code Appendix (Flood Control Act), and its primary statutory objects and purposes are to provide for the control of flood and storm waters and secondarily to conserve such flood and storm waters, and other waters, for beneficial uses in FCD's district area by spreading, storing, retaining, and through percolation.
- b. WHEREAS, Valley District was formed in 1954 as a regional agency formed to plan a long-range water supply for the San Bernardino Valley and it imports water into its service area from the State Water Project and manages groundwater storage within its boundaries.
- c. WHEREAS, FCD owns and operates a number of flood control facilities within Valley District's boundaries.
- d. WHEREAS, Valley District and FCD first entered into a cooperative agreement for Valley District to deliver water to FCD detention basins for purposes of recharging the groundwater basin in 1972, and Valley District and FCD have continued to cooperatively use these facilities ever since.
- e. WHEREAS, Valley District is interested in continuing to cooperatively use FCD's flood control facilities to promote groundwater recharge while acknowledging the primary goal of FCD facilities to maintain adequate flood protection for the safety and protection of the public.
- f. WHEREAS, as a general matter, FCD and Valley District wish to jointly explore the opportunities to use existing flood control basins (and perhaps other facilities owned by either party) for the combined purposes of adequate flood control and useful and beneficial water replenishment operations.
- g. WHEREAS, FCD and Valley District wish to enter into this Planning Memorandum of Understanding (MOU) to describe in general terms their interests in coordinating their efforts to plan and evaluate the environmental and financial impacts of such combined use of FCD's facilities.
- h. WHEREAS, as provided herein, this MOU does not authorize nor guarantee any specific project and the parties will comply with the California Environmental Quality Act (CEQA) prior to approving any specific project.

NOW, THEREFORE, it is mutually agreed as follows:

2. *Understandings*

a. *Priorities*

- i. The parties recognize that flood control is a higher, better and more necessary public use of the property and facilities owned by the FCD pursuant to the Flood Control Act and other state and federal law. This MOU shall be subject to the paramount legal duties and obligations of FCD pursuant to the Flood Control Act.
- ii. The FCD shall have the sole discretionary authority to determine what constitutes “adequate flood protection” for the operation of its facilities.
- iii. FCD shall have the sole discretionary authority to determine which of its facilities are available for use in re-charge activities proposed by the Valley District. Any future use of a FCD facility shall be subject to the parties’ approval of a site specific agreement.
- iv. Based on the priorities and discretion provided in this Section 2.a., “Priorities”, as well as the general planning nature of this MOU, FCD and Valley District acknowledge and agree that no implied covenants attach to this agreement, including, but not limited to, the implied covenant of good faith and fair dealing.

b. *Term*

This MOU shall have a term of 10 years from the date on which the last party executes this MOU. This MOU may be extended by the parties for subsequent 10-year periods, subject to approval by both parties.

c. *General Planning Efforts*

- i. Once a specific plan is initiated by Valley District for the specific use of a particular flood control facility, the parties agree to allocate sufficient staff time and resources to evaluate the joint use/operation of that existing facility for adequate flood control purposes in conjunction with water replenishment. Valley District shall provide to FCD all of the details associated with the proposed use for each FCD facility including, but not limited to, any proposed improvements (including a statement as to which entity will own the improvements after a project specific agreement terminates) and a proposed operational plan for each FCD facility. This information will also include the amount of estimated recharge for both

native stormwater and State Water Project water (if any), or other sources of water, for each facility, and quality of such water.

- ii. The joint evaluation may consider replenishment with both native water and water from the State Water Project or other sources and shall also consider the potential effects of groundwater replenishment to the environment, including, but not limited to, an evaluation of whether such activities will introduce water quality pollutants or mobilize existing groundwater contamination, or will cause land subsidence, liquefaction, or seepage to low lying lands in any basin to be impacted by the replenishment activities of Valley District. The parties acknowledge that Valley District will be the agency primarily leading this evaluation as it has the appropriate expertise concerning groundwater storage and the quality of waters from sources such as the State Water Project. FCD will independently review Valley District's evaluation.
- iii. Considering the statutory purposes of the FCD and the goals of Valley District, both parties agree that they will determine, on a case by case basis, which agency will be in charge of seeking permits for projects and which agency will be the "Lead Agency" for purposes of complying with CEQA.
- iv. Valley District will work cooperatively with FCD towards Valley District's goal of maximizing the quantity of water that can be replenished annually from the existing flood control basins, while maintaining or improving the protection of the public from the dangers of flooding. In general, FCD will not object to Valley District's use of FCD's fee owned properties or the modification of existing flood control basins that are owned in fee by FCD by means of the installation of dual-purpose facilities, *provided* that: (i) Valley District is responsible for all regulatory and other costs associated with said activities, and (ii) the incremental cost of those modifications is paid by Valley District, and (iii) FCD reviews and is satisfied with the individual circumstances surrounding the proposed project and the existing flood control facility. Nothing in this paragraph is intended to alter the sole discretionary authority of the FCD concerning the uses of its facilities.
- v. The parties will also collaborate with other local, state and federal agencies with regulatory authority over these activities, including, but not limited to, the U.S. Army Corps of Engineers, the U.S. Environmental Protection Agency, the U.S. Fish and Wildlife Service, the California Regional Water Quality Control Board, the California Department of Fish and Wildlife and any others.

- vi. Valley District agrees to pay a reasonable use fee for the use of the FCD's land and facilities as agreed to by both parties on a case by case basis.
- vii. Valley District acknowledges and agrees that future project specific agreements with FCD will include indemnification and insurance provisions developed by FCD's counsel and FCD's Risk Management Department that adequately protect FCD from any and all claims, actions, losses, and damages arising out of the water conservation and replenishment activities described in this MOU. The parties agree that such indemnification and insurance provisions will be negotiated in consideration of the individual circumstances surrounding each existing flood control facility on a case-by-case basis.
- viii. Valley District acknowledges and agrees that future project specific agreements with FCD will also require FCD permits.

### 3. *General Provisions*

- a. *Early Termination.* Either party may terminate this agreement prior to its expiration date for cause, *provided* that it has provided 60-day written notice and opportunity to cure to the other party prior to termination.
- b. *Recitals Incorporated Herein.* The parties agree and acknowledge that the recitals set forth above are true and correct and are fully incorporated in this MOU.
- c. *Non-Exclusive Agreement.* Nothing in this MOU shall prevent either party from working cooperatively with other individuals, public agencies or private organizations to improve flood protection or groundwater recharge within that party's respective jurisdiction.
- d. *Authority.* Each signatory of this MOU represents that he/she is authorized to execute this MOU on behalf of the party for which he/she signs. Each party represents that it has legal authority to enter into this MOU and to perform all obligations under this MOU.
- e. *Amendment.* This MOU may be amended or modified only by a written instrument executed by each of the parties to this MOU.
- f. *Jurisdiction and Venue.* This MOU shall be governed by and construed in accordance with the laws of the state of California, except for its conflicts of law rules. Any suit, action, or proceeding brought under the scope of this MOU shall be brought and maintained to the extent allowed by law in the County of San Bernardino, California.

- g. *Headings.* The paragraph headings used in this MOU are intended for convenience only and shall not be used in interpreting this MOU or in determining any of the rights or obligations of the parties to this MOU.
- h. *Construction and Interpretation.* This MOU has been arrived at through negotiations and each party has had a full and fair opportunity to revise the terms of this MOU. As a result, the normal rule of construction that any ambiguities are to be resolved against the drafting party shall not apply in the construction or interpretation of this MOU.
- i. *Entire Agreement.* This MOU constitutes the entire agreement of the parties with respect to the subject matter of this MOU and supersedes any prior oral or written agreement, understanding, or representation relating to the subject matter of this MOU.
- j. *Attorneys' Fees and Costs.* Regardless of whether it is the prevailing party in any litigation or other action to enforce or interpret this MOU, each party shall bear its own attorneys' and expert witnesses' fees, costs of suit and other necessary disbursements. This paragraph shall not apply to the costs or attorney(s) fees relative to Section 3.p., "Indemnification and Insurance."
- k. *Necessary Actions.* Each party agrees to execute and deliver additional documents and instruments and to take any additional actions as may be reasonably required to carry out the purposes of this MOU.
- l. *Third Party Beneficiaries.* This MOU shall not create any right or interest in any non-party or in any member of the public as a third party beneficiary.
- m. *Counterparts.* This MOU may be executed in one or more counterparts, each of which shall be deemed to be an original, but all of which together shall constitute but one and the same instrument.
- n. *Notices.* All notices, requests, demands or other communications required or permitted under this MOU shall be in writing unless provided otherwise in this MOU and shall be deemed to have been duly given and received on: (i) the date of service if served personally or served by facsimile transmission on the party to whom notice is to be given at the address(es) provided below, (ii) on the first day after mailing, if mailed by Federal Express, U.S. Express Mail, or other similar overnight courier service, postage prepaid, and addressed as provided below, or (iii) on the third day after mailing if mailed to the party to whom notice is to be given by first class mail, registered or certified, postage prepaid, addressed as follows:

## SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT

Director  
 Department of Public Works  
 County of San Bernardino  
 825 East Third Street  
 San Bernardino, California 92415

- o. *Assignment.* This MOU may not be assigned by either party without the written consent of the other party.
- p. *Indemnification and Insurance.* FCD agrees to indemnify, defend (with counsel approved by Valley District) and hold harmless Valley District, its employees, officers, agents, and volunteers from any and all claims, actions, losses, damages, and/or liability resulting from FCD's negligent acts or omissions which arise from FCD's performance of its obligations under this MOU. Valley District agrees to indemnify, defend (with counsel approved by FCD) and hold harmless the FCD, its employees, officers, agents, and volunteers from any and all claims, actions, losses, damages, and/or liability resulting from the Valley District's negligent acts or omissions which arise from the Valley District's performance of its obligations under this MOU. In the event, FCD and/or Valley District is found to be comparatively at fault for any claim, action, loss or damage which results from their respective obligations under this MOU, FCD and/or Valley District shall indemnify the other to the extent of its comparative fault. FCD and Valley District shall maintain throughout the term of this MOU such policies of insurance or legally sufficient self-insurance for Professional Liability (as applicable), Automobile Liability, Comprehensive General Liability, and Workers' Compensation that are adequate to protect against all liabilities and indemnification responsibilities arising out of the performance of the terms, conditions or obligations of this MOU.

IN WITNESS WHEREOF, the parties have caused this MOU to be executed by their duly authorized officers or representatives as of the last day and year appearing below.

**AMENDMENT TO AGREEMENT TO FORM THE UPPER SANTA ANA RIVER WASH LAND MANAGEMENT AND HABITAT CONSERVATION PLAN TASK FORCE**

THIS AMENDMENT TO AGREEMENT TO FORM THE UPPER SANTA ANA RIVER WASH LAND MANAGEMENT AND HABITAT CONSERVATION PLAN TASK FORCE ("Amendment") is made effective this 1st day of September, 2013, by and between the following entities (hereinafter individually referred to as a "Party" and collectively referred to as the "Parties"):

- |   |  |
|---|--|
| CEMEX CONSTRUCTION MATERIALS, LP ("CEMEX")  | ROBERTSON'S READY MIX, LTD ("ROBERTSON'S")                         |
| CITY OF HIGHLAND ("HIGHLAND")   | EAST VALLEY WATER DISTRICT ("EVWD")                                |
| CITY OF REDLANDS ("REDLANDS")   | REDLANDS MUNICIPAL UTILITIES AND ENGINEERING DEPARTMENT ("RMUED")  |
| COUNTY OF SAN BERNARDINO ("SAN BERNARDINO COUNTY")                                      | SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT ("SBCFCD")            |
| SAN BERNARDINO VALLEY WATER CONSERVATION DISTRICT ("SBVWCD" OR "CONSERVATION DISTRICT") | UNITED STATES BUREAU OF LAND MANAGEMENT ("BLM")                    |
|   | SAN BERNARDINO VALLEY MUNICIPAL WATER DISTRICT ("VALLEY DISTRICT") |

**RECITALS**

This Amendment is entered into on the basis of the following facts, understandings, and intentions of the Parties:

A. All Parties hereto, except Valley District, entered into that certain "Agreement to Form the Upper Santa Ana River Wash Land Management and Habitat Conservation Plan Task Force" on November 20, 2002 ("Original Agreement"), for the purposes of advancing environmental planning and permitting in connection with the Upper Santa Ana River Wash Land Management Plan ("Wash Plan").

B. Since the time the Original Agreement was entered into, planning for the Wash Plan has advanced in all phases, including with respect to groundwater recharge and other water conservation facilities. In connection with such facilities, Conservation District and Valley District have entered into a series of agreements to allow for joint use

of Conservation District property, and construction of additional facilities as part of an Enhanced Recharge Program with Valley District, to fulfill various of the Wash Plan objectives regarding expanded groundwater recharge and water conservation capabilities.

C. The Original Agreement provided, in paragraph 2 (G), that all Parties acknowledged and agreed that the effectiveness of the Task Force may be improved by the addition of other entities that had interest in the work of the Task Force, and given Valley District's intended role in contributing to expanding groundwater recharge facilities in the Wash Plan area, Valley District is such an entity.

D. At a Task Force meeting held July 16, 2013, the Task Force reviewed cost estimates for the completion of environmental review and permitting activities for the Wash Plan, and the individual members will be going to their respective governing bodies for funding authorization for the completion of such environmental review and permitting activities. In addition, the Task Force has refined its description of covered activities to be included within the "take" and other permitting authorizations proposed to be pursued, such that the Wash Plan process is now at a point where responsible estimates for long-term habitat maintenance and other costs can be generated, and an equitable distribution of such costs over parties sponsoring, or benefitting from, component projects of the overall Wash Plan can be determined.

E. The Parties therefore wish to amend the Original Agreement to add Valley District as a regular member of the Task Force, and to specify their going-forward intentions for additional consultations for deriving an equitable cost-sharing allocation for the costs that may be incurred by the Task Force members for implementation of the Habitat Conservation Plan and other permanent funding requirements that may attend final Wash Plan approval.

**NOW, THEREFORE**, the Parties do hereby agree as follows:

1. Valley District is, and henceforth shall be, a "Regular Member" of the Task Force under Section 2 (A) of the Original Agreement. Valley District shall pay a one-time fee into the Fund (provided in Section 5 (C) of the Task Force Agreement) of \$275,000.00. Such amount shall be utilized by the Conservation District, as Project Manager, to help offset the Conservation District's share of interim and estimated costs of completion of the environmental and permitting documentation for the Wash Plan. The Task Force at its meeting on July 16, 2013 approved estimated costs for planning and consulting services.

2. The Parties agree to meet and confer, in order to rework the contribution levels specified in Exhibit "B-1" to the Original Agreement, for those expenses that will be required of the Task Force members for costs for implementation of the Habitat Conservation Plan and other implementation funding requirements that may attend final Wash Plan approval. As presently contemplated, the basis for the allocation of such implementation costs shall be allocated on a proportionate acreage basis as it relates to the habitat disturbances attributable to the portions of the

component projects of the Wash Plan advanced by, sponsored by, or benefitting Task Force members, with offsetting credit being given to the amount of habitat as acreage being contributed by various Task Force members. The Task Force will refine such costs allocations once the PAR analysis and final permitting costs are more fully determined.

3. Except as specifically amended herein, the Original Agreement remains in full force and effect.

**IN WITNESS WHEREOF**, the Parties hereto have entered into the Amendment as of the day and year first set forth above.

**AGREEMENT TO FORM THE UPPER SANTA ANA RIVER WASH LAND  
MANAGEMENT AND HABITAT CONSERVATION PLAN TASK FORCE**

THIS AGREEMENT is made effective this 20<sup>TH</sup> day of NOV, 2002, by and between the following entities (hereinafter individually referred to as a "Party" and collectively referred to as the "Parties"):

CEMEX CONSTRUCTION MATERIALS, LP ("CEMEX")	ROBERTSON'S READY MIX, LTD ("ROBERTSON'S")
[CITY OF HIGHLAND ("HIGHLAND")]	EAST VALLEY WATER DISTRICT ("EVWD")
CITY OF REDLANDS ("REDLANDS")	REDLANDS UTILITIES DEPARTMENT ("RUD")
COUNTY OF SAN BERNARDINO ("SAN BERNARDINO COUNTY")	SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT ("SBCFCD")
SAN BERNARDINO VALLEY WATER CONSERVATION DISTRICT ("SBWCD" OR "CONSERVATION DISTRICT")	UNITED STATES BUREAU OF LAND MANAGEMENT ("BLM")

**RECITALS**

This Agreement is entered into on the basis of the following facts, understandings, and intentions of the Parties:

A. Representatives of numerous agencies, including water, mining, flood control, resource management and conservation, and municipalities, formed the Santa Ana River Wash Area Coordinating Planning Activities Committee ("Wash Committee") to address local mining issues and other land functions on the Upper Santa Ana River Wash ("Wash"). A Policy Action Committee ("PAC") was subsequently established, consisting of elected officials from San Bernardino County, Highland, Redlands, and the Conservation District, as well as the Field Manager of the BLM. A Technical Advisory Committee ("TAC") was also formed with representatives from the PAC agencies, and other water, mining, flood control, and resource protection interests.

B. The Wash Committee examined the most appropriate manner in which to use the Wash for the benefit of all landowners without regard to preexisting planning of the Wash or current land ownership. Ultimately, the Wash Committee determined that there should be a balance of land uses to accommodate the needs of mineral extraction, water conservation, habitat protection, and municipal infrastructure

requirements (i.e. utilities, trails, etc.). To achieve land use balance, current land uses must be reassigned to better accommodate mineral extraction, water conservation, and habitat. To effect such change, an exchange of existing land ownership between BLM and the Conservation District, and a transfer of leasehold interests between the mining companies and the Conservation District will be required.

C. The TAC reached a general consensus in early 2000 regarding the designation of specific areas of the Wash for the desired uses. The result of this multi-jurisdictional effort was the creation of a proposed Land Management and Habitat Conservation Plan for the Upper Santa Ana River Wash ("Concept Plan"). The Concept Plan establishes the framework for balancing ongoing and future land activities proposed for the Wash Planning Area ("WPA"), including habitat protection areas and recreational trail alignments. The Concept Plan was reviewed and endorsed by the governing boards and/or officials with approval authority from each of the Parties, and various other agencies involved in the deliberations on the Concept Plan.

D. Each of the Parties have found and determined that it is in their best interests to join together to: manage activities in connection with the necessary refinements, environmental review, and implementation of the Land Management and Habitat Conservation Plan (collectively the "Project"); provide an equitable cost-sharing mechanism for the funding of the Project; and, define the projected schedule and scope of work to execute the Project.

E. The Parties hereto now enter into this Agreement to establish a Task Force, consisting of a representative from each party, to oversee and administer the preparation of plans, environmental review documents, public notices and hearings, and other activities requisite to the formulation and, if adopted, execution of the Project.

F. In entering into this Agreement, the Parties reserve their discretionary authority with regard to the execution of the Project, including but not limited to, any land use and planning authority under state and local law, authority, designated under the Surface and Mining Recovery Act ("SMARA"), and CEQA approval of their own discretionary decisions executing the Project.

## **TERMS & CONDITIONS**

### **SECTION 1: DESCRIPTION OF PROJECT.**

The Project to be undertaken by the Task Force consists of all of the following:

A. Refinement and expansion of the Concept Plan (Exhibit "A") to develop the Component Plans of a "Land Management and Habitat Conservation Plan for the Upper Santa Ana River Wash" ("Plan"), which includes the following:

1. A Mining and Reclamation Plan under the Surface Mining and Reclamation Act ("SMARA") designating the areas as generally depicted in Exhibit "A" to be devoted to sand, gravel, and mineral extraction and the terms and conditions under which such extraction may proceed, which will be provided by CEMEX and

Robertson's to the appropriate municipality, Highland or Redlands, for review and approval;

2. A Water Conservation Plan, which describes the scope, extent, and location of water diversions, conveyance, spreading, and monitoring activities, which will be provided by the Conservation District;

3. A Recreation Plan, which coordinates the planning and development of trails, parks, and public recreation areas, which will be provided by Conservation District, San Bernardino County, and Redlands;

4. An Infrastructure Plan, which describes the location of pipelines, utility corridors, roads, highways, and communication facilities, which will be provided by the Conservation District, EVWD, and Redlands;

5. A Habitat Protection Plan, which will be provided by the Conservation District to identify habitat areas that may be considered to protect threatened and endangered species at such time as other activities within the Wash are presented to the appropriate agency for entitlements, approvals and /or land use permits; and

6. A Flood Control Plan, which describes flood control facilities/activities including detention and retention basins, drains, and storm water conveyance facilities, which will be provided by SBCFCD.

B. Preparation of preliminary documents necessary to conduct an environmental analysis, including the following:

1. A Project Description for the environmental analysis based on the Component Plans described above;

2. Alternative land balancing plans to be studied in the environmental analysis;

3. A plan outline, including actions, required funding, and the administrative or legislative measures needed to implement the Project, which will be known as the Implementation Action Plan; and

4. A draft agreement to execute the Implementation Action Plan, which will be known as the Implementation Agreement.

C. Preparation of an EIR/EIS for implementation of the Plan, including a mitigation monitoring plan, based on the Component Plans in 1.A. above, and the preliminary documents in 1.B. above.

D. Completion of a proposed land exchange between BLM and Conservation District. BLM, working with the Conservation District, shall undertake activities to assess, and if appropriate, implement by way of a Memorandum of Understanding or

other appropriate instrument with the Conservation District, a land exchange. The assessment and potential implementation of the land exchange will analyze whether portions of property currently owned by BLM can feasibly and beneficially be exchanged for portions of property owned by the Conservation District.

E. Preparation of the implementation documents based on the completed EIR/EIS, including the following:

1. A certification of the EIR and record of decision for the EIS;
2. An Implementation Action Plan; and
3. A Habitat Conservation Plan, including a programmatic Section 10a Take Permit.

F. Task Force submit the EIR/EIS, Implementation Action Plan, and Habitat Conservation Plan to the appropriate agencies for their action and, if adopted, subsequent implementation.

## **SECTION 2: CREATION OF THE TASK FORCE.**

There is hereby created a task force that shall be known as the Upper Santa Ana River Wash Land Management and Habitat Conservation Plan Task Force ("Wash Task Force" or "Task Force"). The Task Force shall oversee and direct preparation of the Project and shall be comprised of regular and advisory members as follows:

### **A. Regular Members.**

Each Party who contributes financially to fund the Project in accordance with Exhibit "B" to this Agreement, as may be amended from time to time, or contributes with in-kind services that result in a product for use by the Task Force commensurate with the level of contribution identified in Exhibit "B," shall be deemed a Regular Member of the Task Force. Any dispute regarding whether "in-kind" services contributions by a Party entitles such Party to status as a Regular Member shall be submitted to all then-existing Task Force Regular Members, and will be decided by a majority vote of the Task Force Regular Members. Each Regular Member shall be entitled to appoint two (2) representatives to the Task Force concurrently with the execution of this Agreement. Each Regular Member shall appoint (1) representative to oversee and contribute to the technical/staff aspects of the Task Force's work, and one (1) member of the legislative body, Board of Directors, or other body with ultimate decision making and policy making authority for the Regular Member, who shall be the voting member of the Task Force. Notwithstanding that each Regular Member shall have two (2) representatives to the Task Force, each Regular Member shall have and exercise only one (1) vote. The identity of each of the appointed representatives from each respective Party shall be promptly communicated to the Project Manager. Appointed representatives to the Task Force shall serve at the pleasure of the governing body of the respective appointing Party, and may be removed by them at any time, with or without cause; provided, however, that the Parties acknowledge and agree the continuity of representation on the

Task Force is important to the overall effectiveness of the Task Force, and the Parties further agree to ensure such continuity whenever possible.

**B. Advisory Members.**

1. Any member of the TAC, which is not a Regular Member of the Task Force, and any other public or governmental agency, may with the approval of a majority of the Regular Members of the Task Force, designate representatives as non-voting advisors to the Task Force ("Advisory Members"). The Task Force will formally recognize these Advisory Members and ensure all materials and products of the Task Force are provided to the Advisory Members. A list of Advisory Members will be maintained by the Project Manager.

2. The California Department of Water Resources (DWR), the California Department of Fish and Game (DFG), and the United States Fish and Wildlife Service (USFWS), County of Orange, and the City of Highland are hereby designated as Advisory Members to the Task Force.

3. Advisory Members may be admitted as Regular Members, with voting privileges, with approval by a majority vote of Regular Members of the Task Force.

**C. Function.**

1. The Task Force shall oversee and direct the preparation of all of the component elements of the Project.

2. The Task Force shall assist in the selection of a consultant to assist in planning and implementing the Project ("Consultant"). The Consultant selected must be acceptable to the Federal lead agency.

3. The Task Force shall meet periodically for the purpose of reviewing and evaluating the work product of the Task Force and the Consultant.

4. The Task Force shall administer this Agreement, subject to the reserved right of each of the Parties to approve their respective financial appropriations to Task Force budgets.

5. The Task Force shall propose contribution levels for each Party, subject to Section 4.D. herein. The contribution level for each Party shall initially be those set out in Exhibit "B" hereto.

6. The Task Force shall, in consultation with the Consultant, prepare and adopt a project schedule ("Project Schedule"). When completed, the Project Schedule will be circulated among all Regular and Advisory Members, and will be maintained by the Project Manager.

D. Committees.

The Task Force may establish working committees, which shall be designated from a pool of Regular and Advisory members who shall be selected by and serve at the pleasure of the Task Force.

E. Designation of Officers.

The Task Force shall designate and appoint one of its representatives to act as Chair and another of its members to act as Vice-Chair, both of which shall be selected from the pool of Regular Members. The Conservation District shall perform the functions of project administrator, including secretarial and treasurer duties.

F. Meetings

Regular meetings of the Task Force shall be held at the Conservation District offices, or such other place as may be agreed upon by the Task Force. At the first meeting, the Task Force shall provide for the time and place of its regular meetings. Special meetings may be called at the request of the Chair or of a majority of Regular Members to the Task Force. A majority of Regular Members of the Task Force shall constitute a quorum for the purposes of transacting business. Except as otherwise provided herein, all actions of the Task Force shall be passed and adopted upon the affirmative vote of a majority of the quorum of Regular Members. All meetings of the Task Force shall be conducted in accordance with California's Open Meeting Laws. The Project Manager shall keep or cause to be kept, minutes of the meetings of the Task Force, copies of which shall be forwarded to each Task Force representative and to each Party. The Task Force may adopt, from time to time, such additional rules and regulations for the conduct of its affairs as may be required.

G. Additional Parties.

The Parties to this Agreement acknowledge and agree that the effectiveness of the Task Force may be improved by the addition of other entities that have interest in the work of the Task Force. Such entities may join the Task Force upon approval of a majority of the Regular Members of the Task Force, and upon such terms and conditions as are acceptable to such Regular Members, including, but not limited to, cash contributions to past, present, and/or future work of the Task Force.

H. City of Highland as Regular Member.

At the time of execution of this Agreement, the City of Highland has expressed its interest in joining the Task Force as a Regular Member, and the parties to this Agreement contemplate and desire that it do so. Provided City of Highland approves and executes this Agreement within One Hundred Eighty (180) days of the Effective Date, and pays its share of the Task Force Contribution Levels as set forth in Exhibit "B-1," for application to all expenses incurred by the Task Force from the Effective Date and following, City of Highland may join the Task Force, as a Regular Member, without the necessity of an approving vote of the Regular Members. In the event City of

Highland so joins the Task Force pursuant to the terms and conditions of this Section 2 (H), and effective immediately and prospectively from the date it does, various provisions of this Agreement shall be thereupon automatically be amended, all as more specifically set out in Exhibit "D" hereto.

### **SECTION 3: LEAD AGENCY DESIGNATION**

A. Consistent with the First Amendment to the Memorandum of Understanding Regarding Coordinated Planning Activities Pertaining to the Santa Ana River Wash Area dated August 13, 1997, ("MOU") and its designation of the Conservation District as the Permanent Chair of the Policy Action Committee, the Conservation District is hereby designated as the Lead Agency for all non-federal activities associated with the Project under the California Environmental Quality Act ("CEQA").

B. The BLM is hereby designated as the Lead Agency for all federal activities associated with the Project under the National Environmental Policy Act ("NEPA").

### **SECTION 4: PROJECT MANAGER.**

A. The Conservation District shall serve as the Project Manager, at the pleasure of the Task Force. The Project Manager shall act as the primary liaison and contact between the Consultant, the Task Force, and the Parties to the Second Amendment.

B. The duties of the Project Manager shall include the following:

1. Serve as the Lead Agency under CEQA and as assistant to BLM, which is the Lead Agency under NEPA; provided, however, that on issues relating to definition of level of significance for impacts, existence of and mitigation for significant adverse environmental impacts, and formulation of a mitigation monitoring program for those portions of the Project which involve mining activity within the jurisdictional boundaries of Redlands, and which require permits under SMARA, the Project Manager shall accept and incorporate into the EIR/EIS the determinations of Redlands for such aspects of the Project.

2. Administer the cost-sharing formula, which designates the percentage of the total cost of the Project, as approved by each Party to fund the Project;

3. Coordinate communications between the Consultant and the Parties;

4. Provide the Consultant with copies of all earlier studies and EIRs, which may be helpful to the Consultant to complete the Project;

5. Gather and transmit data to the Consultant from the Parties;

6. Provide periodic reports to the Task Force of the progress of the Project;
7. Report to and solicit input from the Task Force regarding policy issues that may arise;
8. Oversee the billing for all aspects of the Project;
9. Receive and pay all appropriate invoices for the Consultant;
10. Review the Consultant's charges and advise the Task Force of any problems associated with the Project;
11. Facilitate meetings of the Task Force and maintain records of the Task Force;
12. The Project Manager shall, through a written Notice to Proceed, cause the Consultant to commence the Project, and shall cause the Consultant to perform all services within the time period(s) established in the Project Schedule, and in conformity with the approved Project Flow Diagram, attached hereto as Exhibit "C"; and,
13. Either approve or deny by way of written response any requests for minor adjustments to the time period(s) specified in the Project Schedule.

C. Administration of Task Force Work.

The Conservation District shall make its personnel available as reasonably necessary to the Task Force to perform the secretarial, clerical, administrative, legal general counsel, and financial management duties requested by the Task Force. The Task Force shall compensate the Conservation District for the Conservation District's actual costs incurred in providing such services to the Task Force, upon presentation of an invoice detailing the services rendered and costs thereof, and approval of the same by the Task Force.

**SECTION 5: FUNDING MECHANISM.**

A. The current estimated cost for the preparation of plans and environmental review for the Project is \$823,258, or \$973,258 if the consultant prepares the Implementation Agreement. The Task Force shall periodically approve a contribution amount to be requested of all Regular Members, to be paid to and managed by the Project Manager consistent with the provisions of this Section 4, from which the Project Manager will meet the expenses incurred in implementing the Project. Contributions shall be apportioned among the Parties, as agreed to by the Parties. The initial levels of contribution are identified in Exhibit "B" to this Agreement.

B. The Conservation District as Project Manager shall coordinate Consultant retention, direction, coordination, and oversight in the planning and implementation of

the Project, and shall serve as the agency through which funds are to be conveyed and disbursed for the purpose of completing the Project.

C. The Conservation District shall establish a fund ("Fund") into which it will cause to be deposited all of the contributions received from the Task Force towards the estimated cost of the Project. It is intended that this Fund finance the Project in its entirety. In establishing the Fund, the Conservation District shall assure that all interest earned by the Fund is to be paid into the Fund, and made solely available for the funding of the Project. The Task Force may from time to time propose a cost-sharing formula differing from that attached as Exhibit "B", which designates the percentage of the total cost of the Project each Party will be required to contribute to the Fund. Upon approval by the Task Force of a contribution amount to be requested of the Regular Members, the Project Manager shall submit invoices to each Party requesting payment of their respective contributions, pursuant to the formula attached as Exhibit "B," or as otherwise proposed by the Task Force. Payment of these invoices shall be made to the Conservation District within 30 days of receipt of such invoice. If any Regular Member fails to timely remit payment of its share of the invoices in accordance to Exhibit "B" to this Agreement, the voting rights of such Regular Member shall be suspended until such time as the full amount of the invoice is paid, or the final resolution of any dispute regarding the invoice, as provided below. During such period of suspension, the Party shall enjoy only those rights and privileges as an Advisory Member of the Task Force.

D. Each Party reserves the right to approve its own contribution level to the Project, as well as its ultimate payment authority of invoices issued by the Project Manager, in whole or in part, on a per-invoice basis.

E. The Project Manager shall have authority and control of disbursements from the Fund. The Project Manager shall provide the Task Force with an accounting on at least a quarterly basis showing all disbursements, accrued interest, and other debits and credits to the Fund for the preceding quarter. Any amounts paid to the Project Manager shall not be subject to refund, except as provided herein.

F. Should a dispute arise between the Project Manager and any Party(ies) with respect to either an invoice submitted by the Consultant or any other disbursement from the Fund, the complaining Party(ies) shall notify the Project Manager in writing, specifying the nature of the objections, the reasons therefor, and the action the complaining Party(ies) requests the Project Manager to take in resolution of the dispute. Upon receipt of any such written objection, the Project Manager shall meet or otherwise confer with the complaining Party(ies) in a good faith effort to resolve the dispute. In the event such efforts do not result in resolution of the dispute within ten (10) days of the Project Manager's receipt of the written objection, the Project Manager shall refer the matter to the Task Force, and shall provide it with any and all receipts, invoices, or other documents necessary for the prompt resolution of the dispute. The Task Force shall consider and resolve the matter at its next scheduled meeting, but no later than thirty (30) days following the Project Manager's referral of the dispute to the Task Force. In resolving the dispute, the decision of the majority of the Regular Members of the Task Force shall be final.

G. Upon completion of the Project, or earlier termination of this Agreement, any unexpended Funds shall be returned to the Parties in proportion to their financial contribution.

#### **SECTION 6: OWNERSHIP OF DOCUMENTS.**

All work produced in association with the Project (including originals prepared by anyone in connection with, or pertaining to, the work of the Task Force) shall become the property of the Regular Members of the Task Force, and each of them.

#### **SECTION 7: INDEMNIFICATION.**

Neither the Project Manager nor any officer or employee thereof shall be responsible to any other Party for any damage or liability occurring by reason of anything done, or omitted to be done, by the Consultant, or in connection with any work, authority or jurisdiction delegated to the Project Manager under this Agreement. All Parties, and each of them, hold the Project Manager harmless from any claim, demand, suit of law or equity, or other proceeding arising from or relating to the Project Manager's performance of its obligations contemplated by this Agreement. Nothing herein shall be read or understood as indemnifying or holding the Conservation District, or any officer or employee thereof, harmless from any claim, demand, suit on law or equity, or other proceeding arising from or relating from the acts or omissions of the Conservation District while acting as a Party to this Agreement.

In addition, each Party agrees to indemnify, defend, and hold harmless each other Party and its officers, employees, agents, and volunteers from any and all claims, actions, losses, damages, and/or liability arising out of its obligations under this Agreement.

In the event any Party is found to be comparatively at fault for any claim, action, or loss, or damage that results from their respective obligations under this Agreement, the Party(s) found to be at fault shall indemnify the other(s) to the extent of its comparative fault.

Federal agencies' obligations under this Agreement shall be to the extent permitted by the Federal Tort Claims Act.

#### **SECTION 8: NOTICES.**

All notices required to be provided hereunder, except meeting notices, shall be in writing, and either served personally or sent by United States Mail. Meeting notices may be provided by electronic mail correspondence. For these purposes, the addresses for the Parties and Advisory Members are as follows:

As to Cemex Construction Materials, LP:

## **SECTION 9: ENTIRE AGREEMENT.**

This Task Force Agreement contains the entire agreement of the Parties hereto with respect to the matters contained herein, and supersedes all negotiations, prior discussions, and preliminary agreements or understandings, written or oral relating to

the Task Force and Project Manager. No waiver or modification of this Agreement shall be binding unless consented to by all Parties in writing.

**SECTION 10: WAIVER.**

No waiver of any default shall constitute a waiver of any other default or breach, whether of the same or other covenant or condition. No waiver, benefit, privilege, or service voluntarily given or performed by a Party shall give the other Party any contractual rights by custom, estoppel, or otherwise.

**SECTION 11: COOPERATION: FURTHER ACTS.**

All parties agree to use reasonable care and diligence to perform their respective obligations under this Agreement. All parties agree to act in good faith to execute all instruments, prepare all documents, and take all actions as may be reasonably necessary, appropriate or convenient to carry out the purposes of this Agreement.

**SECTION 12: GOVERNING LAW.**

This Agreement shall be governed by and construed under the laws of the State of California. Federal agency participation under this Agreement, however, shall be governed by the applicable federal laws.

**SECTION 13: ATTORNEYS' FEES.**

In the event the Task Force initiates or defends any litigation or other judicial or administrative proceeding in connection with the Project or this Agreement, retention of counsel to represent the Task Force, if required, shall be by the Project Manager, subject to the approval of the Task Force. The costs of such retention will be invoiced to the members of the Task Force in the same manner, and subject to the same procedures, as all other consultant costs invoiced to the Task Force. In any action or proceeding involving a dispute between the Parties arising out of this Agreement, the prevailing Party shall be entitled to receive from the other Party, reasonable attorneys' fees. The term "attorneys' fees" shall include reasonable costs for investigating the action, conducting discovery, cost of appeal, costs and fees for expert witnesses, and all other normally allowable costs incurred in such litigation, whether or not such litigation is prosecuted to final judgment. Service of process on any Party shall be made in any manner permitted by law and shall be effective whether served inside or outside of California.

Notwithstanding the foregoing, attorneys' fees and costs' recoverable against the United States, however, shall be governed by applicable federal laws.

**SECTION 14: NO THIRD PARTY BENEFICIARIES.**

There are no intended third party beneficiaries of any right or obligation assumed by the Parties. No member of, or delegate to, Congress or Federal Resident

Commissioner, shall be entitled to any share of this Agreement, or to any benefit that may arise from it.

**SECTION 15: CONSTRUCTION: CAPTIONS.**

The language of this Agreement shall be construed according to its fair meaning, and not for or against any Party hereto based on authorship. The captions of the various articles and paragraphs are for convenience and ease of reference only, and do not define, limit, augment, or describe the scope, content, or intent of this Agreement.

**SECTION 16: SEVERABILITY.**

Each provision of this Agreement shall be severable from the whole. If any provision of this Memorandum shall be found contrary to law, it is the intention of all the Parties, and each of them, that the remainder of this Agreement shall continue in full force and effect.

**SECTION 17: INCORPORATION OF RECITALS.**

The Recitals are incorporated herein and made an operative part of this Agreement.

**SECTION 18: AUTHORITY TO ENTER INTO AGREEMENT.**

All Parties warrant that they have all requisite power and authority to execute and perform this Agreement. Each person executing this Agreement on behalf of their party warrants that he or she has the legal power, right, and authority to make this Agreement and bind his or her respective Party, and that in so doing, such Party is not thereby in breach of any other contract or agreement.

**SECTION 19: COUNTERPARTS.**

This Agreement may be signed in counterparts, each of which shall constitute an original.

**SECTION 20: EFFECTIVE DATE**

The Effective Date of this Agreement shall be latest of the dates set next to the signatures of the parties hereto evidencing signature by all the parties hereto, which latest date shall be inserted into the preamble to this Agreement.

**SECTION 21: NO ASSIGNMENT.**

The rights and obligations of this Agreement may not be transferred, assigned, or encumbered by any Party hereto without the prior, express, written consent of a majority of the Regular Members of the Task Force.

**SECTION 22: DISSOLUTION.**

The Task Force may be dissolved upon a 2/3 majority vote of the regular members. Upon such dissolution, the Project Manager is entitled to pay all outstanding invoices, and distribute any remaining money in the Fund among the contributing members pro-rata according to each Party's respective financial contribution.

**SECTION 23: TERMINATION.**

A. Any Party may voluntarily terminate its participation under the Agreement at any time upon delivery of at least 60 days prior written notice to the Task Force.

B. The Task Force may, upon a 2/3 majority vote, terminate any Party's participation under the Agreement upon that Party's failure to make its pro-rata contribution:

- (1) Within 30 days of the date said Party's contribution becomes due; OR
- (2) Within 45 days after the Task Force resolves said Party's dispute over the payment of an invoice in favor of payment as set forth in Section 4(F) of this Agreement.

C. Upon a Party's termination from participation under the Agreement, the Project Manager shall return the portion of that Party's pro-rata contribution not expended by the Project Manager after paying invoices for all charges incurred during the period that Party served as a Member of the Task Force.

D. The termination of any member or members of the Task Force shall not affect the remaining Parties' obligations under this Agreement, except for redistribution of contributions described herein. This Agreement shall remain in effect until such time as 2/3 of the regular members vote to dissolve the Task Force as provided by Section 22 of this Agreement.

**EXHIBIT "B": TASK FORCE CONTRIBUTION LEVELS**

Allocation to the Parties of their share of the costs associated with the Project is as set forth below in the following proportions:

<u>AGENCY</u>	<u>RESPONSIBILITY FOR FINANCIAL CONTRIBUTION</u>
CEMEX	24.774
ROBERTSON'S READY MIX	24.774
SAN BERNARDINO VALLEY WATER CONSERVATION DISTRICT	24.644
EAST VALLEY WATER DISTRICT	3.226
REDLANDS UTILITIES DEPARTMENT	3.226
COUNTY OF SAN BERNARDINO	6.452
SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT	6.452
CITY OF REDLANDS	6.452

Should the cost to complete financing of the Project exceed the total current estimated charges set forth above, the Task Force will have the responsibility of obtaining any required additional funding from each of the Parties. Any such additional funding shall be assessed to those Parties in the above-mentioned proportions, or as otherwise determined by the Task Force.

Note that in the event the City of Highland joins the Task Force as a Regular Member pursuant to the provisions of Section 2 (H) of this Agreement, the contribution levels set forth here will be superseded by the levels set forth in Exhibit "B-1."

**EXHIBIT "B-1": TASK FORCE CONTRIBUTION LEVELS IN THE EVENT CITY OF HIGHLAND JOINS AS A REGULAR MEMBER**

Allocation to the Parties of their share of the costs associated with the Project is as set forth below in the following proportions:

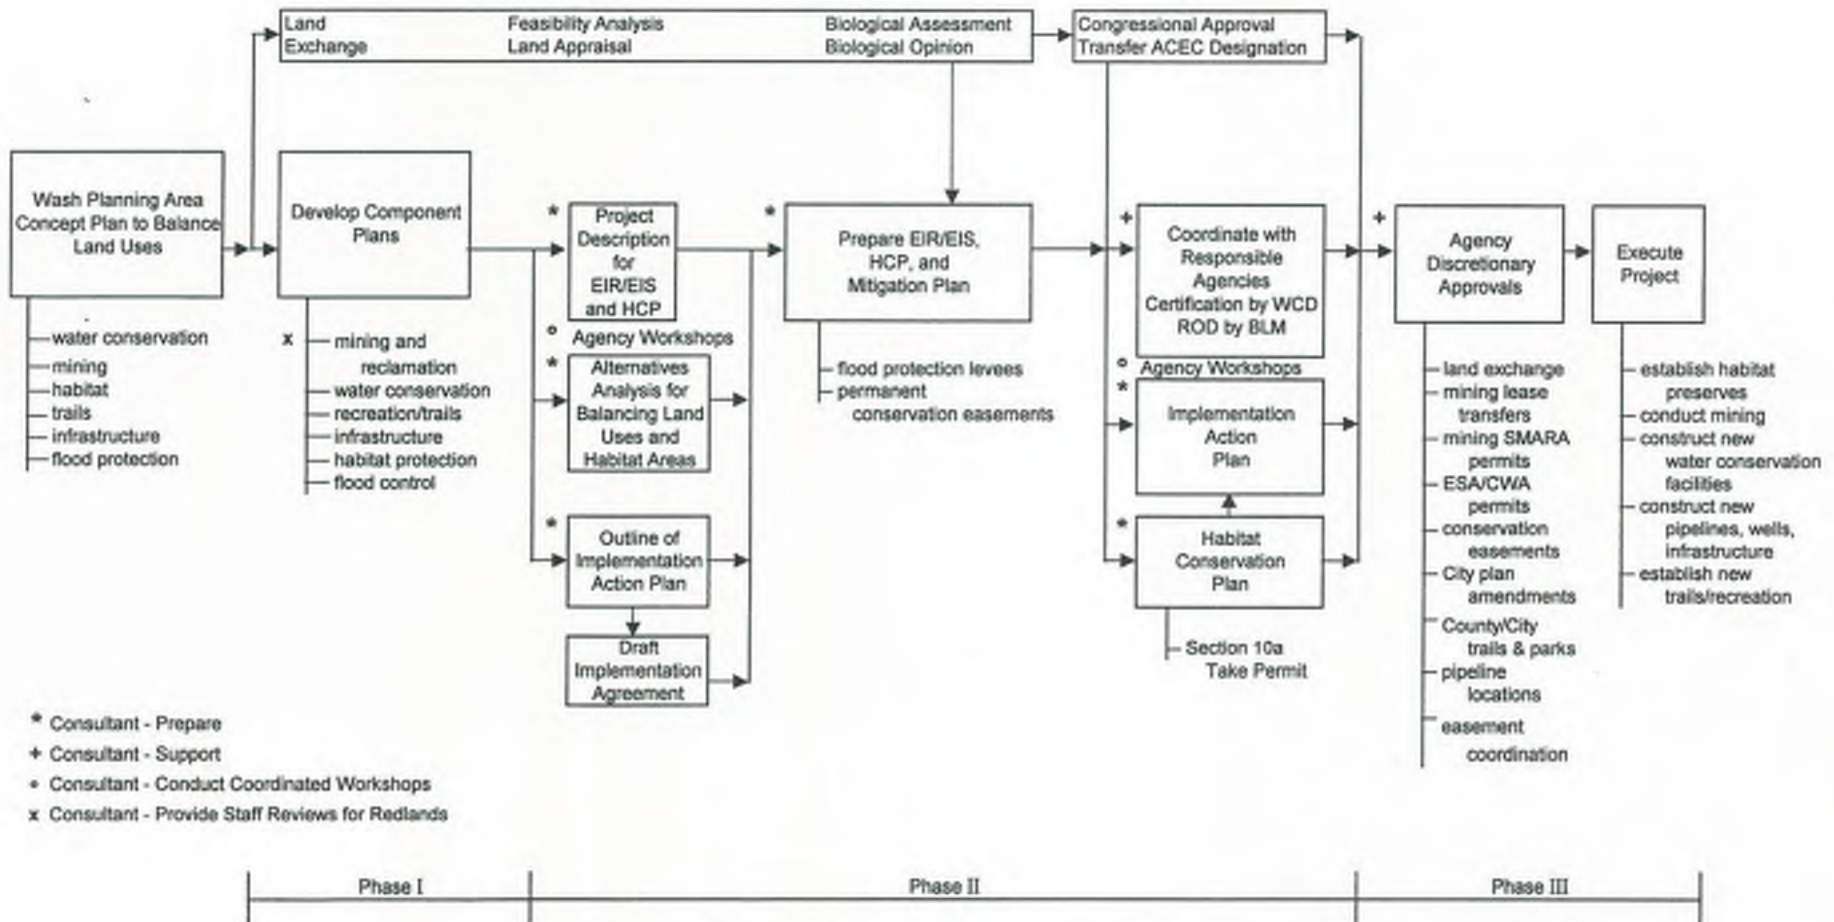

<u>AGENCY</u>	<u>RESPONSIBILITY FOR FINANCIAL CONTRIBUTION</u>
CEMEX	23.272
ROBERTSON'S READY MIX	23.272
SAN BERNARDINO VALLEY WATER CONSERVATION DISTRICT	23.152
EAST VALLEY WATER DISTRICT	3.030
REDLANDS UTILITIES DEPARTMENT	3.030
COUNTY OF SAN BERNARDINO	6.061
SAN BERNARDINO COUNTY FLOOD CONTROL DISTRICT	6.061
CITY OF HIGHLAND	6.061
CITY OF REDLANDS	6.061

Should the cost to complete financing of the Project exceed the total current estimated charges set forth above, the Task Force will have the responsibility of obtaining any required additional funding from each of the Parties. Any such additional funding shall be assessed to those Parties in the above-mentioned proportions, or as otherwise determined by the Task Force.

This schedule of contribution levels shall only become effective if the City of Highland joins the Task Force as a Regular Member pursuant to the provisions of Section 2 (H) of this Agreement.

**EXHIBIT "D": REVISIONS TO AGREEMENT IN THE EVENT CITY OF HIGHLAND  
JOINS AS A REGULAR MEMBER**

In the event the City of Highland joins the Task Force as a Regular Member pursuant to, and in compliance with, the provisions of Section 2 (H) of this agreement, the parties hereto have agreed to certain modifications of the text of the Task Force Agreement, which will serve as amendments thereto, effective immediately and prospectively upon inclusion of the City of Highland as a Regular Member pursuant to Section 2 (H). These amendments are set out below:

Section 1 (A) 3): A Recreation Plan, which coordinates the planning and development of trails, parks, and public recreation areas, which will be provided by Conservation District, San Bernardino County, Highland, and Redlands.

Section 1 (A)(4): An Infrastructure Plan, which describes the location of pipelines, utility corridors, roads, bridges, highways, and communication facilities, which will be provided by the Conservation District, San Bernardino County, Highland, and Redlands.

Section 1 (F): Task Force submit the EIR/EIS, Implementation Action Plan, and Habitat Conservation Plan to the appropriate agencies for their action and, if adopted, subsequent implementation. The EIR/EIS shall not be certified by the Lead Agency as to those portions of the Project occurring within the jurisdictional boundaries of the City of Highland if, prior to the time the Lead Agency certifies the EIR/EIS, it has been disapproved by the City Council of the City of Highland. The EIR/EIS shall not be certified by the Lead Agency as to those portions of the Project occurring within the jurisdictional boundaries of the City of Redlands if, prior to the time the Lead Agency certifies the EIR/EIS, it has been disapproved by the City Council of the City of Redlands.

Section 2 (B)(2): The California Department of Water Resources (DWR), the California Department of Fish and Game (DFG), the United States Fish and Wildlife Service (USFWS), and County of Orange are hereby designated as Advisory members of the Task Force.

Section 4 (B)(1): Revise Section 4 (B)(1). to read as follows:

Serve as the Lead Agency under CEQA and as assistant to BLM, which is the Lead Agency under NEPA, provided, however, that on issues relating to definition of level of significance for impacts, existence of and mitigation for significant adverse environmental impacts, and formulation of a mitigation monitoring program for those portions of the Project requiring permits under SMARA, the Project Manager shall accept and incorporate into the EIR/EIS the collective determinations of the applicable agencies with SMARA permitting authority for such aspects of the Project, and in the absence of any agreement by such agencies, shall refer determination of such issues to the Task Force;

Jack Woodbury  
 San Bernardino Valley WCD  
 31919 Florida Street  
 Mentone, CA 92346

RE: Agreement to Form the Upper Santa Ana River Wash Land Management and  
 Habitat Conservation Plan Task Force

Dear Mr. Woodbury:

As previously announced, all of the required signatures have been obtained for the Task Force Agreement ("Agreement") referenced above. Attached are the signature pages that you should insert in your copy of the Agreement. On page 1 of the Agreement, you should write in "20<sup>th</sup>" day of "November" 2002 as the effective day. In accordance with the Agreement, the San Bernardino Valley Water Conservation District ("District") shall be the Task Force Project Manager.

As a reminder, the Agreement was prepared to accommodate the City of Highland because there was a potential delay in their decision to participate. As we now know, the City of Highland agreed to participate several months ago. Therefore, please annotate the appropriate paragraphs of the Agreement to refer to Exhibit "D," *"Revisions to Agreement in the Event City of Highland Joins as a Regular Member."*

Section 2 of the Agreement identifies the criteria for Regular and Advisory Members of the Task Force, and stipulates that each Regular Member will have two representatives: one to oversee and contribute to the technical/staff aspects and one from the governing body. The names of those representatives should be forwarded to the Project Manager at this time. Advisory Members should also submit representative names to the Project Manager at this time. A list of current Regular and Advisory Members is attached.

On December 20, the former Wash Committee Technical Advisory Committee (TAC) will meet for a Pre-final review of the proposed scope of work prior to the Project Manager issuing a Notice to Proceed to LSA Associates, Inc., who will prepare the environmental documentation for the Concept Plan. Following that review, an invoice will be submitted to each Regular member for its share of the consultant's cost, based

BOARD

 Manuel Aranda, Jr.

GENERAL  
 MANAGER

D. Burnell Cavender, AICP

on the distribution of costs shown on Exhibit "B-1": *Task Force Contribution Levels in the Event City of Highland Joins as a Regular Member*, of the Agreement, and attached hereto.

The District is looking forward to starting calendar year 2003 by issuing a Notice to Proceed to prepare the environmental documentation. Please note that the first task in the scope of work is to complete the Project Description. Therefore, please review Section 1 of the Agreement as a reminder of the responsibilities of the Task Force and the Regular Members for preparing the "Component Plans." When the Notice to Proceed is issued, we will not want to delay the consultant by not having Component Plans ready for review. It has already been 6 years since we started developing the Concept Plan. As Project Manager, we will do our best to assure the environmental documentation is prepared within the estimated 18 months.

We thank you for your past and continued perseverance and willingness to work toward a coordinated plan that we all know intuitively is the right thing to do. We look forward to continued good working relations among the Task Force members.

Sincerely,

D. Burnell Cavender, AICP  
General Manager

**PROPOSED**  
**LAND MANAGEMENT**  
**AND HABITAT CONSERVATION PLAN**  
**FOR THE**  
**UPPER SANTA ANA RIVER WASH**

**EXECUTIVE SUMMARY**

PREPARED FOR THE  
SANTA ANA RIVER WASH AREA COORDINATED  
PLANNING ACTIVITIES COMMITTEE

BY

STAFF OF THE  
SAN BERNARDINO VALLEY WATER CONSERVATION DISTRICT

APRIL 2001  
(Figures Revised December 2001)

**PROPOSED LAND MANAGEMENT  
AND HABITAT CONSERVATION PLAN  
FOR THE  
UPPER SANTA ANA RIVER WASH**

D. Burnell Cavender, AICP  
General Manager  
San Bernardino Valley Water Conservation District

**Introduction**

The land area between the mouth of the Santa Ana River Canyon, down stream of the new Seven Oaks Dam on the east, Interstate 215 (I-215) on the west, the cities of Highland and Redlands to the north and south, respectively, is known locally as the Upper Santa Ana River Wash (Wash) (Fig 1). A part of that Wash, containing approximately 5,200 acres, from the canyon mouth to Alabama Street on the west and bounded by the cities, has been the subject of intense planning the past three years. This area is known as the Wash Planning Area or the "WPA" (Fig 2).

Historically, the Wash was a natural flood plain and alluvial fan. In the past, the flood plain has provided a place to convey frequently devastating flood waters and deposit sediment. The alluvial deposit provides excellent geologic conditions to establish settling basins for percolating surface water to the groundwater basin, providing a significant part of the water supply for the local region. These same geologic conditions provide regionally significant deposits of sand and gravel as classified by the California Department of Conservation, that are used to support the local economy. In recent years, the value of the Wash as habitat for a variety of sensitive, threatened, and endangered species has become more apparent due to the decrease in this type of habitat throughout Southern California (Fig 3). Because the Wash is a unique open space and corridor, the County of San Bernardino (County) and the cities of Highland and Redlands are also planning to establish a series of recreational trails in and around the Wash. These important functions within the Wash, flood control, water conservation, mineral extraction, and wildlife habitat, are often in direct competition for much of the same land. It has been apparent since the early 1980s that a land management plan for the future use of the Wash would be needed to maintain other public services (water supply facilities, transportation and utility corridors, and recreation/trails), provide areas for the extraction of valuable construction materials, and preserve declining sensitive habitats.

In 1993, representatives of numerous agencies, including water, mining, flood control, wildlife and municipal interests, formed a Wash Committee to address local mining issues. Subsequently, the role of the Committee was expanded to address all the land functions in the Wash. The Wash Committee began meeting again in 1997 to determine how to use the WPA to accommodate all the important functions identified above. A Policy Action Committee (PAC) was established consisting of elected officials from the County, cities of Highland and Redlands, and the San Bernardino Valley Water Conservation District (District), and the Field Manager from the U.S. Bureau of Land Management (BLM). A Technical Advisory Committee (TAC) was formed with

representatives of the PAC agencies and other water, mining, flood control, and wildlife interests. The District chairs and provides staff support for the Committees.

The TAC, in concept, wiped the WPA clean of land ownership lines (Fig 4) and began anew to decide how the land could best be used. As a result of extensive workshops during 1998 and 1999, a conceptual Coordinated WPA map has been developed. As expected, the way the land might best be used and the way the land use was planned were not the same, nor does it conform to current land ownership. For example, the TAC found that some land proposed for mining was better suited for joint use by water conservation and wildlife habitat while other areas proposed for habitat preservation could be used better for mining. It became apparent that to make a plan work, land ownership would have to change, in particular, a land transfer or exchange between the BLM and the District, and areas leased by the District for mining.

A general consensus of the TAC was reached in early 2000 on the areas within the WPA designated for the specified land uses, which is the basis of the Land Management and Habitat Conservation Plan (Plan) (Fig 5). As stated, the proposed designations for land use crossed land ownership (3 public and 2 private) and land use authority lines (2 cities and the County). The TAC determined that mining expansion is best addressed by consolidating the future mining activity into one large area adjacent to existing mining operations within the western half of the WPA. This focuses extraction activities on lands currently disturbed by mining and lands with the least long-term wildlife habitat value. Furthermore, the TAC determined that portions of the BLM land designated as Areas of Critical Environmental Concern (ACEC) were either previously disturbed or were fragmented by adjacent mining activities, and thus would be better suited for mining expansion. Some of the most intact, viable wildlife habitat areas are contained within lands that are leased for future mining and currently used for water conservation. The TAC concluded that some of these lands were best suited for joint use as water and habitat conservation rather than mining. For example, the up-gradient side of a percolation basin dike could be wetted and periodically contain water for water-dependent species; whereas, the down-gradient side could generally remain undisturbed, except for maintenance and repair of the percolation basin dike and, therefore, could support other wildlife species common to the WPA.

Refinements in land use boundaries were made and agency and jurisdictional coordination was accomplished. The result of this effort is a proposed Plan that designates areas of the WPA for specific uses. The Plan will allow the existing and future Wash activities and land functions to occur and establish habitat preserves.

It is imperative that the principles that will govern the use, management, and conservation of the WPA be set forth in legally binding documents to which all concerned parties can agree. The PAC believes that there are sufficient lands in the WPA that can be divided equitably among the advocates to accommodate the needs for water conservation and supply facilities, aggregate extraction, and flood protection, while providing land for wildlife habitat and recreation.

It is equally important to note that if this coordinated Plan is not implemented, the consequences could be very grave for each of the primary use groups. Without the Plan, attempts to expand water conservation to meet future demands, develop additional aggregate resources, or effectively protect habitat will likely be held up by legal proceedings. Such action could result in

piecemeal planning, thus impairing the ability to reach an effective compromise. If local land use agencies make decisions regarding mining development in the WPA, without considering a coordinated plan, there could be greater environmental degradation and reduced ability to meet future water supply demands. On the other hand, if local officials make land use decisions that significantly restrict water conservation activities and mining, the reduced availability of water and aggregate resources may impact the economic development of the region. The affect of not implementing this Plan is that none of the groups would be able to accomplish its goals.

### Proposed Project Description Summary

The proposed project is a Land Management and Habitat Conservation Plan (Plan) for the Upper Santa Ana River Wash Planning Area. The land area addressed in this Plan is part of the overall alluvial fan and flood plain located along the Santa Ana River one mile downstream from the new Seven Oaks Dam between the cities of Highland on the north and Redlands to the south. The City of San Bernardino, to the northwest, is the largest city in the San Bernardino Valley. The WPA covers approximately 5,200 acres and starts at the canyon mouth at Greenspot Road, extends for some six miles to Alabama Street, and is as much as two miles wide.

The Plan will coordinate and accommodate existing ongoing and anticipated future activities planned to occur in the WPA, establish habitat preserve areas, and provide recreational trails. Each function will occupy designated specific areas within the WPA best suited for that function and will also accommodate the other competing uses for the overall benefit of the WPA. These existing and future activities include the following:

- Water conservation of both native and (when necessary) imported water resources for groundwater basin replenishment to augment public water supplies;
- Flood control, and management of the Seven Oaks Dam releases;
- Aggregate extraction and processing;
- Protection and conservation of sensitive and listed native species and habitat;
- Recreation planning including a portion of the Santa Ana River trail system; and
- Utilities, transportation, and water supply corridors and facilities.

The final approved Plan, its associated actions and permits, and environmental review will provide the necessary information for jurisdictional approvals for the described activities to move forward. The Plan, when implemented will be considered a "Win-Win-Win" for all the water, utility and service functions, mineral resource management, and environmental resource preservation.

As staff for the Wash Committee, the District invites your questions and support for this inter-relational concept plan. You may call me at 909-793-2503, or write to me at P.O. Box 1839, Redlands, CA 92373.

## Coordinated Operations Agreement

This Coordinated Operations Agreement (“**Agreement**”) is entered into and effective this 9 day of September, 2013 (the “**Effective Date**”) by and between the San Bernardino Municipal Water Department (the “**Department**”) and San Bernardino Valley Municipal Water District (“**Valley District**”). The Department and Valley District are each sometimes referred to herein as a “**Party**” and are collectively referred to as the “**Parties.**”

### Recitals

- A. The Department owns certain water delivery facilities serving the residents of the City of San Bernardino, including certain groundwater wells, the Encanto pumping station, the 10th Street Pipeline, and the Virginia Street Pipeline, all of which are identified more fully on the map attached hereto as **Exhibit A**, which is incorporated herein by reference (“**Department Facilities**”).
- B. By agreement dated June 15, 2005, Valley District purchased 61.98% of the capacity in Department’s 10<sup>th</sup> Street Transmission Main and 46.73% of the capacity in Department’s Virginia Street Transmission Main.
- C. Valley District owns certain water delivery facilities in and through the City of San Bernardino which are identified more fully on the map attached hereto as **Exhibit A**, which is incorporated herein by reference (“**Valley District Facilities**”).
- D. At Valley District’s request, the Department has been operating and making Department deliveries utilizing Valley District’s Baseline Feeder Extension South Pipeline.
- E. Both the Department and Valley District from time to time have unused capacity in their respective water delivery facilities.
- F. The Parties share an interest in using their respective facilities to increase operational flexibility, improve water supply reliability in their respective service areas, encourage the efficient use of capacity within the each Party’s water delivery system and provide the public with more reliable water service as efficiently as possible.
- G. The Parties wish to enable each other to make use of unused capacity in their respective facilities whenever possible and so wish to provide for the coordinated operation of those facilities.
- H. The Parties agree that if either Party uses the other’s water delivery facilities to deliver water, that Party using the facilities should be responsible for the increased cost associated with that Party’s use.

38 I. The Parties wish to continue the spirit of cooperation they enjoy by memorializing in  
39 this Agreement their desire to share their respective water production, transmission  
40 and distribution facilities.

41 Agreements

42 The Parties agree as follows:

- 43
- 44 1. *Term.* This Agreement shall have an initial term of twenty-five (25) years from its  
45 Effective Date and shall automatically renew for subsequent ten-year terms thereafter  
46 unless terminated as provided for in paragraph 2 below.
- 47 2. *Termination.* This Agreement may be terminated by either Party: (i) at the end of the  
48 initial term or any subsequent term, with or without cause, upon written notice provided  
49 at least one year prior to the end of the initial or subsequent term; or (ii) for cause upon  
50 90-days' written notice, *provided* that the Parties have, prior to the notice of termination,  
51 attempted to resolve the dispute as provided in paragraph 13.c below.
- 52 3. *Other Agreements.* This agreement is not intended to modify or change any other  
53 agreement the Parties may have together.
- 54 4. *Facilities Subject to This Agreement.* This Agreement governs the Parties' coordinated  
55 operation and use of the Department Facilities and the Valley District Facilities as  
56 described in Exhibit A, respectively. The Parties may amend this Agreement to add  
57 additional water delivery facilities owned by either Party upon the written consent of the  
58 other Party. Neither Party shall unreasonably delay or deny its consent for the addition of  
59 facilities owned by the other Party.
- 60 5. *Priority.* Save as may be provided by any other written agreement existing as of the  
61 Effective Date of this Agreement, each Party shall have priority for the use of the other  
62 Party's facilities, as set forth in Exhibit A, over any non-Party to this Agreement.  
63 Nothing in this Agreement, however, shall be construed to create a right by either Party  
64 to any specific share of the capacity in the other Party's facilities except for that capacity  
65 already purchased in Department's facilities by Valley District.
- 66 6. *Coordinated Operations.* This Agreement provides for the Parties' coordinated use of  
67 unused capacity within their respective water delivery facilities.
- 68 a. *Operation of Department Facilities.* The Department shall operate the Department  
69 Facilities to serve Valley District as follows:
- 70 (1) When Valley District requests a change to the current flow rate in one or  
71 more of the Department Facilities, Valley District shall request that  
72 change in writing at least 24 hours in advance, except in case of  
73 emergency.

- 74 (2) If the Valley District request is for flow through facilities in which Valley  
75 District has purchased capacity, Department's staff shall make the  
76 operational changes needed to provide the requested flow rate to Valley  
77 District for the duration requested.
- 78 (3) If the Valley District request is for flow through Department facilities in  
79 which Valley District does not own capacity and Department, in its sole  
80 discretion, determines that there will be unused and available capacity in  
81 that Department Facility, the Department's staff shall make the changes  
82 needed to provide the requested flow rate to Valley District for the  
83 duration requested.
- 84 b. *Operation of Valley District's Baseline Feeder Extension South Pipeline.* The  
85 Department shall operate the Baseline Feeder Extension South Pipeline on behalf  
86 of Valley District as follows:
- 87 (1) If the Department wishes to change the flow rate in the Valley District  
88 Facilities to make better use of unused and available capacity, the  
89 Department will provide Valley District with at least 24 hours' written  
90 notice of such change in flow rate. Valley District may, in its sole  
91 discretion, veto such modification of flow rates if Valley District believes  
92 that the modification in flow rates would not serve the interests of Valley  
93 District or its other customers.
- 94 (2) Valley District will coordinate deliveries of water with the Department  
95 staff operating the pipeline.
- 96 (3) The Baseline Feeder Extension South Pipeline presently conveys potable  
97 drinking water for the Department. Department agrees to fulfill all  
98 monitoring and other requirements associated with operating a potable  
99 water line per all applicable state and federal laws.
- 100 c. *Operation of other Valley District Facilities.* Valley District shall operate Valley  
101 District Facilities to serve the Department as follows:
- 102 (1) If the Department wishes to change the flow rate of a Valley District  
103 Facility to make better use of unused and available capacity, the  
104 Department will provide Valley District with at least 24 hours' written  
105 notice of such a change in flow rate. Valley District may, in its sole  
106 discretion, veto such modification of flow rates if Valley District believes  
107 that the modification in flow rates would not serve the interests of Valley  
108 District or its other customers.
- 109 (2) If the Department request is for flow through Valley District facilities,  
110 Valley District, in its sole discretion, determines that there will be unused  
111 and available capacity in that Valley District Facility, the Valley District

112 staff shall make the changes needed to provide the requested flow rate to  
113 the Department for the duration requested.

114 7. *Establishment of Joint Operations Committee.* The Parties shall establish and participate  
115 in a Joint Operations Committee (the "JOC") to serve in an advisory capacity to both  
116 Parties regarding their coordinated operation of the Department Facilities and the Valley  
117 District Facilities. The JOC shall establish which costs for the Department Facilities and  
118 the Valley District Facilities are eligible for reimbursement, and shall perform such other  
119 functions as determined by the Parties. The JOC shall meet at least twice a year to review  
120 the financial and water accounting needed to implement this Agreement.

121 8. *Maintenance.* Valley District shall be responsible for performing routine maintenance on  
122 Valley District Facilities, and Department shall be responsible for performing routine  
123 maintenance on Department Facilities. However, each Party shall be reimbursed for any  
124 JOC approved maintenance costs associated with the shared use of the facilities as  
125 described in Section 9 below.

126 9. *Eligible Reimbursement Costs.* Each Party will reimburse the other Party for its use of  
127 that Party's facilities as follows:

128 a. *Valley District Facility Replacement Costs.* Since Valley District's facilities were  
129 constructed and paid for entirely by Valley District, Valley District shall pay all  
130 replacement costs.

131 b. *Valley District Baseline Feeder Extension South Pipeline.* The Department will  
132 continue to provide and pay for all operations costs associated with the Baseline  
133 Feeder Extension South Pipeline provided that the Department is the sole user of  
134 this facility. At such time that Valley District and/or its partner Western  
135 Municipal Water District begin to operate this facility, the Department shall pay  
136 its proportional share of the operations costs as calculated in paragraph c, below.

137 c. *Valley District Operations Costs.* The Department will reimburse Valley District  
138 for **Fixed Costs** and **Variable Costs** associated with the Department's use of the  
139 Valley District Facilities, as provided in this paragraph. Department's total  
140 reimbursement to Valley District shall be the sum of the Fixed Cost and the  
141 Variable Cost in each calendar year.

142 (1) *Fixed Costs.* **Fixed Costs** shall consist of the sum of: (i) sampling costs,  
143 and (ii) permit compliance costs incurred by Valley District in the  
144 operation of its Facilities. Department shall pay Valley District a portion  
145 of total Fixed Costs for the operation of the Valley District Facilities that  
146 is equal to the proportion of the total capacity of the Valley District  
147 Facilities which is authorized for Department's use in that calendar year.

148 (2) *Variable Costs.* **Variable Costs** shall consist of the sum of: (a) energy  
149 costs associated with the use of the Valley District Facilities; (b) repair  
150 costs; and (c) personnel costs for the use of the Valley District Facilities.

- 151 Department shall pay Valley District the portion of the total Variable  
152 Costs for the operation of the Valley District Facilities that is equal to the  
153 proportion of the total capacity of the Valley District Facilities which is  
154 authorized for Department's use in that calendar year.
- 155 d. *Department Facilities.* Valley District will reimburse Department for **Fixed**  
156 **Costs** and **Variable Costs** associated with Valley District's use of the Department  
157 Facilities, as provided in this paragraph. Valley District's total reimbursement to  
158 the Department shall be the sum of the Fixed Cost and the Variable Cost in each  
159 calendar year.
- 160 (1) *Replacement Costs.* For all of the Department facilities in which Valley  
161 District has purchased capacity, Valley District shall pay its proportionate  
162 share of any replacement costs.
- 163 (2) *Fixed Costs.* **Fixed Costs** shall consist of the sum of: (i) sampling costs,  
164 and (ii) permit compliance costs incurred by the Department in the  
165 operation of the Department Facilities. Valley District shall pay the  
166 Department a portion of total Fixed Costs for the operation of the  
167 Department Facilities that is equal to the capacity which Valley District  
168 has purchased in Department facilities or its proportionate share, based on  
169 the capacity that has been authorized for Valley District use in that  
170 calendar year.
- 171 (3) *Variable Costs.* **Variable Costs** shall consist of the sum of: (a) energy  
172 costs associated with the use of the Department Facilities; (b) repair costs  
173 and (c) personnel costs for the use of the Department Facilities. Valley  
174 District shall pay the Department a portion of the total Variable Costs for  
175 the operation of the Department Facilities that is equal to the proportion of  
176 the total flows conveyed through the Department Facilities during a  
177 calendar year that were conveyed at the request of Valley District in that  
178 year.
- 179 e. *Fair Compensation.* For the purposes of Water Code Section 1810, both Parties  
180 agree that the payment structure set forth in this paragraph 8 constitutes fair  
181 compensation for each Party's use of unused capacity in the other Party's  
182 facilities.
- 183 10. *Invoices.* Each Party shall invoice the other Party for eligible reimbursement costs, as  
184 described in paragraph 8 above, annually in arrears on each March 1. Invoices shall  
185 include a full cost accounting, and must indicate, in reasonable detail, the cost of each  
186 action undertaken to operate and maintain the facilities in question. Invoices shall  
187 include all information reasonably necessary for each Party to confirm the other Party's  
188 calculation of reimbursement costs. In the event that either Party objects to any costs  
189 identified on an invoice, that Party shall pay the undisputed costs and shall invoke the  
190 dispute resolution process set forth in paragraph 13.c below for the objectionable costs.

- 191 11. *Payment Schedule.* Within 45 days of the date that an invoice is provided to a Party, the  
192 Party shall pay the invoicing Party for any costs that are not subject to an objection.
- 193 12. *Indemnification.*
- 194 a. *Indemnification by Department.* The Department shall indemnify, defend and  
195 hold harmless Valley District, its directors, officers, employees and agents from  
196 and against all damages, liabilities, claims, actions, demands, costs and expenses  
197 (including, but not limited to, costs of investigations, lawsuits and any other  
198 proceedings whether in law or in equity, settlement costs, attorneys' fees and  
199 costs), and penalties or violations of any kind, which arise out of, result from, or  
200 are related to the implementation of this Agreement by Department.
- 201 b. *Indemnification by Valley District.* Valley District shall indemnify, defend and  
202 hold harmless Department, its directors, officers, employees and agents from and  
203 against all damages, liabilities, claims, actions, demands, costs and expenses  
204 (including, but not limited to, costs of investigations, lawsuits and any other  
205 proceedings whether in law or in equity, settlement costs, attorneys' fees and  
206 costs), and penalties or violations of any kind, which arise out of, result from, or  
207 are related to the implementation of this Agreement by Valley District.
- 208 c. *Indemnification Procedures.* Any Party that is an indemnified party (the  
209 "**Indemnified Party**") that has a claim for indemnification against another Party  
210 (the "**Indemnifying Party**") under this Agreement, shall promptly notify the  
211 Indemnifying Party in writing, *provided, however*, that no delay on the part of the  
212 Indemnified Party in notifying the Indemnifying Party shall relieve the  
213 Indemnifying Party from any obligation unless (and then solely to the extent) the  
214 Indemnifying Party is prejudiced. Further, the Indemnified Party shall promptly  
215 notify the Indemnifying Party of the existence of any claim, demand, or other  
216 matter to which the indemnification obligations would apply, and shall give the  
217 Indemnifying Party a reasonable opportunity to defend the same at its own  
218 expense and with counsel of its own selection, *provided* that the Indemnified  
219 Party shall at all times also have the right to fully participate in the disputed  
220 matter at its own expense. If the Indemnifying Party, within a reasonable time  
221 after notice from the Indemnified Party, fails to defend a claim, demand or other  
222 matter to which the indemnification obligations would apply, the Indemnified  
223 Party shall have the right, but not the obligation, to undertake the defense of, and  
224 to compromise or settle (exercising reasonable business judgment), the claim or  
225 other matter, on behalf, or for the account, and at the risk, of the Indemnifying  
226 Party. If the claim is one that cannot by its nature be defended solely by the  
227 Indemnifying Party, then the Indemnified Party shall make available all  
228 information and assistance to the Indemnifying Party that the Indemnifying Party  
229 may reasonably request.
- 230 13. *Administration of Agreement.*

- 231 a. *Recordation of Agreement.* Valley District shall, within ten days of the Effective  
232 Date of this Agreement, cause this Agreement to be recorded in the Official  
233 Records of the County of San Bernardino. Valley District shall provide the  
234 Department with a recorded copy of this Agreement promptly upon the receipt of  
235 such copy from the County of San Bernardino.
- 236 b. *Books and Records.* Each Party shall have access to and the right to examine any  
237 of the other Party's pertinent books, documents, papers or other records  
238 (including, without limitation, records contained on electronic media) relating to  
239 the performance of that Party's obligations pursuant to this Agreement. The  
240 Parties shall each retain all such books, documents, papers or other records to  
241 facilitate such review. Access to each Party's books and records shall be during  
242 normal business hours only. Nothing in this paragraph shall be construed to  
243 operate as a waiver of any applicable privileges.
- 244 c. *Disputes.* The Parties recognize that there may be disputes regarding the  
245 obligations of the Parties or the interpretation of this Agreement. The Parties  
246 agree that they may attempt to resolve disputes as follows:
- 247 (1) *Statement Describing Alleged Violation of Agreement.* A Party alleging a  
248 violation of this Agreement (the "**Initiating Party**") shall provide a  
249 written statement describing all facts that it believes constitute a violation  
250 of this Agreement to the Party alleged to have violated the terms of this  
251 Agreement (the "**Responding Party**").
- 252 (2) *Response to Statement of Alleged Violation.* The Responding Party shall  
253 have sixty days from the date of the written statement to prepare a written  
254 response to the allegation of a violation of this Agreement and serve that  
255 response on the Initiating Party or to cure the alleged violation to the  
256 reasonable satisfaction of the Initiating Party. The Initiating Party and the  
257 Responding Party shall then meet within thirty days of the date of the  
258 response to attempt to resolve the dispute amicably.
- 259 (3) *Mediation of Dispute.* If the Initiating Party and the Responding Party  
260 cannot resolve the dispute within ninety days of the date of the written  
261 response, they shall engage a mediator, experienced in water-related  
262 disputes, to attempt to resolve the dispute. Each Party shall ensure that it  
263 is represented at the mediation by a Commissioner or Director. These  
264 representatives of the Initiating Party and the Responding Party may  
265 consult with staff and/or technical consultants during the mediation and  
266 such staff and/or technical consultants may be present during the  
267 mediation. The costs of the mediator shall be divided evenly between the  
268 Initiating Party and the Responding Party.
- 269 (4) *Reservation of Rights.* Nothing in this paragraph 13.c shall require a Party  
270 to comply with the dispute resolution process contained herein and each  
271 Party retains and may exercise at any time all legal and equitable rights

- 272 and remedies it may have to enforce the terms of this Agreement;  
273 provided, that prior to commencing litigation, a Party shall provide at least  
274 five calendar days' written notice of its intent to sue to all Parties.
- 275 14. *No Changes to Water Rights.* This Agreement is an agreement for the coordinated use of  
276 the Department Facilities and the Valley District Facilities only. Nothing in this  
277 Agreement shall validate, invalidate or modify, in any way, any rights to water held or  
278 claimed by a Party.
- 279 15. *Ownership of Department and Valley District Facilities.* Nothing in this Agreement shall  
280 be construed so as to change the ownership of such facilities or to provide one Party with  
281 a real property interest in the facilities of the other Party
- 282 16. *General Provisions.*
- 283 a. *Authority.* Each signatory of this Agreement represents that s/he is authorized to  
284 execute this Agreement on behalf of the Party for which s/he signs. Each Party  
285 represents that it has legal authority to enter into this Agreement and to perform  
286 all obligations under this Agreement.
- 287 b. *Amendment.* This Agreement may be amended or modified only by a written  
288 instrument executed by each of the Parties to this Agreement.
- 289 c. *Jurisdiction and Venue.* This Agreement shall be governed by and construed in  
290 accordance with the laws of the State of California, except for its conflicts of law  
291 rules. Any suit, action, or proceeding brought under the scope of this Agreement  
292 shall be brought and maintained to the extent allowed by law in the County of San  
293 Bernardino, California.
- 294 d. *Headings.* The paragraph headings used in this Agreement are intended for  
295 convenience only and shall not be used in interpreting this Agreement or in  
296 determining any of the rights or obligations of the Parties to this Agreement.
- 297 e. *Construction and Interpretation.* This Agreement has been arrived at through  
298 negotiations and each Party has had a full and fair opportunity to revise the terms  
299 of this Agreement. As a result, the normal rule of construction that any  
300 ambiguities are to be resolved against the drafting Party shall not apply in the  
301 construction or interpretation of this Agreement.
- 302 f. *Entire Agreement.* This Agreement constitutes the entire agreement of the Parties  
303 with respect to the subject matter of this Agreement and supersedes any prior oral  
304 or written agreement, understanding, or representation relating to the subject  
305 matter of this Agreement.
- 306 g. *Partial Invalidity.* If, after the date of execution of this Agreement, any provision  
307 of this Agreement is held to be illegal, invalid, or unenforceable under present or  
308 future laws effective during the term of this Agreement, such provision shall be

- 309 fully severable. However, in lieu thereof, there shall be added a provision as  
310 similar in terms to such illegal, invalid or unenforceable provision as may be  
311 possible and be legal, valid and enforceable.
- 312 h. *Successors and Assigns.* This Agreement shall be binding on and inure to the  
313 benefit of the successors and assigns of the respective Parties to this Agreement.  
314 No Party may assign its interests in or obligations under this Agreement without  
315 the written consent of the other Parties, which consent shall not be unreasonably  
316 withheld or delayed.
- 317 i. *Waivers.* Waiver of any breach or default hereunder shall not constitute a  
318 continuing waiver or a waiver of any subsequent breach either of the same or of  
319 another provision of this Agreement and forbearance to enforce one or more of  
320 the remedies provided in this Agreement shall not be deemed to be a waiver of  
321 that remedy.
- 322 j. *Attorneys' Fees and Costs.* The prevailing Party in any litigation or other action  
323 to enforce or interpret this Agreement shall be entitled to reasonable attorneys'  
324 fees, expert witnesses' fees, costs of suit, and other and necessary disbursements  
325 in addition to any other relief deemed appropriate by a court of competent  
326 jurisdiction.
- 327 k. *Necessary Actions.* Each Party agrees to execute and deliver additional  
328 documents and instruments and to take any additional actions as may be  
329 reasonably required to carry out the purposes of this Agreement.
- 330 l. *Compliance with Law.* In performing their respective obligations under this  
331 Agreement, the Parties shall comply with and conform to all applicable laws,  
332 rules, regulations and ordinances.
- 333 m. *Third Party Beneficiaries.* This Agreement shall not create any right or interest in  
334 any non-Party or in any member of the public as a third party beneficiary.
- 335 n. *Counterparts.* This Agreement may be executed in one or more counterparts,  
336 each of which shall be deemed to be an original, but all of which together shall  
337 constitute but one and the same instrument.
- 338 o. *Notices.* All notices, requests, demands or other communications required or  
339 permitted under this Agreement shall be in writing unless provided otherwise in  
340 this Agreement and shall be deemed to have been duly given and received on: (i)  
341 the date of service if served personally, by facsimile transmission or by electronic  
342 mail on the Party to whom notice is to be given at the address(es) provided below,  
343 (ii) on the first day after mailing, if mailed by Federal Express, U.S. Express Mail,  
344 or other similar overnight courier service, postage prepaid, and addressed as  
345 provided below, or (iii) on the third day after mailing if mailed to the Party to  
346 whom notice is to be given by first class mail, registered or certified, postage  
347 prepaid, addressed as follows:  
348

<a href="#">Relation to Local Land Use Planning</a>	Yes	
<a href="#">Stakeholder Involvement</a>	Yes	
<a href="#">Coordination</a>	Yes	
<a href="#">Climate Change</a>	Yes	

\* If not included as an individual section use Governance, Project Review Process, and Data Management Standards per 2016 Guidelines, p. 52.

**Additional Comments:**

IRWM Plan Standard: Governance				Overall Standard Sufficient		Yes
Requirement		Included		Evidence of Plan Sufficiency		Sufficient
From IRWM 2016 Guidelines	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	y/n
The RWMG and individual project proponents who adopted the Plan"	37	y/n	y	Part 1, Section 1.5  Part 3	All members of the RWMG have adopted the IRWM Plan (Resolutions of adoption are provided in Appendix A). As noted in Section 1.5 of the IRWM Plan, stakeholders may participate in IRWM Planning without adoption of the IRWM Plan. Given the dynamic nature of the IRWM process, it isn't possible to update the IRWM Plan every time a project proponent adopts the IRWM Plan. Proof of adoption is provided as part of grant applications, as needed.	y
A description of the IRWM governance structure including a discussion of whether or how Native American tribes will participate in the RWMG.	37	y/n	y	Part 1, Section 1.3.4	Native American tribes are invited to participate in regional planning efforts via the Basin Technical Advisory Committee meetings.	y
A description of how the chosen form of governance addresses and insures:						
Public outreach and involvement processes	37	y/n/q	y	Part 1, Sections 1.3.3 and 1.4	BTAC meetings continue to be open to stakeholders to attend and contribute to the regional planning process. Public participation in the Plan update was also encouraged through stakeholder workshops and public comment on the plan.	y

Effective decision making	37	y/n/q	y	Part 1, Section 1.3.2	The Region has a distributed governance structure consisting of the BTAC, whose members provide recommendations to their respective governing bodies who then make decisions regarding water resources planning and projects in the Region, and stakeholders who are encouraged to take part in IRUWMP development and implementation. The BTAC strives for consensus when making decisions, and in those cases where consensus cannot be reached, has provided a forum for discussion and early resolution of water issues in the region. If disputes cannot be resolved at this level, they are elevated to the policy level (governing bodies). The policy level is continuously informed by BTAC agencies' staff.	y
Balanced access and opportunity for participation in the IRWM process	37	y/n/q	y	Part 1, Sections 1.3.3	The BTAC invited all stakeholders to participate in development of the Plan. BTAC meetings continue to be open to stakeholders to attend and contribute to the regional planning process. Meeting announcements and agendas are emailed out to a comprehensive mailing list that includes both BTAC members and stakeholders.	y
Effective communication – both internal and external to the IRWM region	37	y/n/q	y	Part 1, Sections 1.3.3 and 1.4	Meeting announcements and agendas are emailed out to a comprehensive mailing list that includes both BTAC members and stakeholders. Agendas are also posted on Valley District's website in advance so all agencies, other stakeholders, and interested parties can participate throughout the planning process in discussion of the issues in which they were interested. Stakeholder workshops were held to encourage participation in the latest plan update.	y
Long term implementation of the IRWM Plan	37	y/n/q	y	Part 1, Section 8.2	The BTAC will continue to manage implementation of the IRWM plan. BTAC agencies have planned for ongoing support of the region's activities as shown in the financing plan.	y

Coordination with neighboring IRWM efforts and State and federal agencies	37	y/n/q	y	Part 1, Sections 1.6	The BTAC participates in the overlapping SAWPA region, coordinates with the neighboring Mojave and San Gorgonio IRWM Regions, and also includes State and federal agencies as stakeholders as part of the Region's email list and as part of project planning.	y
The collaborative process(es) used to establish plan objectives	38	y/n/q	y	Part 1, Section 1.4.2	The plan objectives were updated through a collaborative stakeholder process initiated by the BTAC.	y
How interim changes and formal changes to the IRWM Plan will be performed	38	y/n/q	y	Part 1, Section 8.5	The BTAC will review progress in meeting plan objectives annually and update the plan as-needed according to an adaptive management process.	y
Updating or amending the IRWM Plan	38	y/n/q	y	Part 1, Section 8.5.3	The Plan will be updated at least every every 5 years. Any other updates will be discussed among the BTC agencies at regular meetings.	y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

IRWM Plan Standard: Region Description				Overall Standard Sufficient		Yes
Requirement		Included		Evidence of Plan Sufficiency		Sufficient
From IRWM 2016 Guidelines	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	y/n
If applicable, describe and explain how the plan will help reduce dependence on the Delta supply regionally.	38	y/n	y	Part 1, Section 6.2.1.1		y
Describe watersheds and water systems	38	y/n	y	Part 1, Chapter 3		y
Describe internal boundaries	38	y/n	y	Part 1, Section 2.2		y
Describe water supplies and demands for minimum 20 year planning horizon	38	y/n	y	Part 1, Chapters 4, 5		y
Describe social and cultural makeup, including specific information on DACs and tribal communities in the region and their water challenges.	38	y/n/q	y	Part 1, Section 2.3.3	Section 2.3.3 describes the social and cultural makeup of the region. The region is experiencing growth in population a change in its economic base. The rest of the section touches on DAC's, housing, and employment. Water challenges in DAC areas and tribal communities are similar to those faced across the Region.	y
Describe major water related objectives and conflicts (1).	38	y/n/q	y	Part 1, Chapter 6	Regional issues, focusing on imported water dependence, groundwater supply, water quality, flood management, aquatic/riparian habitat, and sustainability, are identified in the development of planning objectives.	y
Explain how IRWM regional boundary was determined and why region is an appropriate area for IRWM planning.	38	y/n/q	y	Part 1, Chapter 2.1	The Region's boundary is defined by the area of the Upper Santa Ana River Watershed that contributes surface runoff to the Riverside Narrows at U.S. Geological Survey (USGS) Gage 11066460. Disputes over the use of water in the SAR led to the subdivision of the watershed into the Upper SAR watershed and Lower SAR watershed just upstream of Prado Dam.	y
Describe neighboring and/or overlapping IRWM efforts	38	y/n	y	Part 1, Section 1.6.1		y
Explain how opportunities are maximized (e.g. people at the table, natural features, infrastructure) for integration of water management activities	38	y/n	y	Part 1, Sections 8.1 and 6.4.2	The Region takes advantage of the management group already in place, the BTAC, to maximize opportunities for integration of water management activities. In addition, the Region has identified opportunities for integration of water management strategies, interested institutions and geographic coverage.	y

Describe water quality conditions. If the IRWM region has areas of nitrate, arsenic, perchlorate, or hexavalent chromium contamination, the Plan must include a description of location, extent, and impacts of the contamination; actions undertaken to address the contamination, and a description of any additional actions needed to address the contamination (2).	38	y/n	y	Part 1, Section 3.10		y
Describe likely Climate Change impacts on their region as determined from the vulnerability assessment.	38	y/n	y	Part 1, Section 2.6		y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

- (1) Requirement must be addressed per CWC §10541 (e)(3).
- (2) Requirement must be addressed per CWC §10541 (e)(14).

IRWM Plan Standard: Plan Objectives					Overall Standard Sufficient	Yes
Requirement		Included		Evidence of Plan Sufficiency		Sufficient
From IRWM 2016 Guidelines	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	y/n
Through the objectives or other areas of the plan, the 7 items on pg 49 of GL are addressed <b>(1)</b> .	49	y/n	y	Part 1, Chapter 6	All 7 items on pg 49 of the GL are addressed as discussed throughout Ch.6	y
Describe the collaborative process and tools used to establish objectives: - How the objectives were developed - What information was considered (i.e., water management or local land use plans, etc.) - What groups were involved in the process - How the final decision was made and accepted by the IRWM effort	48 - 50	y/n	y	Part 1, Sections 6.3.1 and 1.4.2		y
Identify quantitative or qualitative metrics and measureable objectives: Objectives must be measurable - there must be some metric the IRWM region can use to determine if the objective is being met as the IRWM Plan is implemented. Neither quantitative nor qualitative metrics are considered inherently better <b>(2)</b> .	49	y/n/q	y	Part 1, Sections 6.3.2 through 6.3.6	Quantifiable metrics were developed for each objective and will be tracked on an annual basis.	y
Explain how objectives are prioritized or reason why the objectives are not prioritized	50	y/n/q	y	Part 1, Sections 6.3.7	The Region elected not to prioritize the objectives with the understanding that each objective is equally important relative to the others.	y
Reference specific overall goals for the region: RWMGs may choose to use goals as an additional layer for organizing and prioritizing objectives, or they may choose to not use the term at all.	50	y/n	y	Part 1, Sections 6.3.1		y
Address adapting to changes in the amount, intensity, timing, quality and variability of runoff and recharge.	39	y/n	y	Part 1, Sections 6.3.6.1	Objective 5a is to identify projects to address or manage climate change impacts	y
Consider the effects of sea level rise (SLR) on water supply conditions and identify suitable adaptation measures.	39	y/n	y	Part 1, Section 6.2.1.1	Though the Region is not near to coast, potential impacts of SLR on imported water supply were considered. The Region's goal of increasing diversification of the water supply portfolio is intended to help the Region respond to this issue and thus adapt to SLR.	y
Reducing energy consumption, especially the energy embedded in water use, and ultimately reducing GHG emissions.	39	y/n	y	Part 1, Section 6.3.6.2	Objective 5b is to implement projects to reduce or offset energy consumption or reduce GHG emissions associated with water or wastewater systems	y
In evaluating different ways to meet IRWM plan objectives, where practical, consider the strategies adopted by CARB in its AB 32 Scoping Plan1.	39	y/n	y	Part 1, Section 6.3.6.2		y

Consider options for carbon sequestration and using renewable energy where such options are integrally tied to supporting IRWM Plan objectives.	39	y/n	y	Part 1, Section 6.3.6.2		y
---	----	-----	---	-------------------------	--	---

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

- (1) Requirement must be addressed per CWC §10540 (c).
- (2) Requirement must be addressed per CWC §10541 (e).

IRWM Plan Standard: Resource Management Strategies (RMS)				Overall Standard Sufficient		
Requirement		Included		Evidence of Plan Sufficiency		
From IRWM 2016 Guidelines	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	Yes Sufficient y/n
Address which RMS will be implemented in achieving IRWM Plan Objectives (1).	39	y/n	y	Part 1, Table 6-2		y
Identify RMS incorporated in the IRWM Plan: Consider all California Water Plan (CWP)RMS criteria (29) listed in Table 3 from the CWP Update 2013	39	y/n	y	Part 1, 6.4.1	The IRWM Plan considered the RMS listed on the CWP website ( <a href="https://water.ca.gov/Programs/California-Water-Plan/Water-Resource-Management-Strategies">https://water.ca.gov/Programs/California-Water-Plan/Water-Resource-Management-Strategies</a> ) as of March 2021. According to the website, these were last updated in 2016. A comparison of the website strategies to CWP Update 2013 finds that the strategies are the same.	y
Consideration of climate change effects on the IRWM region must be factored into RMS. Identify and implement, using vulnerability assessments and tools such as those provided in the Climate Change Handbook, RMS and adaptation strategies that address region-specific climate change impacts. • Demonstrate how the effects of climate change on its region are factored into its RMS. • Reducing energy consumption, especially the energy embedded in water use, and ultimately reducing GHG emissions. • An evaluation of RMS and other adaptation strategies and ability of such strategies to eliminate or minimize those vulnerabilities, especially those impacting water infrastructure systems (2).	39	y/n	y	Part 1, 6.4.1, Table 6-2	Table 6-2 provides a cross reference of which strategies identified in the IRWM Plan support the Region's objectives, including the goal: Address climate change through adaptation and mitigation.	y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

(1) Requirement must be addressed per CWC §10540 (e)(1).  
 (2) Requirement must be addressed per CWC §10540 (e)(10).

IRWM Plan Standard: Integration				Overall Standard Sufficient	
Requirement		Included		Evidence of Plan Sufficiency	
From IRWM 2016 Guidelines	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation
Contains structure and processes for developing and fostering integration <sup>1</sup> : <ul style="list-style-type: none"> <li>- Stakeholder/institutional</li> <li>- Resource</li> <li>- Project implementation</li> </ul>	39	y/n/q	y	Part 1, Sections 6.4.2, 8.1, 8.4.1 and 1.3	The Plan discusses how stakeholders are incorporated into the decision making body of the group. Resource integration is described through the RWMG's efforts in involving stakeholders (public hearings, workshops, etc.). Project development and implementation reflects the regional interests of all stakeholders.

1. If not included as an individual section use Governance, Project Review Process, and Data Management Standards per 2016 IRWM Guidelines, p. 52.

IRWM Plan Standard: Project Review Process				Overall Standard Sufficient		Yes
Requirement		Included		Evidence of Plan Sufficiency		Sufficient
From IRWM 2016 Guidelines	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	y/n
Process for projects included in IRWM plan must address 3 components: - procedures for submitting projects - procedures for reviewing projects - procedures for communicating lists of selected projects	39 - 40	y/n	y	Part 1, Sections 7.2 and 7.3		y
Does the project review process in the plan incorporate the following factors:						
How a project contributes to plan objectives	40	y/n	y	Part 1, Table 7-1		y
How a project is related to Resource Management Strategies identified in the plan.	40	y/n	y	Part 1, Table 7-1		y
The technical feasibility of a project.	40	y/n	y	Part 1, Table 7-1		y
A projects specific benefits to a DAC water issue.	40	y/n	y	Part 1, Table 7-1		y
Environmental Justice considerations.	40	y/n	y	Part 1, Table 7-1		y
Project costs and financing	40	y/n	y	Part 1, Table 7-1		y
Address economic feasibility	40	y/n	y	Part 1, Table 7-1		y
Project status	40	y/n	y	Part 1, Table 7-1		y
Strategic implementation of plan and project merit	40	y/n	y	Part 1, Table 7-1		y
Status of the Project Proponent's IRWM plan adoption	40	y/n	y	Part 1, Table 7-1		y
Project's contribution to reducing dependence on Delta supply (for IRWM regions receiving water from the Delta).	40	y/n	y	Part 1, Table 7-1		y
Project's contribution to climate change adaptation. •Include potential effects of Climate Change on the region and consider if adaptations to the water management system are necessary (1). •Consider the contribution of the project to adapting to identified system vulnerabilities to climate change effects on the region. •Consider changes in the amount, intensity, timing, quality and variability of runoff and recharge. •Consider the effects of SLR on water supply conditions and identify suitable adaptation measures.	40	y/n	y	Part 1, Table 7-1		y

<p>Contribution of project in reducing GHGs compared to project alternatives.</p> <ul style="list-style-type: none"> <li>•Consider the contribution of the project in reducing GHG emissions as compared to project alternatives</li> <li>•Consider a project’s ability to help the IRWM region reduce GHG emissions as new projects are implemented over the 20-year planning horizon.</li> <li>•Reducing energy consumption, especially the energy embedded in water use, and ultimately reducing GHG emissions.</li> </ul>	40	y/n	y	Part 1, Table 7-1		y
<p>Specific benefits to critical water issues for Native American tribal communities.</p>	53	y/n	y	Part 1, Table 7-1		y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

(1) Requirement must be addressed per CWC §10540 (e)(10).

IRWM Plan Standard: Impact and Benefit				Overall Standard Sufficient		
Requirement		Included		Evidence of Plan Sufficiency		
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	Sufficient
						y/n
Discuss potential impacts and benefits of plan implementation within IRWM region, between regions, with DAC/EJ concerns and Native American Tribal communities	40	y/n	y	Part 1, Section 8.4		y
State when a more detailed project-specific impact and benefit analysis will occur (prior to any implementation activity)	55	y/n	y	Part 1, Section 8.5.4		y
Review and update the impacts and benefits section of the plan as part of the normal plan management activities	55 - 56	y/n	y	Part 1, Section 8.5		y

IRWM Plan Standard: Plan Performance and Monitoring				Overall Standard Sufficient		
Requirement		Included		Evidence of Plan Sufficiency		
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	Yes Sufficient
						y/n
Contain performance measures and monitoring methods to ensure that IRWM objectives are met <b>(1)</b> .	40	y/n	y	Part 1, Section 8.5.1		y
Contain a methodology that the RWMG will use to oversee and evaluate implementation of projects.	40	y/n	y	Part 1, Section 8.5.1		y
Each project in the IRWM Plan is monitored to comply with all applicable rules, laws, and permit requirements.	58	y/n	y	Part 1, Section 8.5.1.2		y
Contain policies and procedures that promote adaptive management and, as more effects of Climate Change manifest, new tools are developed, and new information becomes available, adjust IRWM plans accordingly.	40	y/n	y	Part 1, Section 8.5		y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

(1) Requirement must be addressed per CWC §10541 (e)(7).

IRWM Plan Standard: Data Management				Overall Standard Sufficient		
Requirement		Included		Evidence of Plan Sufficiency		
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	Yes Sufficient y/n
Describe data needs within the IRWM region	59 - 60	y/n	y	Section 8.5.2 and Section 6.3 (metrics to measure		y
Describe typical data collection techniques	59 - 60	y/n	y	Volume 1, Section 8.5.2		y
Describe stakeholder contributions of data to a data management system	59 - 60	y/n	y	Volume 1, Section 8.5.2		y
Describe the entity responsible for maintaining data in the data management system	59 - 60	y/n	y	Volume 1, Section 8.5.2		y
Describe the QA/QC measures for data	59 - 60	y/n	y	Volume 1, Section 8.5.2		y
Explain how data collected will be transferred or shared between members of the RWMG and other interested parties throughout the IRWM region, including local, State, and federal agencies <b>(1)</b> .	59 - 60	y/n	y	Volume 1, Section 8.5.2		y
Explain how the Data Management System supports the RWMG's efforts to share collected data	59 - 60	y/n	y	Volume 1, Section 8.5.2		y
Outline how data saved in the data management system will be distributed and remain compatible with State databases including CEDEN, Water Data Library (WDL), CASGEM, California Environmental Information Catalog (CEIC), and the California Environmental Resources Evaluation System (CERES).	59 - 60	y/n	y	Volume 1, Section 8.5.2		y

(1) Requirement must be addressed per CWC §10541 (e)(12).

IRWM Plan Standard: Finance				Overall Standard Sufficient		Yes
Requirement		Included		Evidence of Plan Sufficiency		Sufficient
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	y/n
Include a programmatic level (i.e. general) plan for implementation and financing of identified projects and programs <b>(1)</b> including the following:	41	y/n	y	Part 1, Section 8.2.2		y
List known, as well as, possible funding sources, programs, and grant opportunities for the development and ongoing funding of the IRWM Plan.	41	y/n	y	Part 1, Section 8.2.2		y
List the funding mechanisms, including water enterprise funds, rate structures, and private financing options, for projects that implement the IRWM Plan.	41	y/n	y	Part 1, Section 8.2.2		y
An explanation of the certainty and longevity of known or potential funding for the IRWM Plan and projects that implement the Plan.	41	y/n	y	Part 1, Section 8.2.2		y
An explanation of how operation and maintenance (O&M) costs for projects that implement the IRWM Plan would be covered and the certainty of operation and maintenance funding.	41	y/n	y	Part 1, Section 8.2.2		y

(1) Requirement must be addressed per CWC §10541 (e)(8).

IRWM Plan Standard: Technical Analysis				Overall Standard Sufficient	
Requirement		Included		Evidence of Plan Sufficiency	Yes
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Brief Qualitative Evaluation	Sufficient
Document the data and technical analyses that were used in the development of the plan <b>(1)</b> .	41	y/n	y	Part 1, Section 1.4.3	y

(1) Requirement must be addressed per CWC §10541 (e)(11).

IRWM Plan Standard: Relation to Local Water Planning				Overall Standard Sufficient	Yes	
Requirement		Included		Evidence of Plan Sufficiency	Sufficient	
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	y/n
Identify a list of local water plans used in the IRWM plan	41	y/n	y	Part 1, Section 1.4.3		y
Describe the dynamics between the IRWM plan and other planning documents	41	y/n	y	Part 1, Section 1.4.3 and 1.6.2		y
Describe how the RWMG will coordinate its water mgmt planning activities	41	y/n	y	Part 1, Section 8.1		y
Discuss how the plan relates to these other planning documents and programs. Same as 2012 GL with the following addition: "It should be noted that Water Code § 10562 (b)(7) requires the development of a stormwater resource plan and compliance with these provisions to receive grants for stormwater and dry weather runoff capture projects. Upon development of the stormwater resource plan, the RWMG shall incorporate it into IRWM plan. The IRWM Plan should discuss the processes that it will use to incorporate such plans." Minor wording differences - e.g. Groundwater Sustainability Plan example in the 2016 Guidelines instead of Groundwater Management Plan in the 2012 Guidelines.	63 - 64	y/n	n	Part 1, Table 1-3 and Section 6.4.2		y
Consider and incorporate water management issues and climate change adaptation and mitigation strategies from local plans into the IRWM Plan.	63 - 64	y/n	y	Part 1, Sections 6.2.1.8, 6.3.6 and 6.4.2		y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

IRWM Plan Standard: Relation to Local Land Use Planning				Overall Standard Sufficient		
Requirement		Included		Evidence of Plan Sufficiency		
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	Sufficient
						y/n
Document current relationship between local land use planning, regional water issues, and water management objectives	41	y/n	y	Part 1, Section 1.6.2 and Part 2		y
Document future plans to further a collaborative, proactive relationship between land use planners and water managers	41	y/n	y	Part 1, Section 8.1		y
Demonstrate information sharing and collaboration with regional land use planning in order to manage multiple water demands throughout the state, adapt water management systems to climate change, and potentially offset climate change impacts to water supply in California.	41	y/n	y	Part 1, Sections 1.6.2 and 8.1, and Part 2		y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

IRWM Plan Standard: Stakeholder Involvement				Overall Standard Sufficient		
Requirement		Included		Evidence of Plan Sufficiency		
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	Sufficient
						y/n
Discuss involvement of DACs and tribal communities in the IRWM planning effort	41 - 42	y/n	y	Part 1, Sections 1.3.3, 1.3.4, 1.4.1 and 1.4.2		y
Describe decision-making process and roles that stakeholders can occupy	41 - 42	y/n	y	Part 1, Sections 1.3.3 and 1.3.4		y
Discuss how stakeholders are necessary to address objectives and RMS	41 - 42	y/n	y	Part 1, Sections 1.3.3		y
Discuss how a collaborative process will engage a balance in interest groups	41 - 42	y/n	y	Part 1, Sections 1.1 and 1.3		y
Contain a public process that provides outreach and opportunity to participate in the IRWM plan <b>(1)</b> . Per 2016 GL: "Native American tribes – It should be noted that tribes are sovereign nations, and as such coordination with tribes is on a government-to-government basis."	41 - 42	y/n	y	Part 1, Sections 1.3.3, 1.3.4, 1.4.1 and 1.4.2		y
Identify process to involve and facilitate stakeholders during development and implementation of IRWM plan regardless of ability to pay; include description of any barriers to involvement <b>(2)</b> . "Stakeholder Involvement" in the 2012 GL is referred to "Native American Tribe and Stakeholder Involvement" in the 2016 GL and Tribes are referred to specifically.	41 - 42	y/n	y	Part 1, Sections 1.3.3, 1.3.4, 1.4.1, 1.4.2 and 8.1		y

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 IRWM Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

(1) Requirement must be addressed per CWC §10541 (g).  
 (2) Requirement must be addressed per CWC §10541 (h)(2).

IRWM Plan Standard: Coordination				Overall Standard Sufficient	Yes	
Requirement		Included		Evidence of Plan Sufficiency	Sufficient	
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	y
Identify the process to coordinate water management projects and activities of participating local agencies and stakeholders to avoid conflicts and take advantage of efficiencies (1).	42	y/n	y	Part 1, Sections 1.3.3 and 8.1		y
Identify neighboring IRWM efforts and ways to cooperate or coordinate, and a discussion of any ongoing water management conflicts with adjacent IRWM efforts	42	y/n	y	Part 1, Section 1.6.1		y
Identify areas where a state agency or other agencies may be able to assist in communication or cooperation, or implementation of IRWM Plan components, processes, and projects, or where State or federal regulatory decisions are required before implementing the projects.	42	y/n	y	Part 1, Section 1.3		y

(1) Requirement must be addressed per CWC §10541 (e)(13).

IRWM Plan Standard: Climate Change				Overall Standard Sufficient		
Requirement		Included		Evidence of Plan Sufficiency		
IRWM 2016 Guidelines Requirement	IRWM 2016 Guidelines Page Number	y/n - Present/Not Present in the IRWM Plan. If y/n/q, qualitative evaluation needed.		Location of Standard in Grantee IRWM Plan	Brief Qualitative Evaluation	Yes Sufficient y/n
Contain a plan, program, or methodology for further data gathering and analysis of prioritized vulnerabilities.	42 - 44	y/n	y	Part 1, Section 8.5		y
Include climate change as part of the project review process.	42 - 44	y/n	y	Part 1, Table 7-1		y
Evaluate IRWM region's vulnerabilities to climate change and potential adaptation responses based on vulnerabilities assessment in the DWR Climate Change Handbook for Regional Water Planning (1). Addition in 2016 GL - "At a minimum, the vulnerability evaluation must be equivalent to the vulnerability assessment contained in the Climate Change Handbook for Regional Water Planning, Section 4 and Appendix B."	42 - 44	y/n	y	Part 1, Section 6.2.1.8		y
Provide a process that considers GHG emissions when choosing between project alternatives (1). Addition in 2016 GL - "At a minimum, that process must determine a project's ability to help the IRWM region reduce GHG emissions as new projects are implemented over a 20-year planning horizon and consider energy efficiency and reduction of GHG emissions when choosing between project alternatives."	42 - 44	y/n	y	Part 1, Table 7-1	The Region's project review process incorporates GHG reduction under its "Sustainability" criteria shown in Table 5-1 through the question: "Does the project mitigate against or help adapt to climate change?" Projects that contribute towards climate change mitigation are expected to reduce GHGs, and are awarded higher scores. The information used to make this determination is gathered using the project nomination form that allows project sponsors to quantify the estimated decrease in GHG emissions a project will provide.	y
Include a list of prioritized vulnerabilities based on the vulnerability assessment and the IRWM's decision making process. Addition in 2016 GL - "A list of prioritized vulnerabilities which includes a determination regarding the feasibility for the RWMG to address the priority vulnerabilities."	42 - 44	y/n	y	Part 1, Section 6.2.1.8	The region identified primary concerns stemming from the Vulnerability Assessment Checklist located in Appendix XX of Part 3.	y

<p>Address adapting to changes in the amount, intensity, timing, quality, and variability of runoff and recharge.</p>	<p>42 - 44</p>	<p>y/n</p>	<p>y</p>	<p>Part 1, Sections 2.6.2 and 2.6.3, Table 7-1, and Section 6.3.6</p>	<p>The Region identified the set of vulnerabilities found in Part 3 based on climate change impacts to amount, intensity, timing, quality and variability of runoff and recharge. To respond to the effects of climate change and identified vulnerabilities, the Region identified the Objective to "Adapt to and mitigate against climate change by promoting adaptation strategies and reducing water related GHG emissions". Additionally, all of the objectives included in the IRWM Plan either directly or indirectly will help to respond to climate change. Finally, the Region has also included climate change as part of its project review process.</p>	<p>y</p>
<p>Areas of the State that receive water imported from the Sacramento-San Joaquin River Delta, the area within the Delta, and areas served by coastal aquifers must also consider the effects of sea level rise (SLR) on water supply conditions and identify suitable adaptation measures.</p>	<p>42 - 44</p>	<p>y/n</p>	<p>y</p>	<p>Part 1, Section 2.6.3 and Table 6-3</p>	<p>The Region currently receives imported water from the Delta, and therefore identified decreased imported water supply as a vulnerability issue. To help adapt to this vulnerability, the Region identified objectives to reduce regional potable water consumption and increase local supply development. In addition, the Region also set the objective to adapt to and mitigate against climate change by promoting adaptation strategies and reducing water and wastewater related GHG emissions.</p>	<p>y</p>

IRWM Plan Standard Requirements for 2016 IRWM Guidelines in Addition to Previously Required 2012 Guideline Requirements. See Appendix H in IRWM 2016 Guidelines.

(1) Requirement must be addressed per CWC §10541 (e)(9).

## D: San Bernardino County USARW Stormwater Resource Plan

# SAN BERNARDINO COUNTY SANTA ANA RIVER WATERSHED STORMWATER RESOURCE PLAN

## Executive Summary

This Stormwater Resource Plan (SWRP) was prepared to develop a regional, watershed-based plan for management and improvement of stormwater resources within the Santa Ana River Watershed (SARW) portion of San Bernardino County (SBC). This SWRP is a document that complies with the requirements and guidelines set forth by the State Water Resources Control Board (SWRCB) mandated by Senate Bill 985 (SB 985), passed by the California State Legislature and signed into law by Governor Jerry Brown on September 25, 2014.

The intent of the SWRP is to develop a regional plan of stormwater resources to maximize benefits within the SBC portion of the SARW, an area of 1,015 square miles and home to nearly 2 million people, or about 80% of the overall population of the county. The SBC SARW contains the headwaters of the Santa Ana River and the headwaters of many of its tributaries draining from the San Bernardino and San Gabriel Mountains. The SWRP establishes stormwater and dry-weather runoff goals and objectives for the entire SBC SARW to provide water quality, water supply, flood management, environmental, and community benefits. The intention of this SWRP is not to preclude a stakeholder from fulfilling their agency's primary mission, but to identify and prioritize multi-benefit projects when feasible.

The SBC SARW SWRP includes a section on the water quality objectives within the watershed. Meeting existing water quality objectives is an important component of the SWRP. Existing planning efforts have been identified, as the intent of the SWRP is not to replace existing efforts, but rather to work in conjunction with existing goals already defined in regulations and planning efforts. Stakeholders were identified, along with a process for collaborating with organizations, stakeholders, and the public.

The SWRP contains a number of potential stormwater and dry-weather runoff projects. The types of projects include low-flow capture, infiltration basins, channel improvements, bioretention projects, habitat remediation, public use areas, and green streets projects. Each project included provides multiple benefits to the community and contributes towards the achievement of stormwater goals and objectives. The multiple benefits are quantified and projects are prioritized based on an integrated metrics-based analysis. An implementation strategy and a rough estimation of a schedule for each project is included in the plan.

The SWRP was prepared with community and stakeholder involvement at each step of the process. The outreach, collaboration, and educational components are summarized within the SWRP. The SWRP is a living document which can be used for many years and will be adaptively managed based on the changing needs and resource goals within the SBC SARW. The SWRP will be submitted to the Santa Ana Watershed Protection Authority (SAWPA) for inclusion in their One Water, One Watershed (OWOW) Plan.

# 1. Introduction

California voters passed the Water Quality, Supply, and Infrastructure Improvement Act of 2014 (Proposition 1) during the general election of November 4, 2014. As a precursor to the passage of Proposition 1, the California State Legislature adopted Senate Bill (SB) 985 entitled the Stormwater Resource Planning Act (SB 985), requiring the development of a Stormwater Resource Plan (SWRP) to be eligible to receive grants from a bond act approved after January 1, 2014, for stormwater and dry-weather runoff capture projects. A SWRP is a stormwater management document developed on a watershed basis that identifies a prioritized list of projects to address stormwater and dry-weather runoff, while also providing multiple benefits, such as water supply, flood management, and environmental and community enhancements. The State Water Resources Control Board (SWRCB) developed Stormwater Resource Plan Guidelines (2015) to facilitate the preparation of SWRPs or equivalent documents. Proposition 1 includes numerous project categories to be funded, one being the Stormwater Grant Program. Planning and implementation grants were included in the Stormwater Grant Program. Planning grants were used for developing SWRPs and/or conducting studies prior to project implementation while the implementation grants were used to fund projects identified in a SWRP or equivalent document.

The San Bernardino County Flood Control District (SBCFCD) was awarded Proposition 1 planning grant funds through the Stormwater Grant Program for the development of the San Bernardino County Santa Ana River Watershed (SBC SARW) SWRP (Grant Agreement No. D1612627). The SBC SARW area encompasses the upper limits of the SARW that lies within the San Bernardino County jurisdictional boundary and is comprised of 14 subwatersheds associated with major tributaries to the Santa Ana River. The SBC SARW SWRP has been developed with funding provided by this planning grant program based on the conditions of the grant agreement.

The following subsections provide background information on the history of stormwater management legislation in California, the intended use of this SWRP, and the existing regulations and planning efforts that this SWRP will complement. **Section 1.5** introduces the stormwater management objectives addressed by the SBC SARW SWRP, and **Section 1.6** outlines the structure of this document.

## 1.1 Background

Stormwater and dry-weather runoff are resources that must be managed on a regional scale to maximize benefits. The California State Legislature found that “improved management of stormwater and dry-weather runoff, including capture, treatment, and reuse by using the natural functions of soils and plants, can improve water quality, reduce localized flooding, and increase water supplies for beneficial uses and the environment.” That finding was included with the passage of SB 985 in 2014, the Stormwater Management Planning Act.

Historically, stormwater management focused on the conveyance of stormwater offsite as quickly as possible. The conveyance of stormwater has been generally regarded as separate from the concept of water supply infrastructure and water quality management. Conveyance of stormwater through Municipal Separate Storm Sewer Systems (MS4s) and flood control infrastructure was combined with water quality regulations in California with the passage of the Porter-Cologne Water Quality Control Act of 1969, followed soon thereafter nationally by the Clean Water Act (CWA) of 1972. The CWA prohibited any entity from discharging pollutants through a point source into a water of the United States unless

that entity had a National Pollutant Discharge Elimination System (NPDES) permit. Through these regulations, water quality became a priority for municipalities on par with flood control management.

The traditional approach to stormwater management as a flood control and water quality issue did not address projects that could attain multiple benefits, such as the augmentation of the water supply or protection of the local ecology. In general, the conveyance of stormwater through storm drains and channels reduced the ability of the environment to capture runoff and treat it through natural hydrology and watershed processes. Municipalities sacrificed opportunities to use stormwater runoff to augment water supply by favoring the quick conveyance of stormwater runoff downstream rather than capturing the runoff and storing it. As a result, municipalities are forced to import costly water from the California State Water Project and deplete local groundwater basins to meet water demands.

The California State Legislature passed the Integrated Regional Water Management (IRWM) Planning Act of 2002, which encouraged the establishment of regional water management groups, which would then prepare a regional plan to address the quantity, quality, and reliability of water supplies. The Act established the idea of creating a regional planning document, an Integrated Regional Water Management Plan (IRWMP), as a framework for integrating various programs and projects with the primary goal of enhancing water supplies, but with a secondary goal of providing flood protection, improving water quality, and undertaking environmental restoration or enhancement. Since the Act passed in 2002, various bond acts approved by California voters have provided over \$1.5 billion in funding to support multi-benefit regional projects (DWR, 2018).

By 2009, the State of California had established funding for projects to encourage water supply through the IRWM groups, and requirements for projects to enhance water quality. The existing programs did not encourage the implementation of multi-benefit stormwater projects. In response, the California State Legislature passed SB 790, the Stormwater Resource Planning Act, authored by Senator Fran Pavley, which introduced the concept of a SWRP. SB 790 authorized a city, county, or special district to develop, jointly or individually, a SWRP. The purpose of a SWRP was to identify, on a watershed basis, projects and programs that could augment local water supplies, control pollution, enhance habitat, and provide other multiple community benefits. The Stormwater Resource Planning Act "change[d] perspective on stormwater from being a water quality problem to recognizing that stormwater could be a source of water supply for a variety of purposes," according to Pavley (2009).

In 2014, the Stormwater Resource Planning Act was amended by SB 985, also authored by Pavley, which expanded the standards to include dry-weather runoff and made the development of a SWRP a prerequisite for receiving money from any bond act approved by California voters after January 1, 2014. One such bond act, known as the Water Quality, Supply, and Infrastructure Improvement Act of 2014 (Proposition 1), was approved by voters in November of 2014. Proposition 1 authorized \$7.545 billion in general obligation bonds to fund ecosystems and watershed protection and restoration, water supply infrastructure projects (including surface and groundwater storage), and drinking water protection.

SB 985 required the State of California to establish guidelines for the development of SWRPs. The SWRCB published the SWRP Guidelines in December of 2015 to establish guidance for public agencies interested in developing SWRPs. The SWRP Guidelines "serve as a guide for the State Water Board and other bond fund-dispensing agencies to use in determining whether an adequate Stormwater Resource Plan has been prepared prior to the granting of funds for stormwater and dry-weather runoff capture projects." This SWRP has been developed in consideration of the SWRP Guidelines.

## 1.2 Intended Use of the SWRP

The purpose of the SBC SARW SWRP is to create a plan that characterizes the SBC SARW, provides a template for interagency coordination and outreach, quantifies potential solutions to achieve stormwater management goals and objectives, and outlines a strategy for implementation. The intent is not to create a plan that replaces objectives that already exist within the SBC SARW but rather to work in conjunction with existing goals already defined in regulations and planning efforts.

## 1.3 Consistency with Applicable Regulations

Effective stormwater planning and management on a watershed level basis requires agreement of applicable water quality provisions developed and implemented by the United States Environmental Protection Agency (USEPA), SWRCB, Santa Ana Regional Water Quality Control Board (SARWQCB), and local agencies and stakeholders. Projects identified within this SWRP are consistent with applicable requirements of the provisions outlined in subsequent sections.

### 1.3.1 California Environmental Quality Act

Stormwater related projects proposed for the study area by public agencies must comply with the California Environmental Quality Act (CEQA) statute, California Public Resources Code § 21000 et seq., purposed to disclose to the public the significant environmental effects of proposed discretionary projects, through the preparation of an Initial Study (IS) and Negative Declaration (ND), Mitigated Negative Declaration (MND), or Environmental Impact Report (EIR). CEQA requires that any impacts determined to be significant must be mitigated to a level of non-significance.

Each project and/or program identified in this SWRP will be reviewed and documentation will be prepared in accordance with CEQA requirements prior to implementation of the project/program. The agency responsible for implementation will also be responsible for the CEQA requirements.

### 1.3.2 Clean Water Act

The CWA established the structure for regulating point source discharges of pollutants into the waters of the United States and water quality standards for surface waters. Under the CWA, USEPA has implemented pollution control programs and set water quality standards for contaminants in surface waters. One program that ties water quality standards and surface waters is the 303(d) listing of impaired waters. The list serves as a tracking system for water bodies and associated pollutants causing impairments. Waste discharge requirements regulate discharge water quality through the assignment of Total Maximum Daily Loads (TMDLs), based on the severity of the pollution and sensitivity of the beneficial uses to be protected. Water bodies currently on the 303(d) list within the SBC SARW are identified in **Section 3.1**.

The Porter-Cologne Water Quality Control Act, also known as the California Water Code, Section 7, was established to protect water quality as well as its beneficial uses and consists of three elements: beneficial uses, water quality objectives, and an implementation program. The Regional Water Quality Control Boards implement the applicable Basin Plan(s) by issuing and enforcing waste discharge requirements to individuals, municipalities, and/or businesses whose point source or non-point source waste discharges can impact water quality.

### 1.3.2.1 NPDES MS4 Permit Order No R8-2010-0036

The NPDES Permit and Waste Discharge Requirements for the SBCFCD, the County of San Bernardino, and the Incorporated Cities of San Bernardino County within the Santa Ana Region, Order No. R8-2010-0036 (MS4 Permit) was adopted on January 29, 2010, and expired on January 29, 2015. The MS4 Permit was administratively extended until a new permit is issued. The MS4 Permit regulates the discharge of pollutants from anthropogenic sources from MS4s. Among many things, the MS4 Permit outlines the responsibilities of the Permittees, defines discharge prohibitions and receiving water limitations, and identifies programs that must be implemented in an effort to minimize pollutant discharges. The MS4 Permit requires that Permittees establish legal authority for inspections, enforcement, prohibition of waste discharge, and other actions necessary to uphold the MS4 Permit requirements. Although the expiration date has passed, the MS4 Permit must be abided by until a new MS4 Permit is adopted by the SARWQCB. The MS4 Permit applies to the SBC SARW area and the SWRP was developed to be consistent with the requirements contained within it.

### 1.3.2.2 Report of Waste Discharge: Application for Renewal of the Municipal NPDES Stormwater Permit (NPDES Permit No. CAS618036)

The Report of Waste Discharge (ROWD) was prepared as part of the MS4 Permit renewal application process, which will result in the development and adoption of a fifth-term MS4 Permit by the SARWQCB. The ROWD was submitted August 1, 2014, to the SARWQCB. The ROWD identifies the accomplishments of the San Bernardino County Areawide Stormwater Program (Areawide Program), which implements the shared requirements set forth by the MS4 Permit, and develops priorities for the watershed area. The ROWD presents iterative Best Management Practice (BMP) approaches that continue to be successful. The data and findings included within the ROWD were referenced throughout the SWRP development and are used to support approaches taken to address the SWRP Guidelines (2015).

### 1.3.2.3 Clean Water Act, Section 401

Section 401 of the CWA requires that any person applying for a federal permit or license, which may result in the discharge of pollutants into waters of the United States, must obtain a state water quality certification that the activity complies with all water quality standards, limitations, and restrictions. Certification or a waiver under Section 401 is required prior to other federal agency certifications or licenses. This certification is required prior to construction and is only applicable during construction activities. The authority to certify projects has been delegated to local Regional Water Quality Control Boards, which in this case is the SARWQCB. Several projects included in this SWRP are located within open conveyances and will need to comply with Section 401 requirements. The projects will be designed to preserve beneficial uses, satisfy water quality objectives, and be consistent with the Antidegradation Policy according to CWA 40 Code of Federal Regulations (CFR) 131. The agency responsible for a project's implementation is also responsible for compliance with Section 401.

### 1.3.2.4 Clean Water Act, Section 404

Section 404 of the CWA establishes a program that requires a permit to be obtained prior to construction to regulate the discharge of dredged or fill material into the waters of the United States. The basic premise of the program is that no discharge of dredged or fill material may be permitted if a practicable alternative exists that is less damaging to the aquatic environment or the nation's waters would be significantly degraded. When applying for a permit, it must be clear that steps have been taken to

minimize potential impacts and that compensation will be provided for all remaining unavoidable impacts. Individual permits are reviewed by the United States Army Corps of Engineers (USACE) and applications are evaluated under public interest review as well as Section 404 guidelines. For most discharges that will have only minimal adverse effects, a general permit may be suitable. General permits are issued on a nationwide, regional, or state basis for particular categories of activities. Several projects included in this SWRP are located within open conveyances and will need to comply with Section 404 requirements. The agency responsible for a project's implementation is also responsible for compliance with Section 404.

### 1.3.3 Safe Drinking Water Act

The Safe Drinking Water Act (SDWA) gives the USEPA authority to set drinking water standards. Projects that have been identified in the SBC SARW SWRP have no components foreseen to be applicable to the SDWA.

### 1.3.4 Water Rights Permits

An entity must have a water right to capture or divert stream flows from natural streams, including flows incurred during peak storm events, to artificially recharge groundwater aquifers. Except where the storage and beneficial use are authorized under an existing appropriative right or a change in an existing right, this will require filing an application with the SWRCB to obtain a water right permit. Exceptions to acquiring water rights exist for flood control projects, those designed and used solely for flood protection and not for beneficial use. Exceptions also exist for pre-1914 rights, projects diverting water under a valid pre-1914 appropriative right.

The type of application required for a given project is dependent upon the duration of operation and urgency of water needs. The two types are outlined below:

- Temporary Permits – expire within 180 days of issuance and are typically appropriate for short-term or infrequent diversions where an urgent need may exist.
- Standard Permits – appropriate for long-term projects and may take several years to issue.

### 1.3.5 Areas of Special Biological Significance

Areas of Special Biological Significance (ASBS) are important areas outlined in the California Ocean Plan for which additional water quality protection may be necessary. State regulations mandate that "waste shall not be discharged to designated Areas of Special Biological Significance..." Currently, there are no ASBSs applicable to the projects identified in this SWRP.

### 1.3.6 Total Maximum Daily Loads

TMDLs are developed for water bodies on the CWA 303(d) List and define how much of a pollutant can be present in a water body and still meet water quality standards and protect beneficial uses. There are two TMDLs in the SBC SARW: Big Bear Lake Nutrients and Nuisance Aquatic Plants TMDL and the Middle Santa Ana River Bacterial Indicator TMDL. Additional details pertaining to these TMDLs are provided in **Section 3**.

### 1.3.7 Other Federal and/or State Laws, Regulations, and Permits

In addition to federal and state laws, regulations, and permits described above, compliance will be demonstrated for the following programs as listed below.

#### 1.3.7.1 United States Fish and Wildlife Service

The United States Fish and Wildlife Service (USFWS) governs the Endangered Species Act (ESA), which directs all Federal agencies to conserve endangered and threatened species and use their authorities to further the purpose of the Act. Section 7 of the Act, called "Interagency Cooperation," is the mechanism by which Federal agencies ensure the actions they take, including those they fund or authorize, do not jeopardize the existence of any listed species. Based on preliminary review, endangered and/or threatened species exist in the SBC SARW and projects may need to comply with these requirements on a project by project basis. The agency responsible for project implementation is responsible for complying with these requirements, as applicable.

Under Section 7, Federal agencies must consult with the USFWS when they carry out any action, funds, or authorizations (such as through a permit) which may affect a listed endangered or threatened species. This process usually begins as an informal consultation, as the Federal agency approaches the USFWS in the early stages of a project to discuss the types of listed species that may be in the project area and what effect the project may have on those species. If the Federal agency and the USFWS determine that the proposed project is not likely to affect any listed species in the project area, the informal consultation is complete and the proposed project can move forward. If it appears that the project may affect a listed species, the Federal agency will coordinate with the applicant to prepare a biological assessment to assist in the determination of the project's effect on the species.

#### 1.3.7.2 California Department of Fish and Wildlife Code Section 1602

The Fish and Game Code Section 1602 requires an entity to notify the California Department of Fish and Wildlife (CDFW) prior to the commencement of any activity that may do one or more of the following:

1. Substantially divert or obstruct the natural flow of any river, stream, or lake;
2. Substantially change or use any material from the bed, channel, or bank of any river, stream, or lake; or
3. Deposit or dispose of debris, waste, or other materials containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake.

The Notification of Lake or Streambed Alteration form must be completed and submitted along with the applicable fee to the Central Region (Region 4) to notify the CDFW regarding the project once it is scheduled to be implemented. Applicable special status studies, biological assessments, and hydrological studies must be included in the submittal package. When there is a potential for endangered and/or threatened species to exist in the project vicinity, then these requirements must be complied with. Special status studies and biological assessments will be required for these species plus any other endangered and/or threatened species known in the area. The agency responsible for implementation of a given project must also evaluate the applicability of these requirements and conform as necessary.

### 1.3.7.3 Mosquito Abatement and Vector Control District Law

The Mosquito Abatement Act of 1915 allows municipalities and counties to create Mosquito Abatement Districts. Projects identified in the SBC SARW SWRP will comply with requirements of the local mosquito abatement district. The San Bernardino County Department of Public Health, Division of Environmental Health Services, Mosquito and Vector Control Program provide mosquito abatement services within the San Bernardino County Region. Vector control is applicable to projects that have the potential for standing water. The agency responsible for a project's implementation is also responsible for coordination pertaining to vector control.

## 1.4 Existing Planning Efforts

Various local plans currently exist and are in effect within the SBC SARW related to water management. The intent of the SBC SARW SWRP is not to supersede these plans, but to improve water management objectives in the SBC SARW in conjunction with already existing efforts. Current planning efforts in the region that were considered throughout the development of this SWRP are described in detail in the Annotated List of Data and Reports Technical Memorandum (**Attachment A**) and **Section 4.2**. One major existing planning effort that is referenced throughout the SWRP is the Santa Ana Watershed Project Authority's (SAWPA's) One Water, One Watershed (OWOW) 2.0 Plan (2014). The OWOW Plan is the IRWMP for the SARW.

## 1.5 Stormwater Management Objectives

Stormwater management objectives have been identified for the SBC SARW to guide project/program identification, prioritization, and implementation within the watershed. The SWRP Guidelines (2015) state that plans must "discuss how the various stormwater management objectives within the watershed will protect or improve water quality, water supply reliability, and/or achieve other objectives."

### 1.5.1 Objectives Specific to the SBC SARW SWRP

The stormwater management objectives for the SBC SARW SWRP are spread across five categories of stormwater management goals. These goals are as follows, while **Table 1-1** summarizes the specific stormwater objectives:

1. Enhance water quality
2. Maximize water supply
3. Improve flood management
4. Protect the environment
5. Provide community benefits

**Table 1-1 Stormwater Management Objectives**

<b>Goal</b>	<b>Objective</b>	<b>Description of Objective</b>
<b>Enhance Water Quality</b>	Pollutant Load Reduction	Reduce the pollutant load from the contributing drainage area to achieve water quality objectives in downstream receiving waters, focusing on the water quality priorities identified in <b>Section 3.4</b> .
	Stormwater Runoff Reduction	Reduce volume of stormwater runoff from the project tributary area to downstream receiving waters to improve water quality by reducing the discharge of polluted runoff.
<b>Maximize Water Supply</b>	Stormwater Recharge	Increase the amount of stormwater runoff captured and infiltrated into groundwater basins.
	Recycled Water Recharge	Increase the amount of recycled water captured and infiltrated into groundwater basins.
<b>Improve Flood Management</b>	Runoff Rate Reduction	Reduce the peak runoff rate for the 100-year storm event, such that flooding is reduced.
	Runoff Volume Reduction	Reduce the volume of floodwaters reaching downstream conveyances, such that additional capacity is available downstream and flooding is reduced.
	Flood Elevation Reduction	Reduce flood elevation (water surface elevation) of the 100-year flood in conveyances downstream, which reduces the risk to property damage or loss caused by flooding.
	Removal of Parcels/ Structures from the Floodplain	Remove parcels/structures from the 100-year floodplain, decreasing the risk of losing property or human life due to flooding.
	Property Value Saved	Decrease property losses due to flooding.
<b>Protect the Environment</b>	Wetlands Enhancement/ Creation	Enhance/create wetlands to protect and improve habitat for species dependent on aquatic habitats for survival. Wetlands enhancement/creation replaces wetland habitat lost due to the process of urbanization.
	Riparian Area Enhancement	Riparian area enhancement helps protect and improve riparian habitat, which is important to protecting biodiversity, maintaining/improving water quality, and protecting channel slopes, among other benefits.
	Streambed Restoration	Restore or enhance natural streambeds for the protection of fish and wildlife habitat. Streambed restoration can also stimulate the natural scour and sedimentation processes essential to creating coarse sandy loam habitat for the endangered San Bernardino kangaroo rat.
	Increased Urban Green Space	Increase urban green space by providing trees, shrubs, and grasses that can filter pollution from air, water, and soils. Urban green space also provides community benefits of increased access to spaces for recreation, exercise, communing with nature, neighborhood cohesion, and intangible social benefits associated with lower crime rates and improved property values.

Goal	Objective	Description of Objective
<b>Provide Community Benefits</b>	Provide Employment Opportunities	Increase the number of jobs for members of the community.
	Increase Public Education	Increase public education associated with stormwater quality and multi-benefit project implementation, such that the public's understanding of water quality protection results in water quality improvements.
	Increase Community Involvement	Enhance public participation in the design phase of a project. Project buy-in can occur when designers have taken the time to involve the community, which yields long-term community cohesion benefits.
	Recreational Path Enhancement/Creation	Enhance/create walking paths, sidewalks, and bike trails, which provide community benefits by increasing connectivity, supporting multi-modal transportation, and encouraging a healthy community.
	Public Use Area Enhancement/Creation	Provide space for communities to gather and recreate, especially within disadvantaged communities, which have been neglected historically in terms of the development of public spaces. Enhancing/creating certain types of public use areas may result in health and social benefits.

The stormwater management objectives will be met through the implementation of the projects and programs described in this SWRP. An evaluation of these stormwater management objectives is included in **Section 6.4**.

### 1.5.2 Compatibility with IRWMP Goals

The SBC SARW SWRP will be submitted to SAWPA for incorporation into the local IRWMP (OWOW Plan) and the objectives included in this SWRP are consistent with those identified in the OWOW Plan, as shown below. **Table 1-2** lists the goals enumerated in the OWOW 2.0 Plan and the SBC SARW SWRP watershed management objectives that address these goals. Each stormwater management objective specific to the SBC SARW SWRP furthers at least one goal from the OWOW 2.0 Plan.

**Table 1-2 Compatibility with IRWMP Goals**

OWOW 2.0 Plan Goals	SBC SARW SWRP Objectives
Maintain reliable and resilient water supplies and reduce dependency on imported water	<ul style="list-style-type: none"> <li>➤ Stormwater Recharge</li> <li>➤ Recycled Water Recharge</li> </ul>
Manage at the watershed scale for preservation and enhancement of the natural hydrology to benefit human and natural communities	<ul style="list-style-type: none"> <li>➤ Wetlands Enhancement/Creation</li> <li>➤ Riparian Area Enhancement</li> <li>➤ Streambed Restoration</li> </ul>
Preserve and enhance the ecosystem services provided by open space and habitat within the watershed	<ul style="list-style-type: none"> <li>➤ Wetlands Enhancement/Creation</li> <li>➤ Riparian Area Enhancement</li> <li>➤ Streambed Restoration</li> <li>➤ Increased Urban Green Space</li> </ul>

OWOW 2.0 Plan Goals	SBC SARW SWRP Objectives
Protect beneficial uses to ensure high quality water for human and natural communities	<ul style="list-style-type: none"> <li>➤ Pollutant Load Reduction</li> <li>➤ Stormwater Runoff Reduction</li> </ul>
Accomplish effective, equitable, and collaborative integrated watershed management	<ul style="list-style-type: none"> <li>➤ Pollutant Load Reduction</li> <li>➤ Stormwater Runoff Reduction</li> <li>➤ Stormwater Recharge</li> <li>➤ Recycled Water Recharge</li> <li>➤ Runoff Rate Reduction</li> <li>➤ Runoff Volume Reduction</li> <li>➤ Flood Elevation Reduction</li> <li>➤ Removal of Parcels/Structures from the Floodplain</li> <li>➤ Property Value Saved</li> <li>➤ Provide Employment Opportunities</li> <li>➤ Increase Public Education</li> <li>➤ Increase Community Involvement</li> <li>➤ Recreational Paths Enhancement/Creation</li> <li>➤ Public Use Area Enhancement/Creation</li> </ul>

## 1.6 Elements of the SWRP

The SWRP consists of the following sections:

➤ **Section 2 – Watershed Identification**

Internal boundaries within the SBC SARW area are defined and include the following boundaries: watershed and subwatersheds, planning areas, public agency, water utility, and surface and groundwater resources. This section includes the characterization of land use and natural/open space. Identification of the watershed and its characteristics sets the stage for project partners and stakeholder identification, water quality derivations, and potential regional projects.

➤ **Section 3 – Water Quality**

Data from existing monitoring programs was compiled from various sources. Existing TMDLs and CWA 303(d) listed impairments are identified for receiving waters within the SBC SARW along with applicable Water Quality Objectives (WQOs). Data was analyzed to determine the exceedance frequency for each of the receiving waters to identify water quality priorities. The identified water quality priorities help guide the implementation efforts for the quantification of project benefits. Water quality data was also used to establish baseline water quality conditions in the SARW area.

➤ **Section 4 – Organizations, Coordination, and Collaboration**

Stakeholders, the public, regulators, and Non-Governmental Organizations (NGOs) were solicited for input throughout the development of the SWRP. This section describes the coordination and collaboration that occurred and how it impacted the final SWRP.

➤ **Section 5 – Quantitative Methods**

The water management objectives for the SBC SARW will be met through various multi-benefit stormwater management projects located within the SBC SARW. This section presents the approach taken to develop quantitative methodologies for integrated identification, prioritization, and analysis of multi-benefit projects and programs. Existing hydrologic/hydraulic models, water quality models, and other Geographic Information System (GIS) and spreadsheet-based decision support tools were reviewed to determine if they could be used to support the metric-based benefit analysis and prioritization of projects. A weighted scoring approach to conduct the metric-based analysis was established and is described in this section.

➤ **Section 6 – Project Identification and Prioritization**

The approach described in the previous section was used to quantify benefits and prioritize projects. This section summarizes the results of the analysis and includes an assessment of the stormwater management objectives.

➤ **Section 7 – Implementation Strategy and Schedule**

The implementation strategy is described in this section for future implementation of the projects/programs identified in the previous sections. The implementation approach, resources, schedule, funding, adaptive management, and performance assessments are described in detail. The information contained in this section supports the next steps following the SWRP approval.

➤ **Section 8 – Education, Outreach, and Public Participation**

This section discusses the education/outreach materials and strategies used to engage the public and stakeholders. The approach, implementation, and outcomes are detailed to demonstrate how the community and stakeholders impacted the SWRP development.

## 2. Watershed Identification

This section identifies and describes the SBC SARW, its surface water and groundwater resources, and its internal boundaries, including public agency (jurisdictional), water and wastewater services, groundwater basin, and land use boundaries. This section includes a description of the native habitats, parks, and open spaces within the watershed. In total, the SBC SARW area is 1,015 square miles, or 649,513 acres, with a population of just under two million. The SBC SARW is further subdivided into 14 subwatersheds. The watershed characteristics presented in this section were considered as part of the project and program identification, quantification, and prioritization further described in this SWRP.

### 2.1 San Bernardino County Santa Ana River Watershed

The SARW encompasses nearly 2,650 square miles of mountains, foothills, and valleys, and is home to more than six million people. The watershed contains portions of Los Angeles, Orange, Riverside, and San Bernardino Counties, as depicted in **Figure 2-1**.

The SARW is characterized by the flat, arid basin of southwestern San Bernardino and western Riverside Counties and the coastal plain of north-central Orange County, and is bisected by the Santa Ana Mountains, which runs northwest to southeast, nearly perpendicular to the Santa Ana River. The Santa Ana River begins in the San Bernardino Mountains, upstream of Seven Oaks Dam, and drains into the Pacific Ocean in the City of Huntington Beach. There are over 50 major tributaries to the once free-flowing and perennial river, some of which are identified in **Figure 2-2**. Ancient igneous, metamorphic, and sedimentary rock underlies and forms the geologic base of the Santa Ana River. Most of the strata in the flat valleys and basins of the watershed are underlain by thousands of feet of sediment deposited by transient seas during climate changes and erosion (Mitchell, 2006).

Diverse and complex faulting and geologic instability have shaped the SARW. The San Andreas Fault runs across the northern section of the watershed and is responsible for causing the uplift of the San Bernardino Mountains, part of the Transverse Ranges of Southern California. The Elsinore–Whittier Fault Zone crosses the Santa Ana River further downstream, near the Orange County/Riverside County boundary. This fault caused the rising of the Santa Ana Mountains, Puente Hills, East Orange Hills, Chino Hills, Loma Ridge, and the other mountain ranges and ridges that run northwest-southeast across the lower section of the watershed, comprising the coastal Peninsular Ranges. While the larger San Andreas Fault allowed the Transverse Ranges to rise to above 10,000 feet in many places, the Peninsular Ranges are only about half that height.

The SBC SARW boundary, as illustrated in **Figure 2-2**, encompasses the upper limits or the headwaters of the Santa Ana River, with the SBC jurisdictional boundary as the southern limit. The jurisdictional boundary is utilized for the SWRP area instead of the hydrologic boundary. This approach was taken in an effort to have a more centralized analysis and planning study as compared to the efforts of the local IRWM (SAWPA) with the OWOW Plan, which encompasses the full SARW.

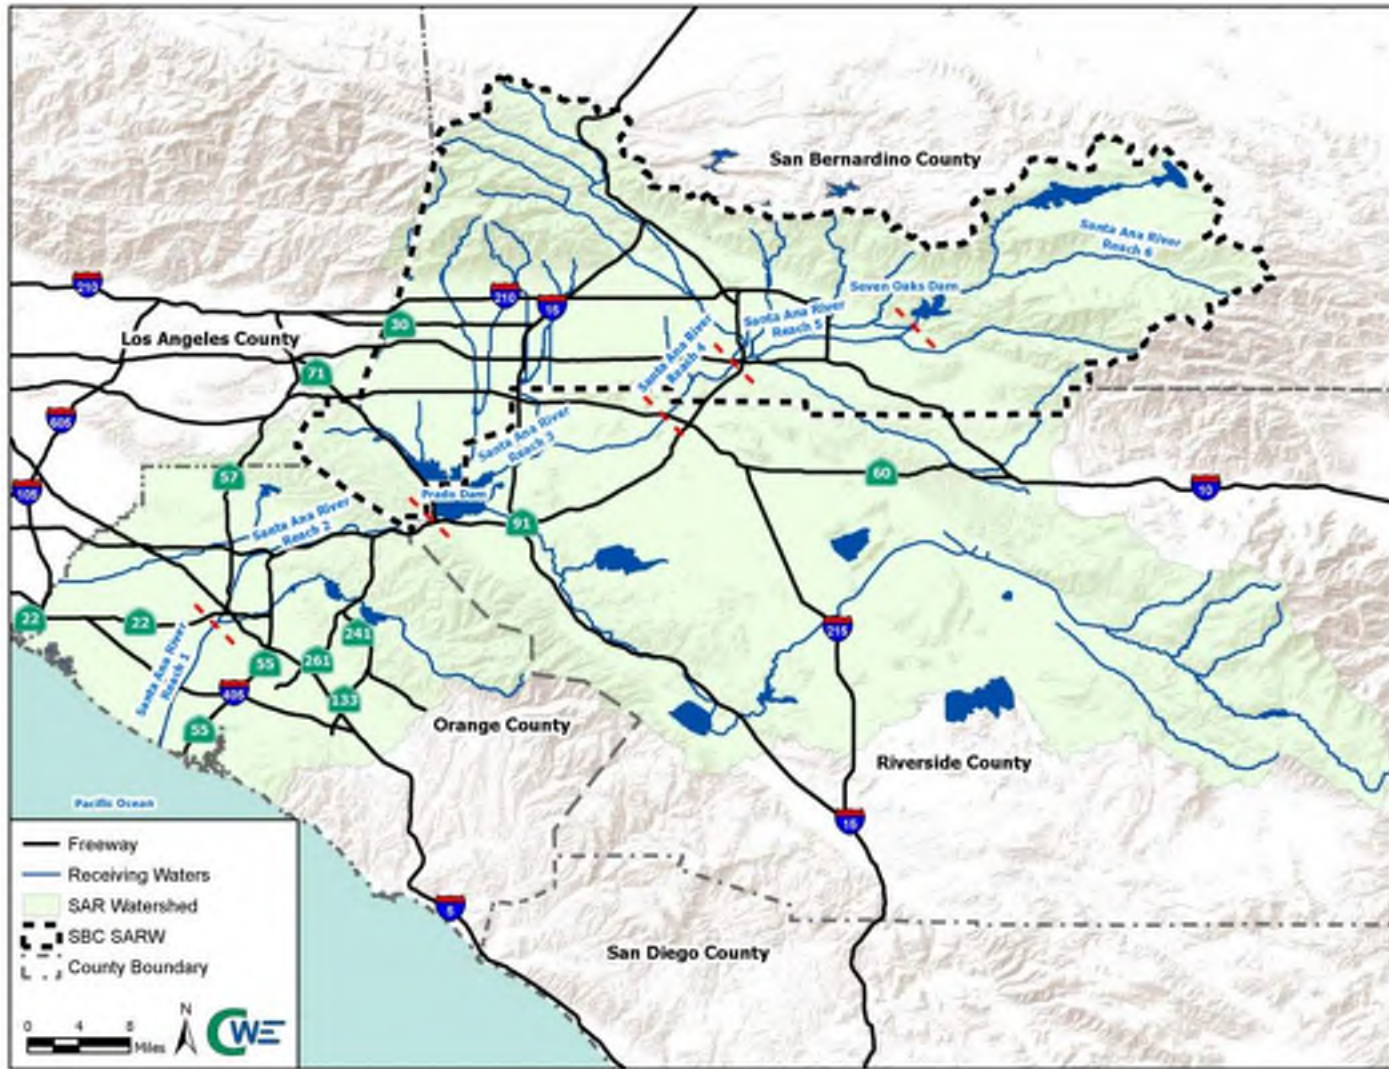

Figure 2-1 Santa Ana River Watershed

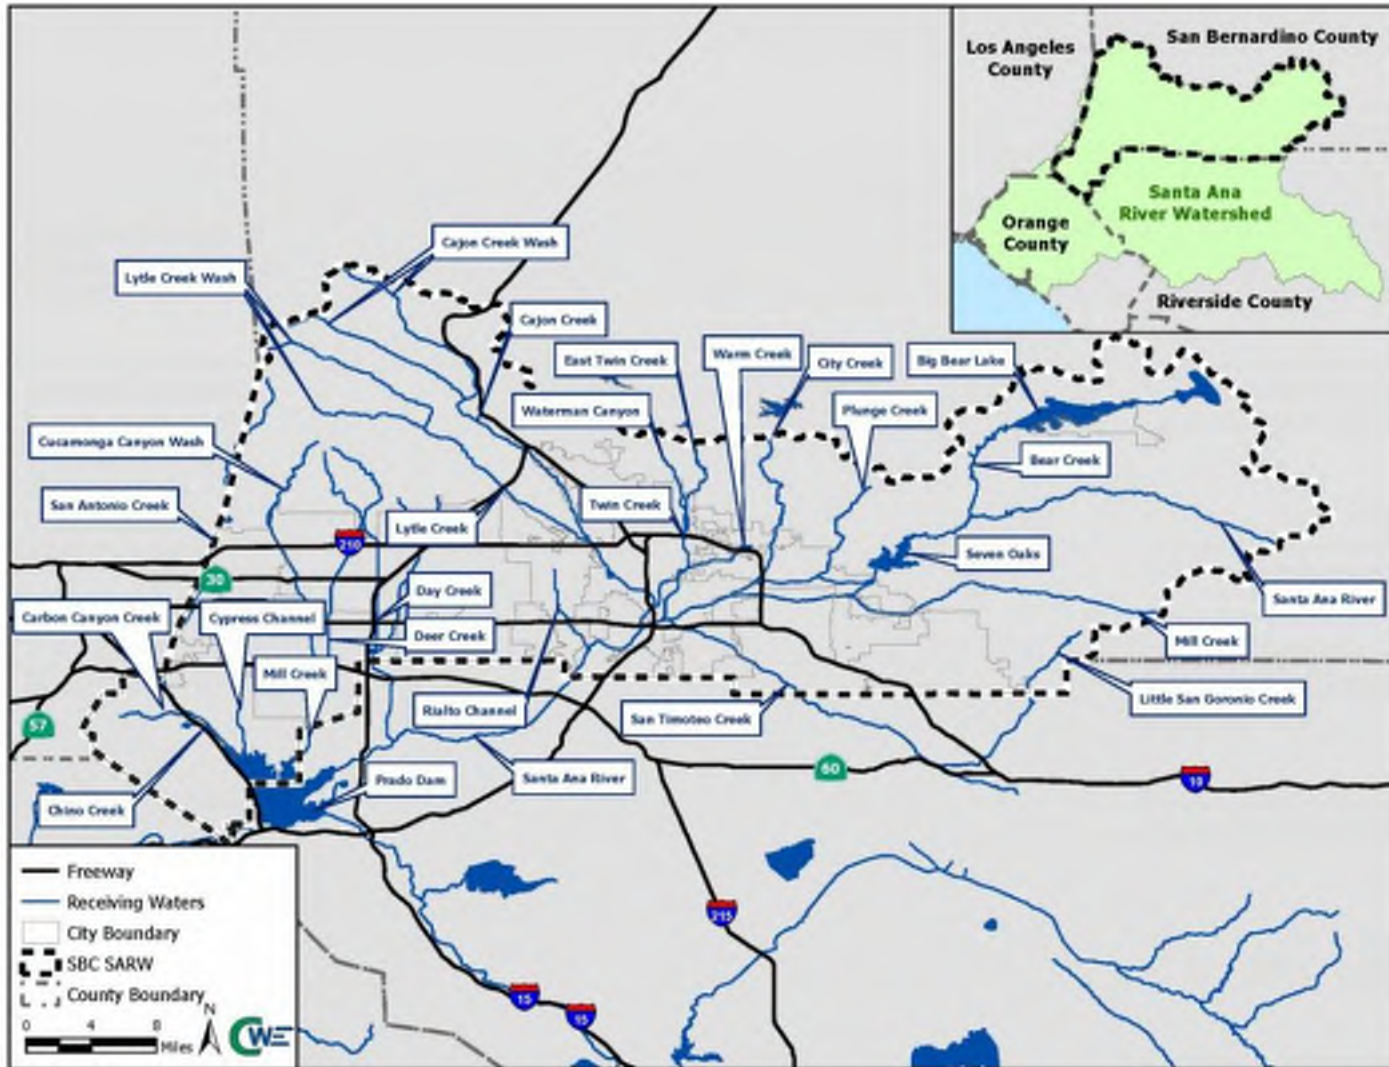

Figure 2-2 San Bernardino County Portion of the Santa Ana River Watershed

## 2.1.1 Internal Boundaries

The SBC SARW area encompasses several boundaries such as public agency (jurisdictional), water service, wastewater service, groundwater basin, and land use boundaries. The following subsections describe these boundaries within the SBC SARW.

### 2.1.1.1 Jurisdictional Boundaries

Sixteen cities encompass the SBC SARW area as well as Unincorporated Areas (UA) of SBC as shown in **Figure 2-3**. The City of San Bernardino is the largest city, followed by the Cities of Ontario, Chino Hills, Fontana, Rancho Cucamonga, Redlands, Chino, Yucaipa, Rialto, Highland, Colton, Upland, Loma Linda, Big Bear Lake, Montclair, and Grand Terrace. **Table 2-1** provides a summary of the area from each jurisdiction that makes up the SBC SARW.

**Table 2-1 Jurisdictional Areas within SBC SARW**

Jurisdiction	Area (Acres)	Percent (%)
Big Bear Lake	4,181	0.6
Chino	18,978	2.9
Chino Hills	28,640	4.4
Colton	10,265	1.6
Fontana	27,156	4.2
Grand Terrace	2,241	0.4
Highland	12,089	1.9
Loma Linda	4,811	0.7
Montclair	3,531	0.5
Ontario	32,005	4.9
Rancho Cucamonga	25,517	3.9
Redlands	23,313	3.6
Rialto	14,314	2.2
San Bernardino	38,171	5.9
Upland	10,016	1.5
Yucaipa	17,852	2.8
SBC UA	376,433	58.0
<b>Total:</b>	<b>649,513</b>	<b>100</b>

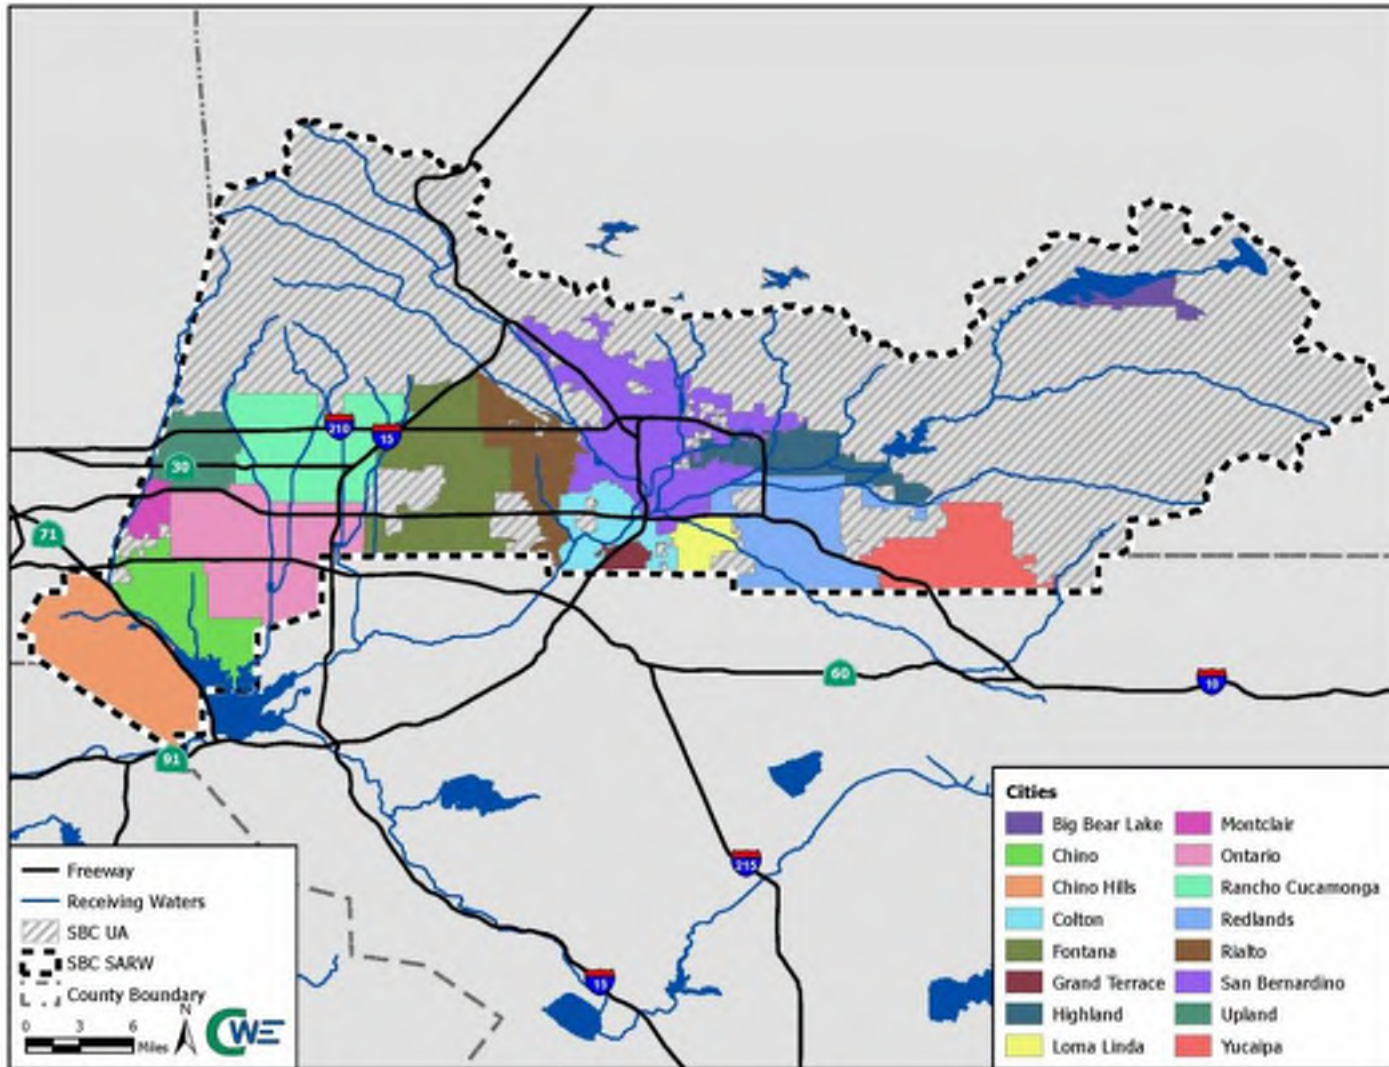

Figure 2-3 Jurisdictional Boundaries within the SBC SARW Area

## 2.1.1.2 Water and Wastewater Service Areas

There are three main water suppliers, San Bernardino Valley Municipal Water District (SBVMWD), Inland Empire Utilities Agency (IEUA), and Big Bear Municipal Water District (BBMWD) located within the SBC SARW area, as presented in **Figure 2-4. Table 2-2** summarizes the estimated total annual water demands associated with these water suppliers based on their Urban Water Management Plans (UWMPs).

**Table 2-2 Projected Water Demands from the Water Suppliers**

Water Supplier	Total Water Demands (AF)				
	2020	2025	2030	2035	2040
SBVMWD <sup>a</sup>	250,027	260,542	270,747	281,697	289,821
IEUA	210,588	225,923	242,732	254,721	278,017
BBMWD	6,500	6,500	6,500	6,500	6,500

<sup>a</sup> Includes water supplied on BBMWD's behalf for in-lieu of Big Bear Lake releases to Bear Valley Mutual Water Company (BVMWC).

SBVMWD was formed in 1954, under the Municipal Water District Act of 1911, as a regional agency to plan for long-range water supply in the San Bernardino Valley. SBVMWD covers approximately 221,820 acres within the SBC SARW. SBVMWD spans the eastern two-thirds of the San Bernardino Valley, and includes a portion of Yucaipa Valley. SBVMWD is responsible for long-range water supply management which includes local groundwater basins and replenishing these groundwater basins with imported water from the California State Water Project. SBVMWD has specific responsibilities for monitoring groundwater supplies in the San Bernardino Basin Area and Rialto-Colton Subbasin, and for a portion of the minimum Santa Ana River flow required at the Riverside Narrows (SBVMWD, 2016).

IEUA was formed in 1950 as the Chino Basin Municipal Water District. The same year, the agency joined the Metropolitan Water District (MWD) of Southern California. In 1998, the agency changed its name to IEUA. IEUA covers approximately 152,800 acres within the SBC SARW area. IEUA is focused on providing four key services: 1) treating wastewater; 2) developing recycled water, local water resources, and water use efficiency programs that will reduce the region's dependence on imported water supplies and drought-proof the service area; 3) converting biosolids and waste products into a high quality compost made from recycled materials; and 4) generating electrical energy from renewable sources (IEUA, 2016b).

BBMWD was formed in 1964 and is responsible for the overall management of Big Bear Lake (BBL). The primary goals of the BBMWD are the stabilization of the water level at BBL, given the availability of water and financing; maintaining the surrounding lake environment; and maintaining the irrigation interest of downstream communities. Through a judgment executed in 1977, BBMWD purchased from BVMWC the BBL bottom, Bear Valley Dam, and the right to utilize and manage the surface of BBL for recreation and wildlife. In return, deliveries to reduce the amount of lake releases to BVMWC were capped at 65,000 acre-feet in any ten-year period. These deliveries are made in the form of lake releases or other sources "in-lieu" of lake releases (in-lieu water deliveries) (SBVMWD, 2016).

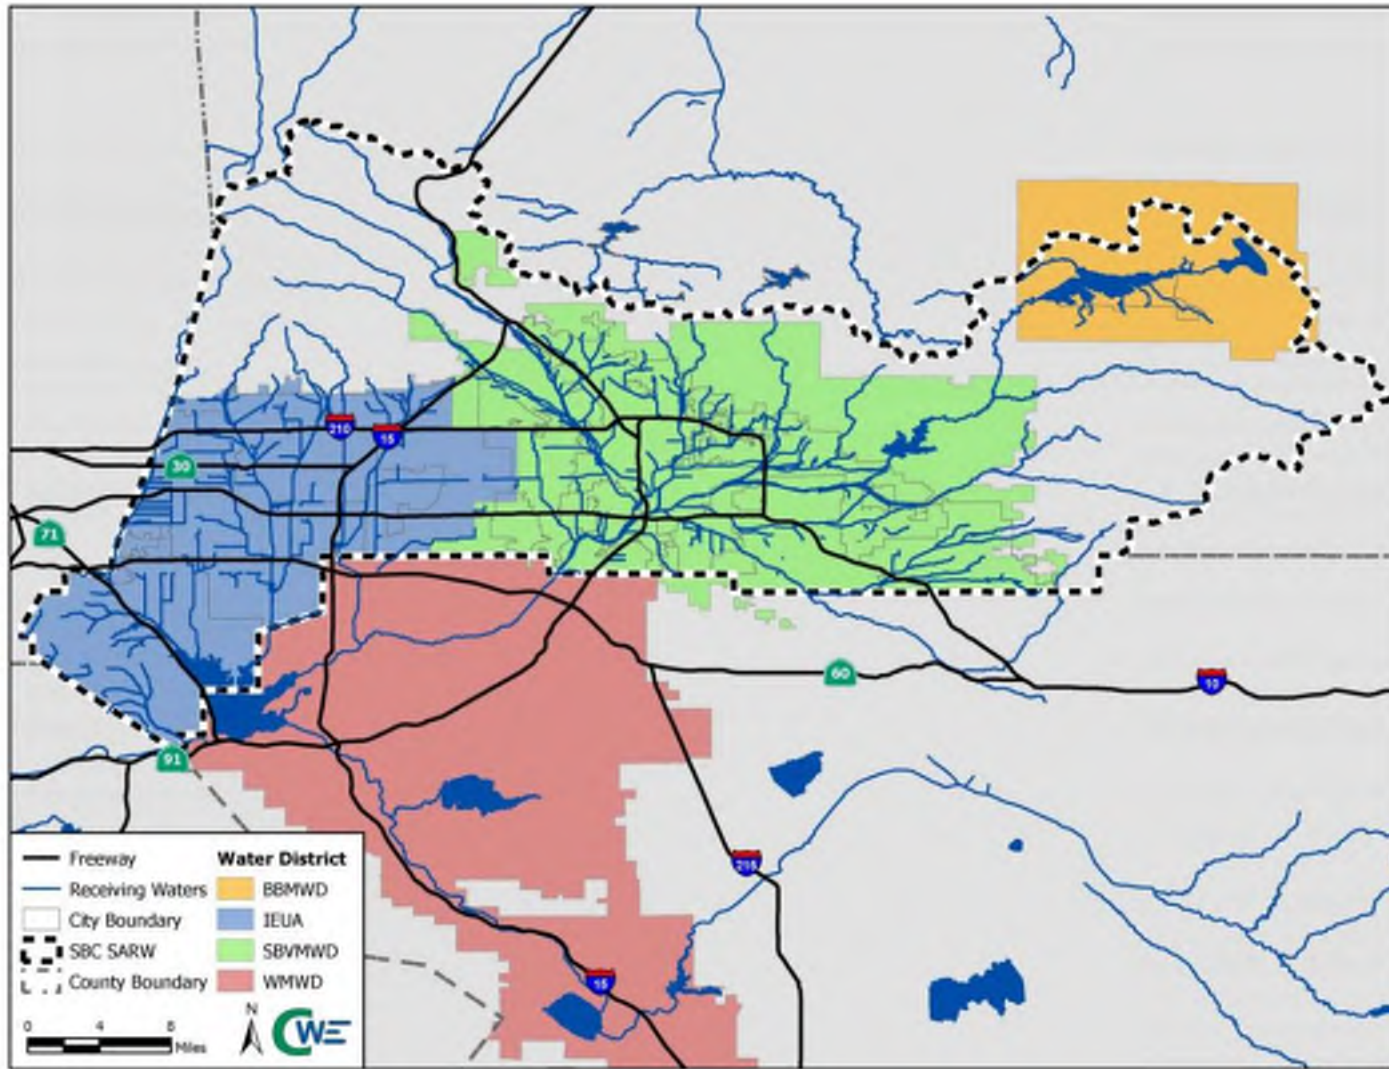

Figure 2-4 Water Supplier Boundaries within the SBC SARW Area

## San Bernardino County Flood Control District

SBC SARW SWRP

November 2018

Western Municipal Water District (WMWD) is located beyond the boundary of the SBC SARW; however, WMWD has groundwater rights within the SBC SARW area. The water pumped out from the SBC SARW area is transported into WMWD's Riverside Division through an agreement with the City of Riverside.

Thirty-one water purveyors are located within the SBC SARW, as summarized in **Table 2-3**. The table summarizes the estimated volume of potable water supplied in acre-feet (AF) in 2015.

**Table 2-3 Water Supplied through Water Purveyors in 2015**

<b>Water Purveyor</b>	<b>Population Served</b>	<b>Potable and Drinking Water Supplied (AF)</b>
<b>SBVMWD (based on individual reports/Annual Reports by each purveyor)</b>		
City of Colton	45,496	9,008
City of Loma Linda	23,298	4,682

City of Rialto	54,453	8,771
East Valley Water District (EVWD)	104,457	16,942
Marygold Mutual Water Company	6,818	--
Muscoy Mutual Water Company	13,255	--
Riverside Highland Water Company (RHWC)	16,007	2,964
San Bernardino Municipal Water District (SBMWD)	199,657	36,035
San Bernardino Valley Conservation District	--	--
South Mesa Water Company	4,830	--
Terrace Water Company	2,200	--
West Valley Water District (WVWD)	80,161	17,131
Western Heights Water Company	7,120	--
Yucaipa Valley Water District (YVWD)	44,745	9,595
<b>Subtotal:</b>	<b>687,773</b>	<b>126,418</b>
<b>IEUA (based on Fiscal Year 2015-16 data presented in the Annual Water Use Report)</b>		
City of Chino	74,000	20,163
City of Chino Hills	77,600	12,993
City of Ontario	168,780	36,096
City of Upland	75,790	16,807
Crawford Canyon Municipal Water Company	10	--
Cucamonga Valley Water District	200,460	40,166
Fontana Water Company	215,500	32,681
Monte Vista Water District	54,200	8,012
San Antonio Water Company	3,150	1,882
<b>Subtotal:</b>	<b>869,490</b>	<b>168,800</b>
<b>BBMWD</b>		
BVMWC	--	--
<b>Outside of Agency Areas (based on individual reports/Annual Reports by each purveyor)</b>		
City of BBL Water Department	15,520	2,166
Big Bear City Community Service District	11,528	890
Fallsvale Service Company	959	200

Water Purveyor	Population Served	Potable and Drinking Water Supplied (AF)
Lake Arrowhead Community Services District	7,183	1,600
Lytle Creek Springs Water Company	475	--
Running Springs Water District	4,806	350
<b>Total:</b>	<b>1,597,734</b>	<b>300,424</b>

-- Information not available at this time

Sixteen out of the 31 water purveyors also provide wastewater services along with the SBC Special Districts Department, which only provides wastewater services and is not a water purveyor. The water agencies that also provide wastewater services are the Cities of Colton, Fontana, Grand Terrace, Loma Linda, Rancho Cucamonga, Redlands, and Rialto, Big Bear Area Regional Wastewater Agency, Big Bear City Community Services District, EVWD, IEUA, Lake Arrowhead Community Services District, Lytle Creek Community Services District, Running Springs Water District, SBMWD, and YVWD. In addition, approximately 2,300 parcels within the SBC SARW area utilize Onsite Wastewater Treatment Systems (OWTS or septic systems). **Figure 2-5** depicts the locations of the OWTS within the SBC SARW area.

### 2.1.1.3 Groundwater Basin Boundaries

Six groundwater basins are located within the SBC SARW area totaling approximately 340,412 acres, all of which are located within the South Coast Hydrologic Region. The six basins included Bear Valley, Big Meadows Valley, Coastal Plain of Orange County, San Gabriel Valley, Seven Oaks Valley, and Upper Santa Ana Valley, as shown in **Figure 2-6**. The largest groundwater basin, as summarized in **Table 2-4**, is the Upper Santa Ana Valley basin covering approximately 46 percent of the SBC SARW area. The Upper Santa Ana Valley basin is further divided into eight subbasins which are Bunker Hill, Cajon, Chino, Cucamonga, Rialto-Colton, Riverside-Arlington, San Timoteo, and Yucaipa, as illustrated in **Figure 2-7**. Existing groundwater quality data is summarized in **Section 3.2**.

**Table 2-4 Groundwater Basins within the SBC SARW**

Groundwater Basin	Area (Acres)	Percent of SBC SARW (%)
Bear Valley	18,573	2.9
Big Meadows Valley	14,162	2.2
Coastal Plain of Orange County	134	< 0.1
San Gabriel Valley	2,756	0.4
Seven Oaks Valley	4,075	0.6
Upper Santa Ana Valley	300,712	46.3
<b>Total:</b>	<b>340,412</b>	<b>52.4</b>

The groundwater basins do not line up exactly with the surface watersheds described in **Section 2.2**. Surface watersheds are based on surface topography and manmade structures (storm conveyances, basins, pumps, etc.). Groundwater basin delineation is dependent on hydraulic properties of an aquifer, input and outflow, and geological factors. Surficial aquifers (water table) generally mimic surface watersheds and their flow does not cross surface boundaries. Deeper (confined) aquifers are less likely to conform to surface watersheds. Some of the groundwater basins/subbasins depicted below are confined and do not line up with the surface watersheds (DNR, 2018).

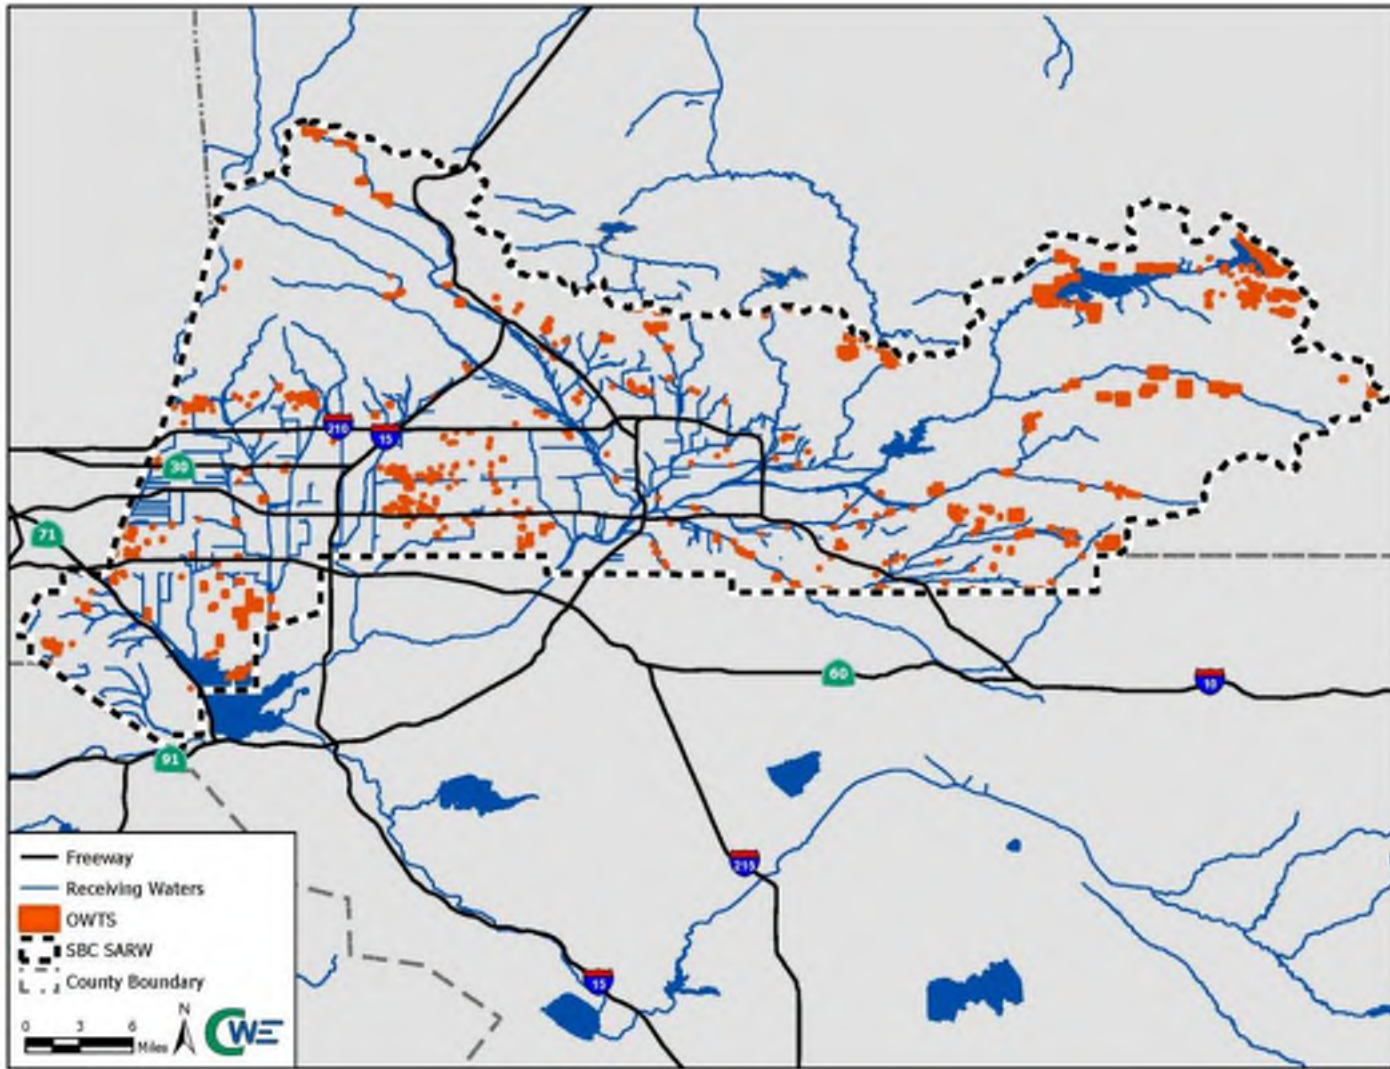

Figure 2-5 Onsite Wastewater Treatment Systems within the SBC SARW Area

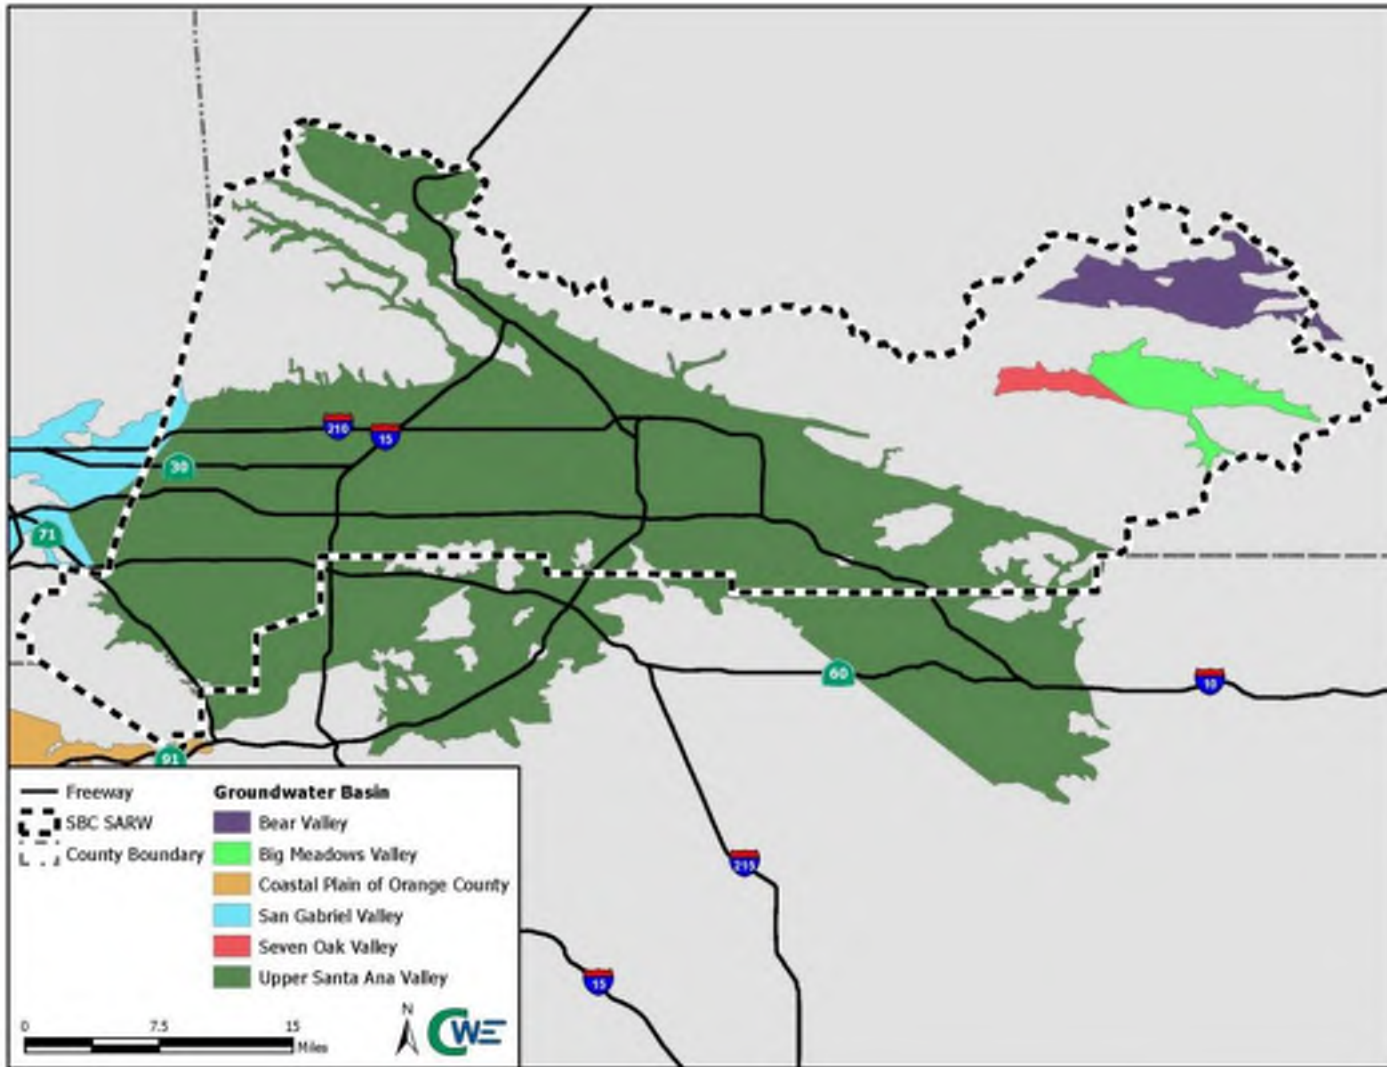

Figure 2-6 Groundwater Basins within the SBC SARW Area

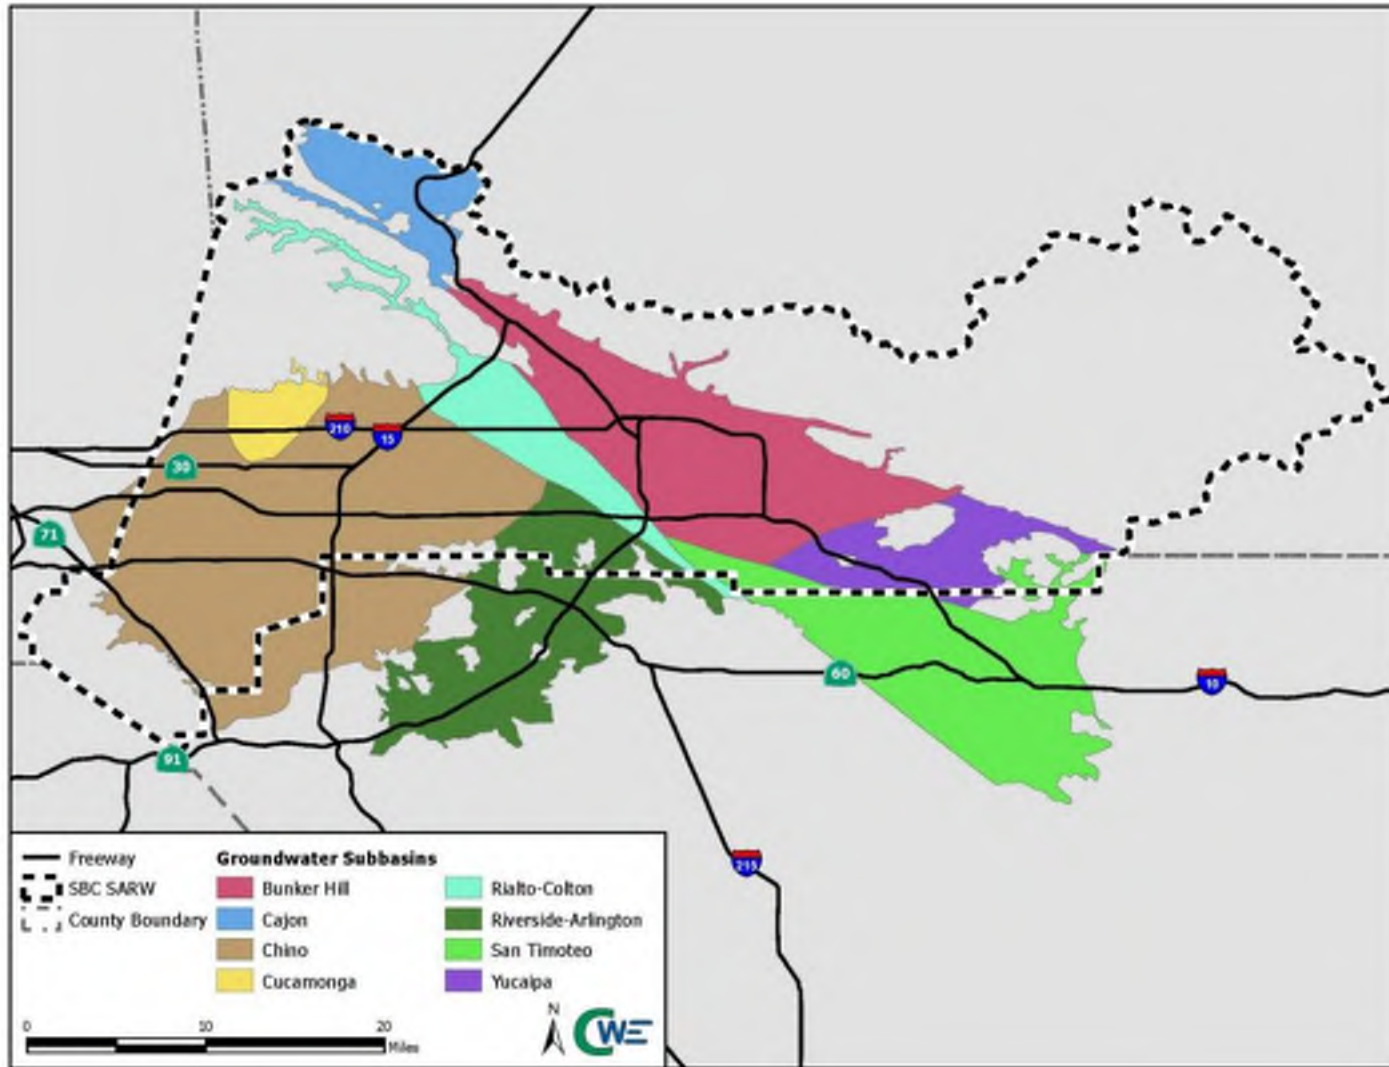

Figure 2-7 Upper Santa Ana Valley Groundwater Subbasins within the SBC SARW Area

#### 2.1.1.4 Land Use

Land use within the SBC SARW area is shown in **Figure 2-8**. General Plan land use (2013) information from the San Bernardino Associated Governments (SANBAG) was used to categorize land use within the SBC SARW area. The General Plan land use represents the projected future built out land use, rather than the existing. This is more appropriate for planning purposes as compared to existing land use. The 2013 SANBAG General Plan land use data includes a total of 22 land use descriptions. The land use descriptions were re-categorized into seven land use categories which include agriculture, commercial, education, industrial, residential, transportation, and vacant. **Attachment B** provides the list of land use descriptions and the assigned land use category. The predominant land use category is vacant land, as tabulated in **Table 2-5**, which is reflective of the large mountainous areas within the SBC SARW. Of the planned urbanized area, the residential land use is the largest area covering 162,877 acres or 25.1 percent of the total SBC SARW area, while the education land use category makes up the lowest percentage.

**Table 2-5 Categorized Land Use of Total SBC SARW Area**

Land Use	Area (Acres)	Percent (%)
Agriculture	9,307	1.4
Commercial	45,933	7.1
Education	6,371	1.0
Industrial	42,094	6.5
Residential	162,877	25.1
Transportation	8,359	1.3
Vacant	374,572	57.6
<b>Total:</b>	<b>649,513</b>	<b>100.0</b>

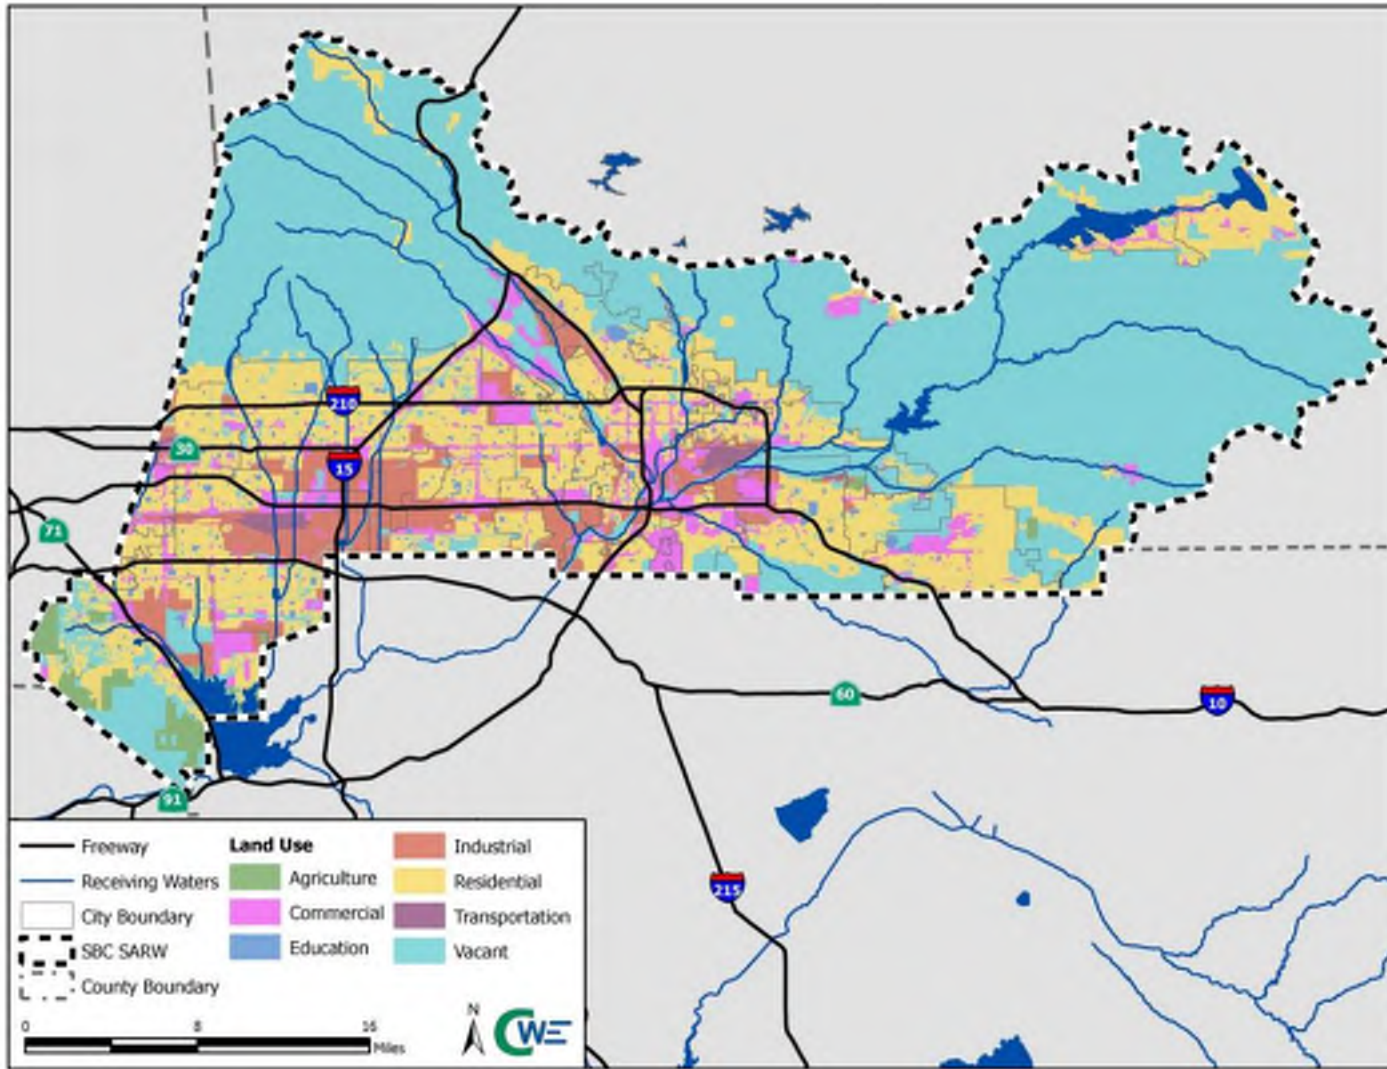

Figure 2-8 General Plan Land Use within the SBC SARW Area

## 2.1.2 Surface Water

The Santa Ana River is 96 miles long and divided into six reaches. The river starts upstream of Seven Oaks Dam and discharges into the Pacific Ocean, as seen in **Figure 2-1**. The Santa Ana River begins in Santa Ana Canyon in the Southern San Bernardino Mountains, on the northern flank of San Gorgonio Mountain. The river initially flows west through a broad and deep gorge, and receives its first major tributary, Bear Creek, which flows southwest from BBL. Flows from this portion of the Santa Ana River consist mostly of snowmelt and storm runoff in undeveloped mountainous area, resulting in good water quality. The river turns south, passing westward towards Seven Oaks Dam and the City of San Bernardino. As it passes through to the urban areas, it receives flow from City Creek and enters a flood control channel flanked by earthen levees on both sides. Not long after the confluence with City Creek, Lytle Creek connects with the Santa Ana River. Lytle Creek is one of the largest tributaries of the Santa Ana River, rising in three forks of the San Gabriel Mountains and flowing southeast, becoming the Lytle Creek Wash before discharging into the main stem. From there, the Santa Ana River flows southwest, where the Rialto Channel confluences inside the SBC boundary, continuing on to Riverside County. Further downstream, flows from Day Creek join the main stem before discharging into the flood control reservoir formed by Prado Dam. Within the SBC SARW, three other major tributaries of the river join the reservoir area (Prado Dam): Chino Creek, Cypress Channel, and Mill Creek (Prado Area). After flowing out of the Prado Dam, the Santa Ana River flows between the northern Santa Ana Mountains and Chino Hills, crosses into Orange County and discharges into the Pacific Ocean. Details on the surface water quality are included in **Section 3**.

## 2.1.3 Native Habitats, Parks, and Open Space

SBC consists of three sub-regions: valley, mountain, and desert regions. The SBC SARW area is within two of these regions: valley and mountain regions. These two regions contain diverse habitats, differing in climates and geography which in turn sustain differing biological environments.

### 2.1.3.1 Valley Region

The valley region is urbanized with few existing natural open space areas (SBC, 2007b). The habitats within the undeveloped areas of the valley are alluvial sage scrub, chaparral, coastal sage scrub, deciduous woodlands, grasslands, riverine, and wetlands (SBC, 2007b). Vegetation in urbanized areas consists primarily of introduced landscape species. The most sensitive vegetation types found within the study area are wetlands, including riparian woodland, riparian scrub, and freshwater marsh. The valley region provides habitat to several sensitive species such as burrowing owl, California bedstraw, coastal California gnatcatcher, least bell's vireo, Los Angeles pocket mouse, northwestern San Diego pocket mouse, rufous-crowned sparrow, San Bernardino kangaroo rat, San Diego horned lizard, Stephens' kangaroo rat, southwestern willow flycatcher, and western yellow-billed cuckoo (SBC, 2007b). Natural preserves and parks found within the valley region are illustrated in **Figure 2-9** and further detailed below.

- **Chino Hills State Park** – Chino Hills State Park is an open-space area in the hills of Santa Ana Canyon (SBC, 2017d). The State Park is a critical link in the Puente-Chino Hills biological corridor. It encompasses stands of oaks and sycamores, Riversidean sage scrub, and grassy hills that stretch nearly 31 miles, from the Santa Ana Mountains to the Whittier Hills. The Riversidean sage scrub community supports a sensitive bird species, the coastal California gnatcatcher.

- **Cucamonga-Guasti Regional Park** – Cucamonga-Guasti Regional Park is a 150-acre park located in the City of Ontario. It offers a wide range of activities, including two lakes for fishing, a swim complex with water slides, zero depth water play park, picnic tables, and group picnic shelters (SBC, 2017d).
- **Glen Helen Regional Park** – Glen Helen Regional Park is located at the base of the chaparral covered hills of the Cajon Pass, the park offers scenic views of both the San Gabriel and San Bernardino Mountains. The 1,340-acre park offers recreational activities which include two lakes for fishing, a swim complex with pool, sandy area, dual water slides, zero depth water play park, large group shelter picnic areas, and amphitheater (SBC, 2017d).
- **North Etiwanda Preserve** – The preserve encompasses 763 acres primarily of a unique Riversidean alluvial fan sage scrub habitat that also contains a water marsh (SBC, 2007b). The area was acquired in 1998 by SANBAG, as mitigation for the Interstate 215 Freeway extension. It was later assigned to SBC for management in conjunction with the CDFW and an advisory committee. Ongoing conservation efforts have enabled expansion of the Preserve to over 1,200 acres.
- **Prado Basin Mitigation Area** – An agreement in 1995 between the Orange County Water District (OCWD), USACE, and USFWS, resulted in the water level behind Prado Dam to be raised, doubling the amount of water stored behind the dam. The agreement between the agencies resulted in cooperative efforts to enhance the water conservation and environmental values of Prado Basin, and to also enhance the breeding grounds of the endangered least bell's vireo. The OCWD owns 2,150 acres behind Prado Dam in Riverside County. There are nearly 465 acres of constructed wetlands within the OCWD property and adjacent lands, which have effectively demonstrated the ability to reduce nitrogen levels in the Santa Ana River.
- **Prado Regional Park** – Prado Regional Park is in the Chino Valley Basin where San Bernardino, Riverside, Orange, and Los Angeles Counties connect. The name Prado is derived from California's early Spanish days when the countryside was known as a "prado" or meadow. This park offers a number of recreational activities which include fishing, camping, hiking, biking nature trails, meeting room, disc golf, and picnic facilities.
- **Santa Ana Woolly Star and Slender-Horned Spine Flower Mitigation Lands in the Upper Santa Ana Wash** – The 760-acre woolly star preserve was established by the USACE along the Santa Ana River Wash as mitigation for the Seven Oaks Dam project.
- **Vulcan Materials Alluvial Fan Sage Scrub Mitigation Bank** – Vulcan Materials established a 1,378-acre habitat conservation management area along a six mile stretch of Cajon Creek (SBC, 2007b). Enclosed within this sage and scrub community are 24 sensitive species, including numerous wildflowers, the coastal California gnatcatcher, and the endangered San Bernardino kangaroo rat.
- **Yucaipa Regional Park** – The Yucaipa Regional Park is located near Oak Glen, Redlands, and mountain communities. It includes a wide range of outdoor recreation such as fishing in three lakes, a swim complex with water slides, sandy beach area, and picnic shelters (SBC, 2017d).

### 2.1.3.2 Mountain Region

The mountain region lies in the southwestern portion of SBC and contains the San Bernardino Mountains and the eastern end of the San Gabriel Mountains. The major habitats found in the region include chaparral, conifer forest, sage shrubs, oak woodlands, wetlands (including woodlands, scrub, marsh,

meadows, and riverine), and the relic pavement plains (SBC, 2007c). There are 71 threatened or endangered wildlife species inhabiting the forest. The mountain region provide habitat to several sensitive species such as the California bald eagle, mountain yellow-legged frogs, southern rubber boa, peregrine falcons, bighorn sheep, and many endangered plants (SBC, 2007c). Bear Creek is a CDFW designated wild trout stream and contains high quality riparian resources. Low-elevation riparian resources include cottonwood-willow, sycamore/coast live oak, and white alder communities. Locally rare riparian resources include the aspen groves in the San Bernardino Mountains.

The CDFW recognizes 14 Areas of Special Biological Importance (ASBIs) within the mountain region of SBC. Key areas are identified among the ASBIs that support herds of both resident and seasonally migratory mule deer. Good deer fawning areas, generally located near wet meadows and riparian thickets, occur from Manzanita Flat to Plunge Creek in the Alder Creek area and near Keller Meadows and the forks of Plunge Creek, east of Harrison Mountain. Deer winter ranges occur north of Barton Flats and summer ranges occur northwest of Delamar Mountain. The CDFW also recognizes principal wintering area for waterfowl migrating along the Pacific Flyway. Waterfowl have been observed at Baldwin Lake and BBL within the mountain region. The lake areas also provide wintering habitat for the bald eagle, and recognized by the CDFW as ASBIs. Natural preserves and parks found within the region are illustrated in **Figure 2-10** and further detailed below.

- **Baldwin Lake Ecological Reserve** – The 156-acre Baldwin Lake Ecological Reserve includes a unique pebble plain plant community as well as vernal wet meadow habitat. The site is also significant for its wintering population of bald eagles. The CDFW purchased the property from the Natural Conservancy in 1989, and designated it as an ecological reserve in 1991. It was acquired to protect existing populations of rare and endangered plants.
- **Bluff Lake Reserve** – The Bluff Lake Reserve is an ecological reserve with towering pines, a 20-acre lake and meadow, and majestic outcrops of quartz monzonite. The reserve includes Southern California’s finest intact mountain marsh and meadow complex that contains the federally threatened Bear Valley bluegrass, the federally endangered Big Bear checkerbloom, and California dandelion. Botanically, the meadow is remarkable with 16 species of sedges, eight species of wire grass, and 14 species of native grass. Mature forests of lodgepole pine, Jeffrey pine, and white fir surround the meadow.
- **Castle Glen Bald Eagle Preserve** – The 125-acre preserve is situated in the Castle Glen area of BBL and was set aside as habitat for the bald eagle. Bald eagles have been known to migrate here during winter, from frigid nesting grounds in the Pacific Northwest, to roost in scraggly pine trees and hunt for fish and waterfowl in the lake. Many bald eagles gather at Baker Pond, a shallow waterfowl refuge at the eastern end of the 15-mile-long lake where plentiful tall pine trees provide the federally endangered birds with a commanding view of hunting grounds below.
- **Cucamonga Wilderness Area** – The Cucamonga Wilderness Area is composed of 12,781 acres along the boundaries of the Angeles National Forest – San Gabriel Mountains National Monument and the San Bernardino National Forest (USDA, 2017a). This wilderness consists of a sub-alpine setting, which is primarily composed of mixed conifers ranging in age class such as Ponderosa, Jeffrey, and Douglas-fir pines. Numerous wildlife species do well in the area, including deer, bear, mountain lions, and Nelson bighorn sheep (USDA, 2017a).

- **San Gorgonio Wilderness Area** – The 56,749-acre area is located in the eastern San Bernardino Mountains (USDA, 2017b). San Gorgonio Wilderness Area is the largest established wilderness area in Southern California and one of the most publicly used within the nation. The wilderness is part of the eastern slope of the San Bernardino Mountains, with topography rapidly changing from low rolling foothills and canyons to steep rugged mountains. The wilderness reflects a transition between desert, coastal, and mountain environments, including the different types of vegetation representative of each elevation due to the elevation gradient (USDA, 2017b).
- **Wildland Park, Pebble Plain Preserve** – Pebble Plain geologic formation only occurs in Big Bear and Holcomb Valley and nowhere else in the world. As a result, the flora and fauna growing on the Pebble Plain are unique to the areas and interested groups have joined together to ensure plants and insects will be forever protected.

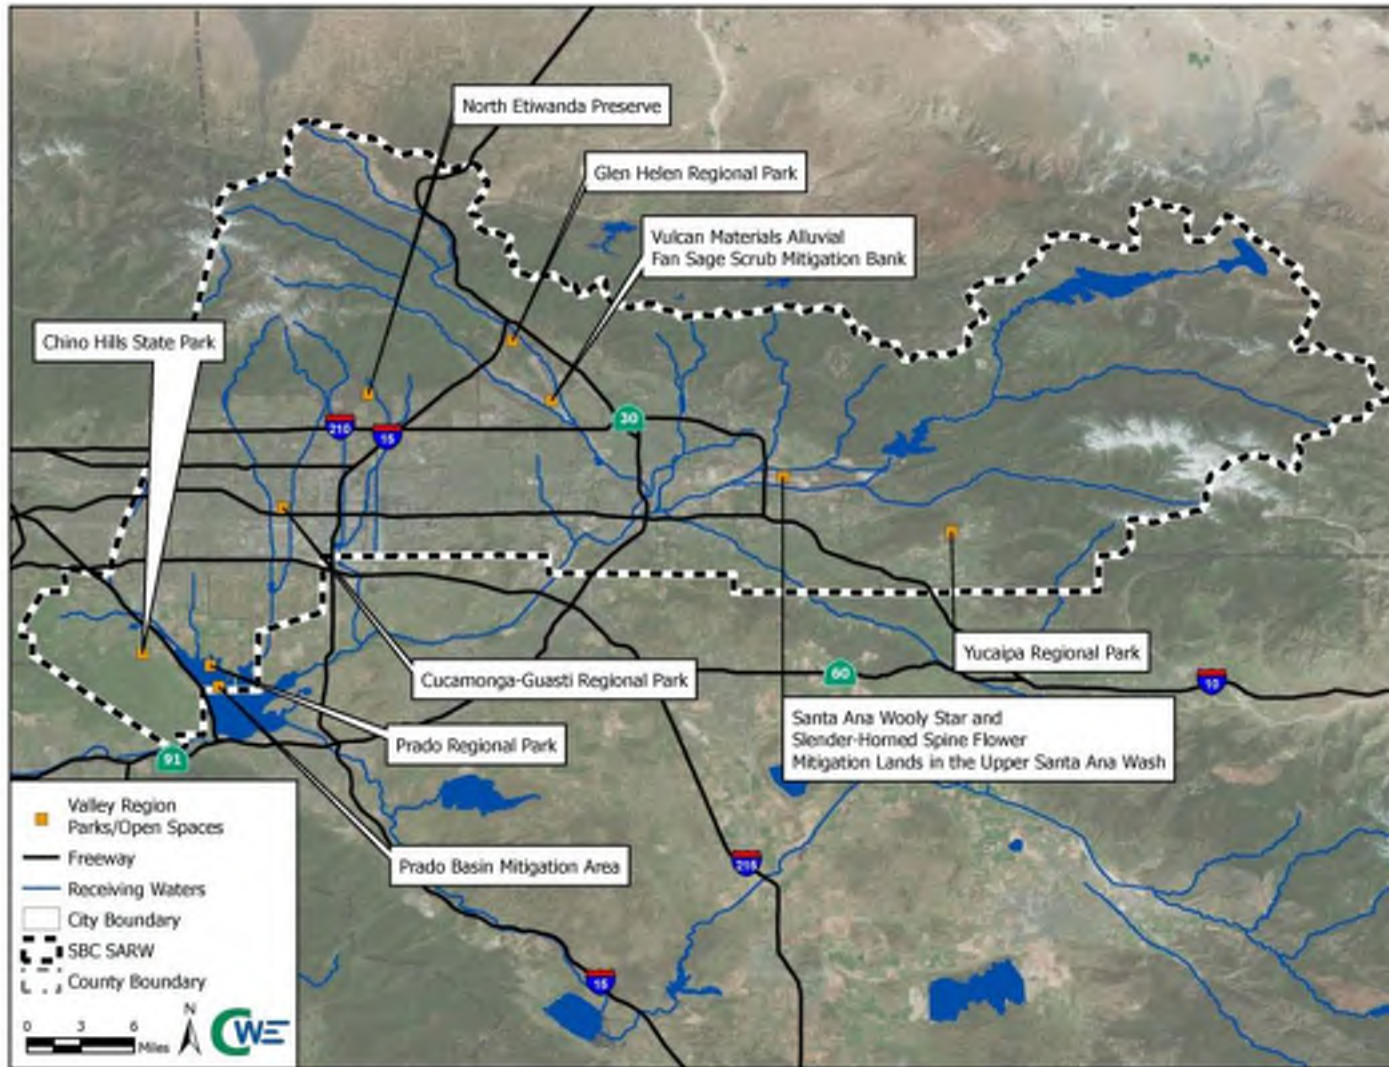

Figure 2-9 Native Habitats, Parks, and Open Space within the SBC SARW Valley Region

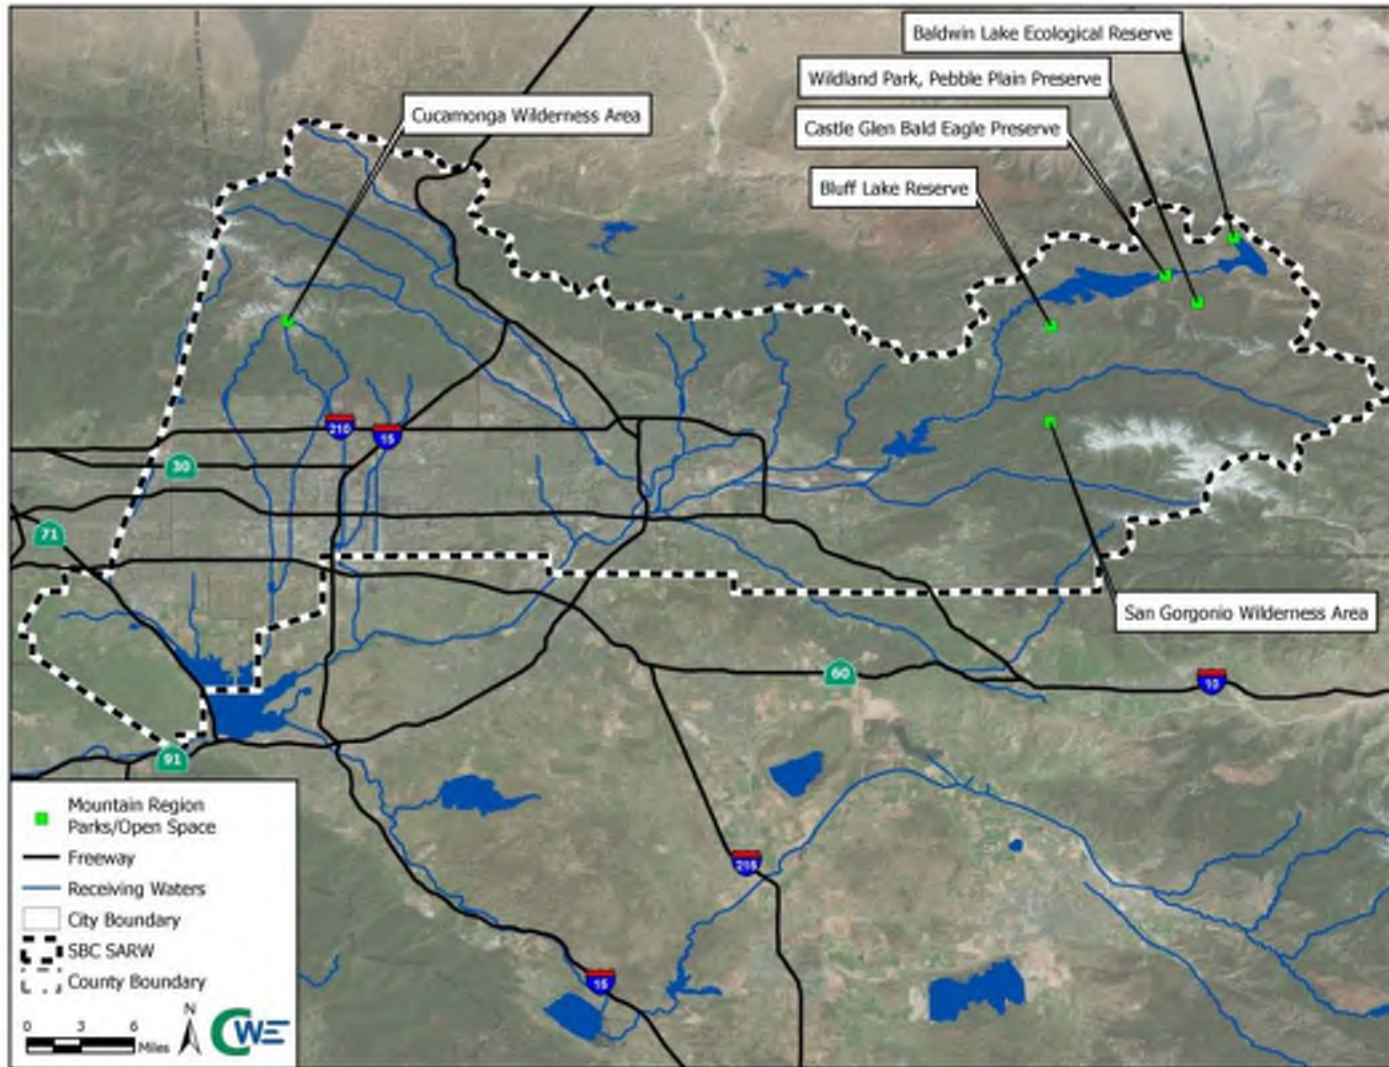

Figure 2-10 Native Habitats, Parks, and Open Space within the SBC SARW Mountain Region

## 2.1.4 Natural Watershed Processes

Before human activity created developed land in the San Bernardino Valley, water quality in receiving waters was maintained through natural watershed processes. The specific processes varied spatially and temporally because of the semi-arid climate and the seasonal distribution of rainfall. Processes involving the movement of sediment and the interface between surface water and groundwater were prevalent within natural stream channels. Permanent wetlands were not common within San Bernardino County, where the Santa Ana River and its tributaries only flowed during storm events. Outside of natural stream channels, the watershed processes of overland flow, groundwater recharge, interflow, and evapotranspiration dominated.

Pre-development water quality in the San Bernardino Valley was maintained through biological and chemical processes that were transient in nature due to the temporary nature of flows. The vast open scrublands and grasslands soaked up rainfall from high-frequency low-runoff storm events. Stormwater runoff from larger storms would drain in an uncontrolled manner to the channels, scouring and depositing sediments as it flowed downstream and creating habitat for native species.

San Bernardino Valley became more and more developed over time. Lands that had previously been able to absorb rain from most storms were paved over so that runoff was directed into engineered stormwater channels. Channels were dammed and diverted, thus eliminating the watershed's ability to dissipate energy through natural sedimentation and deposition.

The sections below provide in more detail an identification of the natural watershed processes that occur within the SBC SARW and a description of how they have been disrupted over time. The processes identified include overland flow, groundwater recharge, interflow, evapotranspiration, sedimentation, and chemical and biological transformation. The SBC SARW SWRP seeks to restore some of these identified natural watershed processes as a way of achieving the stormwater management objectives of the SBC SARW.

The processes identified below are described qualitatively rather than quantitatively. Most natural watershed processes described below are difficult to define quantitatively because they represent different flow paths of stormwater other than what can be measured with flow meters in channels. The task becomes even more difficult when comparing present natural watershed processes to natural watershed processes from the past, where no possibility exists for monitoring of flow processes. However, the processes can be qualitatively described, and in most cases urban development has led to the incidental impairment of natural watershed processes.

### 2.1.4.1 Overland Flow

Precipitation reaching the ground surface that does not immediately infiltrate runs off as overland flow. Most uncompacted vegetated soils have infiltration capacities of one to several inches per hour at the ground surface, which exceeds the rainfall intensity of even unusually intense storms. In contrast, pavement and hard surfaces reduce the effective infiltration capacity of the ground surface to zero, ensuring overland flow regardless of the meteorological attributes of a storm.

Most precipitation that fell to earth in the SARW prior to development either became groundwater or evaporated. The predominant hydrologic soil group in the San Bernardino Valley is type A, typified by low overland flow rates and high infiltration rates. The inverse is true in the mountainous regions of the

SARW where the hydrologic soil group is most commonly type D, featuring high potential for overland flow and stormwater runoff into canyons and valleys. The overland flow in mountainous regions has largely remained unchanged with time, but the overland flow in the San Bernardino Valley has increased with increasing urban development.

### 2.1.4.2 Groundwater Recharge and Infiltration

Groundwater recharge and infiltration are closely-linked hydrologic processes that are dominant across much of California’s intact landscapes. Infiltration of rainfall into the soil prior to development was widespread on virtually any geologic material and on all but the steepest slopes. Urbanization covered the land with more impervious surfaces and reduced the watershed’s natural ability to improve water quality through infiltration.

The effect of urbanization has also had an effect on the natural stream channels of the SBC SARW. The capacity of streams and riverbeds to recharge the underground aquifers decreased as urbanization occurred. Many tributaries within the SBC SARW were diverted, channelized, and paved over with concrete. **Figure 2-11** shows how streambed infiltration from four channels from within IEUA’s service area that travel from the San Gabriel Mountains to the Santa Ana River has been sharply reduced over time. **Figure 2-11** was created using groundwater model data from the Chino Basin Watermaster and was included in IEUA’s 2016 Chino Basin Stormwater Resource Plan. Additional studies would be necessary to evaluate additional streams, which are not included as part of this SWRP.

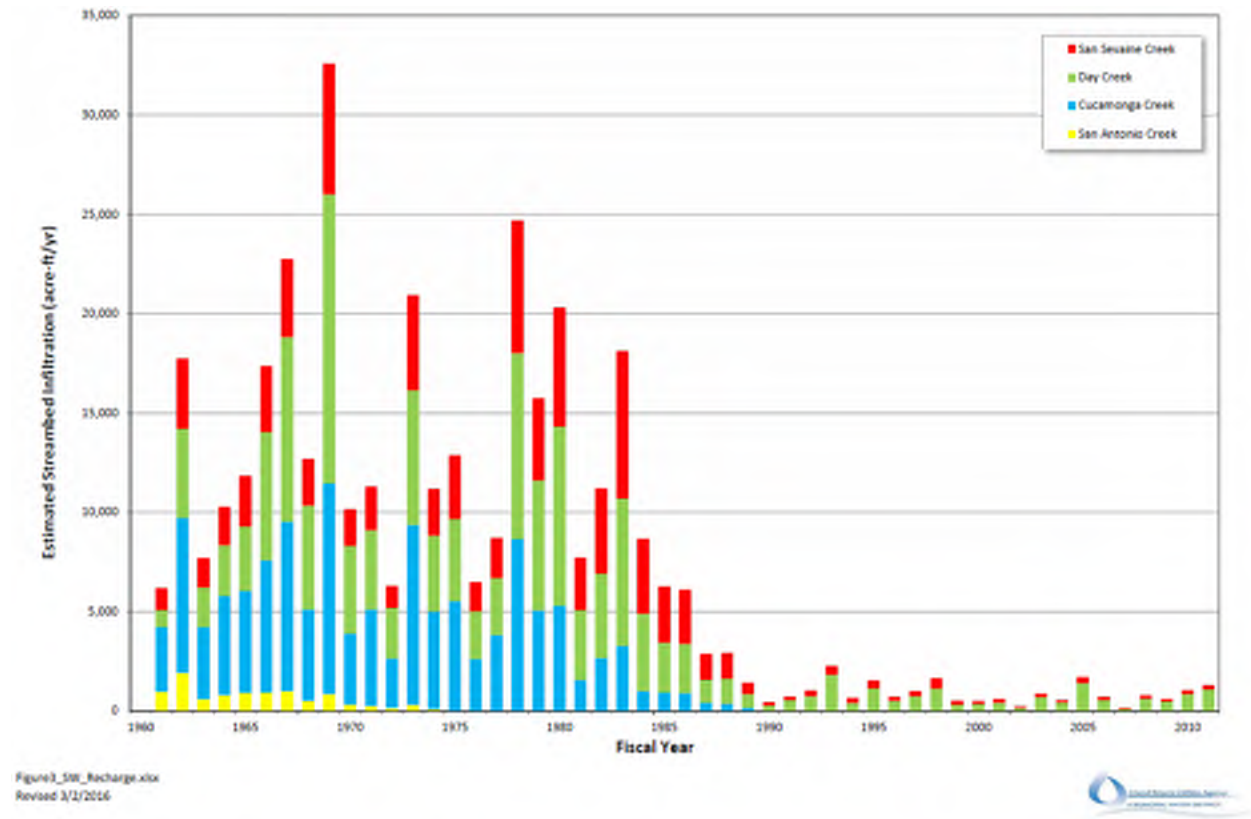

Figure 2-11 Groundwater Recharge from Streambeds (from 2016 Chino Basin SWRP)

### 2.1.4.3 Interflow

Interflow takes place following storm events as shallow subsurface flow (usually within three to six feet of the surface) occurring in a more permeable soil layer above a less permeable substrate. During a rainfall event, some of the water leaves the area as surface runoff, and some infiltrates to a shallow subsurface soil layer. If the shallow layer is more permeable than the layers underneath, water will tend to flow laterally underground rather than percolate to deeper soil layers. This lateral movement of shallow groundwater is interflow. The process of interflow can flatten and elongate the hydrograph of a watershed in certain locations, which can reduce velocities and flood flow rates during a storm. The magnitude of the effect can be quite pronounced in some geologic settings but small to negligible in others.

Urban development reduces infiltration and thus interflow, as well as reducing the footprint of the area supporting interflow volume. Larger acreages of impervious area along with development of underground storm drains and the paving and straightening of open drainage channels have reduced the capacity for vadose zone movements of water. As the SBC SARW has continued to develop, more precipitation that centuries ago would have become interflow and groundwater have now become overland flow and surface runoff.

### 2.1.4.4 Evapotranspiration

In undisturbed humid-region watersheds, the process of returning water to the atmosphere by direct evaporation from soil and vegetation surfaces, and by the active transpiration by plants, can account for nearly one-half of the total annual water balance. This fraction can be even higher in more arid regions. While evaporation is related to characteristics of meteorology such as heat, humidity, and wind, transpiration is related to plant types and the amount of moisture in the soil. Native plants are often replaced with turf, which requires additional irrigated water, especially throughout the summer months.

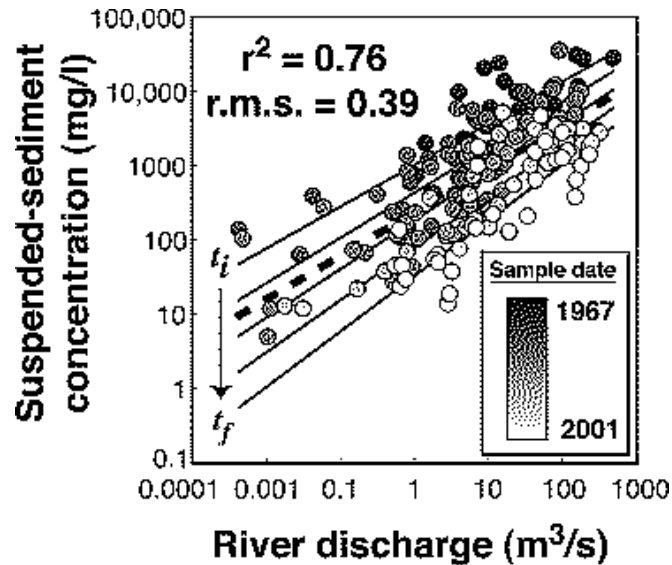

Though the capacity of the atmosphere to reduce the volume of standing water through evapotranspiration has remained relatively unchanged over time, evapotranspiration throughout the SBC SARW has likely increased due to land development and the introduction of non-native plant species. Non-native plant species tend to use more water and be less tolerant of droughts. The introduction of plant species that require more water has likely removed a higher volume of water from the soil column than in pre-development times.

### 2.1.4.5 Sedimentation

Sediment delivery into the channel network is a critical process for the maintenance of various habitat features in fluvial systems, including in the SBC SARW. Endangered species adapted to a particular natural sedimentation process. Continued development of the SBC SARW has changed this natural process.

Urban development has led to a measurable decrease in sediment flows in the Santa Ana River over time. **Figure 2-12**, from Warrick and Rubin (2007), shows how suspended sediment concentrations, while still related to total stormwater discharge in the Santa Ana River, decreased over time between 1967 and 2001.

**Figure 2-12 Suspended Sediment Concentration in the Santa Ana River Over Time**

Delivery of both organic and inorganic sediment to the Santa Ana River tributaries upstream of Prado Dam has been disrupted by the decrease in erodible land through development, and by the addition of debris basins and groundwater recharge basins in the tributaries of the SBC SARW.

#### 2.1.4.6 Chemical and Biological Transformation

Chemical and biological transformation encompasses the suite of watershed processes that alter the chemical composition of water as it passes through the soil column on its path to, and following entry into, a receiving water. The conversion of subsurface flow to overland flow in a developed landscape eliminates much of the opportunity for attenuation and transformations within the soil column, and this is commonly expressed as degraded water quality. The dependency of these processes on watershed conditions is complex in detail, but in general, a greater residence time of stormwater in the soil is correlated with greater activity for this group of processes.

The residence time of stormwater within the soil has decreased within the SBC SARW when compared to historic conditions. The urbanization of the watershed has led to more impervious area preventing stormwater infiltration, thereby disrupting chemical and biological transformation processes. Storm drains and concrete lined channels have further reduced the watershed's natural ability to treat stormwater through chemical and biological processes.

## 2.2 San Bernardino County Santa Ana River Subwatersheds

The SBC SARW is comprised of 14 subwatersheds as shown in **Figure 2-13**. The subwatersheds are associated with major tributaries to the Santa Ana River within the SBC SARW area. **Table 2-6** shows the percentage of each subwatershed within the SBC SARW by acreage. The largest subwatershed is the Santa Ana River subwatershed, which makes up just over 35 percent of the SBC SARW area. The Santa Ana River subwatersheds represent areas that are directly tributary to the river. The smallest subwatershed is Little San Geronio Creek which covers less than one percent of the SBC SARW area. The subwatershed water quality and characteristics were considered as part of the project quantification and may be used to prioritize future implementation, as discussed in **Section 7**. These subwatersheds

are appropriate for use in assessing projects/programs that manage stormwater and provide multiple benefits.

**Table 2-6 Summary of Subwatershed Percentages within the SBC SARW**

Subwatershed	Area (Acres)	Percent (%)
BBL	46,104	7.1
Cucamonga Channel	66,486	10.2
Cypress Channel	5,670	0.9
Day Creek Channel	12,931	2.0
Little San Gorgonio Creek	5,005	0.8
Lytle-Cajon Creek Channel	111,867	17.2
Mill Creek	34,758	5.4
Rialto Channel	12,180	1.9
San Antonio Channel	27,505	4.2
San Sevaine Channel	42,108	6.5
San Timoteo Creek	34,014	5.2
Santa Ana River	198,144	30.5
Upper San Antonio Channel	11,147	1.7
Warm Channel	41,594	6.4
<b>Total:</b>	<b>649,513</b>	<b>100.0</b>

The SBC SARW is composed of 16 cities and the UA of SBC, as mentioned in **Section 2.1.1.1**.

**Table 2-7** provides a breakdown of the corresponding jurisdictions within each subwatershed. The Santa Ana River subwatershed includes 12 jurisdictions, the largest number of jurisdictions among the subwatersheds. Upper San Antonio subwatershed is composed of the least with just the UA of SBC within the subwatershed area.

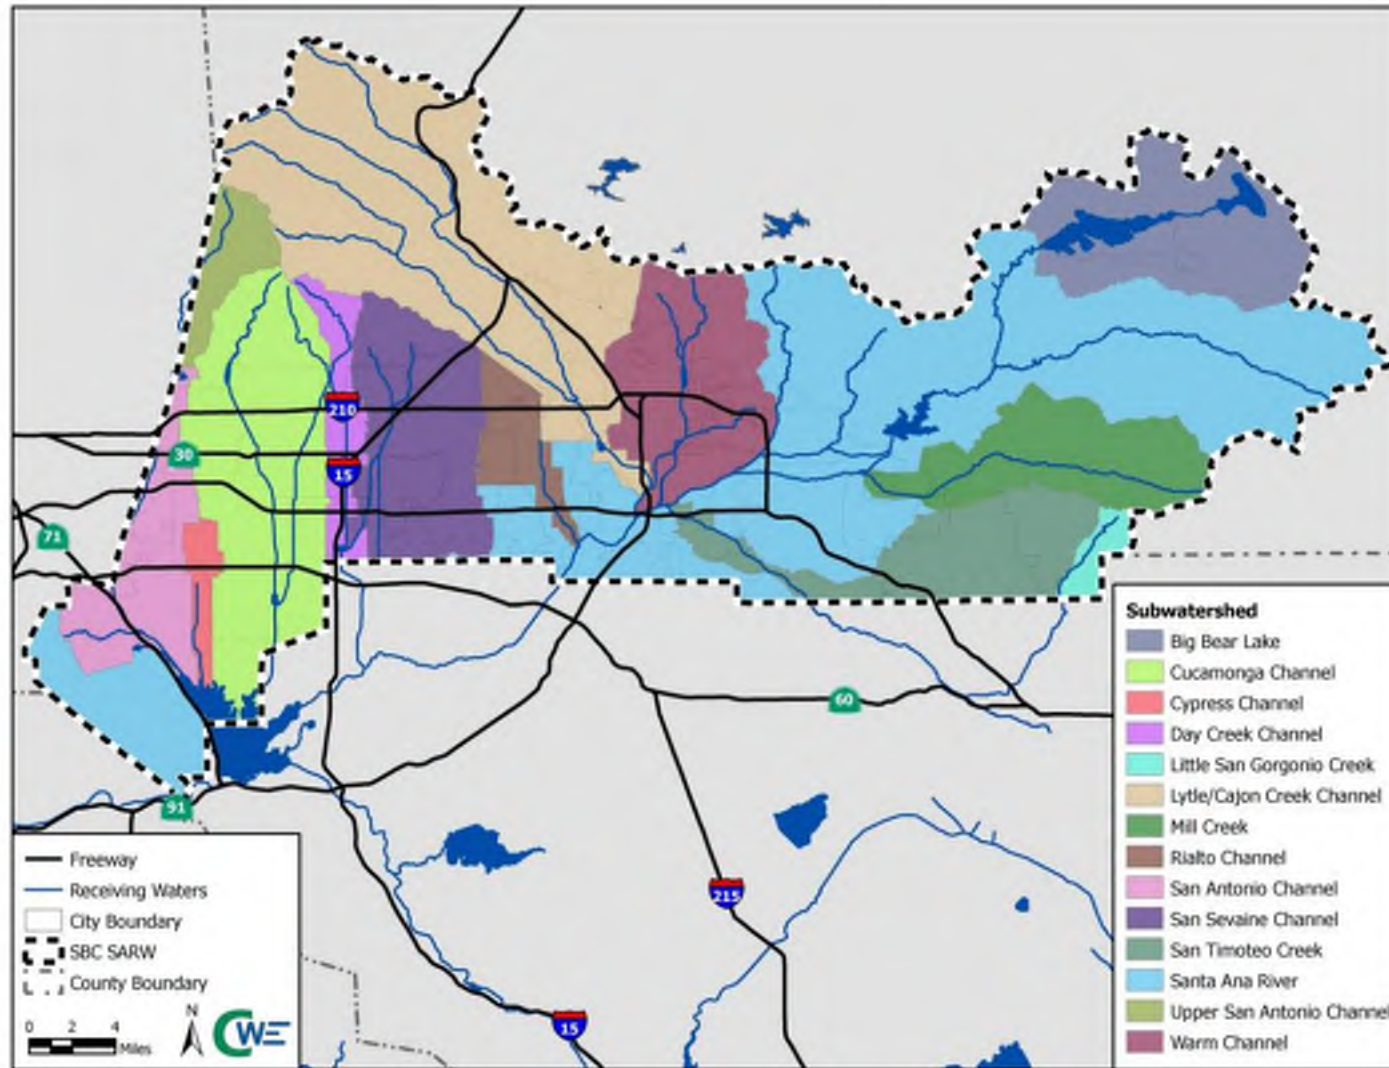

Figure 2-13 SBC SARW Subwatersheds

San Bernardino County Flood Control District

Similarly, land use categories associated with each subwatershed are presented in **Table 2-8**. Land use categories vary from subwatershed to subwatershed, and similar to the whole of the SBC SARW, the residential and vacant land use categories have the largest area for all of the 14 subwatersheds (six subwatersheds have residential as the largest category and eight have vacant). **Attachment C** includes several figures depicting the jurisdictional boundaries, land use categories, and water storage facilities (basins) within each of the 14 subwatersheds.

**Table 2-8 Land Use Composition within SBC SARW Subwatersheds**

Subwatershed	Land Use Category (%)						
	Agriculture	Commercial	Education	Industrial	Residential	Transportation	Vacant
BBL	0.0	3.7	0.0	0.1	25.0	0.0	71.2
Cucamonga Channel	1.0	10.9	2.0	12.7	41.0	3.5	28.9
Cypress Channel	2.2	4.8	2.1	15.6	58.5	1.2	15.6

Warm Channel	0.0	12.6	2.0	5.5	39.6	4.4	35.9

### 3. Water Quality Priorities

The SARWQCB Basin Plan contains the region's water quality regulations and implementation programs designed to preserve and enhance water quality and protect the beneficial uses of waters within the region. Specifically, the Basin Plan:

1. Identifies beneficial uses for surface and ground waters;
2. Includes the narrative and numerical WQOs that must be attained or maintained to protect the designated beneficial uses and conform to the State's anti-degradation policy; and
3. Describes implementation programs and other actions that are necessary to achieve the WQOs established in the Basin Plan.

In combination, beneficial uses and their corresponding WQOs are called Water Quality Standards. A beneficial use is one of the various ways that water can be used for the benefit of people and/or wildlife. A water body is placed on the CWA 303(d) impaired waters list due to exceedances of Basin Plan WQOs of the beneficial uses for that water body. If the pollutant is identified to be causing the impairment, then the water body is assigned a priority for the development of a TMDL, based on the severity of the pollution and the sensitivity of the uses to be made of the waters.

Existing TMDLs and impaired water bodies identified in the 2016 Clean Water Act Section 303(d) List Integrated Report (2016 CWA 303(d) List) were considered as water quality priorities within the SBC SARW which are further discussed in **Section 3.1** to **Section 3.3**. Monitoring data from the Areawide Program was compared to applicable WQOs for each of the receiving waters to further identify priority pollutants in **Section 3.4**. Water quality data from the Areawide Program was also used to establish baseline water quality conditions in the SARW area. The identified priority pollutants from monitoring data, along with TMDL and 303(d) listed impairments, is one aspect that guides the implementation efforts for quantification and prioritization of potential multi-benefit stormwater management projects discussed in **Section 6.1**.

#### 3.1 Existing Surface Water Impairments

The Basin Plan identifies beneficial uses for the Santa Ana River and associated tributaries within the SBC SARW. Water bodies within the SBC SARW support beneficial uses such as:

- Municipal and domestic water supply (MUN)
- Agricultural supply (AGR)
- Groundwater recharge (GWR)
- Hydropower generation (POW)
- Water contact and non-contact recreation (REC1 and REC2)
- Warm freshwater habitat (WARM)
- Cold freshwater habitat (COLD)
- Wildlife habitat (WILD)

- Rare, threatened, or endangered species (RARE)
- Spawning, reproduction, and development (SPWN)

**Table 3-1** presents the beneficial uses of the Santa Ana River Reaches within the SBC SARW (illustrated in **Figure 2-1**). Narrative and numerical WQOs are set within the Basin Plan to protect the designated beneficial uses and conform to the State's Anti-Degradation Policy. In addition to the WQOs in the Basin Plan, the California Toxics Rule (CTR) is often referenced as a source of water quality assessment criteria to identify water body impairments, especially those developed through the Federal CWA 303(d) listing process (Federal Register, 2000).

**Table 3-1 Santa Ana River Reach 6 through 3 Beneficial Uses**

Reach	MUN	AGR	GWR	POW	REC1	REC2	WARM	COLD	WILD	RARE	SPWN
6	X	X	X	X	X	X		X	X		X
5	X*	X	X		X <sup>1</sup>	X	X		X	X

X Existing or Potential Beneficial Use

+ Excepted from MUN

\* **MUN** applies upstream of Orange Avenue (Redlands); downstream, water is excepted from MUN

<sup>1</sup> Access prohibited in some portions per agency with jurisdiction

The following sections describe the relevant CWA 303(d) List impaired water bodies and TMDLs within the SBC SARW. Impairments of the beneficial uses identified above exist in nine water bodies, as described in **Section 3.1.1**. TMDLs have been developed for BBL for Noxious Aquatic Plants Nutrients and Middle Santa Ana River (MSAR) for Indicator Bacteria as further discussed in **Section 3.1.2**. Water quality priorities within the SBC SARW are based on the TMDL listings, while considering the impaired water bodies identified in the 2016 CWA 303(d) List.

### 3.1.1 CWA 303(d) List

The CWA required the State of California to prepare, and then periodically update, a list of impaired water bodies, including those pollutants or conditions causing the impairment and supporting information such as assessment criteria. The current 2016 CWA 303(d) List of water body impairments within the SBC SARW are presented in **Table 3-2** and **Figure 3-1** (SWRCB, 2017a).

On April 28, 2017, the SARWQCB adopted Order No. R8-2017-0013, *Approval of Recommendations for the Federal Clean Water Act Section 303(d) List* (2016 CWA 303(d) List) (SARWQCB, 2017). The SWRCB evaluated the data submitted as part of Order No. R8-2017-0013, for completeness and consistency with the *Water Quality Control Policy for Developing California's CWA Section 303(d) List* (Listing Policy) (SWRCB, 2004). On June 9, 2017, the SWRCB issued the draft *2014 and 2016 California Integrated Report Clean Water Act Sections 303(d) and 305(b)* (2014 and 2016 Integrated Report) outlining the findings from the SWRCB's assessment and recommendations for new listing and delisting to the CWA 303(d) List (SWRCB, 2017a). The 2014 and 2016 Integrated Report recommended delisting a number of water body-pollutant combinations noted in the 2016 CWA 303(d) List. New listing and delisting per the 2016 CWA 303(d) List and SWRCB 2014 and 2016 Integrated Report are noted in **Table 3-2**. The 2016 list obtained final approval from the Office of Administrative Law (OAL) and the USEPA on April 6, 2018, and was utilized in water quality data analysis in **Section 3.3**.

**Table 3-2 2016 CWA 303(d) List of Impairments within SBC SARW**

<b>Water Body</b>	<b>2016 CWA 303(d) List of Impairments</b>

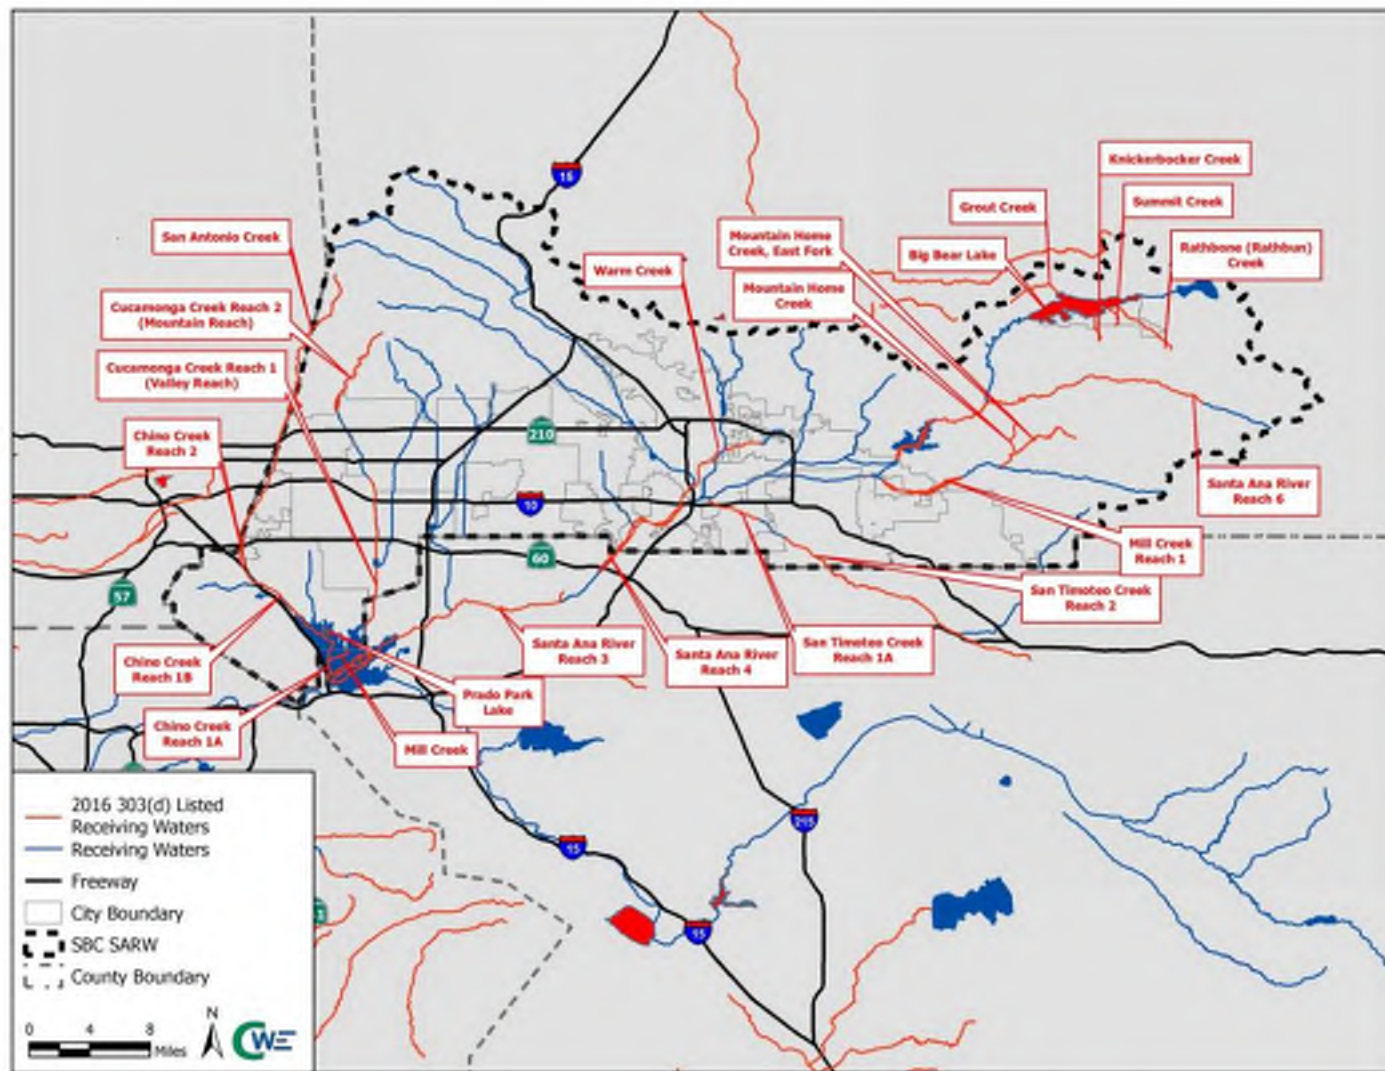

Figure 3-1 2016 CWA 303(d) List of Impaired Water Bodies within SBC SARW

### 3.1.2 Total Maximum Daily Loads

A TMDL must be developed for water bodies placed on the CWA 303(d) List. For water bodies needing a TMDL or alternative planning tool, a completion schedule is developed by the SARWQCB as outlined in the Listing Policy (SWRCB, 2017a). A TMDL defines how much of a pollutant can be present in a water body and still meet water quality standards and protect beneficial uses. Each TMDL must account for contributions from point and non-point sources and provide a Waste Load Allocation (WLA) and Load Allocation (LA), respectively. **Table 3-3** lists two applicable TMDLs in the SBC SARW and subsections below present additional details regarding these TMDLs.

**Table 3-3 TMDLs Developed within the SBC SARW**

Water Body(ies)	TMDL
BBL	Nutrients and Nuisance Aquatic Plants
MSAR – Chino Creek Reach 1, Chino Creek Reach 2, Cucamonga Creek Reach 1, Mill Creek (Prado Area), Prado Park Lake, Santa Ana River Reach 3	Indicator Bacteria

#### 3.1.2.1 Big Bear Lake Nutrients and Nuisance Aquatic Plants TMDL

Proliferation of nuisance (also referred to as noxious) aquatic plants has been recorded in BBL since the 1970s and nutrient discharges have helped promote the growth of nuisance aquatic plants. These nuisance aquatic plants serve as both a sink and source of nutrients. BBL's designated beneficial uses impacted by low dissolved oxygen levels, caused by excess nutrients and nuisance aquatic plants, include COLD, REC1, REC2, WARM, WILD, and RARE. As a result, BBL is on the CWA 303(d) List and a TMDL was developed to limit nutrient loading. The Big Bear Lake Nutrient (BBLN) TMDL was adopted by the SARWQCB in April 2006, and approved by the USEPA on September 25, 2007. The BBLN TMDL numeric targets are shown in **Table 3-4** (SARWQCB, 2006). BBLN TMDL numeric targets during dry hydrologic conditions are required as of 2015 and all other conditions by 2020. In addition, BBLN TMDL WLA and LA established for total phosphorus during dry hydrological conditions are presented in **Table 3-5** (SARWQCB, 2006).

**Table 3-4 Big Bear Lake Nutrient TMDL Numeric Targets**

Parameter	Target Values	Compliance Date <sup>a</sup>	
		Interim – Dry Hydro Conditions	Final – All Other Conditions
Total Phosphorus	35 µg/L (annual average <sup>b</sup> )	2015	2020 <sup>c</sup>
Macrophyte Coverage	30-40% on a total lake area basis		2020 <sup>c,d</sup>
Percentage of Nuisance Aquatic Vascular Plant Species	95% eradication on a total area basis of Eurasian Watermilfoil and any other invasive aquatic plant species		2020 <sup>c,d</sup>
Chlorophyll <i>a</i>	14 µg/L (growing season <sup>e</sup> average)		2020 <sup>c</sup>

<sup>a</sup> Compliance with the targets to be achieved as soon as possible, but no later than the date specified.

<sup>b</sup> Annual average determined by the following methodology: the nutrient data from both the photic composite and discrete bottom samples are averaged by station number and month; a calendar year average is obtained for each sampling location by averaging the average of each month; and finally, the separate annual averages for each location are averaged to determine the lake-wide average.

<sup>c</sup> Compliance date for wet and/or average hydrological conditions may change in response to approved TMDLs for wet/average hydrological conditions.

<sup>d</sup> Calculated as a 5-year running average based on measurements taken at peak macrophyte growth as determined in the Aquatic Plant Management Plan.

<sup>e</sup> Growing season is the period from May 1 through October 31 of each year. The chlorophyll *a* data from the photic samples are averaged by station number and month; a growing season average is obtained for each sampling location by averaging the average of each month; and finally, the separate growing season averages for each location are averaged to determine the lake-wide average.

**Table 3-5 Phosphorus WLAs and LAs for Dry Hydrological Conditions**

Big Bear Lake Nutrient TMDL for Dry Hydrological Conditions	Total Phosphorus Load Allocation (lbs/yr) <sup>a,b</sup>
<b>WLA</b>	<b>475</b>
Urban	475
<b>LA</b>	<b>25,537</b>
Internal Sediment	8,555
Internal macrophyte	15,700
Atmospheric Deposition	1,074
Forest	175
Resort	33
<b>TMDL</b>	<b>26,012</b>

<sup>a</sup> Allocation compliance to be achieved as soon as possible, but no later than December 31, 2015.

<sup>b</sup> Specified as an annual average for dry hydrological conditions only.

### 3.1.2.2 Middle Santa Ana River Bacterial Indicator TMDL

Water bodies within the MSAR Watershed portion of the SBC SARW, in the MSAR Bacterial Indicator TMDL were identified as follows (SARWQCB, 2005c):

- Chino Creek, Reach 1
- Chino Creek, Reach 2

- Cucamonga Creek, Reach 1
- Mill Creek (Prado Area)
- Prado Park Lake
- Santa Ana River, Reach 3

Elevated fecal coliform densities adversely affecting REC1 designated beneficial uses were identified within the MSAR water bodies. As a result, the MSAR water bodies were placed on the CWA 303(d) List and a TMDL was developed to address the impairment. The MSAR Bacterial Indicator TMDL was adopted by the SARWQCB on August 26, 2005, and approved by the USEPA on May 16, 2007 (SARWQCB, 2005c). The MSAR Bacterial Indicator TMDL establishes WLAs, LAs, and compliance targets for fecal coliform and *E. coli* during the wet and dry season. **Table 3-6** identifies the MSAR Bacterial Indicator WLAs, LAs, and TMDL requirements applicable to the SBC SARW area. It is important to note that the targets identified in the table below are associated with the original TMDL requirements. The Basin Plan WQO for *E. coli* (126 organisms/100 milliliters for a 5-day/30-day geomean) is used to assess compliance based on the discussion below.

**Table 3-6 TMDLs, WLAs, and LAs for Bacterial Indicators in MSAR Water Bodies**

Indicator	Original Compliance Target <sup>a,b,c</sup>
Fecal coliform	5-sample/30-day Logarithmic Mean less than 180 organisms/100mL, and not more than 10% of the samples exceed 360 organisms/100mL for any 30-day period.
<i>E. coli</i>	5-sample/30-day Logarithmic Mean less than 113 organisms/100mL, and not more than 10% of the samples exceed 212 organisms/100mL for any 30-day period.

<sup>a</sup> To be achieved as soon as possible, but no later than December 31, 2015, for both dry summer and wet winter conditions.

<sup>b</sup> Compliance target include a 10% margin of safety.

<sup>c</sup> The fecal coliform compliance target has become ineffective upon the replacement of the REC1 fecal coliform objectives in the Basin Plan by approved REC1 objectives based on *E. coli*. SARWQCB Resolution: R8-2012-0001, June 15, 2012 (SARWQCB, 2012b).

On June 15, 2012, the SARWQCB adopted the Basin Plan Amendment (BPA) Resolution R8-2012-0001, to Revise Recreation Standards for Inland Freshwaters in the Santa Ana Region (SARWQCB, 2012b). This BPA resulted in the following key modifications to the Basin Plan:

- Addition of "Primary Contact Recreation" as an alternative name for the REC1 (water contact recreation) beneficial use;
- Addition of narrative text clarifying the nature of REC1 activities and the bacteria objectives established to protect these activities;
- Differentiation of inland surface REC1 waters on the basis of frequency of use and other characteristics for the purposes of assigning applicable single sample maximum values;
- Revision of REC1/REC2 (non-contact water recreation) designations for specific inland surface waters based on the results of completed Use Attainability Analyses (UAA) (SARWQCB, 2012a and 2013);
- Revised water quality objectives to protect the REC1 use of inland freshwaters; and

- Identification of criteria for temporary suspension of recreation use designations and objectives (high flow suspension).

The BPA Resolution R8-2012-0001 was approved by the SWRCB on January 21, 2014, and the OAL on July 2, 2014. The USEPA issued its letter of approval/disapproval on April 8, 2015, and provided a letter of clarification on August 3, 2015. Upon USEPA approval of the BPA Resolution R8-2012-0001 the compliance target for fecal coliform, as indicated in **Table 3-6**, is ineffective, as *E. coli* is the only compliance target for bacterial indicators.

### 3.1.3 Trash Amendments

Trash generated by human activities frequently end up in waterways. The presence of trash in waterways adversely affects beneficial uses and threatens aquatic life, wildlife, and public health. On April 7, 2015, the SWRCB adopted Resolution No. 2015-0019 which approved *Amendment to the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) to Control Trash and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries (ISWEBE Plan)*, collectively referred to as the Trash Amendments (2015a). The USEPA approved the Trash Amendments on January 12, 2016, which applies to all surface waters within the State of California, except waters within the jurisdiction of the Los Angeles Region where trash or debris TMDLs are in effect prior to the effective date of the Trash Amendments. The narrative WQO for the Trash Amendments are as follows:

- For the Ocean Plan: Trash shall not be present in ocean waters, along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.
- For the ISWEBE Plan: Trash shall not be present in inland surface waters, enclosed bays, estuaries, and along shorelines or adjacent areas in amounts that adversely affect beneficial uses or cause nuisance.

The Trash Amendments requirements are to be incorporated into Phase I and II MS4 Permits, Industrial General Permit (IGP), Construction General Permit (CGP), and the California Department of Transportation (Caltrans) NPDES Permit. NPDES Permittees with regulatory authority over land uses are to prohibit the discharge of trash under a dual alternative compliance approach or "Tracks" through the implementation defined by either Track 1 or Track 2. Both Tracks require Permittees to focus their trash control efforts on priority land uses, as outlined in **Table 3-7**. The priority land uses are defined as developed land uses that are high density residential, industrial, commercial, mixed urban, and public transportation stations.

**Table 3-7 Overview of Proposed Compliance Tracks for NPDES Stormwater Permits**

Element	Track 1	Track 2
<b>NPDES Stormwater Permit</b>	Phase I and II MS4 IGP/CGP <sup>a</sup>	Phase I and II MS4 Caltrans IGP/CGP <sup>a</sup>
<b>Plan of Implementation</b>	Install, operate, and maintain Full Capture Systems (FCSs) in storm drains that capture runoff from one or more of the priority land uses/facility/site.	Implement a plan with a combination of FCSs, multi-benefit projects, institutional controls, and/or other treatment controls to achieve FCSs equivalency.
<b>Time Schedule</b>	10 years from first implementing permit but no later than 15 years from the effective date of the Trash Amendments. <sup>b</sup>	
<b>Monitoring and Reporting</b>	Demonstrate installation, operation, and maintenance of FCSs and provide mapped location and drainage area served by FCSs. <sup>c</sup>	Develop and implement set of monitoring objectives that demonstrate effectiveness of the selected combination of controls and compliance with FCS equivalency. <sup>c</sup>

<sup>a</sup> IGP/CGP Permittees would first demonstrate inability to comply with the outright prohibition of discharge of trash.

<sup>b</sup> Where a permitting authority makes a determination that a specific land use or location generates a substantial amount of trash, the permitting authority has the discretion to determine a time schedule with a maximum of ten years. IGP/CGP Permittees would demonstrate full compliance with deadlines contained in the first implementing permit.

<sup>c</sup> No trash monitoring requirements for IGP/CGP; however, IGP/CGP Permittees would be required to report trash controls.

## 3.2 Existing Groundwater Quality

Groundwater accounts for a majority of the domestic water supply in the SBC SARW. Groundwater quality varies among the region's groundwater basins, as they cover a large geographic area. Various agencies throughout the SBC SARW participate in regional efforts to monitor groundwater quality. This section summarizes groundwater quality data based on past monitoring efforts.

### 3.2.1 Chino Groundwater Basin

The Chino Groundwater Basin (illustrated in **Figure 2-7**) comprises an area of approximately 235 square miles that extends from the Prado Basin in the southwestern corner, bounded by the Chino Hills and Puente Hills to the west, the San Jose and Red Hill Faults along the San Gabriel Mountains to the northwest, the Rialto-Colton Fault to the northeast, and the Jurupa Mountains and La Sierra Hills to the southeast. The Chino Groundwater Basin consists of five Management Zones (MZ) and four basin delineations – Chino North comprised of MZ1, MZ2, MZ3 with about 90 percent in San Bernardino County; Chino-East (MZ4); Chino-South (MZ5); Prado Basin (parts of MZ1, MZ2, MZ3, and MZ5); and MZ4 and MZ5 are in Riverside County.

The Chino Groundwater Basin is administered by the Chino Basin Watermaster (CBWM) which prepares a Maximum Benefit Annual Report (2018) and a State of the Basin Report (2017) that tabulates the findings of the monitoring effort in the Chino Groundwater Basin. The monitoring program consists of two main components: groundwater-level monitoring and groundwater-quality monitoring. Groundwater-quality is the focus of this section. The CBWM initiated a comprehensive monitoring program to perform

systematic sampling of wells. Details of the monitoring programs as of fiscal year 2015-2016 are as follows:

- **Chino Basin Data Collection** – the CBWM routinely collects groundwater quality data from well owners, municipal producers, and government agencies. Data is also collected as part of special studies and monitoring taken under orders from the RWQCB, e.g., landfills, groundwater quality investigations, Department of Toxic Substances, United State Geological Survey (USGS), and others. Data is typically collected twice a year. In 2016, data was collected for over 780 wells as part of the Chino Basin Data Collection.
- **CBWM Field Groundwater Quality Monitoring Programs** – continued sampling of privately owned wells and its own monitoring wells on a routine basis as follows:
  - **Private Wells** – approximately 109 private wells, mostly located in the southern portion of the Chino Groundwater Basin, are sampled at various frequencies depending on their proximity to known point source contamination plumes. Eighty-nine wells are sampled on a triennial basis, and 20 wells near contaminant plumes are sampled annually.
  - **CBWM Monitoring Wells** – approximately 22 multi-nested monitoring wells including nine Hydraulic Control Monitoring Program wells, nine Prado Basin Habitat Sustainability Program wells, and four wells near contaminant plumes in MZ3.
  - **Other wells** – four near-river wells, Archibald 1 and Archibald 2 (USGS), and two SAR Water Company wells (9 and 11).

Groundwater quality data is checked by CBWM staff and uploaded to a centralized database management system accessed online through HydroDaVE. The data is used to comply with two maximum benefit salinity management commitments, prepare the biennial State of the Basin Report, support groundwater modeling, characterize non-point source contamination and plumes associated with point source discharges, and characterize long-term trends in water quality.

The State of the Basin Report (2017) includes groundwater quality data for a five year period from July 2011 to June 2016. Groundwater quality is characterized with respect to constituents where groundwater exceeds Primary or Secondary California Maximum Contaminant Levels (MCLs) or Notification Levels (NLs). Wells with constituent concentrations greater than a Primary MCL represent areas of concern and the spatial distribution of these wells indicates areas in the Basin where groundwater may be impaired from a beneficial use standpoint.

The following is a list of the regulatory and voluntary groundwater quality contamination monitoring efforts in the Chino Basin that are tracked by CBWM:

- Alumax Aluminum Recycling Facility - Constituents of Concern: Total Dissolved Solids (TDS), sulfate, nitrate, chloride.  
Order: RWQCB Cleanup and Abatement Order 99-38
- Alger Manufacturing Co. - Constituents of Concern: Volatile Organic Compounds (VOCs).  
Order: Voluntary Cleanup and Monitoring
- Chino Airport - Constituents of Concern: VOCs.  
Order: RWQCB Cleanup and Abatement Order 90-134
- California Institute for Men (No Further Action status) - Constituents of Concern: VOCs.  
Order: Voluntary Cleanup and Monitoring

- Former Crown Coach International Facility - Constituents of Concern: VOCs and solvents.  
Order: Voluntary Cleanup and Monitoring
- General Electric Flatiron Facility - Constituents of Concern: VOCs and hexavalent chromium.  
Order: Voluntary Cleanup and Monitoring
- General Electric Test Cell Facility - Constituents of Concern: VOCs.  
Order: Voluntary Cleanup and Monitoring
- Former Kaiser Steel Mill - Constituents of Concern: TDS, total organic carbon (TOC), VOCs.  
Order: RWQCB Order 91-40 Closed. Kaiser granted capacity to the Chino II Desalter to remediate.
- Former Kaiser Steel Mill – CCG Property - Constituents of Concern: chromium, hexavalent chromium, other metals, VOCs.  
Order: DTSC Consent Order 00/01-001
- Milliken Sanitary Landfill - Constituents of Concern: VOCs.  
Order: RWQCB Order 81-003
- Upland Sanitary Landfill - Constituents of Concern: VOCs.  
Order: RWQCB Order No 98-99-07
- South Archibald Plume - Constituents of Concern: VOCs.  
Order: This plume is currently being voluntarily investigated by a group of potentially responsible parties per seven Draft Cleanup and Abatement Orders
- Stringfellow NPL Site - Constituents of Concern: VOCs, perchlorate, Nitrosodimethylamine (NDMA), trace metals.  
Order: The Stringfellow Site is the subject of USEPA Records of Decision: EPA/ROD/R09-84/007, EPA/ROD/R09-83/005, EPA/ROD/R09-87/016, and EPA/ROD/R09-90/048.

There were a total of 1,358 wells within the Chino Basin where water quality data was available from July 2011 to June 2016. **Table 3-8** includes a tabulation of the findings of the program for that period specified by the number of wells that exceeded the MCL for the constituents of concern. Of these, 828 wells were sampled in Fiscal Year 2016.

**Table 3-8 Groundwater Quality in the Chino Groundwater Basin (CBWM, 2017)**

Analyte	California MCL	No. of Wells Exceeding MCL
<b>Primary Contaminant</b>		
1,1,2-Trichloroethane	5 µg/L	1
1,1-Dichloroethane	5 µg/L	2
1,1-Dichloroethene (1,1-DCE)	6 µg/L	16
1,2,4-Trichlorobenzene	5 µg/L	34

Methyl Tert-Butyl Ether (MTBE)	13 µg/L	98
Odor	3 TON	2
Specific Conductance	1600 µS/cm	120
Sulfate	250 mg/l	134
TDS	1000 MG/l	122
Turbidity	5 NTU	59
Zinc	5 mg/L	30

The CBWM defines constituents of potential concern as the following. Findings from July 2011 to June 2016 related to each constituent of concern is further discussed in the 2016 State of the Basin Report (CBWM, 2017)

- Constituents associated with salt and nutrient management planning (i.e., TDS and nitrate).
- Constituents where a primary MCL was exceeded in twenty or more wells from July 2011 to June 2016 and where the majority of wells with exceedances are not primarily exclusive to known point source contamination plumes (i.e., the Stringfellow NPL Site, Milliken Landfill, etc.). These constituents include nitrate, perchlorate, total chromium, hexavalent chromium, arsenic, TCE, and PCE.
- Constituents for which the California Division of Drinking Water is in the process of developing an MCL that may impact future beneficial uses of groundwater. This includes 1,2,3-trichloropropane (1,2,3-TCP), which currently is monitored under a NL.

### 3.2.2 San Bernardino Valley Municipal Water District

SBVMWD conducts a groundwater monitoring program, which is further described in this subsection. Details pertaining to the monitoring program are summarized in the Upper SARW IRWMP (SBVMWD, 2015). The approach to the groundwater monitoring program is somewhat different than in the Chino Groundwater Basin. Instead of an overall listing of contaminants and the number of wells exceeding the MCLs for any particular constituent, the SBVMWD groups the findings into separate groundwater basins with the number of wells sampled and the number of wells exceeding the respective MCL. The findings are truncated to seven water quality constituents with groupings of:

1. Inorganics (primary)
2. Radiological
3. Nitrates
4. Pesticides
5. VOCs and SOCs
6. Inorganics (secondary)
7. Perchlorate

Primary inorganics include: arsenic, barium, beryllium, borate, cadmium, chromium, copper, cyanide, fluoride, lead, mercury, nickel, selenium, and thallium. Secondary inorganics include: aluminum, chlorine, iron, manganese, silver, sodium, and zinc. VOCs include benzene, carbon tetrachloride, TCE, PCE, and others.

In addition to the above listed constituents, TDS concentrations are published in a range from minimum to maximum detected with a cumulative average for each individual groundwater basin (if detected).

The SBVMWD service area groundwater basins/subbasins are adjacent to and east of the Chino Groundwater Basin. There are nine groundwater subbasins in the SBVMWD service area/upper SAR region, as illustrated in **Figure 2-7** (with the exception of those noted below, which are illustrated in the Upper SARW IRWMP [SBVMWD, 2015]):

1. San Bernardino Basin Area – Bunker Hill Subbasin
2. Rialto-Colton Subbasin
3. Cajon Subbasin
4. Riverside-Arlington Subbasin
5. San Timoteo Subbasin
6. Yucaipa Subbasin
7. Bear Valley Subbasin (located near Big Bear Lake – not illustrated in **Figure 2-7**)
8. Big Meadows Valley Subbasin (located south of Big Bear Lake – not illustrated in **Figure 2-7**)
9. Seven Oaks Valley Subbasin (located west of Big Meadows Valley – not illustrated in **Figure 2-7**)

The Bear Valley, Big Meadows Valley, and Seven Oaks Valley Subbasins are not within the SBVMWD service area but are within the Upper SAR Watershed and are reported in California's Groundwater Bulletin 118.

**Table 3-9** summarizes groundwater quality data reported in the Upper SARW IRWMP (SBVMWD, 2015). Additional discussion pertaining to these results are included in the referenced report, while the table below represents a summary.

**Table 3-9 Groundwater Quality Reported in the Upper SARW IRWMP (SBVMWD, 2015)**

Analyte	No. Wells Sampled	No. of Wells Exceeding MCL
<b>San Bernardino Basin Area</b>

<b>Big Meadows Valley Basin</b>		
No recorded exceedances of MCL		
<b>Seven Oaks Valley Basin</b>		
No data available		

### 3.2.3 Plumes

Several plumes are identified within the SBC SARW area. **Figure 3-2** illustrates the plume locations based on GIS data available in the Watershed Action Plan Geodatabase prepared by the Areawide Program. The following plumes are detailed in the Upper SARW IRWMP (SBVMWD, 2015).

- Crafton-Redlands plume: contaminated with TCE and lower levels of PCE, debromochloropropane (DBCP), and perchlorate
- Norton Air Force Base: TCE and PCE plume, which stretches 2.5 miles from its source and contaminates 100,000 acre-feet of groundwater
- Newark-Muscoy plume: near the Shandon Hills, which is a Superfund site with TCE and PCE
- Santa Fe plume: contaminated with PCE, TCE, and 1,2 dichloroethylene (1,2-DCE)

The Crafton-Redlands plume consists of two intermingled plumes impacting water supply wells owned by the Cities of Riverside, Redlands, and Loma Linda. One plume has TCE measured at  $>100 \mu\text{g/L}$  (MCL=  $6 \mu\text{g/L}$ ), while the other has perchlorate to  $77 \mu\text{g/L}$  (MCL= $4 \mu\text{g/L}$ ). TCE is treated with Granular Activated Carbon (GAC) treatment units, and perchlorate is treated by ion-exchange units. The Newark-Muscoy plumes are also treated by GAC.

The Norton Air Force Base plume is a major contaminant plume consisting mainly of PCE and TCE and is treated by soil gas extraction, soil removal, and groundwater treatment (GAC and ion-exchange). The treatment units are currently on standby mode (SBVMWD, 2015).

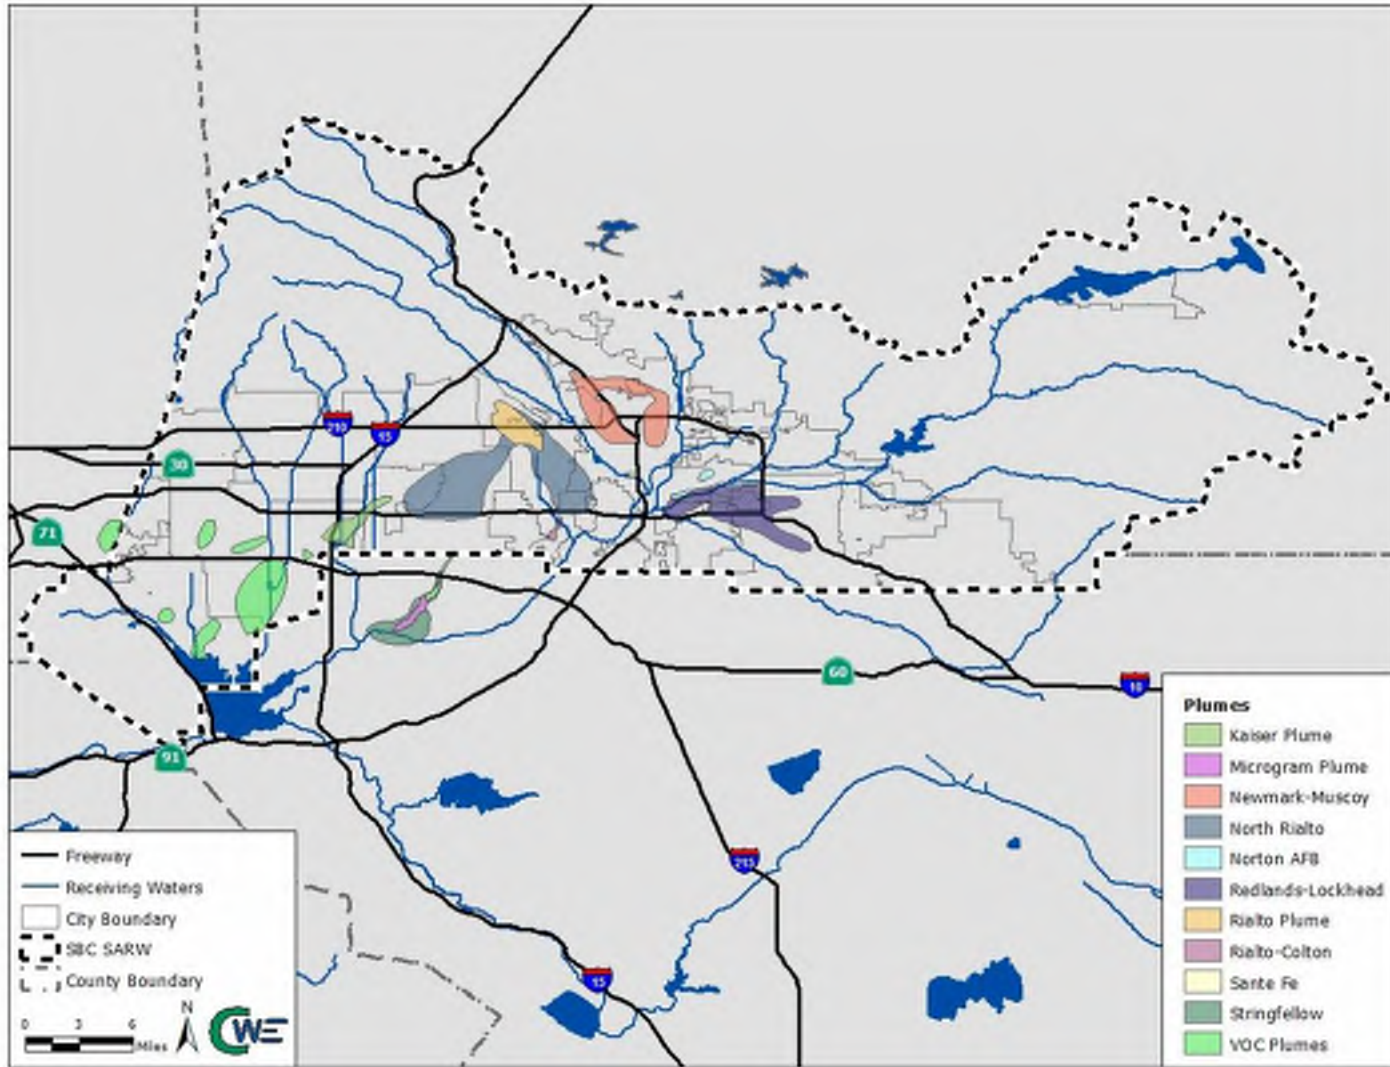

Figure 3-2 Plumes within the SBC SARW Area

### 3.3 Existing Water Quality Data Sources

Water quality monitoring data, from 2006 to 2016, was collected from numerous sources, but the most useful and highest quality data relevant to the SBC SARW were obtained from SBC Areawide Stormwater Monitoring Programs, which include the following:

- Core and Urban Discharge Mass Emission Monitoring Program (Core Monitoring)
- BBLN TMDL Monitoring:
  - BBL Watershed-Wide Nutrient Monitoring
  - BBL In-Lake Monitoring
- MSAR Bacterial Indicator TMDL/WLA Monitoring

The SBC Areawide Stormwater Monitoring Programs were implemented to fulfill the MS4 Permit requirements. **Table 3-10** summarizes the data availability and utilization for the analysis further detailed in **Section 3.4**. Monitoring locations from these sources are located throughout the SBC SARW area, as illustrated in **Figure 3-3** through **Figure 3-5**. Monitoring data associated with the implementation of these monitoring programs was analyzed to evaluate water quality priorities. This data was utilized to assess the need for projects/programs at key locations within the SBC SARW and quantify benefits related to water quality improvements through load reductions.

The monitoring data from the programs listed above was utilized to assess the baseline water quality of the water bodies within the SBC SARW for which data is available. Core Monitoring sites include permanent and rotating sites, which are organized within the SBCFCD Zones 1, 2, and 3, as shown in **Figure 3-3**. Additional details of the Core Monitoring sites are summarized in **Table 3-11**, BBLN TMDL Monitoring in **Table 3-12**, and MSAR Bacterial Indicator TMDL Monitoring in **Table 3-13**.

## 3.4 Data Analysis Summary

The following subsections describe the water quality conditions based on the Core Monitoring and TMDL monitoring data. The attainment of TMDL numeric targets and Basin Plan WQOs is also discussed.

### 3.4.1 Core Monitoring Data Analysis

Core Monitoring data was evaluated to determine parameters exceeding water quality standards. The Core Monitoring data was compared to the WQOs for each of the receiving waters. A summary of the findings from the monitoring data evaluation are presented in **Attachment D**. The monitoring data were evaluated with TMDL numeric values, Basin Plan WQOs, and CTR standards for each receiving water when data was available. CTR standards for metals were calculated to correlate with the observed hardness values from each respective sampling event. The tables in **Attachment D** identify a ratio of the total number of exceedances to the total number of available analytical data values in instances where monitoring data exceeded WQOs. The data was also compared in five and ten year data sets in **Attachment D**. A majority of the data from Core Monitoring was collected within the last five years with the exception of Permanent Sites 2, 3, 8, and 11. These monitoring sites have the greatest amount of analytical data available.

The evaluation of the Core Monitoring data suggests a majority of exceedances occur during wet-weather monitoring. Core Monitoring Site 2, located within Cucamonga Creek, mainly exceeded indicator bacteria and copper. Site 3 in Cucamonga Channel, Site 8 at SAR Reach 3, and Site 11 at SAR Reach 4 had higher exceedances ratios for Chemical Oxygen Demand (COD) as well as indicator bacteria. Copper, silver, and zinc also have exceeded wet-weather WQOs throughout many of the sampling locations in the

three rotating zones. In comparison to the Core Monitoring sites during the dry-weather monitoring, data shows exceedances of COD and indicator bacteria, which demonstrate consistent exceedances in either hydrologic condition. However, dry-weather monitoring at SAR Reach 3 showed exceedances of sodium. Due to a limited amount of dry-weather sampling events over a short period of time for the rotating sites, comprehensive data was not available to fully assess the dry-weather conditions of receiving waters within the three rotating zones.

Constituents that show a higher exceedance ratio (greater than 50 percent), excluding priority pollutants from the TMDL and CWA 303(d) List, may be considered priority pollutants in the future, as additional data is available to support that determination. Prioritized pollutants guide the implementation efforts in an attempt to meet TMDL numeric targets and improve water quality within the SBC SARW.

### 3.4.2 Big Bear Lake Nutrient TMDL

As previously discussed in **Section 3.1.2.1**, conditions for BBLN TMDL and the WLAs and LAs are established for dry hydrological conditions only, which are defined by the conditions observed from 1999-2003: average tributary inflow to BBL is less than 3,049 AF, average lake elevation ranges from 6,671 to 6,735 feet, and annual precipitation ranges from 0 to 23 inches.

Dry hydrologic conditions were not met from 2009-2016; therefore, the TMDL numeric targets do not apply. **Table 3-14** summarizes the average concentrations of chlorophyll *a* and total phosphorus based on the BBL TMDL Annual Reports (2015b). Chlorophyll *a* and total phosphorus numeric TMDL objectives in all other hydrologic conditions do not apply until 2020.

The growing season for chlorophyll *a* is from May 1 to October 31; therefore, data outside of this period were not used to calculate the lake-wide averages. Data for total phosphorus were averaged by taking the arithmetic mean of bottom zone and photic zone samples to get a station sampling date average (see **Figure 3-4** for BBL In-Lake Sampling Stations). Station sampling data averages were then averaged again to get the arithmetic mean over the sampling period.

**Table 3-14 BBL In-Lake Chlorophyll *a* and Total Phosphorus Average Concentrations**

Year	Chlorophyll <i>a</i> Growing Season Average <sup>a</sup> Concentration (µg/L)	Total Phosphorus Annual Average <sup>b</sup> (µg/L)
2009 <sup>c</sup>	11.3	41.3
2010 <sup>c</sup>	8.6	45.4
2011 <sup>c</sup>	7.0	35.9
2012 <sup>c</sup>	6.7	34.1
2013 <sup>c</sup>	17.1	46.7
2014 <sup>c</sup>	15.1	67.1
2015 <sup>c</sup>	28.2	50.3
2016 <sup>c</sup>	41.8	85.9

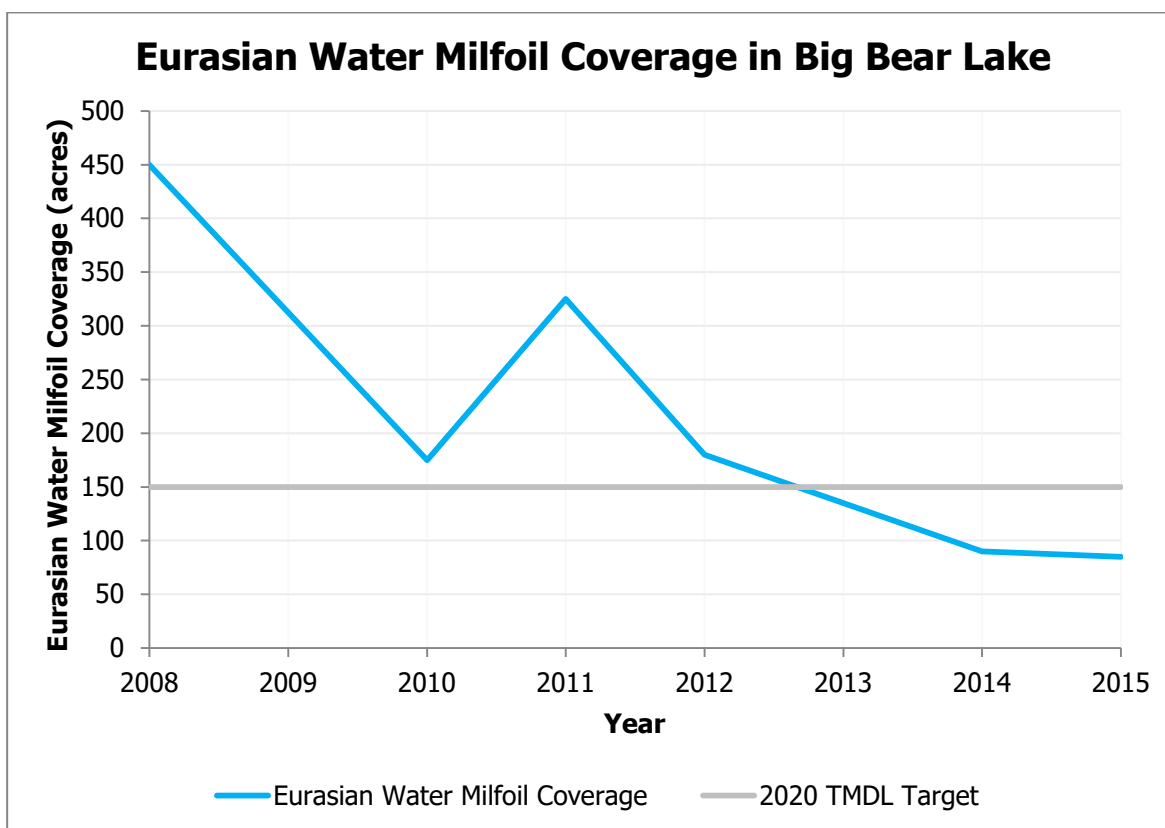

<sup>a</sup> Lake-wide average during growing season (May 1 to October 31) no greater than 14 µg/L to be attained no later than 2015 (dry hydrological conditions), 2020 (all other times).

<sup>b</sup> Lake-wide annual average no greater than 35 µg/L to be attained no later than 2015 (dry hydrological conditions), 2020 (all other times).

<sup>c</sup> Wet hydrologic condition, TMDL numeric targets do not apply to wet hydrologic conditions.

Although total phosphorus shows a slight increasing trend, efforts have been made to sequester phosphorus. The 2016 BBLN TMDL Annual Water Quality Report recognizes in mid-2015, the City of Big Bear Lake, SBC, and SBCFCD initiated a joint project with BBMWD to apply 1,553 tons (dry weight) of alum to BBL. The project team applied approximately 574,832 gallons of alum slurry to the lake. The project cost of \$747,282 was shared between BBMWD, the Areawide Program Permittees, and the Resorts. It is estimated that this amount of alum sequestered approximately 14,100 pounds of phosphorus and rendered unavailable for plant uptake. Combined with the application conducted in 2004, these parties have sequestered over 31,000 pounds of phosphorus.

BBMWD has primary responsibility for implementing the aquatic weed control program and uses a combination of physical harvesting and USEPA-approved herbicides to reduce Eurasian Water Milfoil. In the year 2000, when SARWQCB staff first began working to develop the TMDL, Eurasian Water Milfoil infested more than one-third of the lake (1,000+ acres). By 2014, routine surveys detected this invasive aquatic plant in less than 100 acres, a 99 percent reduction (see **Figure 3-6**). BBL has been consistently meeting the 2020 TMDL target for eradication of Eurasian Water Milfoil since 2013 (Areawide Program, 2015b).

**Figure 3-6 Eurasian Water Milfoil Coverage in Big Bear Lake**

### 3.4.3 Middle Santa Ana River Bacterial Indicator TMDL/WLA Monitoring

Stakeholders established the MSAR TMDL Task Force to coordinate TMDL implementation activities designed to manage or eliminate sources of bacterial indicators to water bodies listed as impaired. The TMDL required the establishment of a watershed-wide compliance monitoring program to measure

compliance with numeric targets established by the TMDL, which were derived from Basin Plan objectives established to protect the REC1 beneficial use. The MSAR TMDL Task Force implemented the Santa Ana River Watershed Bacteria Monitoring Program and prepared and submitted the MSAR Water Quality Monitoring Plan and associated Water Quality Assurance Project Plan (QAPP) to the SARWQCB. The TMDL monitoring program was implemented in July 2007, with SARWQCB formal approval in April 2008. Water bodies within the MSAR watershed portion of the SBC SARW and identified in the MSAR Bacterial Indicator TMDL are listed in **Section 3.1.2.2**.

**Table 3-15** summarizes the *E. coli* geometric mean criterion exceedance frequency during the 2007-2015 dry seasons. Exceedances were determined based on the REC1 *E. coli* objective of log mean less than 126 organisms/100 milliliters for a 5-day/30-day geomean. The geomean data was prepared using available MSAR Bacterial Indicator TMDL Dry Season Reports and Wet Season Reports. Generally the lowest dry season exceedance frequencies were observed at Prado Park Lake, while Mill-Cucamonga Creek and Chino Creek exhibit the highest exceedance frequencies consistently.

**Table 3-15 Frequency of *E. coli* Geomean Exceedances during Dry Seasons**

Site	2007 <sup>1</sup>	2008	2009	2010	2011	2012	2013	2014	2015

### 3.5 Water Quality Prioritization

Priority pollutants for the SBC SARW were determined based on the number of times a specific pollutant appears on the CWA Section 303(d) List within the SBC SARW, as outlined in **Table 3-17**. The priority pollutants include indicator bacteria, nutrients, and metals (zinc, copper, lead) as identified in **Table 3-18**. The priority pollutants identified in **Table 3-18** are similar to the pollutants identified with a higher percentage of exceedances based on the analyses described above. The TMDL pollutants have been identified as a top priority regardless of the number of times that specific pollutant appeared on the CWA 303(d) List, as a schedule has already been established to address these pollutants in specific water bodies. The number of water bodies impaired (as indicated in the table) was used to prioritize non-TMDL pollutants. Metal constituents were grouped together, which explains why the number of water bodies impaired varies within that prioritization group varies and is not sequential. The top priority pollutant (indicator bacteria) was incorporated into the Stormwater Management Objectives (**Section 1.5**), as further described below **Table 3-18**.

**Table 3-17 2016 CWA 303(d) List of Impairments within SBC SARW Priorities**

Water Body	Cadmium	Chlordane	COD	Copper	DDT	Lead	Mercury	Noxious/ Nuisance Aquatic Plants	Nutrients	Indicator Bacteria	PCBs	pH	Sediment/ Siltation	TSS	Zinc

<b>Total</b>	<b>3</b>	<b>1</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>1</b>	<b>8</b>	<b>15</b>	<b>1</b>	<b>4</b>	<b>1</b>	<b>1</b>	<b>1</b>

**Table 3-18 Prioritization of Pollutants within the SBC SARW**

Priority Ranking	Pollutant Listed on CWA 303(d) List	TMDL	Total # Water Bodies Impaired
1	Indicator bacteria	X	15
2	Noxious (nuisance) aquatic plants	X	1
3	Nutrients	X	8
4 (Metals)	Cadmium		3
	Copper		4
	Lead		3
	Mercury		1
	Zinc		1
5	pH		4
Not Priority	Chlordane		1
	COD		
	DDT		
	PCBs		
	Sediment		
	TSS		

The priority ranking indicates that indicator bacteria is the highest priority of pollutants within the SBC SARW. Indicator bacteria was incorporated into the stormwater management objectives for the entire SBC SARW, as indicated in **Table 1-1**, because it is the highest priority pollutant within the SBC SARW. Indicator bacteria is also associated with the Santa Ana River Bacteria TMDL, which has a deadline for implementation. Using indicator bacteria as a stormwater management objective is a sensible choice for a watershed-wide priority because every possible project within the SBC SARW drains to a water body impaired by indicator bacteria (Chino Creek, Mill Creek – Cucamonga Creek, Prado Park Lake, or Santa Ana River Reach 3). Other pollutants were not included in the stormwater management objectives of SBC SARW because the impairments are of a lower priority or because their impacts are less widespread. However, projects that reduce the pollutant loading of indicator bacteria on impaired watersheds also reduce the pollutant loading of other lower-priority pollutants.

### 3.6 Contributors to Surface Water Impairments

Dry-weather runoff and stormwater have been characterized as a major source of pollution to the nation's waterways. Various activities within the SBC SARW are identified as potential pollutant sources contributing to water body impairments. This section discusses the priority pollutants impairing the water bodies within the SBC SARW, provides a summary of potential contributors of these pollutants in dry-weather and stormwater runoff, and summarizes the correlation between land use types and pollutant generation. Priority pollutants within the SBC SARW are presented in **Table 3-18**. Potential contributing sources for these priority pollutants include urban development, industrial activities, and agricultural lands, as further discussed below.

## Indicator Bacteria/Pathogens

Sources of indicator bacteria within the SBC SARW may be associated with runoff from a mix of urban, agricultural, and open space areas. During dry-weather, receiving water bodies accept nuisance non-stormwater discharges from urban areas. Urban areas contribute to the growth of indicator bacteria within the receiving waters through the discharge of trash, pet waste, and/or sewage leaks. Agricultural areas contribute to indicator bacteria through livestock auction lots and confined feeding operations. Discharges from these agricultural land use areas may include stormwater runoff from manured areas, process wastewater from agricultural operations, and tailings from irrigation of agricultural lands. In the MSAR, the remaining agricultural area is formerly known as the Chino Dairy Preserve, which contains approximately 300,000 cows that can generate the waste equivalent of over two million people. During wet-weather conditions, agricultural land uses are likely to be a major contributor to indicator bacteria.

## Nutrients and Noxious (Nuisance) Aquatic Plants

Sources of nutrients (nitrogen and phosphorus) include ubiquitous atmospheric deposition, animal waste, fertilizer use, and soil erosion generated by dairies and other agricultural land uses. Specific regions within the SBC SARW with increased nutrient loads as a result of these sources are the BBL, Cucamonga Channel (lower), Cypress Channel (lower), and San Antonio Channel (lower) Subwatersheds. These areas are also becoming urbanized with increased fertilizer use, yard and pet waste, and car washing activities. These activities also contribute to an increase in nutrient transport that enter the MS4 in dry- and wet-weather runoff and lead to eutrophication in water bodies. Nutrients deposited in the water body can be re-suspended in the water column and become available for biological uptake. Nutrients are also bound in living and dead organic material. Excessive nutrients associated with sedimentation in BBL has led to increased macrophyte (noxious aquatic plants) and algae production, which has adverse effects on aquatic habitat and recreation. Decomposition of the organic material consumes oxygen, resulting in depleted oxygen levels in the water column and can lead to periodic fish kills in BBL.

## Metals

Metals loadings vary depending on the seasons; as noted in the Los Angeles Region Regional Water Quality Control Board's Los Angeles River Metals TMDL Basin Plan Amendment (2015), metal loadings during dry-weather are mostly dissolved and attributed to Publicly-Owned Treatment Works (POTWs) that discharge to receiving waters and the MS4 in the form of low-volume non-stormwater discharges from urbanized areas. During wet-weather, metals loadings come in the form of particulates and are normally transported into receiving waters through MS4 stormwater runoff (LARWQCB, 2015). As the tributary areas of Cucamonga Creek Reach 1 and the SAR become more urbanized, metallic loading into receiving bodies through stormwater runoff can be expected to increase. Additionally, metals loadings can occur through atmospheric deposition from paved and unpaved road dust, tire wear, construction dust, timber/brush fires, or other anthropogenic sources (LARWQCB, 2015). These metals are either directly deposited into the receiving water, or more likely, the atmospheric deposition of metals occurs over land surfaces which is later washed into receiving waters by dry-weather runoff and/or storm events. Increased urbanization, and the associated construction activities, can attribute to sediment and metal loading. Metals are known to bind themselves to sediments and may be disturbed from the receiving water's bottom, or the water body's highly erosive tributary area, and transported throughout the watershed during dry- and wet-weather events. Atmospheric deposition of metals and its adsorption to sediment can also be considered a likely source.

## Mercury

The mercury impairment in BBL originates from atmospheric deposition, attributed to coal-fired power plants, steel recycling facilities, waste incinerators, cement and lime kilns, smelters and gold mine roasters, pulp and paper mills, and chloralkali factories, as identified in the Big Bear Lake Technical Support Document for Mercury TMDL (2008). It should be noted that this TMDL was never approved. Despite the distance of these facilities being 200 miles away, gaseous elemental mercury [Hg(0)] remains in the atmosphere and contributes to long range transport. Divalent mercury [Hg(II)] is highly soluble and has a tendency to attach to particles. Divalent mercury [Hg(II)] redeposits relatively close to the source, usually within 100 miles. The top five facilities that produce mercury fall under two types, cement manufacturing facilities (four facilities) and one oil refinery. In 2006, 40 percent of total reported mercury emissions in Southern California were attributable to a cement manufacturing company, located approximately 100 miles from the watershed. During wetter years, dissolved loading associated with storm event runoff is assumed to dominate mercury loading to BBL. During dry and normal precipitation years, dry deposition to the lake surface constitutes the majority of loading.

A direct geological source of mercury is also attributable to mineralized areas along fault lines. While BBL Watershed is located in the Transverse Range of the San Bernardino Mountains on the east side of the San Andres Fault, naturally elevated mercury levels have not yet been confirmed. However, potential sources of mercury have been associated with dredging of BBL and the sedimentation basins located at the mouth of associated tributaries. Dredging in BBL is assumed to stir up and distribute methylmercury buried within the sediment. Methylmercury is easily taken up by organisms and bioaccumulates at each trophic level. Fish in BBL have accumulated unacceptable tissue concentrations of mercury even though the ambient water quality standard is met. Other indirect geological sources can stem from historic gold mines in the southwest quadrant of San Bernardino County, and also from brief historical prospecting activities that occurred north and east of Bear Valley.

## pH

Water bodies within the SBC SARW area with pH impacts include Chino Creek Reach 2, Cucamonga Creek Reach 1, San Antonio Creek, and the Prado Flood Control Basin. Water bodies impacted by pH are considered to have either low or high pH. The SBC SARW water bodies exceeded pH for both high and low pH, as indicated in **Attachment D**. The Basin Plan indicates water bodies are considered to have low pH when the pH is below 6.5. Source discharge that can contribute to low pH include mine wastes, historic mine sites, acid-generating rocks/soils, industrial plants and other sources of acidic gases, coal pile runoff, industrial effluents, landfill leachate, confined animal feeding operations, dairy runoff, instream oxidation or reduction processes, and recent draining of naturally inundated wetlands or floodplains (USEPA, 2016). A water body is considered to have a high pH, if pH exceeds 8.5 for prolonged periods of time or with high frequency. High pH is less common than low pH as anthropogenic sources are more often acidic than basic. High pH can be caused by discharges from industries that use lime, lye, or sodium hydroxide (NaOH); from agricultural runoff of fertilizers high in lime; and/or industrial landfill leachates that contain solvents or lye. In particular, cement, asphalt, and soap manufacturing may be sources of high pH due to the use of lime or lye. Runoff from limestone gravel roads may increase pH. High pH can be caused in rare cases by natural conditions and mineralogy such as weathering of chalk rock high in carbonates or olivine basalts; however, even in these cases, it is rare for stream pH to exceed 9.5. Leaching of naturally alkaline rocks and soils is exacerbated by physical disturbances such as tilling, mining, and construction. An additional cause of elevated pH is high

photosynthetic activity, which removes carbon dioxide from water favoring equilibrium toward carbonate and a higher pH (USEPA, 2016).

### 3.6.1 Land Use Type and Potential Pollutants

Urban and stormwater runoff from pervious (lawns, landscaping, parks, construction sites, vacant fields, etc.) and impervious areas (streets, parking lots, storage yards, roofs, etc.) delivers accumulated constituents and pollutants (metals, bacteria, fertilizers, hydrocarbons, etc.) to the MS4 and receiving waters. Although admittedly broad-brushed and variable, past studies suggest that some land use types are greater sources of specific pollutants than others. Manufacturing and industrial facilities have often been reported to generate high concentrations of industrial pollutants, such as metals and oils, while commercial areas are often reported to produce trash or bacteria, and residential areas are associated with nutrients and bacteria. Correlations between land use and potential pollutant generation are presented in **Table 3-19**. This correlation may provide insight as to whether projects/programs proposed in the SWRP at future development stages will result in a pollutant load reduction that benefits a known impairment based on the land use types within the tributary area. The information presented in the table is based on various sources, mainly the California Stormwater Quality Association (CASQA) Stormwater Best Management Practice Handbook: New Development and Redevelopment (2003) and A User's Guide for Structural BMP Prioritization and Analysis Tool (SBPAT) Technical Appendices (2008).

**Table 3-19 Correlations Between Land Use Type and Pollutant Generation**

Land Use Types	General Pollutant Categories								
	Trash & Debris	Sediments	Nutrients	Oil & Grease	Organic Compounds	Pathogens	Heavy Metal	Oxygen Demanding Substances	Pesticides
Agriculture		X	X			X	X	P <sup>(1)</sup>	X

X = Anticipated; P = Potential

<sup>(1)</sup> A potential pollutant if landscaping exists onsite

<sup>(2)</sup> A potential pollutant if the project includes uncovered parking area

<sup>(3)</sup> Including petroleum hydrocarbons

<sup>(4)</sup> A potential pollutant if land use involves food or animal waste products

<sup>(5)</sup> Including solvents

### 3.7 Potential Strategies to Address Water Quality Priorities

This section presents a catalog of stormwater and dry-weather runoff capture project types most effective in addressing priority pollutants. Projects and programs that provide multiple benefits, specifically water quality, water supply, flood management, environmental, and community benefits, were identified and prioritized in **Section 6**. The list of project types included herein are intended to address water quality. Projects related to other benefit categories, such as water supply, flood management, environmental, and community, are not discussed below; however, those project types may be enhanced by including stormwater strategies summarized below to provide multiple benefits. The following project types are further detailed within this section:

- Surface infiltration basin
- Underground cistern
- Subsurface infiltration system
- Extended retention wetland
- Seasonal dry detention pond
- Constructed/subsurface flow wetland
- Low-flow diversion pump station
- Sand and media filter
- Membrane filtration
- Ion exchange
- Bioretention planter/rain garden
- Rain barrel
- Infiltration pit/drywell
- Infiltration trench
- Porous/pervious pavement
- Green roof
- Green street
- Connector pipe screen
- Automatic retractable screen
- Hydrodynamic separation device

Details provided below are based on new stormwater projects. Retrofit opportunities may also exist, which are not described in detail below.

#### Surface Infiltration Basin

Surface infiltration basins make an important contribution towards groundwater management. A key characteristic of these basins is placement over alluvial soils that allow rapid drawdown following a storm event. Careful planning, along with multiple infiltration tests, should be conducted to verify site specific infiltration capabilities. Surface infiltration basins require a larger footprint on the surface as compared to other BMPs. Maintenance of surface infiltration facilities typically requires removal of accumulated sediment and maintenance of vegetation.

## Underground Cistern

For areas where infiltration is deemed infeasible, capture and use projects are most favorable, which can be supported using underground cisterns that temporarily store the runoff until needed for non-potable use such as for irrigation.

These systems can take many forms such as below grade water tanks, medium sized modular precast concrete units, or very large precast bridge or arch structures. Modular units are installed over a water proof geotextile to retain the water within the cistern. Holding times are a concern with underground cisterns and vector control measures should be

implemented if holding times are greater than 72 hours. Additionally, the Department of Public Health may have specific criteria for blended irrigation systems which should be reviewed during the preliminary design period. Well placed access points are necessary to perform the required maintenance, which includes sediment and debris removal using a vacuum truck. Underground storage systems may also be used to support diversion to the sanitary sewer or treatment facilities.

## Subsurface Infiltration System

In areas where infiltration is favorable, a similar subsurface cistern design can be used, except the geotextile is omitted so that the runoff may infiltrate into the ground below the cistern and be naturally filtered before recharging the groundwater table. Multiple infiltration tests must be conducted to verify site specific infiltration capabilities, as this BMP requires adequate infiltration to allow the system to drain within 72 hours. Alternatively, vector controls may be implemented to avoid vector concerns.

These systems can be implemented with little to no surface area available, which is often desirable when there is limited open space. Maintenance of subsurface infiltration facilities is comparable to the maintenance required for underground cisterns.

## Extended Retention Wetland

Extended retention wetlands are favored where rainfall or runoff is present year round so that replenishment water is available to maintain the wetland and aquatic life. They must also discharge when large storm events or storm event series are encountered. Water depths in extended retention wetlands are greater than depths seen in subsurface flow wetlands; therefore, the area requirements are lessened and there is a significant risk of the water becoming stagnant and overgrown with algae mats. Depending on the anticipated rainfall depth, the volume required for retention could be excessively large, demanding a large wetland area. Maintenance typically requires vegetation management and sediment removal.

## Seasonal Dry Detention Pond

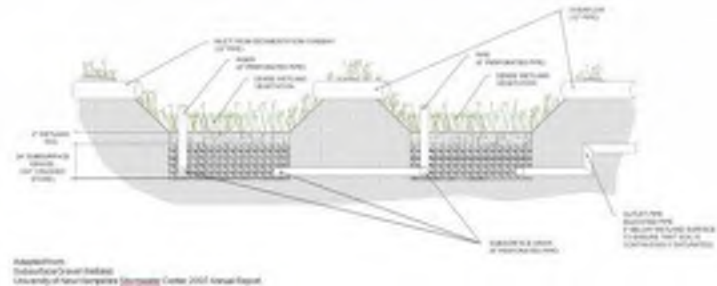

Seasonal detention ponds are an effective method for detaining runoff so that it can be metered out through secondary treatment, such as a bioswale, sand filter, or media filter. They are also effective in avoiding damage associated with hydromodification or flooding due to limited downstream conveyance capacity. Maintenance for detention ponds consists of sediment removal and vegetation management.

## Constructed/Subsurface Flow Wetland

Unless extensive land area and substrate is available, subsurface flow wetlands are generally reserved as a tertiary treatment or polish for the effluent from wastewater treatment facilities, but can be utilized in relatively small catchments where nutrients are a significant issue. The design is generally based on either a

relatively dependable and consistent inflow or the ability to primarily function in detention rather than extended retention. They may also be practical for remediation of dry-weather and very low first flush runoff drainage systems, so long as higher flows may be diverted away. They are impractical where water depths of over a few feet would be present for more than 72 hours. Maintenance of subsurface wetlands is similar to that of constructed wetlands with additional activities related to maintaining media layers and subsurface piping.

## Low-Flow Diversion Pump Station

Low-flow diversion pump stations are operationally straight forward, but connection to the sanitary sewer system can be problematic due to capacity issues, connection limitations, treatment costs, and unexpected prohibitions due to changes in the water quality. Low-flow diversion pump stations are effective at diverting dry-weather flows. Typically, they are constructed adjacent to manholes and are slightly deeper than the adjacent drainage channels such that low-flow runoff is diverted. It is possible to use the low-flow diversion in connection with a detention basin where larger flows can be held during a storm event and/or larger dry-weather events are slowly discharged to the sanitary sewers for treatment. Maintenance for low-flow diversion pump stations can be more expensive than non-mechanical BMPs, as pumps require more specialized maintenance.

## Sand and Media Filter

Surface, or Austin sand filters, are at ground-level and typically earthen. They are easy to maintain, but have a large footprint. Perimeter, or Delaware, sand filters consist of two parallel trench chambers located in concrete vaults below an impervious surface, such as a parking lot. Media filters detain and treat stormwater via filtration and adsorption of pollutants to the filter media. Media filters containing both organic and mineral filtration materials generally have greater ion exchange capacity than sand filters, and therefore can more effectively remove soluble metals and other dissolved pollutants. This

renders media filters particularly effective for roadways and highly industrial sites that contribute higher concentrations of metals to stormwater runoff, particularly zinc and copper. Maintenance of sand and media filters requires sediment and debris removal and replacement of the filters as necessary.

### Membrane Filtration

Membrane filtration water treatment systems use semi-permeable membranes under high pressure to exude clean product water, leaving behind a brine with the pollutants. The higher pressure membrane types such as reverse osmosis or ultra filtration are highly effective at removing dissolved contaminants, while lower pressure systems filter bacteria and viruses. These systems usually require pretreatment as particulate matter can foul the ion selective membrane and reduce performance. Operation and maintenance costs associated with membrane filtration are high due to the large consumption of energy required for filtration.

### Ion Exchange

Ion exchange is a polishing step that specifically targets polar dissolved constituents, such as sulfate. Pretreatment is required prior to ion exchange as suspended solids will clog the exchange columns. Ion exchange systems can be used to treat stormwater from pollution generating impervious surfaces at the end of pipe using a pump system. They are also commonly used to treat contaminated groundwater. Operation and maintenance costs associated with ion exchange are high due to the large consumption of energy required to run an exchange system.

### Bioretention Planter/Rain Garden

Bioretention is a promising solution that relies on inundation tolerant vegetation and native or engineered soils with high organic content, to capture, infiltrate, and transpire runoff, while retaining pollutants. If designed properly, especially where native soils are sufficiently permeable and without other constraints to infiltration, rain gardens and larger bioretention facilities can be aesthetic amenities in addition to being cost-effective and scalable stormwater retention sites that are easily integrated into highly urbanized retrofit projects. The planters must be flat and require maintenance such as weeding, trimming, and the replacement of dead plants. These BMPs can be used as infiltration BMPs if soil testing demonstrates suitable rates, otherwise, underdrains can be used and the BMP would be considered a biotreatment BMP.

## Rain Barrel

Rain barrels hold roof runoff, usually delivered by rain gutters and downspouts, and store the water for later use. Screen installations at the downspout inlets prevent sediment, leaves, debris, and mosquitoes from entering the rain barrel. Rain barrels are easily constructed for aesthetic purposes to compliment adjacent structures. Overall, maintenance requirements are minimal and include frequent visual inspections during the storm season and removal of accumulated sediment or debris. When effectively designed to capture and contain the runoff from a rooftop structure, a rain barrel can prevent runoff from small frequency storm events from ever leaving the property.

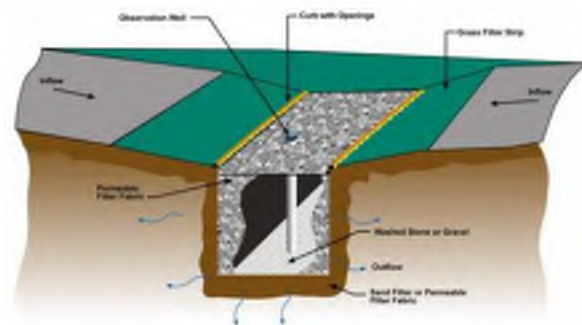

This will reduce onsite water usage and the amount of pollutants that may potentially be carried offsite. This BMP can be implemented throughout residential areas.

## Infiltration Pit/Drywell

Infiltration pits are typically constructed by digging pits sized to accommodate the runoff source and design storm, lined with geotextile filter fabric, and filled with gravel or aggregate. Infiltration testing will be required to verify infiltration is feasible. The retention volume can be increased using various open retention systems or large diameter plastic half pipes in addition to the aggregate. The surface can be open to accept incoming runoff. A drywell is operationally similar to an infiltration pit, but larger and more formally constructed. Pretreatment techniques are recommended to prevent clogging and maintain infiltration. A drywell can be bored, drilled, a driven shaft, or a dug hole that is deeper than its widest surface dimension, it may be classified as a Class V injection well and requires permitting through the USEPA. Maintenance typically includes removal of sediment and debris from the pretreatment system and monitoring and maintaining adequate infiltration.

## Infiltration Trench

An infiltration trench is a shallow impoundment over permeable soil that holds and stores runoff until infiltration can occur, using the natural filtering ability of the soil, or other media such as gravel/sand, to filter out pollutants. Infiltration testing will need to be performed to verify infiltration is feasible. This BMP is effective at retaining sediment associated pollutants, but can become clogged, requiring removal of the upper media. Use of a vegetated swale, or other pretreatment methods, will extend the systems longevity and reduce maintenance costs.

## Porous/Pervious Pavement

Porous/pervious pavement allows rainfall to drain into an aggregate bed or structural retention unit where it is stored until infiltration can occur. There are many pervious pavements including porous concrete, plastic grid systems, interlocking paving stones, brick, grass pavers, gravel pavers, and crushed stones. These materials allow for onsite infiltration that efficiently filters out pollutants. Infiltration rates of the native soil are a key element to the overall design and will need to be verified with infiltration testing. This type of BMP can be used to disconnect directly connected impervious areas such as rooftops and parking lots. Vegetated runoff should not drain onto the pervious pavement as it may clog the system and require more frequent maintenance. Permeable pavements may be used in many locations where conventional pavements are used, such as parking lots, driveways, and walkways. Areas with the potential for spills, such as gas stations, should be avoided. Using proper maintenance techniques, pervious pavement can remove a significant portion of pollutants in stormwater runoff and reduce pavement ponding. If infiltration is not supported within a site, underdrains may be used in combination with the pervious pavement section to support a treatment type BMP.

## Green Roof

Green roofs are appropriate in some climates, but may be challenging to maintain or support in areas with a risk of brush fires and little annual rainfall. Intensive systems have large depths and cover much of the roof while extensive systems feature minimal plantings that require little maintenance. Green roofs enhance water quality, reduce runoff, and are visually appealing as a rest area above office buildings. The amount of

stormwater that a green roof can contain is proportional to the area of coverage, types of plants, slope, and many other factors. Green roofs can be constructed during the building's construction phase or included as a retrofit. When retrofitting, it must be noted that the building needs to support the weight of the green roof under fully saturated conditions. A waterproof membrane should be laid over the building to protect it from structural damage and overflow should be addressed through a drainage layer. Green roofs also provide insulation, help reduce building temperatures during summer months, and counter the heat island effect.

## Green Street

Green street design is strongly encouraged and can take many forms, such as an inverted street cross section with a vegetated low center median, vegetated curb extensions, parkways that trap and hold gutter flows, or planter boxes connected to the gutter and filled with highly porous soil and appropriate vegetation. Green streets are most successful in areas where sediment generation is limited or can be accommodated by pretreatment through a bioswale. Porous concrete may be used to construct gutters so that flows may infiltrate. Green streets may include a combination of the BMP types described in this section that can be placed within a street's right-of-way.

## Connector Pipe Screen

While several devices have been certified as meeting the definition of FCSs, one commonly installed device is a connector pipe screen. These screens are typically made from stainless steel mesh, with five millimeter openings, that stretch in front of the lateral or outlet from a catch basin and are secured to the walls and floor of the catch basin, with an opening above the screen that is greater in area than the outlet. During most events, runoff will flow through the screen leaving the trash upstream of, or on, the screen. During high intensity storms or if the mesh becomes occluded, runoff can flow over the screen and drain from the catch basin to prevent flooding. Approximately 75-90 percent or more of catch basins can be retrofitted with this device. While regular maintenance to remove debris trapped on and on the upstream side of the screen is required, the intensity of maintenance is correlated with the amount of trash and debris collected. Implementation is relatively straight forward. In locations where the trash load results in excessive maintenance costs, or to provide additional efforts to reduce trash, many jurisdictions also install automatic retracting screens, as further detailed below.

## Automatic Retractable Screen

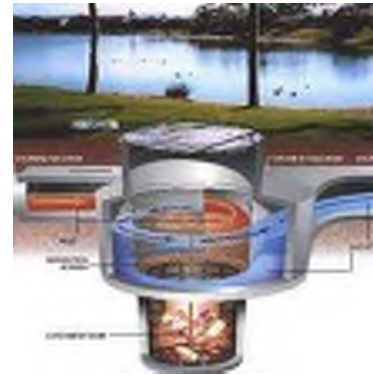

An automatic retractable screen extends across the opening or "mouth" of a catch basin and traps trash and debris at street level where street sweepers or hand crews may remove the trash before it can enter into the catch basin or drain. The screens will open or retract to allow larger flows and trash to enter the catch basin and be trapped on the connector pipe screen to avoid flooding and reduce maintenance costs. Areas that generate sufficient trash and debris to warrant the use of an automatic retractable screen in combination with a connector pipe screen are usually also subject to

enhanced street sweeping on a weekly or even more frequent basis.

## Hydrodynamic Separation Device

Hydrodynamic separation devices such as a Continuous Deflection Separator (CDS) unit can be used to remove trash from runoff and serve as a pretreatment device for many of the BMPs previously discussed. A CDS unit effectively screens, separates, and traps debris, sediment, oil, and grease from stormwater and urban runoff. As flows travel through the system, a very fine screen deflects the pollutants, which are captured in a litter sump in the center of the system. The water velocities within the swirl chamber continually shear debris off the screen to keep it clean. CDS units are ineffective in removing soluble pollutants and smaller, less-settleable solids. It is recommended that the CDS unit be inspected at least once every thirty days after the wet season. Floatables should be removed and the sump cleaned out. It is also recommended that the CDS be pumped out and the screen inspected for damage at least once per year.

## 4. Organizations, Coordination, and Collaboration

Many different types of local agencies can directly benefit from projects that address stormwater. These beneficiaries have the potential to be partners and/or collaborators. This section discusses the organizations that the SBCFCD coordinated and collaborated with and/or will need to coordinate with during SWRP implementation. This section also describes what came out/will come out of that coordination and collaboration.

### 4.1 Local IRWMP

The OWOW 2.0 Plan was prepared by SAWPA and is the current SARW IRWMP. SAWPA spans three counties in Southern California and seeks to provide a collaborative planning process that addresses various aspects of water resources in the SARW. The plan includes an approach for identifying and prioritizing multi-benefit projects and programs, presents innovative solutions, and addresses other water resource related issues.

SAWPA has a planned OWOW Plan update scheduled for 2018. The SBCFCD has been in coordination with SAWPA in an effort to maintain consistency between the OWOW Plan and this SWRP. The geographic focus of the SBC SARW SWRP is limited to the uppermost reaches of the SAR and its tributaries in SBC. The SBC SARW SWRP will be submitted to SAWPA for incorporation into the OWOW Plan, as required based on the SWRP Guidelines (SWRCB, 2015).

### 4.2 SWRP Consistency with other Plans and Programs

Various plans and programs relevant to this SWRP have been prepared by SBC, local agencies, groups of agencies, and regulatory entities. These documents were reviewed as part of the SWRP development in an effort to maintain consistency and identify opportunities for partnerships and aligning programs. An Annotated List of Data and Reports Technical Memorandum was prepared summarizing the following planning and reference documents and is included in **Attachment A**.

- Integrated Water Management Plans
  - SAWPA's OWOW 2.0 Plan (2014)
  - IEUA's Integrated Water Resources Plan (2016c)
  - SBVMWD's Upper SAR Watershed IRWMP (2015)
  - WMWD's Updated Integrated Regional Water Management Plan (2008)
- Water Quality and Monitoring Plans
  - Basin Plan (SARWQCB, 2005)
  - BBL Watershed-Wide Nutrient Monitoring Plan (SBCFCD, 2012)
  - Comprehensive Bacteria Reduction Plan (CBRP) (SBCFCD, 2011)
  - Hydromodification Management and Monitoring Plan (SBC Areawide Program, 2013a)
  - Integrated Watershed Monitoring Program (SBC Areawide Program, 2011)
  - SARW Bacteria Monitoring Plan (SAWPA, 2016)

- San Bernardino County Stormwater Planning
  - SBC Watershed Action Plan (SBC Areawide Program, 2013c)
  - Technical Guidance Document for Water Quality Management Plans (SBC Areawide Program, 2013b)
  - Municipal Stormwater Management Plan (SBC Areawide Program, 2015a)
- Urban Water Management Plans (UWMPs)
  - IEUA and Water Facilities Authority's 2010 UWMP (2010)
  - SBVMWD's San Bernardino Valley Regional UWMP (2016)
- Other Planning Documents
  - Chino Basin SWRP Functional Equivalency Document (IEUA, 2016a)
  - Chino Basin Watermaster and IEUA's Recharge Master Plan Update (2013)
  - San Bernardino County Department of Public Works (SBCDPW) Master Plans of Drainage
  - SBCDPW's Comprehensive Storm Drain Plans

### 4.3 Contribution from Local, State, and Federal Agencies

Local, state, and federal agencies, along with NGOs, were consulted during the development of the SBC SARW SWRP. The section below and **Section 8** identify different audiences (agencies and organizations) that were reached out to during the SWRP development, either as part of the Technical Advisory Committee (TAC) and/or stakeholder outreach events. These audiences included elected and appointed officials, municipal and county staff, watershed groups, local water agencies, and NGOs. Multiple events were held during the course of the planning process to gain input from local agencies and NGOs. These events are described further in **Sections 4.4, 4.5, and 4.6**.

**Section 6** demonstrates that many project partnerships identified in the SWRP involved the SBCFCD and local water agencies. In most cases, agreements are in place between the SBCFCD and the local water agencies, which will allow projects to be more easily implemented, as new agreements are not required. In instances where new agreements are required, the responsible and partnering parties will negotiate terms and develop agreements prior to project/program implementation. New governance structures are not anticipated.

It is not anticipated that local, state, and/or federal regulatory agencies will be required to make decisions during the SWRP implementation phases, except in reference to various permitting requirements that may be applicable, some of which are discussed in **Section 1.3**. Existing monitoring efforts have been approved by local regulatory agencies and will not be altered based on SWRP implementation.

### 4.4 Technical Advisory Committee

Local agencies and NGOs were invited to form the TAC to support the development of the SBC SARW SWRP. Expert advice and technical support was solicited from the TAC throughout SWRP development. The SWRCB, SARWQCB, and other interested parties were invited based on proximity to the SBC SARW, involvement in similar efforts (watershed planning, multi-benefit projects, etc.), and existing relationships/partnerships. TAC member attendees include the Chino Basin Water Conservation District (CBWCD), IEUA, SARWQCB, SAWPA, SBCDPW, SBCFCD, SBVMWD, and WMWD. **Table 4-1** summarizes

the roles and responsibility of each agency, including those agencies/organizations which were invited, but did not participate in the TAC.

**Table 4-1 TAC Roles and Responsibilities**

Agency	Status	Role/Responsibility
Bureau of Reclamation	Unable to Participate	Not applicable
CBWCD	Active	Guidance on water accounting and project selection
IEUA	Active	Guidance on water supply, wastewater, recycled water, and joint use project selection
Riverside County Flood Control and Water Conservation District	Invited, No Response	Not applicable
SARWQCB	Active	Guidance on permit requirements and project selection
SAWPA	Active	Guidance on regional water and project selection
San Bernardino County Department of Public Works, NPDES	Active	TAC lead
SBCFCD, Flood Planning	Active	Guidance on flood control and project selection
SBVMWD	Active	Guidance on water supply, groundwater recharge, and project selection
WMWD	Pending	Guidance on groundwater recharge in service area and project selection

A kickoff meeting was conducted on April 12, 2017, followed by three additional meetings, all of which were hosted by the SBCFCD at the SBCDPW building. The kickoff meeting was convened to develop the SWRP water management goals and objectives, formalize roles and responsibilities, and develop scheduling for future meetings. Each TAC member holds the responsibility to represent their agency and provide information related to their agency, as it relates to the SWRP. TAC members were asked to identify documentation, references, and data that would be beneficial in supporting the development of the SWRP. At each meeting, TAC members provided input at major milestones of the SWRP, including project identification, project prioritization, and the draft SWRP. **Table 4-2** summarizes the TAC meeting schedule and purpose, which includes the kickoff meeting and three additional meetings.

**Table 4-2 TAC Meeting Schedule and Purpose**

TAC Meeting	Schedule	Purpose
Kickoff Meeting	April 12, 2017	<ul style="list-style-type: none"> <li>➤ Present background/overview of SBC SARW SWRP</li> <li>➤ Define roles and responsibilities</li> <li>➤ Discuss water management goals and objectives</li> <li>➤ Outline TAC involvement and schedule</li> </ul>
Meeting #2 (Quantifiable Benefits and Projects)	July 6, 2017	<ul style="list-style-type: none"> <li>➤ Examine quantifiable benefit goals and targets to be included in the SWRP</li> <li>➤ Review multi-benefit projects identified in other planning documents that may be included in the SBC SARW SWRP</li> <li>➤ Identify data needed for projects to quantify benefits</li> </ul>

TAC Meeting	Schedule	Purpose
Meeting #3 (Projects)	September 28, 2017	<ul style="list-style-type: none"> <li>➤ Present/discuss results associated with benefit quantification for example projects</li> <li>➤ Collaborate on project concepts</li> <li>➤ Evaluate opportunities to enhance projects to provide additional benefits</li> </ul>
Meeting #4 (Draft SWRP)	April 25, 2018	<ul style="list-style-type: none"> <li>➤ Walk through the Draft SBC SARW SWRP</li> <li>➤ Discuss structure and key sections</li> <li>➤ Solicit feedback, comments, questions, and suggestions</li> </ul>

## 4.5 Public Engagement

It is important that the public is aware of the efforts made by the SBCFCD to develop the SWRP and are in support of the development and implementation. Their involvement provides meaningful input and ideas that will contribute to the proposed implementation. A Stakeholder and Public Outreach, Education, and Engagement Plan (SPOEEP) was prepared in the early stages of the SWRP development to identify the approach to involve and engage the public. A copy of the SPOEEP is included in **Attachment E**.

Public participation was provided for during the SWRP development in accordance with the SPOEEP. Community participation was most directly accomplished through the public outreach event, which was held following the SWRP Draft development on July 24, 2018. **Section 8.3** discusses the public outreach event in more detail. Additionally, community participation was accomplished through printed materials, development of a SWRP webpage, and through promotion on social media. The SBCFCD solicited public involvement through invitations on social media and distributed print materials for public feedback and review.

## 4.6 Stakeholder Engagement

The SBCFCD sought opportunities to partner with local stakeholders in the development of this SWRP, project identification/prioritization, and future implementation. Stakeholders participated in the TAC and also attended stakeholder outreach events. Similar to the public engagement discussed above, the stakeholder outreach events were performed in accordance with the SPOEEP included in **Attachment E**. The SBCFCD utilized stakeholder events to solicit technical information and identify projects that include partnerships with the SBCFCD. Potential participants were invited to the stakeholder events held on August 30 and 31, 2017. Educational materials were provided during the stakeholder presentation and comments cards were available for attendees to leave feedback. Additional information is included in **Section 8.2**.

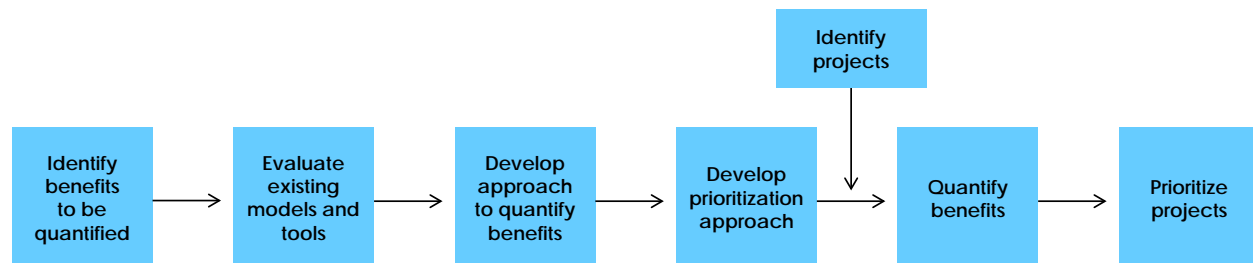

## 5. Quantitative Methods

The stormwater management objectives for the SBC SARW will be met through various multi-benefit projects located within the SBC SARW. This section presents the approach taken to develop quantitative methodologies for integrated identification, prioritization, and analysis of multi-benefit projects and programs. An overview is provided, which summarizes the applicable Water Code requirements, which provides a context. Existing hydrologic/hydraulic models, water quality models, and other GIS and spreadsheet-based decision support tools and modeling suitable to conduct the metric-based benefit analysis and prioritization of projects was evaluated with respect to the SWRP development. An approach to conduct the metric-based analysis was established based on the evaluation of existing models/tools.

### 5.1 Overview

California Water Code Section 10562 describes the minimum requirements for development of a SWRP. An outline of how stormwater projects are included, analyzed, and prioritized within the SWRP is included within the minimum requirements. Water Code Section 10562.(b)(2) states that a SWRP shall “identify and prioritize stormwater and dry-weather runoff capture projects for implementation in a quantitative manner, using a metrics-based and integrated evaluation and analysis of multiple benefits to maximize water supply, water quality, flood management, environmental, and other community benefits within the watershed.” Water Code Section 10562.(e) states that “a stormwater resource plan shall use measurable factors to identify, quantify, and prioritize potential stormwater and dry-weather runoff capture projects.” **Figure 5-1** illustrates the steps necessary to identify, quantify, and prioritize projects. The following subsections further describe the actions taken as part of the SBC SARW SWRP development to address the Water Code specifications.

**Figure 5-1 Project Identification, Quantification, and Prioritization**

### 5.1.1 Identify

The first step mentioned in the quote above pertaining to Water Code Section 10562.(e) is to identify stormwater projects. A request for projects was made to public entities within the SBC SARW area through the TAC and stakeholder outreach events. Projects received were screened and removed if they did not fit the goals and objectives of the SBC SARW SWRP. Projects were submitted by the local stakeholders listed below:

- SBCFCD
- San Bernardino County Regional Parks Department (SBC Parks)
- CBWCD
- IEUA
- San Bernardino Valley Water Conservation District (SBVWCD)
- SBVMWD
- WMWD
- City of Big Bear Lake
- City of Chino Hills
- City of Montclair
- City of Redlands

### 5.1.2 Quantify

The second step mentioned in Water Code Section 10562.(e) is to quantify stormwater project benefits. The identification of benefits to be quantified and the methodologies by which benefits were estimated is the focus of this section (**Section 5**). The benefits for quantification fall into the five overarching benefit categories referenced in Water Code Section 10562.(b)(2) and listed in Table 3 of the SWRP Guidelines:

- Water quality
- Water supply
- Flood management
- Environmental
- Community

Table 3 in the SWRP Guidelines (SWRCB, 2015) goes on to give examples of appropriate metrics for each benefit category. Some of the examples given would be difficult to apply to the SBC SARW SWRP. One reason for this is that certain benefit examples are not “measurable,” which is a requirement of the Water Code. Another reason is that some of the benefits apply to watersheds in other parts of the state where permanent base flow is a characteristic of the watershed. However, the guidelines also state that “other metrics and methodologies for integrated evaluation and analysis of multiple benefits may be considered, as appropriate.”

**Table 5-1** identifies the benefits to be quantified as part of the SBC SARW SWRP based on the SWRP Guidelines and local conditions. **Section 5.3** details the approach to quantify the benefits identified in the table below. Each project identified for inclusion will provide benefits from at least two benefit categories (water quality, water supply, flood management, environmental, and community), consistent with SWRP Guidelines Section VI.D.2.

**Table 5-1 Multiple Benefits Quantified**

Benefit Category	Multiple Benefits Quantified
Water Quality	Pollutant load reduction
	Stormwater runoff reduction
Water Supply	Stormwater recharge
	Recycled water recharge
Flood Management	Runoff rate reduction
	Runoff volume reduction
	Flood elevation reduction
	Removal of parcels/structures from the 100-year floodplain
	Property value saved
Environmental	Wetlands enhancement/creation
	Riparian area enhancement
	Streambed restoration
	Increased urban green space
Community	Provide employment opportunities
	Increase public education
	Increase community involvement
	Walking paths, sidewalks, and bike trails enhancement/creation
	Public use areas enhancement/creation

### 5.1.3 Prioritize

The third step mentioned in Water Code Section 10562.(e) is to prioritize stormwater projects. Once benefits were quantified, projects were prioritized based on an integrated metrics-based analysis of quantitative and practical factors. The quantitative factors are listed in **Table 5-1**. The practical factors broadly fit into the categories of cost and project readiness. Additional details on the prioritization elements are included in **Section 5.4**. The integrated metrics-based analysis of quantitative and practical factors on a project-specific basis is included in **Section 6**.

## 5.2 Review of Existing Models and Tools

Existing models and tools were evaluated for use in quantifying benefits. This evaluation includes an analysis of hydrologic/hydraulic models, water quality models, and other GIS and spreadsheet-based decision support tools and modeling suitable to conduct the metrics-based benefit analysis and prioritization of projects. This subsection focuses on the suitability of various models and decision support tools to quantify benefits. Existing models and tools that can be used to quantify the benefits from **Table 5-1** were reviewed and incorporated into the approach as applicable, which is defined further in **Section 5.3**.

### 5.2.1 Hydrologic/Hydraulic Models

Hydrologic and hydraulic models are used to quantify volumes and rates of water for quantifying water supply and flood control benefits. Hydrologic models identify the volume and timing of stormwater runoff based on watershed properties and geographic location, while hydraulic models generally focus on localized characteristics of water surface height, width, flow velocity, and energy. Hydrologic models found capable of producing output used to quantify benefits include:

- Hydrologic Engineering Center – Hydrologic Modeling System (HEC-HMS) from USACE
- Watershed Modeling System (WMS) from Aquaveo
- Hydrological Simulation Program – Fortran (HSPF) from USGS
- Wasteload Allocation Model (WLAM) from Wildermuth Environmental, Inc. (WEI)

Computer programs exist that also assist with the calculation of simple hydrologic estimates such as the Rational Method and the unit hydrograph method, which are described in the San Bernardino County Hydrology Manual. CivilDesign Corporation and Advanced Engineering Software (AES) developed software that computes information conforming to the methodology detailed in the San Bernardino County Hydrology Manual. Hydraulic models found capable of producing output used to quantify flood control benefits include:

- Hydrologic Engineering Center – River Analysis System (HEC-RAS) from USACE
- Water Surface Pressure Gradient (WSPG) from the Los Angeles County Flood Control District

### 5.2.2 Water Quality Models

Water quality models are used to quantify project performance in an effort to establish water quality benefits for projects included in the SWRP. Some water quality models are public domain software and could be used to assess pollutant loading. These models require significant base data for calibration, which is typically not available over extremely large areas like the SBC SARW. Water quality models found capable of producing output used to quantify water quality benefits include:

- Stormwater Management Model (SWMM) from USEPA
- SBPAT from Geosyntec Consultants
- System for Urban Stormwater Treatment and Analysis Integration (SUSTAIN) from USEPA

### 5.2.3 GIS-Based Decision Support Tools and Models

GIS is a critical component in quantifying benefits that are used to prioritize projects within the SWRP. Decision support tools using GIS have been included in watershed plans throughout the state. In local watershed planning studies, GIS-based tools/models were used to assemble spatial information such as soil type, land use, ground slope, impervious areas, parcels of land, and bodies of water. Points were assigned to each parcel of land that corresponded with prioritization criteria, and parcels were ranked based on the number of points each parcel received, with high scores indicating sites where stormwater projects would be most beneficial or easiest to implement.

With regard to the SBC SARW SWRP, projects have already been identified by stakeholders, and the type of application identified above would not be applicable. However, GIS is critical to the development of input data for hydrologic, hydraulic, and water quality models.

### 5.2.4 Spreadsheet-Based Decision Support Tools and Models

Spreadsheet-based decision support tools are critical during all phases of the SWRP. Spreadsheets are a necessary component to almost every type of hydrologic, hydraulic, and water quality model discussed in the previous sections. In particular, long-term simulation of watershed hydrology using rain gage data can be calculated with spreadsheets programmed with hydrologic equations. Many other analyses necessary for GIS-based calculations also require spreadsheets.

Spreadsheet-based decision support tools are most helpful during the prioritization phase of project benefit quantification. There are many watershed planning document examples where spreadsheet-based decision support tools were used to prioritize projects given an array of benefits. Some of these tools are readily available through the developers and/or local agencies, while project specific tools are typically developed by the user and tailored to the specific project goals.

## 5.3 Approach to Quantify Benefits

The benefits used in the SWRP are described in the subsections below. They are arranged according to the five benefit categories listed in Water Code Section 10562.(b)(2), which are also listed in Table 3 of the SWRP Guidelines (SWRCB, 2015). Included in each benefit description is a section on how the benefit achieves the stormwater management goals and objectives, types of projects that can attain the benefit, approach to quantifying the benefit, and metric used to evaluate the benefit.

In some instances, project sponsors had completed studies/analyses that quantified the benefits being considered in the SWRP. For projects where benefits had already been quantified, no further analysis was necessary as a part of the SBC SARW SWRP. This is an appropriate approach to avoid duplicative and unnecessary analysis costs and results. Though in most cases these types of benefits calculations predate the determination of the approach to quantify benefits, the calculations are still valid for the SBC SARW SWRP because they incorporate the physical structure and location of the projects. This approach also avoids having conflicting benefit quantifications. It is understood this may result in a non-uniform comparison. Project sponsors were given the opportunity to review the information included in the SWRP prior to finalization and there were no protests regarding this approach. The approaches outlined below were used for projects where benefits had not already been quantified by the responsible agency.

Projects included in the SWRP are at different stages of planning/design, ranging from ideas to full design plans. Assumptions were made to perform the analyses necessary to quantify benefits when projects lacked certain details necessary to quantify benefits. The benefits quantified as a part of the SBC SARW SWRP are preliminary and refinement will be necessary as the project designs progress.

Benefits described in this section are tangible, measurable, and quantifiable. Additionally, projects included in the SWRP also provide additional intangible, non-measurable benefits that fall under these benefit categories. These intangible benefits are not highlighted in this section.

5.3.1 Water Quality

Water quality benefit goals include opportunities to control stormwater pollution through infiltration and/or treatment processes. **Section 3** describes the water quality priorities within the SBC SARW area. Projects that address the priorities identified provide the greatest benefit to the watershed. Water quality benefits achieved by projects included in the SWRP include pollutant load reduction and stormwater runoff reduction. The tables below summarize the approach to quantify each water quality benefit for the projects identified in the SWRP. Assumptions were made when input data was not readily available. Each of the tables also identifies the project types that would provide the specific benefit.

**Table 5-2 Approach to Quantify Pollutant Load Reductions**

<b>Goal:</b>	
Reduce the pollutant load from the contributing drainage area to achieve water quality objectives in downstream receiving waters, focusing on the water quality priorities identified in <b>Section 3</b> .	
<b>Applicable Models and Tools:</b>	
Custom spreadsheet-based decision support tools with ArcGIS Soil Conservation Service (SCS) Runoff Curve Number method Runoff volume estimation methodology from San Bernardino County Hydrology Manual Data analysis from San Bernardino Areawide Stormwater Monitoring Program Stormwater BMP Database effectiveness calculations	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Drainage area</li> <li>➤ Land use/land cover</li> <li>➤ Rain depth/patterns (rain gage data)</li> <li>➤ Infiltration rates</li> <li>➤ Existing water quality</li> </ul>	<ul style="list-style-type: none"> <li>➤ Volume of runoff</li> <li>➤ Pollutant load reduction</li> </ul>
<b>Metric:</b>	
Removal of _____ <i>E. coli</i> per year	
<b>Potential Project Types:</b>	
Projects involving infiltration (basins and/or soft-bottom channels) or treatment BMPs (bioswales)	

**Table 5-3 Approach to Quantify Stormwater Runoff Reductions**

<b>Goal:</b>	
Reduce volume of stormwater runoff from the project tributary area to downstream receiving waters to improve water quality by reducing the discharge of polluted runoff.	
<b>Applicable Models and Tools:</b>	
Custom spreadsheet-based decision support tools with ArcGIS SCS Runoff Curve Number method Runoff volume estimation methodology from San Bernardino County Hydrology Manual	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Drainage area</li> <li>➤ Land use/land cover</li> <li>➤ Rain depth/patterns (rain gage data)</li> <li>➤ Infiltration rates</li> </ul>	<ul style="list-style-type: none"> <li>➤ Volume of runoff captured/infiltrated</li> </ul>
<b>Metric:</b>	
_____ acre-feet of runoff reduced per year (AFY)	
<b>Potential Project Types:</b>	
Projects involving basin outlet controls and/or infiltration (includes basins, soft-bottom channels, and/or treatment BMPs that support infiltration [bioswales])	

### 5.3.2 Water Supply

Water supply benefit goals include opportunities to augment local water sources by storing water in groundwater basins. Water supply benefits quantified as part of the SBC SARW SWRP include groundwater recharge and recycled water recharge. A table for each water supply benefit is included below summarizing how benefits were quantified and which types of projects achieve the specific benefit. Assumptions were made for input variables when information was not readily available.

**Table 5-4 Approach to Quantify Stormwater Recharge**

<b>Goal:</b>	
Increase the amount of stormwater runoff captured and infiltrated into groundwater basins.	
<b>Applicable Models and Tools:</b>	
Custom spreadsheet-based decision support tools with ArcGIS SCS Runoff Curve Number method Runoff volume estimation methodology from San Bernardino County Hydrology Manual	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Drainage area</li> <li>➤ Land use/land cover</li> <li>➤ Rain depth/patterns (rain gage data)</li> <li>➤ Infiltration rates</li> </ul>	<ul style="list-style-type: none"> <li>➤ Volume of runoff infiltrated</li> </ul>
<b>Metric:</b>	
_____ acre-feet of stormwater runoff recharged per year (AFY)	
<b>Potential Project Types:</b>	
Projects involving infiltrating at a rate or volume above the existing condition (includes basins, soft-bottom channels, and/or treatment BMPs that support infiltration [bioswales])	

**Table 5-5 Approach to Quantify Recycled Water Recharge**

<b>Goal:</b>	
Increase the amount of recycled water captured and infiltrated into groundwater basins.	
<b>Applicable Models and Tools:</b>	
Benefit is quantified when analysis available by others, typically the project sponsor	
<b>Input</b>	<b>Output</b>
➤ Results from existing hydrologic studies	➤ Volume of recycled water infiltrated
<b>Metric:</b>	
_____ acre-feet of recycled water recharged per year (AFY)	
<b>Potential Project Types:</b>	
Projects able to capture recycled water and involving infiltration at a rate or volume above the existing condition (includes basins, soft-bottom channels, and/or treatment BMPs that support infiltration [bioswales])	

### 5.3.3 Flood Management

Flood management benefit goals include opportunities to decrease flood risk and minimize property losses. Flood management benefits quantified as part of the SWRP include runoff rate reduction, runoff volume reduction, flood elevation reduction, removal of parcels/structures from the 100-year floodplain, and property value saved. Tables are included below summarizing the approach to quantify each flood management benefit. Example project types that achieve the benefit are included in the table. Assumptions were made when input information was not readily available.

**Table 5-6 Approach to Quantify Runoff Rate Reductions**

<b>Goal:</b>	
Reduce the peak runoff rate for the 100-year storm event, such that flooding is reduced.	
<b>Applicable Models and Tools:</b>	
Custom spreadsheet-based decision support tools with ArcGIS SCS Runoff Curve Number method Synthetic unit hydrograph estimation methodology from San Bernardino County Hydrology Manual Stage-storage, stage-discharge, and culvert analysis from Hydraflow Express Flow routing and timing using HEC-HMS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Drainage area</li> <li>➤ Land use/land cover</li> <li>➤ As-built plans</li> <li>➤ Infiltration rates</li> <li>➤ 100-year storm event rainfall</li> </ul>	<ul style="list-style-type: none"> <li>➤ Peak flow rate reduction due to diversion or infiltration improvements</li> <li>➤ Peak flow rate reduction due to basin outlet reconfiguration</li> </ul>
<b>Metric:</b>	
Runoff rate reduction of _____ cubic feet per second (cfs) during the 100-year storm event	
<b>Potential Project Types:</b>	
Projects that detain stormwater and/or enhance infiltration (includes basins and soft-bottom channels)	

**Table 5-7 Approach to Quantify Runoff Volume Reductions**

<b>Goal:</b>	
Reduce the volume of floodwaters reaching downstream conveyances, such that additional capacity is available downstream and flooding is reduced.	
<b>Applicable Models and Tools:</b>	
Custom spreadsheet-based decision support tools with ArcGIS SCS Runoff Curve Number method Runoff volume estimation methodology from San Bernardino County Hydrology Manual	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Drainage area</li> <li>➤ Land use/land cover</li> <li>➤ Rain depth/patterns (rain gage data)</li> <li>➤ Infiltration rates</li> </ul>	<ul style="list-style-type: none"> <li>➤ Volume of runoff diverted from downstream conveyances</li> </ul>
<b>Metric:</b>	
Runoff reduction of ____ acre-feet per year (AFY)	
<b>Potential Project Types:</b>	
Project designed to detain stormwater, including infiltration (includes basins, soft-bottom channels, and/or treatment BMPs that support infiltration [bioswales])	

**Table 5-8 Approach to Quantify Flood Elevation Reductions**

<b>Goal:</b>	
Reduce flood elevation (water surface elevation) of the 100-year flood in conveyances downstream, which reduces the risk to property damage or loss caused by flooding.	
<b>Applicable Models and Tools:</b>	
Hydraulic analysis using HEC-RAS SCS Runoff Curve Number method Synthetic unit hydrograph estimation methodology from San Bernardino County Hydrology Manual Stage-storage, stage-discharge, and culvert analysis from Hydraflow Express Flow routing and timing using HEC-HMS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Drainage area</li> <li>➤ Land use/land cover</li> <li>➤ As-built and proposed channel plans</li> <li>➤ 100-year storm event rainfall</li> </ul>	<ul style="list-style-type: none"> <li>➤ Water surface elevation profile</li> </ul>
<b>Metric:</b>	
Water surface elevation reduction of ____ feet during the 100-year storm event	
<b>Potential Project Types:</b>	
Projects where channels are enlarged to convey additional flow or provide a runoff peak rate reduction through detention of flood flows (include channel widening/improvement and infiltration basin projects where infiltration is enhanced by manipulating the geometry of outflow structures)	

**Table 5-9 Approach to Quantify Removal of Parcels/Structures from the Floodplain**

<b>Goal:</b>	
Remove parcels/structures from the 100-year floodplain, decreasing the risk of losing property or human life due to flooding.	
<b>Applicable Models and Tools:</b>	
Custom spreadsheet-based decision support tools with ArcGIS Hydraulic analysis using HEC-RAS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Flood maps from FEMA</li> <li>➤ San Bernardino County parcel maps</li> <li>➤ HEC-RAS flood elevation analysis</li> </ul>	<ul style="list-style-type: none"> <li>➤ List of parcels removed from flood hazard area</li> </ul>
<b>Metric:</b>	
Removal of _____ parcels/structures from the 100-year floodplain (measured in units of parcels or structures, depending on what makes the most sense for each geographic location)	
<b>Potential Project Types:</b>	
See project types identified under the flood elevation reduction benefit ( <b>Table 5-8</b> )	

**Table 5-10 Approach to Quantify Property Value Saved**

<b>Goal:</b>	
Decrease property losses due to flooding.	
<b>Applicable Models and Tools:</b>	
List of parcels removed from flood hazard area San Bernardino County assessor data Home price estimates from Zillow.com	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Parcels and structures removed from flood hazard areas</li> </ul>	<ul style="list-style-type: none"> <li>➤ Total value of parcels and structures removed from flood hazard areas</li> </ul>
<b>Metric:</b>	
\$_____ saved (in 2017 dollars) during one 100-year flood event	
<b>Potential Project Types:</b>	
See project types identified under the flood elevation reduction benefit ( <b>Table 5-8</b> )	

5.3.4 Environmental

Environmental benefit goals include opportunities to enhance habitat and open space through the implementation of stormwater projects. Environmental benefits being quantified in the SWRP include wetlands enhancement/creation, riparian area enhancement, streambed restoration, and increased urban green space. A table is included below for each benefit. The tables summarize the approach used to quantify the benefit and the types of projects the benefit is applicable to. Assumptions were made when quantifying benefits if the input data was not readily available.

**Table 5-11 Approach to Quantify Wetlands Enhancement/Creation**

<b>Goal:</b>	
Enhance/create wetlands to protect and improve habitat for species dependent on aquatic habitats for survival. Wetlands enhancement/creation replaces wetland habitat lost due to the process of urbanization.	
<b>Applicable Models and Tools:</b>	
ArcGIS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Conceptual plans</li> <li>➤ Construction plans</li> </ul>	<ul style="list-style-type: none"> <li>➤ Areas where wetlands will be enhanced/created</li> </ul>
<b>Metric:</b>	
_____ acres of wetlands enhanced/created	
<b>Potential Project Types:</b>	
Projects involving wetland enhancement/creation	

**Table 5-12 Approach to Quantify Riparian Area Enhancement**

<b>Goal:</b>	
Riparian area enhancement helps protect and improve riparian habitat, which is important to protecting biodiversity, maintaining/improving water quality, and protecting channel slopes, among other benefits.	
<b>Applicable Models and Tools:</b>	
ArcGIS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Conceptual plans</li> <li>➤ Construction plans</li> </ul>	<ul style="list-style-type: none"> <li>➤ Areas where riparian area is created/enhanced</li> </ul>
<b>Metric:</b>	
_____ acres of riparian area enhanced	
<b>Potential Project Types:</b>	
Enhancing riparian areas in highly urbanized/semi-arid areas is difficult given the ecological stresses imposed by development and drought. Achieving biodiversity in an artificially-created riparian zone is possible and can be managed through careful design of channel-side bioswales. In non-urbanized areas, riparian areas can be enhanced by creating channel conveyances that mimic natural conditions.	

**Table 5-13 Approach to Quantify Streambed Restoration**

<b>Goal:</b>	
Restore or enhance natural streambeds for the protection of fish and wildlife habitat. Streambed restoration can also stimulate the natural scour and sedimentation processes essential to creating coarse sandy loam habitat for the endangered San Bernardino kangaroo rat.	
<b>Applicable Models and Tools:</b>	
ArcGIS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Conceptual plans</li> <li>➤ Construction plans</li> </ul>	<ul style="list-style-type: none"> <li>➤ Areas where streambeds will be constructed to mimic natural conditions</li> </ul>
<b>Metric:</b>	
_____ feet of streambed restored, improved, or enhanced	
<b>Potential Project Types:</b>	
Channel enhancement projects located in natural sections of receiving waters (commonly in the eastern portion of the SBC SARW area)	

**Table 5-14 Approach to Quantify Increased Urban Green Space**

<b>Goal:</b>	
Increase urban green space by providing trees, shrubs, and grasses that can filter pollution from air, water, and soils. Urban green space also provides community benefits of increased access to spaces for recreation, exercise, communing with nature, neighborhood cohesion, and intangible social benefits associated with lower crime rates and improved property values.	
<b>Applicable Models and Tools:</b>	
ArcGIS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Conceptual plans</li> <li>➤ Construction plans</li> </ul>	<ul style="list-style-type: none"> <li>➤ Areas where urban green space will be created or enhanced</li> </ul>
<b>Metric:</b>	
_____ acres of urban green space added	
<b>Potential Project Types:</b>	
Projects that involve public use, where landscaping and tree-planting are essential components of the project (includes trail projects adjoining channels and projects with biological treatment of stormwater, where plants constitute a necessary water quality component)	

### 5.3.5 Community

Community benefit goals include opportunities to improve community health, safety, recreation, and sense of cohesiveness, particularly within disadvantaged communities. Community benefits being quantified in the SWRP include providing employment opportunities; increasing public education; increasing community involvement; walking paths, sidewalks, and bike trails enhancement/creation; and public use areas enhancement/creation. The approach used to quantify each community benefit is summarized in the tables below, which also identify project types that would achieve the specific benefit. Assumptions were made during the analysis when input data was not readily available.

**Table 5-15 Approach to Quantify Provided Employment Opportunities**

<b>Goal:</b>	
Increase the number of jobs for members of the community.	
<b>Applicable Models and Tools:</b>	
Estimates of job creation rates due to government infrastructure spending from the American Recovery and Reinvestment Act (Executive Office of the President – Council of Economic Advisors, 2009)	
<b>Input</b>	<b>Output</b>
➤ Project cost estimates	➤ Jobs created, in job-years (one job for a year)
<b>Metric:</b>	
_____ employment opportunities provided	
<b>Potential Project Types:</b>	
All projects, as short-term employment is provided to implement the project and long-term employment may be introduced based on continued operation and maintenance of the facilities.	

**Table 5-16 Approach to Quantify Increased Public Education**

<b>Goal:</b>	
Increase public education associated with stormwater quality and multi-benefit project implementation, such that the public's understanding of water quality protection results in water quality improvements.	
<b>Applicable Models and Tools:</b>	
Not applicable	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Concept plans</li> <li>➤ Construction plans</li> <li>➤ Project-specific implementation plans</li> </ul>	➤ Number of interpretive signs installed as part of the project
<b>Metric:</b>	
_____ interpretive signs installed as part of the project	
<b>Potential Project Types:</b>	
Projects that involve educational signage, which are typical for projects that are in public right-of-way or include public use benefits, such as trails along channels.	

**Table 5-17 Approach to Quantify Increased Community Involvement**

<b>Goal:</b>	
Enhance public participation in the design/implementation phase of a project. Project buy-in can occur when designers have taken the time to involve the community, which yields long-term community cohesion benefits.	
<b>Applicable Models and Tools:</b>	
Not applicable	
<b>Input</b>	<b>Output</b>
➤ Project-specific implementation plans	➤ Number of community meetings planned
<b>Metric:</b>	
_____ community meetings planned	
<b>Potential Project Types:</b>	
Projects that involve community meetings during the design and implementation phases, which is typical of larger projects that include public use benefits, such as along a trail/park.	

**Table 5-18 Approach to Quantify Path, Sidewalk, and Bike Trail Enhancement/Creation**

<b>Goal:</b>	
Enhance/create walking paths, sidewalks, and bike trails, which provide community benefits by increasing connectivity, supporting multi-modal transportation, and encouraging a healthy community.	
<b>Applicable Models and Tools:</b>	
ArcGIS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Concept plans</li> <li>➤ Construction plans</li> </ul>	<ul style="list-style-type: none"> <li>➤ Linear feet of walking paths/trails, sidewalks, and/or bike trails enhanced or created</li> </ul>
<b>Metric:</b>	
_____ feet of walking paths, sidewalks, and/or bike trails enhanced/created	
<b>Potential Project Types:</b>	
Projects that involve walking paths, sidewalks, and/or bike trails, which are most likely along channel improvement projects.	

**Table 5-19 Approach to Quantify Public Use Area Enhancements/Creation**

<b>Goal:</b>	
Provide space for communities to gather and recreate, especially within disadvantaged communities, which have been neglected historically in terms of the development of public spaces. Enhancing/creating certain types of public use areas may result in health and social benefits.	
<b>Applicable Models and Tools:</b>	
ArcGIS	
<b>Input</b>	<b>Output</b>
<ul style="list-style-type: none"> <li>➤ Concept plans</li> <li>➤ Construction plans</li> </ul>	<ul style="list-style-type: none"> <li>➤ Acreage of public use areas created or enhanced</li> </ul>
<b>Metric:</b>	
_____ acres of public use area enhanced/created	
<b>Potential Project Types:</b>	
Projects that involve publically accessed parks, trails, and open spaces, which may be included in projects inclusive of trails along channel improvements.	

## 5.4 Prioritizing Projects based on Multiple Benefits

Section D.1 of the SWRP Guidelines (2015) provides guidance for prioritizing stormwater and dry-weather runoff capture projects within a watershed. The guidance indicates that the prioritization of individual projects and programs for implementation should be based on an integration of quantitative factors and elements. The elements are listed in the following order (Section D.1.a through Section D.1.f).

- a. Projects/programs supported by entities that have created permanent, local, or regional funding
- b. Projects or programs that use a metrics-driven approach and an appropriately detailed geospatial analysis of multiple benefits to maximize water supply, water quality, flood management, environmental, and community benefits within the watershed
- c. Projects located on lands with public ownership
- d. Projects that augment local water supplies

- e. Projects and programs that preserve, restore, or enhance watershed processes that yield a broad suite of water quality benefits and support beneficial uses
- f. Projects and programs that create or restore habitat, open space, parks, recreation, or green open space in disadvantaged communities with a high deficit of tree canopy, parks, and open space

The prioritization for the SBC SARW SWRP is based on an integrated metrics-based analysis of these factors. The interpretation and quantification of these factors is discussed further in **Section 5.4.1**, including the assignment of numeric codes based on these prioritization elements. The methodology for combining the codes into a prioritization matrix is discussed further in **Section 5.4.2**.

### 5.4.1 Prioritization Elements

A discussion of each prioritization factor and element proposed for the SBC SARW SWRP based on these guidelines is included in the following subsections. Each element will convert into a numeric code to evaluate the project's conformance with each element. The codes will be developed such that low numbers indicate the more preferred values.

The prioritization of projects in the SBC SARW SWRP is based on a strict hierarchal prioritization discussed in the sections below. That is, the prioritization methodology favors projects that perform well on the first categories over projects that perform well over later categories. This approach aligns with the order of prioritization factors listed in Section D.1 of the SWRP Guidelines (2015). More information about each prioritization factor is included in the subsections below.

#### 5.4.1.1 Project Readiness

Section D.1.a of the SWRP Guidelines (2015) indicates that the SWRCB places a high priority on projects or programs that are already supported by a public agency that is responsible for funding both capital improvements and operations and maintenance. The best way to indicate whether or not a given project is already supported by a public agency is if that public agency has signed off on detailed concept plans or construction plans developed to any level of completeness. The existence of plan drawings and/or concepts indicates a level of intent from a public agency that they are willing to commit time and resources to the project. Also, projects that have plans are more ready for construction than projects that are currently just ideas or rough concepts.

Accordingly, the first prioritization factor in the SBC SARW SWRP will be a Project Readiness factor that indicates whether or not a public agency has signed off on concept plans or construction plans. If the public agency has approved plans for the project, the project will be deemed approved or ready. If no plans exist for the project, the project will be deemed not approved or ready. **Table 5-20** summarizes the prioritization code for this factor.

**Table 5-20 Project Readiness Code Definition**

Code Value	Project Readiness
1	Approved or ready
2	Not approved or ready

### 5.4.1.2 Cost Estimate

Another quantitative proxy for a project's readiness is the existence of a cost estimate prepared by an engineer. The existence of a cost estimate indicates that a public agency has examined the project from an engineer's perspective to estimate the time and materials needed to complete the project, even if the cost estimate is preliminary. The second prioritization factor in the SBC SARW SWRP will be a Cost Estimate factor that indicates whether or not a cost estimate exists for the project. **Table 5-21** indicates the prioritization code for this factor.

**Table 5-21 Cost Estimate Code Definition**

Code Value	Cost Estimate
1	Cost estimate has been prepared
2	Cost estimate has not been prepared

### 5.4.1.3 Quantification

Section D.1.b. of the SWRP Guidelines (2015) states that "[p]rojects or programs that use a metrics-driven approach and an appropriately detailed geospatial analysis of multiple benefits to maximize water supply, water quality, flood management, environmental, and community benefits within the watershed" should be prioritized in an SWRP. Therefore, projects where an analysis has been performed quantifying these benefits should be prioritized in the SBC SARW SWRP over projects where the benefits have simply been assumed to exist. Benefit quantification is also an indication of project readiness; only when an element of a project is defined and described can the element's effect on public water quality and supply be evaluated to any level of certainty.

The third prioritization factor in the SBC SARW SWRP will be a Quantification factor that indicates whether or not a metrics-based analysis of a project's multiple benefits has been performed.

**Table 5-22** reveals the prioritization code for this factor.

**Table 5-22 Quantification Code Definition**

Code Value	Quantification
1	Benefits have been quantified
2	Benefits have not been quantified

### 5.4.1.4 Benefit Categories

The intention of the Water Code requirements is to encourage stormwater and dry-weather runoff projects that provide multiple public water quality and supply benefits, according to the SWRP Guidelines (SWRCB, 2015). The SWRP Guidelines go on to explain that each project or program included in an SWRP should address at least two or more main benefits and as many feasible additional benefits as possible. This guidance indicates that the SWRCB considers the number of benefit categories as an important factor with which to prioritize projects in the SWRP.

The fourth prioritization factor in the SBC SARW SWRP will be a Benefit Categories factor that describes the number of benefit categories that a project will provide. The five benefit categories, as described in Water Code Section 10562.(b)(2), which are also listed in Table 3 of the SWRP Guidelines and described

in **Section 5.3**, are water supply, water quality, flood management, environmental, and community benefits. **Table 5-23** describes the prioritization code for this factor.

**Table 5-23 Benefit Categories Code Definition**

Code Value	Benefit Categories
1	Project provides benefits across five (5) categories
2	Project provides benefits across four (4) categories
3	Project provides benefits across three (3) categories
4	Project provides benefits across two (2) categories
5	Project provides benefits in one (1) category

#### 5.4.1.5 Water Supply Cost

Section D.1.d of the SWRP Guidelines (SWRCB, 2015) indicates that a SWRP should prioritize projects that augment local water supplies such as projects that use captured stormwater and dry-weather runoff to recharge groundwater. Project readiness elements and multiple benefits are a greater priority than this element based on the prioritization elements listed in the SWRP Guidelines. For this reason, the Water Supply Cost prioritization element will be placed in the SBC SARW SWRP after these elements of project prioritization.

The SBC SARW SWRP contains a mix of both large and small projects. Large projects tend to capture large quantities of stormwater, but at a higher project cost than small projects. If projects were prioritized only by the quantity of stormwater supplied, large costly projects would always be placed ahead of small projects regardless of the cost effectiveness of the project. This is a potential waste of public money. Therefore, in the SBC SARW SWRP, prioritization for water supply benefits provided will be normalized according to the cost of water supplied per acre-foot per year. The breakdown of the range of water supply costs is described in **Table 5-24**.

**Table 5-24 Water Supply Cost Code Definition**

Code Value	Water Supply Cost per Acre-Foot per Year
1	Less than \$5,000
2	Between \$5,000 and \$10,000
3	Between \$10,000 and \$50,000
4	Between \$50,000 and \$100,000
5	Between \$100,000 and \$200,000
6	Between \$200,000 and \$500,000
7	Between \$500,000 and \$1,000,000
8	Greater than \$1,000,000
9	Project provides no benefit to groundwater recharge/benefits are unquantified

#### 5.4.1.6 Water Quality Cost

Section D.1.e of the SWRP Guidelines (SWRCB, 2015) states that “[p]rojects and programs that preserve, restore, or enhance watershed processes that yield a broad suite of water quality benefits and support

beneficial uses” should be prioritized in an SWRP. This element is placed sixth on the list after the elements described above.

In the SBC SARW, the beneficial uses of the water bodies within the watershed are impacted primarily by the presence of indicator bacteria, which is further discussed in **Section 3**. Within the SBC SARW SWRP a water quality benefit will be assigned primarily on projects that reduce the quantity of *E. coli* bacteria.

Similar to the Water Supply Cost prioritization element described in **Section 5.4.1.5**, the Water Quality Cost prioritization element is structured in a way to level the playing field between large and small projects by comparing the project cost and bacteria removal. The most cost efficient projects will attain a lower code value, as described in **Table 5-25**.

**Table 5-25 Water Quality Cost Code Definition**

Code Value	Water Quality Cost per Billion <i>E. coli</i> Bacteria Removed per Year
1	Less than \$50
2	Between \$50 and \$100
3	Between \$100 and \$500
4	Between \$500 and \$1,000
5	Between \$1,000 and \$2,000
6	Between \$2,000 and \$5,000
7	Between \$5,000 and \$10,000
8	Greater than \$10,000
9	Project provides no water quality benefit/benefits are unquantified

#### 5.4.2 Ranking Methodology

The projects are included in a prioritization matrix and assigned prioritization codes based on the elements described in **Section 5.4.1**. The one-digit codes in the six prioritization elements will be combined into a six-digit ranking code for each project, assembled from the prioritization elements in the order listed in **Section 5.4.1**. This order is related to the order of prioritization elements listed in Section D.1 of the SWRP Guidelines (SWRCB, 2015).

The projects will then be ordered from first to last, with the lowest numeric value of ranking code being listed first and higher numeric value of ranking code being listed last. The completed prioritization matrix is further discussed in **Section 6.3**.

## 6. Project Identification and Prioritization

Multi-benefit stormwater management projects located throughout the SBC SARW will help achieve the stormwater management objectives for the watershed. The projects propose enhancement of existing stormwater infrastructure and construction of new improvements to capture stormwater and dry-weather runoff and achieve multiple benefits. This section describes the process used to identify projects, results of the benefit analysis utilizing the approach described in **Section 5.3**, project prioritization in accordance to the approach included in **Section 5.4**. This section also includes an assessment of the stormwater management objectives, as originally defined in **Section 1.5**.

### 6.1 Project Identification

A project must be included in a SWRP to receive grant funding from the State of California, according to state law. California Water Code Section 10563 (c)(1) states that "the development of a stormwater resource plan ... shall be required to receive grants for stormwater and dry-weather runoff capture projects from a bond act approved by the voters after January 1, 2014."

As mentioned above, the SBCFCD received input from the following agencies for inclusion in the SWRP in response to project solicitation through the TAC and stakeholder outreach events:

- SBCFCD
- SBC Parks
- CBWCD
- IEUA
- SBVWCD
- SBVMWD
- WMWD
- City of Big Bear Lake
- City of Chino Hills
- City of Montclair
- City of Redlands

**Figure 6-1** illustrates the project locations and **Table 6-1** lists the projects approved for inclusion in this SWRP. The order listed in the page is not associated with the prioritization, which is further discussed in **Section 6.3**. The table identifies the lead/responsible agency for each project with a brief project description. Figures illustrating the project locations are included in **Attachment F**.

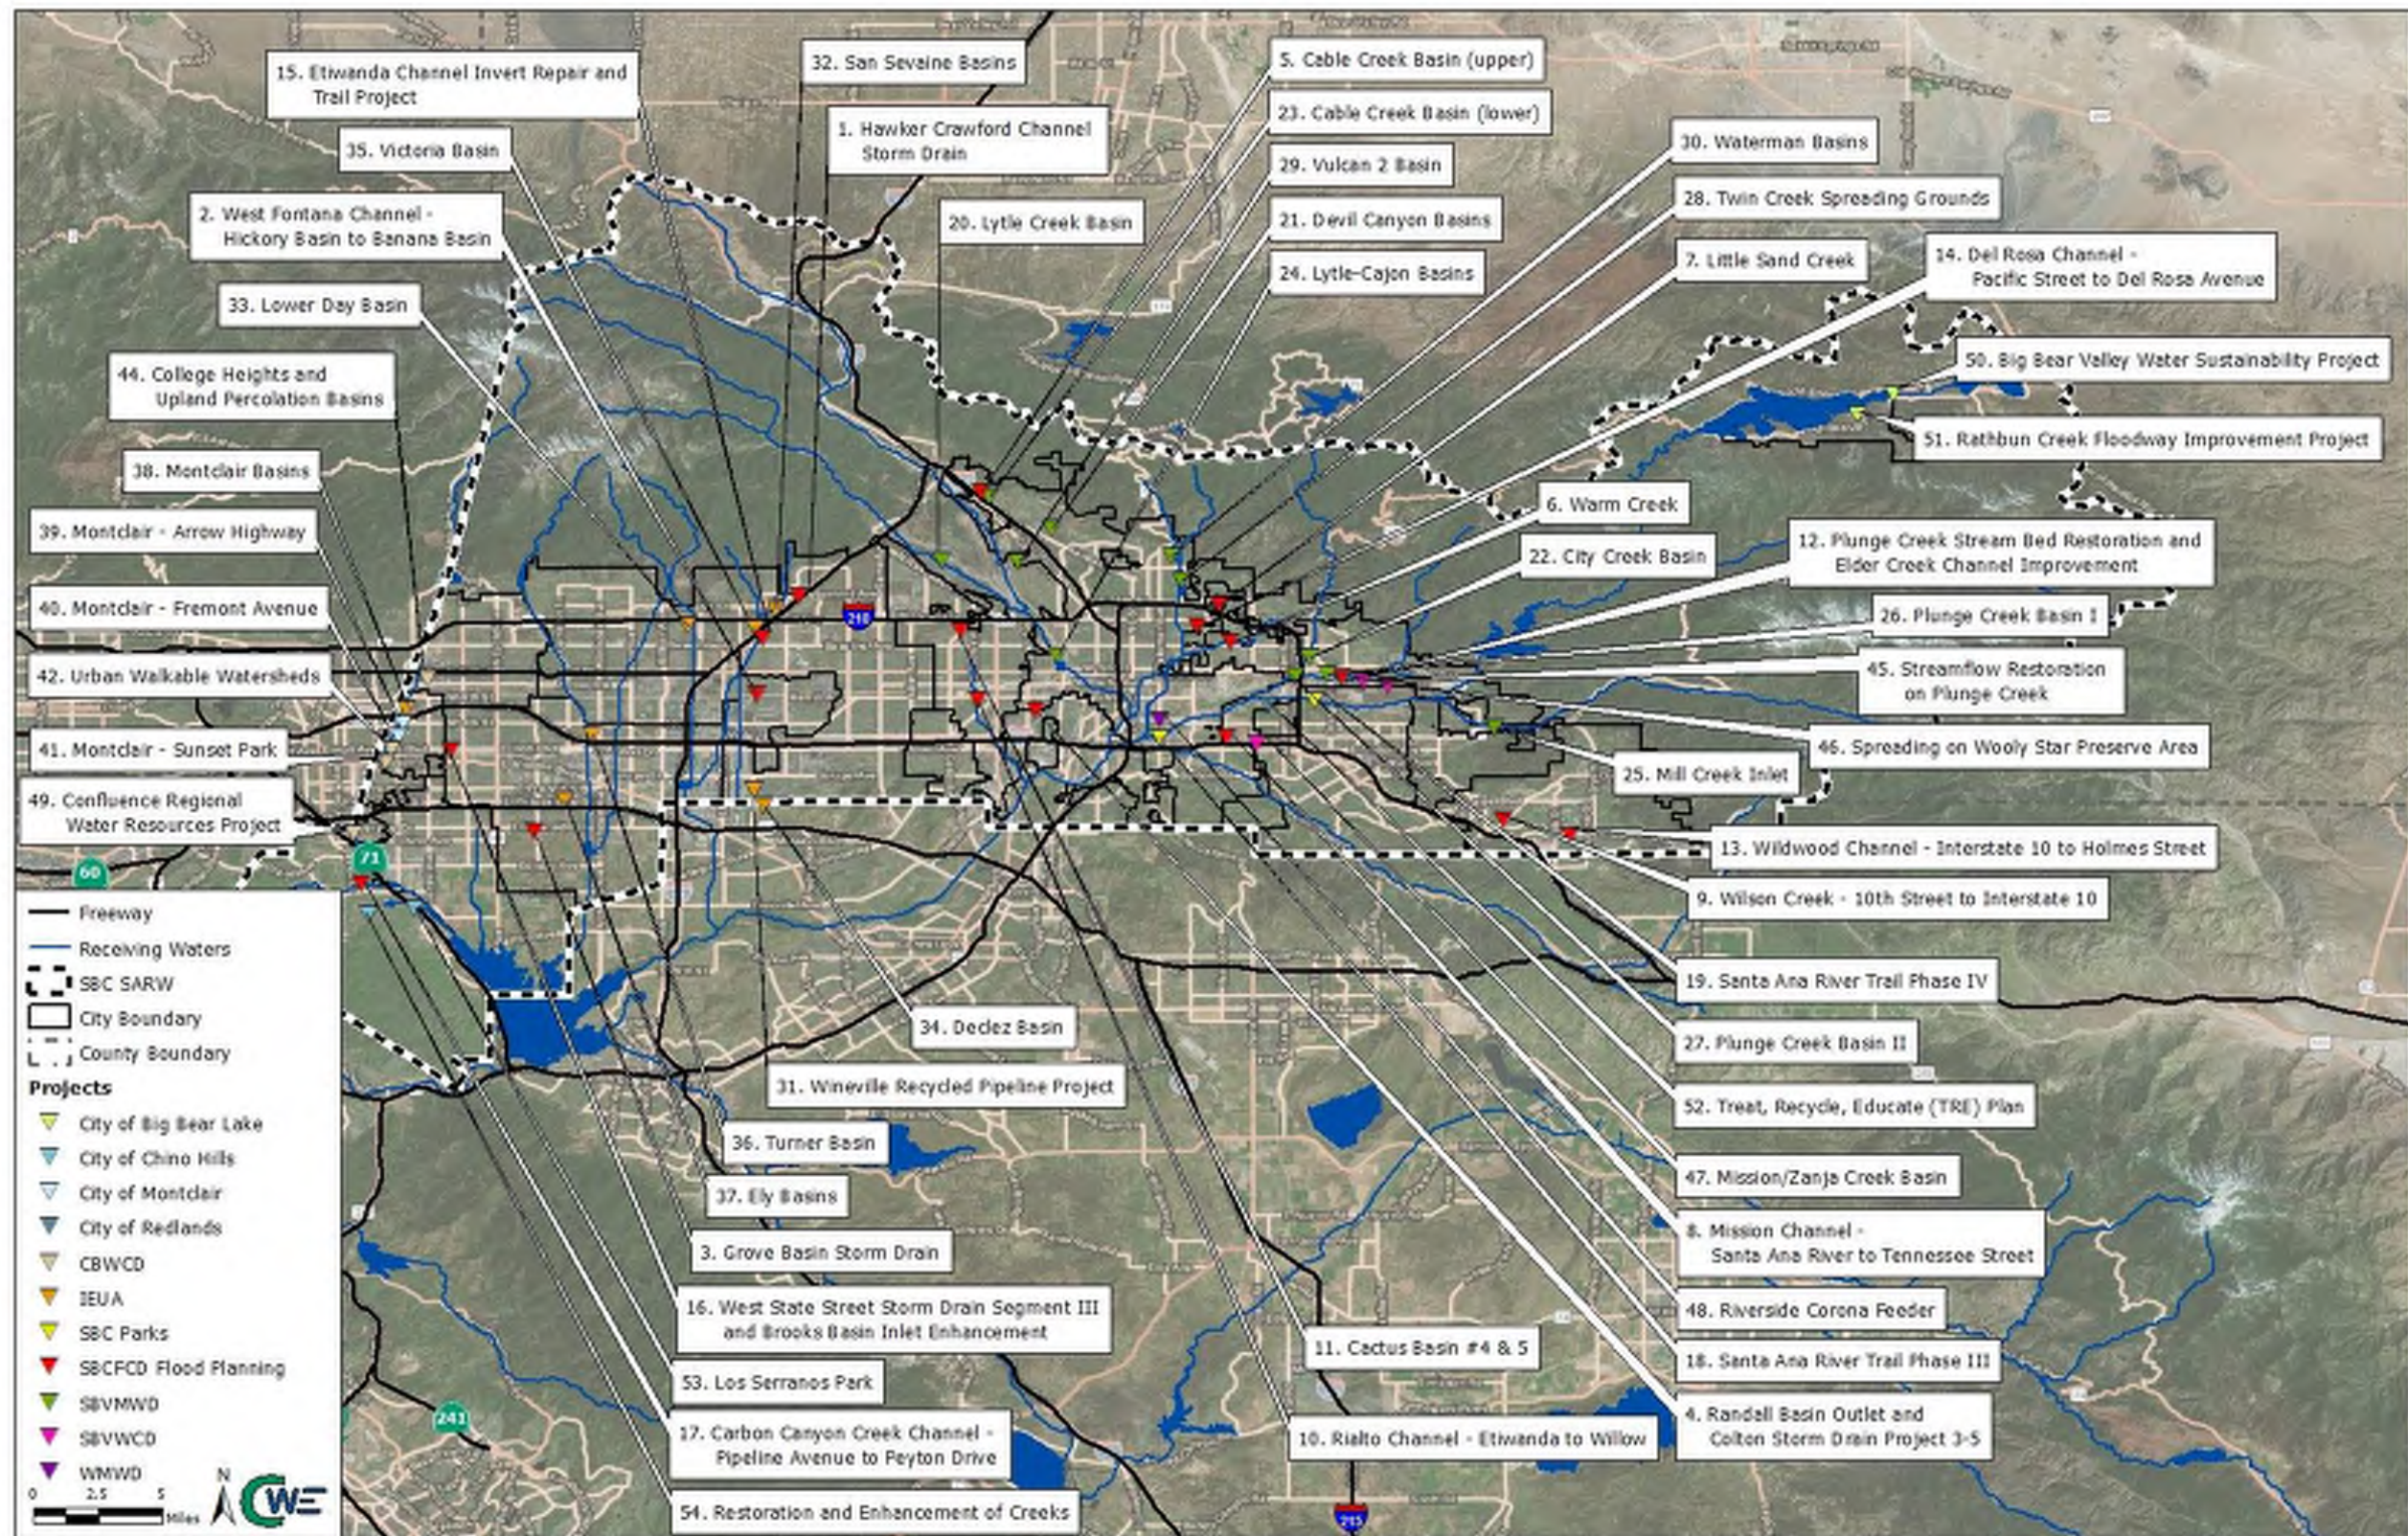

Figure 6-1 SWRP Projects

**Table 6-1 SWRP Projects**

<b>Project Number</b>	<b>Project</b>	<b>Responsible Agency</b>	<b>Project Description</b>
1	Hawker Crawford Channel Storm Drain	SBCFCD	An existing undersized trapezoidal channel cuts through a field and discharges into San Sevaive Basin No. 3, which has an infiltration rate of 0.5 feet per day. The proposed project will take flow into a box culvert sized to carry the 100-year flow rate and discharge into San Sevaive Basin No. 1, which has a higher infiltration rate (2.5 feet/day). The project will increase the stormwater and dry-weather runoff captured and infiltrated to the groundwater by 12 acre-feet per year.
2	West Fontana Channel - Hickory Basin to Banana Basin	SBCFCD	The existing undersized riprap-lined trapezoidal channel floods surrounding parcels during high return interval storm events. The proposed project will enlarge the channel to contain the 100-year storm event and add a bioswale to the north side that treats runoff from areas north of the channel.
3	Grove Basin Storm Drain	SBCFCD	Grove Basin has a gated outlet structure which is connected to a 66-inch Reinforced Concrete Pipe (RCP). This 66-inch RCP discharges onto Grove Avenue, causing street flooding, and the potentially polluted discharge eventually reaches Prado Park Lake. The proposed project will reroute the flows to a 108-inch RCP going eastward along Chino Avenue and discharge to Lower Cucamonga Spreading Grounds, allowing for additional groundwater infiltration.
4	Randall Basin Outlet and Colton Storm Drain Project 3-5	SBCFCD	Randall Basin is a flood control basin that can only discharge excess flows overland in an uncontrolled emergency spillway to Randall Avenue. The proposed project will allow Randall Basin to be managed as a recharge facility by including a control structure at the basin outlet and a new storm drain to the Santa Ana River.
5	Cable Creek Basin (Upper)	SBCFCD	Uncontrolled and unregulated flows from Cable Creek discharge to the Cajon Wash. The proposed project will create a new basin on Cable Creek upstream of Little League Drive in north San Bernardino. The basin will capture sediment and polluted runoff. The project will also provide a water supply benefit to the Bunker Hill groundwater basin through groundwater recharge.

Project Number	Project	Responsible Agency	Project Description
6.1	Warm Creek - Baseline Street to Sand Creek Confluence - Concept 1	SBCFCD	Warm Creek is an undersized earth-lined trapezoidal channel between Baseline Street and the improved confluence with Sand Creek. Warm Creek Concept 1 will increase the width of the channel, which will provide an increase in infiltration. The channel will be lined with riprap, and the velocity will be controlled by grouted riprap grade breaks. A trail is also proposed along a portion of the site, to be maintained by the Cities of San Bernardino and Highland.
6.2	Warm Creek - Del Rosa Confluence to Sand Creek Confluence - Concept 2	SBCFCD	Warm Creek Concept 2 will improve water quality by adding bioretention facilities on each side of the channel at locations where it is feasible to capture runoff from intersecting storm drains. Walls will separate the bioretention facilities from the flood control channel, and the channel will be deep enough to contain the entire 100-year flood flow. The project will incorporate a trail to be maintained by the Cities of San Bernardino and Highland.
7.1	Little Sand Creek - Concept 1	SBCFCD	Little Sand Creek is a channel with a riprap bottom and rail-and-wire revetment with sheet metal backing on the sides. Concept 1 will improve water quality and flood control with the incorporation of a bioretention facility to capture and treat stormwater flows entering from the north side of the channel. The bioretention facility will be separated from the improved flood control channel by a concrete wall.
7.2	Little Sand Creek - Concept 2	SBCFCD	Little Sand Creek Concept 2 will take advantage of publicly owned lands on the north side of the channel to improve water supply and water quality. A small basin will be constructed that will take diverted dry-weather runoff from Little Sand Creek for infiltration into the groundwater basin.
8	Mission Channel - Santa Ana River to Tennessee Street	SBCFCD	Mission Channel is an undersized earth and riprap trapezoidal channel that bisects a Disadvantaged Community (DAC) in eastern San Bernardino and western Redlands. The proposed project will benefit the community by adding a trail connecting the Santa Ana River Trail and the Orange Blossom Trail while upgrading the channel to be capable of carrying the 100-year storm event. The channel will continue to be an earthen channel, and the increased width will increase the volume of infiltration.

Project Number	Project	Responsible Agency	Project Description
9	Wilson Creek - 10 <sup>th</sup> Street to Interstate 10	SBCFCD	Wilson Creek flows through west Yucaipa as a 60-foot wide channel with rail and wire revetment on the side slopes. The efficiency of infiltration from the earth-lined channel is less than optimal, as the channel is prone to scour and deposition, which alters the stream bed and constricts the spread of flows. The proposed project will improve infiltration efficiency, reduce scour, enhance the flood capacity, and improve the trail system along the channel.
10.1	Rialto Channel - Etiwanda to Willow - Concept 1	SBCFCD	Rialto Channel conveys urban stormwater and outflow from the Cactus Basins in an undersized earth and rock-lined trapezoidal channel. The proposed project concept will widen the channel to allow for more infiltration while deepening the channel to provide additional flood capacity. The project will also provide community benefits to a severely DAC within the City of Rialto through the creation of a multi-use trail to connect with the popular Pacific Electric Trail.
10.2	Rialto Channel - Etiwanda to Willow - Concept 2	SBCFCD	Rialto Channel Concept 2 will widen and deepen Rialto Channel to provide flood protection for surrounding residents and businesses. The concept will increase infiltration in the upper portion through Armorflex blocks, while the lower portion will convey flood flows through a concrete lined rectangular channel. The project will include a multi-use trail as mentioned above.
11	Cactus Basin #4 and 5	SBCFCD	Cactus Basin #4 and 5 will provide multiple beneficial uses for DACs in Rialto and the Inland Empire. The project will provide a large increase in the volume of stormwater captured to recharge groundwater. The project will enhance water quality by removing bacteria and other pollutants from downstream water bodies. The project will also protect thousands of structures from flooding.
12	Plunge Creek Stream Bed Restoration and Elder Creek Channel Improvement	SBCFCD	The Elder Creek/Plunge Creek confluence project, a continuation of SBVWCD's Plunge Creek restoration project, will rehabilitate the ecological function of the wash. The project will spread stormwater through braided channels to restore natural watershed processes, enhance groundwater recharge, and improve downstream water quality. The project will also improve Elder Gulch upstream of the confluence to reduce sedimentation and protect surrounding areas from flooding.

Project Number	Project	Responsible Agency	Project Description
13	Wildwood Channel - Interstate 10 to Holmes Street	SBCFCD	Wildwood Channel conveys flows in an undersized channel lined with sand and gravel. The proposed project will widen the channel to increase infiltration capacity and flood protection while providing grade breaks that will reduce velocities. The project will also enhance the existing multi-use trails in this DAC.
14.1	Del Rosa Channel - Pacific Street to Del Rosa Avenue - Concept 1	SBCFCD	Del Rosa Channel is an undersized rectangular channel with a riprap-lined bottom and rail-and-wire revetment on the sides. The limited amount of public right-of-way reduces the opportunities for additional enhancements. Concept 1 will widen the channel from 20 feet to 30 feet and deepen it to handle flood flows. The composition of the channel bottom will remain porous for infiltration. A new culvert will be required across Pacific Avenue.
14.2	Del Rosa Channel - Pacific Street to Del Rosa Avenue - Concept 2	SBCFCD	Del Rosa Channel Concept 2 will widen the channel without deepening it. The slopes will be protected with stair-stepped rock gabion walls, eliminating the need for permanent concrete structures within the channel right-of-way. Flooding will be reduced, but the channel will not be capable of carrying the 100-year flood. The existing culvert at Pacific Avenue will remain in place.
15	Etiwanda Channel Invert Repair and Trail Project	SBCFCD	Etiwanda Channel and San Sevaine Channel are two rectangular concrete channels laterally contiguous to one another separated by a channel wall. The channels are subject to scour issues. The proposed project will remove the wall between the channels, address the scouring issues, and provide a trail improvement benefiting the community as a part of the San Sevaine Trail Phase I Segment 2 in the City of Fontana.
16	West State Street Storm Drain Segment III and Brooks Basin Inlet Enhancement	SBCFCD	West State Street Storm Drain is an open channel that runs between West State Street and the Union Pacific Railroad in the Cities of Montclair and Ontario. The storm drain conveys runoff westward to San Antonio Creek Channel, but upstream of the confluence with San Antonio Creek Channel there is an inlet that diverts low flows into Brooks Basin. The project will enlarge the inlet and enhance the channel to provide flood protection and capture, convey, and divert more stormwater to Brooks Basin for infiltration (groundwater recharge).

Project Number	Project	Responsible Agency	Project Description
17	Carbon Canyon Creek Channel - Pipeline Avenue to Peyton Drive	SBCFCD	Carbon Canyon Creek Channel is a riprap-lined undersized trapezoidal channel between Pipeline Avenue and Peyton Drive. The proposed project will widen the channel, while maintaining a soft bottom. This design will increase flood protection and provide additional opportunity for stormwater flows to infiltrate and recharge groundwater.
18	Santa Ana River Trail Phase III	SBC Parks	Santa Ana River Trail Phase III will extend the popular public use trail from its current endpoint at Waterman Avenue in San Bernardino to California Street in Redlands. Stormwater improvements along the trail will be sized for the 100-year flood flow from future development conditions. The trail provides public use areas and green space for DACs.
19	Santa Ana River Trail Phase IV	SBC Parks	Santa Ana River Trail Phase IV will complete the trail to Garnet Street in Mentone. The project will include similar stormwater improvements as Phase III, provide public use areas, and enhance green space. The project will also feature interpretive signage as a public education component.
20	Lytle Creek Basin	SBVMWD	The proposed Lytle Creek Basin will be located in the City of Rialto east of Interstate 15, upstream of an existing CEMEX plant. The 60 acre site will capture unregulated flood flows from Lytle Creek and allow an estimated average of 4,023 acre-feet of stormwater per year to infiltrate and recharge the Bunker Hill groundwater subbasin.
21	Devil Canyon Basins	SBVMWD	The existing Devil Canyon Spreading Grounds diverts flow from Devil Creek during very high flow events. The proposed project would increase the capacity of the diversion through the construction of an inflatable armored dam across Devil Creek. Two new recharge cells will be constructed below the existing Basin No. 1, and the transfer structures between the existing basins will be improved. The improvements will allow an estimated average of 3,631 acre-feet of stormwater per year to infiltrate.

Project Number	Project	Responsible Agency	Project Description
22	City Creek Basin	SBVMWD	The series of nine proposed basins will be constructed along over a mile of City Creek on both sides of the 210 Freeway in the City of Highland. Infiltrated stormwater from the City Creek Basin project will recharge the Bunker Hill groundwater subbasin by an estimated average of 5,247 acre-feet per year. The basins will be connected at the downstream end to the proposed Plunge Basin II project, though the projects can be constructed independently of one another.
23	Cable Creek Basin (Lower)	SBVMWD	This Cable Creek Basin project will be located just downstream of the proposed SBCFCD Cable Creek Basin project (Project No. 5). Unlike the SBCFCD project, flow will be diverted into the lower Cable Creek Basin project from the main channel via an inflatable rubber dam. The Bunker Hill groundwater subbasin will be recharged by an estimated average of 2,978 acre-feet of stormwater per year as a result of this project.
24	Lytle-Cajon Basins	SBVMWD	The Lytle-Cajon Basins project will be located just upstream of the Lytle-Cajon Radial Gate and spillway. The proposed project will result in the construction of eight in-channel recharge basins. In total, the project will result in an estimated average of 3,408 acre-feet of additional infiltrated stormwater to recharge the Bunker Hill groundwater subbasin.
25	Mill Creek Inlet	SBVMWD	The Mill Creek Inlet project will improve the transfer of flow from Mill Creek into the existing series of percolation basins in the Mill Creek wash area. The capacity of the existing inlet will be increased from 110 cubic feet per second (cfs) to 210 cfs and involve the replacement of culverts underneath the existing flood control levee. The improvements will allow 196 acre-feet more stormwater to infiltrate per year.
26	Plunge Creek Basin I	SBVMWD	The Plunge Creek Basin I project will place a basin downstream of the SBVWCD and SBCFCD Plunge Creek Restoration Projects. The single cell basin will capture water using an inflatable rubber dam diversion across Plunge Creek, resulting in an increase in groundwater recharge of an estimated 2,481 acre-feet per year.

Project Number	Project	Responsible Agency	Project Description
27	Plunge Creek Basin II	SBVMWD	The Plunge Creek Basin II project will be located just upstream of the confluence of Plunge Creek and City Creek. The basin will receive flows from an inflatable dam placed across Plunge Creek. Groundwater recharge due to construction of the basin will be increased by approximately 1,050 acre-feet per year.
28	Twin Creek Spreading Grounds	SBVMWD	The existing Twin Creek Spreading Grounds are flow-through basins located within Twin Creek north of Lynwood Drive in the City of San Bernardino. Existing basins within the spreading grounds were originally built to attenuate flows, but over the years the basin walls have been eroded or purposely breached, allowing flows to pass through unobstructed. The proposed project will reconstruct and armor the basin walls, construct one new cell, and provide new transfer structures between the basin cells. These improvements will provide flood protection and groundwater infiltration benefits.
29	Vulcan 2 Basin	SBVMWD	The Vulcan 2 Basin project will improve groundwater recharge in a new basin located near the severely DAC of Muscoy. The project will divert flow from the Devil Creek Diversion Channel using an inflatable dam. The Vulcan 2 Basin will allow the diverted flow to infiltrate, recharging the Bunker Hill groundwater subbasin by an average of 3,441 acre-feet per year.
30	Waterman Basins	SBVMWD	The Waterman Basins project will improve the existing diversion structure at the Waterman Basins northeast of Waterman Avenue and 40 <sup>th</sup> Street in the City of San Bernardino. The improvements will refurbish two existing radial gate systems and provide two new gates for a maximum diversion capacity of 1,000 cfs. Upon completion, Waterman Basins will put an estimated average of 1,675 more acre-feet of stormwater per year into the groundwater aquifer.

Project Number	Project	Responsible Agency	Project Description
31	Wineville Recycled Pipeline Project	IEUA	The Wineville Recycled Pipeline Project will make changes to three basins. The project will include upgrading Wineville Basin to be capable of infiltration by adding a gate to the outlet and improving the dam. Detained stormwater will be pumped to Jurupa Basin via a new pump and conveyance pipeline. Stormwater will then be pumped from Jurupa Basin through existing lines to the RP3 Basins, which will be enlarged and improved to accept more stormwater and recycled water. Combined, the upgrades will add over 6,500 acre-feet per year on average of stormwater and recycled water to the Chino groundwater subbasin.
32	San Sevaine Basins	IEUA	Recharge in the San Sevaine Basins will be increased by recycling water through a new pump and conveyance pipeline from San Sevaine Basin No. 5, which has a low infiltration rate, to San Sevaine Basin No. 3, which has a higher infiltration rate. A new berm will also be constructed within Basin No. 5. The improvements will facilitate additional groundwater recharge from both stormwater and recycled water.
33	Lower Day Basin	IEUA	The improvements proposed as part of the Lower Day Basin project include the construction of a secondary diversion structure within the channel to more efficiently divert flows into the basin. Within the basin, capacity will be increased by removing a mid-level outlet and reconstructing an embankment. These improvements will add an estimated average of 75 acre-feet of groundwater to the Chino groundwater subbasin per year.
34	Declez Basin	IEUA	Declez Basin will be improved by reconstructing the existing embankment and spillway at a higher elevation to increase storage. Additionally, a gate will be installed on an existing outlet, improving the ability of IEUA to manage the basin as a recharge facility. The improvements will recharge an average of 241 acre-feet of stormwater to the groundwater basin annually.

Project Number	Project	Responsible Agency	Project Description
35	Victoria Basin	IEUA	The Victoria Basin project will improve the recharge and flood control capabilities of the existing basin by abandoning the mid-level outlet that allows flows to discharge to the San Sevaine Channel. The basin's recharge capacity will be increased by blocking the outlet and extending the existing lysimeter stations, allowing the basin to hold a greater volume of water.
36	Turner Basin	IEUA	The existing spillway at Turner 2 Basin was built long before upstream development in the City of Rancho Cucamonga required larger stormwater basins at the confluence of Cucamonga Channel and Deer Creek Channel, and it is one of the last remaining pieces of the Turner Basin complex that has yet to be replaced. A new spillway at a higher elevation will allow IEUA to store additional stormwater volume within the basin complex, which will produce an additional annual recharge volume of 66 acre-feet.
37	Ely Basins	IEUA	The Ely Basins improvements include excavating 470,000 cubic yards of material from within the existing footprint of the basins. IEUA estimates that the increase in the capacity of the basins would yield an average of 221 acre-feet of additional stormwater recharge per year.
38	Montclair Basins	IEUA	The proposed project at Montclair Basin will add one drop inlet structure from Basin 1 to Basin 2, and one drop inlet structure from Basin 2 to Basin 3. The project will allow for better management of groundwater recharge and the efficiencies attained will yield an average of 248 acre-feet of additional recharge per year.
39	Montclair - Arrow Highway	City of Montclair	This project will reduce the current four lane major arterial street to a two lane road, allowing for a median that will capture runoff from the street, treat it, and infiltrate it back into the ground.
40	Montclair - Fremont Avenue	City of Montclair	This project will reduce the current four lane arterial street to a two lane road, allowing for a median that will capture runoff from the street, treat it, and infiltrate it back into the ground.
41	Montclair - Sunset Park	CBWCD / Montclair	This project will develop a walking and biking environmental trail that incorporates a water feature moving dry-weather runoff on Orchard Street from the north end of the park to the south end where it will infiltrate into the ground.

Project Number	Project	Responsible Agency	Project Description
42	Urban Walkable Watersheds	CBWCD	The Urban Walkable Watersheds project will feature a community walking trail that provides connectivity near water infrastructure projects while actively capturing and infiltrating runoff through green infrastructure demonstration projects. An emphasis will be placed on increasing public education and community involvement through educational programs involving nearby public schools.
43	Multipurpose Recharge Basins	CBWCD	The Multipurpose Recharge Basins project will re-conceptualize the role of groundwater recharge basins by integrating native plant restoration and passive recreation with educational signage on perimeters of existing basins. The project will increase areas for public education and recreation without impeding groundwater recharge in the basin.
44	College Heights and Upland Percolation Basins	CBWCD	The improvements proposed to the College Heights and Upland Percolation Basins will include water quality features to improve urban runoff, flood mitigation, streetscape, passive recreation, and education.
45	Streamflow Restoration on Plunge Creek	SBVWCD	The Streamflow Restoration on Plunge Creek will continue the enhancement of the SBVWCD Plunge Creek Conservation Project by an additional half mile. In addition to providing riparian habitat, the stream enhancements will improve flood management capacity during high flow events.
46	Spreading on Woolly Star Preserve Area	SBVWCD	The Spreading on Woolly Star Preserve Area project involves spreading Santa Ana River water within the preserve area during events of high flow through the installation of new gates and pipes. Stormwater infiltration will occur in historical remnant channels to better mimic pre-development processes, which will enhance riparian habitat.
47	Mission/Zanja Basin	SBVWCD	The Mission/Zanja Groundwater Recharge Basin project will place a groundwater recharge basin in vacant lands along the Mission Zanja, reducing stormwater runoff and increasing groundwater recharge. Seven possible locations have been identified with the smallest being 65,000 square feet with a recharge rate of 10 feet per day. Up to 15 acre-feet will recharge per day at a flow rate of 7.5 cfs.

Project Number	Project	Responsible Agency	Project Description
48	Riverside Corona Feeder	WMWD	The project will connect the California State Water Project feeder to Riverside. California State Water Project water will be used to recharge Riverside County basins.
49	Confluence Regional Water Resources Project	CBWCD	The project will construct a new groundwater recharge and storage reservoir at the confluence of Chino Creek and San Antonio Creek. Pumps will send excess stormwater to upstream CBWCD-managed basins to enhance recharge opportunities. An artificial habitat and bioremediation channel will be used as an educational and wetland habitat feature.
50	Big Bear Valley Water Sustainability Project	City of Big Bear Lake	Big Bear Valley wastewater currently is treated and sent outside of the SARW to irrigate crops in Lucerne Valley. The project will upgrade the Wastewater Treatment Plant (WWTP) and reuse tertiary-treated wastewater locally to recharge local groundwater, provide critical habitat for endangered species, and stabilize BBL water levels.
51	Rathbun Creek Floodway Improvement Project	City of Big Bear Lake	The project will increase the size of three culverts on Rathbun Creek to be able to convey the 100-year discharge without flooding nearby properties. The project will also enhance the natural streambed downstream of Big Bear Boulevard and riparian habitat. A multiuse trail will be constructed along the banks to extend Rathbun Trail all the way to Big Bear Lake.
52	Treat, Recycle, Educate (TRE) Plan	City of Redlands	The TRE Plan consists of several green street improvements combined with a new 0.8-acre stormwater basin near the existing Redlands WWTP. The area will include a new educational park featuring interpretive signage describing the LID BMPs that will be included in the park and on Nevada Street. The park's vegetation will be irrigated with recycled water from the WWTP.
53	Los Serranos Park	City of Chino Hills	The Los Serranos Park project will create a new community park in the City of Chino Hills. The design will include green infrastructure and habitat enhancement and protection.
54	Restoration and Enhancement of Creeks	City of Chino Hills	This project will improve the ecosystem and protect valuable riparian habitat through a creek rehabilitation and streambed restoration project. The project will also provide public walking trails and educational opportunities.

## 6.2 Benefit Analysis Results

Each project was evaluated for its capacity to maximize water supply, water quality, flood management, environmental, and other community benefits within the watershed. The benefits were analyzed based

on the quantitative methods approach described in **Section 5.3**. A summary of this analysis is included in **Attachment G**.

### 6.3 Project Prioritization

The projects listed in **Section 6.1** were assigned a ranking code according to the methodology described in **Section 5.4**. The ranking takes into account an integration of quantitative factors, including the project readiness, cost, breadth of benefits, water supply efficiency, and water quality efficiency, to assure the greatest needs are addressed. A summary of the result of this analysis are included in **Attachment H**. While each of the projects is considered a priority, this analysis helps determine which projects may be most ready and beneficial from a SWRP perspective.

### 6.4 Assessment of Stormwater Management Objectives

Five stormwater management goals were identified in **Section 1.5** as follows:

1. Enhance water quality
2. Maximize water supply
3. Improve flood management
4. Protect the environment
5. Provide community benefits

Eighteen stormwater management objectives were identified in accordance with these goals, as further discussed in sections above and for which the quantitative approach is included in **Section 5.3**.

**Table 6-2** identifies the degree to which these stormwater management objectives will be satisfied through the construction of all projects identified in **Section 6.1**. It is unlikely that all projects will be constructed and overall implementation will span over multiple decades. Conditions will change over time and those changes are not accounted for in this analysis. The assessment included below provides a context to the magnitude of benefits proposed through this SWRP.

**Table 6-2 Assessment of Stormwater Management Objectives**

Goal	Objective	Predicted Cumulative Achievement
<b>Enhance Water Quality</b>	Pollutant Load Reduction	The projects will cumulatively provide for the removal of roughly <b>four quadrillion (<math>4 \times 10^{15}</math>) MPN <i>E. coli</i> bacteria</b> from the waterways of the SBC SARW per year.
	Stormwater Runoff Reduction	The projects will reduce the discharge of untreated stormwater by approximately <b>41,000 acre-feet</b> per year.
<b>Maximize Water Supply</b>	Stormwater Recharge	The projects in the SWRP will cumulatively capture on average around <b>41,000 acre-feet</b> of stormwater per year and use the volume to recharge local aquifers.
	Recycled Water Recharge	The projects will also capture about <b>7,500 acre-feet</b> of recycled water per year for groundwater recharge.

Goal	Objective	Predicted Cumulative Achievement
<b>Improve Flood Management</b>	Runoff Rate Reduction	At least 32 projects will provide a benefit of reducing the peak flow rate during floods, with a maximum predicted flow rate reduction of <b>600 cfs</b> (Cactus Basin #4 and 5).
	Runoff Volume Reduction	The projects will cumulatively prevent <b>41,000 acre-feet</b> of stormwater from reaching downstream flood-prone areas.
	Flood Elevation Reduction	At least 17 projects will provide a benefit of reducing the water surface elevation during a flood event, with a maximum predicted flood elevation reduction of almost <b>9 feet</b> (Wilson Creek – 10 <sup>th</sup> Street to Interstate 10).
	Removal of Parcels/ Structures from the Floodplain	The projects will cumulatively remove approximately <b>1,900 parcels</b> from the risk of flooding during a 100-year storm event.
	Property Value Saved	These parcels have a combined value of over <b>\$610 million</b> .
<b>Protect the Environment</b>	Wetlands Enhancement/ Creation	The projects will enhance or create over <b>148 acres</b> of wetlands.
	Riparian Area Enhancement	The projects in the SWRP will restore or enhance almost <b>178 acres</b> of riparian habitat.
	Streambed Restoration	The projects in the SWRP will restore at least <b>4,545 feet</b> of streambed to natural conditions, creating and preserving critical habitat for endangered species.
	Increased Urban Green Space	Cumulatively, the projects will increase the amount of urban green space within the SBC SARW by about <b>78 acres</b> .
<b>Provide Community Benefits</b>	Provide Employment Opportunities	Construction of the projects in the SWRP is estimated to provide roughly <b>6,100 job-years</b> of employment opportunities to the community. From the Bureau of Labor Statistics, the median tenure of an employee in a construction job in 2016 was 4 years (BLS, 2016). Therefore, it is estimated that the projects will cumulatively provide over <b>1,500 new jobs</b> .
	Increase Public Education	Public education benefits will be achieved in at least <b>eight projects</b> . These projects will have interpretive signage to increase the public's understanding of water quality protection and using stormwater as a resource.
	Increase Community Involvement	At least <b>five projects</b> in the SWRP will increase community involvement as a permanent feature of the project.
	Recreational Paths Enhancement/ Creation	The projects in the SWRP will create or enhance over <b>29 miles</b> of multi-use paths and trails for public use.
	Public Use Area Enhancement/ Creation	Over <b>75 acres</b> of new public use and recreational space will be created by the construction of the projects.

## 7. Implementation Strategy and Schedule

This section presents elements of the implementation strategy that will be used to implement projects and programs identified in the SBC SARW SWRP. The strategy includes implementation elements, resources, performance-measures, and an adaptive management approach. This section also discusses the use of decision support tools to support ongoing implementation and adaptation.

### 7.1 Implementation Approach

**Figure 7-1** illustrates the overall implementation strategy. The four major components of the implementation strategy are resources, implementation, adaptive management, and performance measures. These components are further detailed in the sections below.

**Figure 7-1 Overall Implementation Strategy**

### 7.2 Resources

Financial resources are a significant component of SWRP implementation. A matrix of funding opportunities is included in **Attachment I**, summarizing various financing programs (grants and loans). The matrix included in the attachment identifies the funding agency, program, timeline, purpose, eligible uses, funding limits, contact information, and website link. Funding programs will change over time. The attached matrix summarizes programs that are currently relevant, which may also be relevant in the

future. The cost estimates included in **Attachment H** represent the currently projected funding needs on a project by project basis (if available). The responsible agency for each project would ultimately be responsible for identifying and securing funding according to the financing program schedule and/or the implementation schedule if the implementing agency's funds are utilized.

## 7.3 Implementation

The general implementation strategy includes several elements, including schedule, responsible parties, community participation, and tracking, which are further detailed below. The schedule for implementation is discussed in **Section 7.3.1**. The party responsible for each project will dictate specific details regarding implementation. This information is discussed in **Section 7.3.2**. Community involvement (**Section 7.3.3**) is a key component, as the SWRP is a regional planning document that is most effective when stakeholders and the public are involved. Project/program implementation tracking (**Section 7.3.4**) will be important to measure progress from the planning phase through operation. The elements described in this section will also be considered through the adaptive management process.

### 7.3.1 Schedule

This section discusses the schedule associated with finalizing the SWRP along with the scheduling of the projects identified through the SWRP development process. This SWRP will be submitted to SAWPA (the local IRWM group) upon finalization, as required based on the SWRP Guidelines (SWRCB, 2015).

**Table 7-1** summarizes the typical schedule related to implementation of various size projects. It is assumed that all outreach related activities would occur during the planning/design and construction phases. The schedule noted in the table below does not take into account the time needed to obtain necessary federal, state, and local permits. The obtainment of permits can vary by project and can range from a few months to several years.

**Table 7-1 Typical Project Schedule**

Phase	Percent Complete				
	Year 1	Year 2	Year 3	Year 4	Year 5
<b>Green Streets (Under \$1 Million for Construction)</b>					
Agency planning and design	100%	-	-	-	-
Consultant planning and design	100%	-	-	-	-
Construction	-	100%	-	-	-
Agency construction management	-	100%	-	-	-
Consultant construction management	-	100%	-	-	-
<b>Small/Medium Projects (Under \$10 Million for Construction)</b>					
Agency planning and design	100%	-	-	-	-
Consultant planning and design	50%	50%	-	-	-
Construction	-	25%	75%	-	-
Agency construction management	-	25%	75%	-	-
Consultant construction management	-	25%	75%	-	-
<b>Large Projects (Over \$10 Million for Construction)</b>					
Agency planning and design	100%	-	-	-	-
Consultant planning and design	25%	50%	25%	-	-

Phase	Percent Complete				
	Year 1	Year 2	Year 3	Year 4	Year 5
Construction	-	-	25%	50%	25%
Agency construction management			25%	50%	25%
Consultant construction management			25%	50%	25%

The schedules for each individual project will vary based on the needs of the project, the funding available, and other unforeseeable circumstances, and thus it is unknown when exactly projects will begin in most cases. A rough estimate of the date when construction will start for each project is listed below. These dates are tentative and subject to change for a variety of reasons.

### Year 1 = 2018

11. Cactus Basin #4 and 5 (SBCFCD)
15. Etiwanda Channel Invert Repair and Trail Project (SBCFCD)
16. West State Street Storm Drain Segment III and Brooks Basin Inlet Enhancement (SBCFCD)
18. Santa Ana River Trail Phase III (SBC Parks)
32. San Sevaine Basins (IEUA)
33. Lower Day Basin (IEUA)
49. Confluence Regional Water Resources Project (CBWCD)

### Year 1 = 2019

2. West Fontana Channel – Hickory Basin to Banana Basin (SBCFCD)
12. Plunge Creek Stream Bed Restoration and Elder Creek Channel Improvement (SBCFCD)
31. Wineville Recycled Pipeline Project (IEUA)
34. Declez Basin (IEUA)
35. Victoria Basin (IEUA)
36. Turner Basin (IEUA)
37. Ely Basins (IEUA)
38. Montclair Basins (IEUA)
53. Los Serranos Park
54. Restoration and Enhancement of Creeks

### Year 1 = 2020

3. Grove Basin Storm Drain (SBCFCD)
50. Big Bear Valley Water Sustainability Project (City of Big Bear Lake)
51. Rathbun Creek Floodway Improvement Project (City of Big Bear Lake)

### Year 1 = 2021

1. Hawker Crawford Channel Storm Drain (SBCFCD)
17. Carbon Canyon Creek Channel – Pipeline Avenue to Peyton Drive (SBCFCD)

**Year 1 = 2022**

19. Santa Ana River Trail Phase IV (SBC Parks)

**Year 1 = 2023 or beyond**

4. Randall Basin Outlet and Colton Storm Drain Project 3-5 (SBCFCD)
5. Cable Creek Basin (Upper) (SBCFCD)
- 6.1 Warm Creek – Baseline Street to Sand Creek Confluence – Concept 1 (SBCFCD)
- 6.2 Warm Creek – Del Rosa Confluence to Sand Creek Confluence – Concept 2 (SBCFCD)
- 7.1 Little Sand Creek – Concept 1 (SBCFCD)
- 7.2 Little Sand Creek – Concept 2 (SBCFCD)
8. Mission Channel – Santa Ana River to Tennessee Street (SBCFCD)
9. Wilson Creek – 10<sup>th</sup> Street to Interstate 10 (SBCFCD)
- 10.1 Rialto Channel – Etiwanda to Willow – Concept 1 (SBCFCD)
- 10.2 Rialto Channel – Etiwanda to Willow – Concept 2 (SBCFCD)
13. Wildwood Channel – Interstate 10 to Holmes Street (SBCFCD)
- 14.1 Del Rosa Channel – Pacific Street to Del Rosa Avenue – Concept 1 (SBCFCD)
- 14.2 Del Rosa Channel – Pacific Street to Del Rosa Avenue – Concept 2 (SBCFCD)
20. Lytle Creek Basin (SBVMWD)
21. Devil Canyon Basins (SBVMWD)
22. City Creek Basin (SBVMWD)
23. Cable Creek Basin (Lower) (SBVMWD)
24. Lytle-Cajon Basins (SBVMWD)
25. Mill Creek Inlet (SBVMWD)
26. Plunge Creek Basin I (SBVMWD)
27. Plunge Creek Basin II (SBVMWD)
28. Twin Creek Spreading Grounds (SBVMWD)
29. Vulcan 2 Basin (SBVMWD)
30. Waterman Basins (SBVMWD)
39. Montclair – Arrow Highway (City of Montclair)
40. Montclair – Fremont Avenue (City of Montclair)
41. Montclair – Sunset Park (CBWCD / City of Montclair)
42. Urban Walkable Watersheds (CBWCD)
43. Multipurpose Recharge Basins (CBWCD)
44. College Heights and Upland Percolation Basins (CBWCD)
45. Streamflow Restoration on Plunge Creek (SBVWCD)
46. Spreading on Woolly Star Preserve Area (SBVWCD)
47. Mission/Zanja Basin (SBVWCD)
48. Riverside Corona Feeder (WMWD)
52. Treat, Recycle, Educate (TRE) Plan (City of Redlands)

**7.3.2 Responsible Parties**

A lead agency has been identified for each of the projects evaluated, as defined in **Table 6-1**. The responsible agency is the agency that submitted the project information for inclusion in the SWRP. In several cases, the lead agency will partner with other agencies. For example, the SBCFCD has identified

several projects that may include trail features. Those trail features will be established through a partnership with local jurisdictions.

There are not any critical linkages between projects, such that there is not any given project that must be implemented prior to another. Several of the projects are related due to their location within the same subwatershed; therefore, implementation of one project may impact performance of another, but will not mitigate the need for the other project. The project concepts identified in the SWRP are based on full implementation. In some cases multiple alternatives have been identified and in that case only one concept will be implemented. The lead agency may determine it is best to phase the projects, which would essentially create interdependence among the phases. Due to the independence of each project, the lead agency will be responsible for the overall implementation and utilize partners as appropriate.

### 7.3.3 Community Participation

The stakeholders/public supported the development of the SWRP through the TAC and outreach events, described further in **Section 4 and 8**. Community participation is consistent with the SPOEEP, included in **Attachment E**. The efforts made during the SWRP development to involve stakeholders and the public will transition into a platform for stakeholder/public input during implementation. Involvement during implementation will likely focus on the direct community in which the project is being implemented. Meetings and/or workshops will be executed as necessary in an effort to inform the community of multi-benefit project implementation and seek input as appropriate.

In addition to the involvement during the design and construction process of project implementation, the stakeholders/public may be engaged following the completion of projects when educational signage is incorporated. The community will learn about the multiple benefits the project provides and stormwater quality through the signage included as part of the projects. Stakeholder/public input may also be solicited during the design process with regard to the proposed educational signage.

### 7.3.4 Tracking

Project implementation is the most significant SWRP element for which tracking is applicable. Preliminary information regarding project status has been collected and documented as part of the SWRP development. The project prioritization in **Attachment H** identifies whether conceptual design plans have been prepared, as well as a cost estimate, for each of the projects included in the SWRP. The status of required studies, reports, investigations, and design plans may be tracked independently by each of the parties responsible for implementation. Tracking this information is helpful, as it may assist the responsible agency and/or their partners with prioritizing implementation efforts. Centralized tracking was considered and determined not to be the best approach at this time. A centralized tracking system will be reconsidered in the future and would be incorporated into the SWRP through the adaptive management process described below if deemed appropriate at that time. Each responsible party will track the status of applicable design elements for each of their projects independently, which may include, but is not limited to:

- Conceptual plans
- Preliminary design report
- Soils investigation

- Hydrology and hydraulic study
- Topographic survey
- Flood study
- Design plans

## 7.4 Adaptive Management

The SBC SARW SWRP is structured as a living document and will be adaptively managed. The SWRP will be reviewed approximately every five years to determine if an update is warranted. Adaptive management will allow the SWRP to be updated with the most pertinent and relevant information, which changes over time. For example, ongoing monitoring may demonstrate water quality improvements over time. In that instance, the SWRP could be updated to re-establish the water quality priorities. The utilization of monitoring data as part of the adaptive management process is further discussed in **Section 7.5**. Ongoing adaptations to the SWRP may include, but are not limited to:

- Re-characterization of water quality priorities
- Source assessment re-evaluation
- Effectiveness assessment of watershed-based projects
- Updated metrics-based quantitative analysis
- Deleted or new projects
- Identification of completed projects

Projects may be submitted to the SBCFCD by local lead agencies on an ongoing basis. The Multi-Benefit Project Request Form originally used to collect project information from stakeholders is included in **Attachment J**. This form may be submitted to the SBCFCD at any time and the SBCFCD will incorporate projects into the SWRP as appropriate. If a project concept has changed, the responsible agency would be required to submit the updated information to the SBCFCD. Updated information would also need to be submitted if the quantified benefits are determined to be different than those presented in the SWRP due to additional data collection and/or detailed analyses. It will be noted in the SWRP when a project originally identified in the SWRP has been implemented during periodic updates.

## 7.5 Performance Measures

This section discusses how performance of identified projects will be measured to assess the achievement of projected benefits. The following components will be used to assess performance and are further described below:

- Evaluation of expected versus actual outcomes, which leads to the re-evaluation of project objectives, priorities, and goals
- Monitoring and information management systems used to gather performance data
- Mechanisms to adapt project operations and plan implementation based on performance data
- Approach to document and share performance data with stakeholders

### 7.5.1 Expected versus Actual Outcomes

The quantification of multiple benefits presented in **Attachment G** represents a preliminary evaluation of the expected outcome due to project implementation. Project concepts assessed are preliminary, and benefits will be updated as the designs are finalized by the responsible parties. Projects that receive funding through grants are typically required to measure performance over time and are designed to achieve a benefit agreed upon between the responsible party and the granting agency. Benefits have been quantified within the five benefit categories (water quality, water supply, flood management, environmental, and community) through the SWRP development.

**Table 7-2** summarizes design elements and/or technical analyses that may be necessary to measure actual outcomes/multiple benefits based on the benefit category following project implementation. The elements/analyses identified will need to be tailored for each project to establish an economical approach. For example, measuring flow rates/volumes into a basin can be done easily using a flow meter on the inflow pipe, while for a channel improvement, installing flow meters at every inlet (to assess infiltration within the channel) would be extremely costly and a detailed analysis may represent a more economical approach. Additional details pertaining to the benefits are included in **Section 5.3**.

**Table 7-2 Options for Measuring Actual Outcomes by Benefit Category**

Benefit	Design Elements/Analysis Options to Verify Performance
<b>Water Quality</b>	
Pollutant load reduction	<ul style="list-style-type: none"> <li>➤ Visual flow monitoring</li> <li>➤ Flow meter(s)/stream gage(s)</li> <li>➤ Monitoring program (pre-/post-project and/or upstream/downstream)</li> <li>➤ Monitoring with lysimeters (if applicable)</li> <li>➤ Hydrologic modeling with collected rainfall data</li> <li>➤ Infiltration testing to support calculations</li> </ul>
Stormwater runoff reduction	<ul style="list-style-type: none"> <li>➤ Visual flow monitoring</li> <li>➤ Flow meter(s)/stream gage(s)</li> <li>➤ Hydrologic modeling with collected rainfall data</li> <li>➤ Infiltration testing to support calculations</li> </ul>
<b>Water Supply</b>	
Stormwater recharge	<ul style="list-style-type: none"> <li>➤ Visual flow monitoring</li> <li>➤ Flow meter(s)/stream gage(s)</li> <li>➤ Hydrologic modeling with collected rainfall data</li> <li>➤ Infiltration testing to support calculations</li> </ul>
Recycled water recharge	<ul style="list-style-type: none"> <li>➤ Recycled water discharge rates/quantities               <ul style="list-style-type: none"> <li>▪ Flow meter, visual monitoring, and/or collect data from others</li> </ul> </li> <li>➤ Flow rate/quantity captured               <ul style="list-style-type: none"> <li>▪ Flow meter and/or visual monitoring</li> </ul> </li> <li>➤ Assessment of recycled water capture versus stormwater captured (unless project exclusively captures recycled water)</li> </ul>
<b>Flood Management</b>	
Runoff rate reduction	<ul style="list-style-type: none"> <li>➤ Model existing and proposed conditions hydrology and hydraulics and compare results</li> <li>➤ Prepare Letter of Map Revision (LOMR) (if applicable)</li> </ul>

Benefit	Design Elements/Analysis Options to Verify Performance
Runoff volume reduction	<ul style="list-style-type: none"> <li>➤ Visual flow monitoring</li> <li>➤ Flow meter(s)/stream gage(s)</li> <li>➤ Hydrologic modeling with collected rainfall data</li> <li>➤ Infiltration testing to support calculations</li> </ul>
Flood elevation reduction	<ul style="list-style-type: none"> <li>➤ Model existing and proposed conditions hydrology and hydraulics and compare results</li> <li>➤ Prepare LOMR (if applicable)</li> </ul>
Removal of parcels/structures from the 100-year floodplain	<ul style="list-style-type: none"> <li>➤ Model existing and proposed conditions hydrology and hydraulics and compare results to identify change in floodplain limits</li> <li>➤ Identify structures/parcels removed</li> <li>➤ Prepare LOMR (if applicable)</li> </ul>
Property value saved	<ul style="list-style-type: none"> <li>➤ Model existing and proposed conditions hydrology and hydraulics and compare results to identify properties saved</li> <li>➤ Update current market prices for properties removed from the floodplain to quantify property value saved</li> </ul>
<b>Environmental</b>	
Wetlands enhancement/creation	<ul style="list-style-type: none"> <li>➤ Measure area based on design plans/implementation</li> <li>➤ Visual monitoring/photo documentation of enhancement</li> </ul>
Riparian area enhancement	<ul style="list-style-type: none"> <li>➤ Measure area based on design plans/implementation</li> <li>➤ Visual monitoring/photo documentation of enhancement</li> </ul>
Streambed restoration	<ul style="list-style-type: none"> <li>➤ Measure length based on design plans/implementation</li> <li>➤ Visual monitoring/photo documentation of restored streambed</li> </ul>
Increased urban green space	<ul style="list-style-type: none"> <li>➤ Measure area based on design plans/implementation</li> <li>➤ Visual monitoring/photo documentation of urban green space type and how it is utilized by the community</li> </ul>
<b>Community</b>	
Provide employment opportunities	<ul style="list-style-type: none"> <li>➤ Data collection from all involved partners related to employment</li> <li>➤ Collection of timesheets during design, construction, and ongoing implementation (as applicable)</li> </ul>
Increase public education	<ul style="list-style-type: none"> <li>➤ Count number of interpretive signs installed</li> <li>➤ Photo documentation of signage and use</li> <li>➤ Public surveys</li> </ul>
Increase community involvement	<ul style="list-style-type: none"> <li>➤ Track number of community meetings held</li> <li>➤ Compile and analyze data/outcomes pertaining to each meeting (number of attendees, who attended, presentation, comments, action items, etc.)</li> </ul>
Walking paths, sidewalks, and bike trails enhancement/creation	<ul style="list-style-type: none"> <li>➤ Measure feature lengths based on design plans/implementation</li> <li>➤ Photo documentation of paths, sidewalks, and/or bike trails (implementation and ongoing use)</li> </ul>
Public use areas enhancement/creation	<ul style="list-style-type: none"> <li>➤ Measure public use areas based on design plans/implementation</li> <li>➤ Photo documentation (implementation and ongoing use)</li> </ul>

Project objectives, priorities, and goals may be re-evaluated once actual outcomes are quantified. At that time, the future implementation strategies may be modified, as necessary and feasible, to align with objectives, priorities, and goals, which may be adapting and changing. These re-evaluations and assessments would be part of the adaptive management process described under **Section 7.4**.

## 7.5.2 Monitoring

This section is broken into two separate monitoring discussions; the first one is regional monitoring that is conducted currently to assess water quality on a regional level, and the second is individual project monitoring that may be implemented following project implementation. Results from both of these monitoring programs may be used to assess performance of either a specific project or the overall program. Project specific monitoring may include information management systems, such as flow monitoring, which will also produce data that can be used to assess performance.

### 7.5.2.1 Regional Water Quality Monitoring

**Section 3.3** details the monitoring programs implemented in the last ten years along with the results of those monitoring efforts, specifically pertaining to:

- Core Monitoring
- BBLN TMDL Monitoring:
  - BBL Watershed-Wide Nutrient Monitoring
  - BBL In-Lake Monitoring
- MSAR Bacterial Indicator TMDL/WLA Monitoring

The SBC Areawide Stormwater Monitoring Programs are implemented to fulfill the MS4 Permit requirements. Implementation is currently ongoing and the monitoring programs will be modified as required by future MS4 Permits. The data collected through these monitoring efforts was used to quantify anticipated pollutant load reductions associated with project implementation. Through the adaptive management process, further detailed in **Section 7.4**, future monitoring data will be used to verify the characterization of water quality.

In early November of each year, the SBC Areawide Stormwater Annual Report is completed for the previous fiscal year, which includes a summary of the findings from the various monitoring programs. These reports are available for stakeholders to review and are reviewed by the SARWQCB. The transparent reporting process allows for data to be reviewed and gaps to be identified if they exist. Implementation of the SBC SARW SWRP does not require additional regional monitoring to be conducted. Monitoring may be conducted on a project by project basis, as further discussed below.

The findings related to regional water quality may provide insight as to how implemented programs are influencing the quality of water reaching downstream receiving waters. This assessment may be relevant to SWRP implementation in the future, once SWRP projects have been implemented. Findings from these ongoing monitoring efforts may influence future implementation and project prioritization (through the adaptive management process).

### 7.5.2.2 Project Specific Monitoring

Various types of monitoring may be implemented for individual projects. Monitoring may include flow monitoring (visual versus automatic) and/or water quality monitoring. Individual project monitoring is likely to occur when grant funds are received in which monitoring is required to assess performance. The monitoring scope and frequency will likely vary on a project by project basis. Individual project

monitoring data will allow the responsible party to assess project performance and compare expected and actual outcomes. This data may also be used to make projections on regional water quality improvements due to project implementation.

Monitoring data collected as part of a grant funded project will be summarized and reported to the grant manager. This data may also be shared with the public and/or stakeholders through a public input process or on the SWRP website. Sharing the monitoring data and findings with the granting agency, public, and/or stakeholders will promote a multi-faceted review process in which data gaps would be identified and an approach to fill those gaps could be developed as necessary.

### 7.5.3 Information Management

Information will be managed such that project operations and SWRP implementation may be adjusted based on performance data collected. How information will be stored and shared is further discussed under the following subsection, while this subsection focuses on how the information will be used to guide future operations and decisions. For instance, monitoring data (flow and/or water quality) may demonstrate that the originally projected targets are not being achieved. Some projects that involve controls (pumps, valves, etc.) may be modified to maximize the benefits achieved by a project; however, most of the projects identified in the SBC SARW SWRP cannot be easily modified once implemented. Potential project enhancements may be evaluated if critical goals are not achieved. Alternatively, if a project is exceeding the projected benefits at a high operational cost, then the project operations may be altered such that the projected benefits are achieved in a more economical way.

On a larger scale, regional monitoring data may be used to guide project/program implementation. For example, if several projects are implemented within a watershed tributary to a regional monitoring site and it is observed that water quality improves once the projects are implemented, then there may be opportunities to re-prioritize project implementation. In that case, projects within other watersheds that have water quality concerns may become a higher priority over those that would continue to improve the same watershed. Another example is that if one project helps relieve flooding in a given area, then another project to address that flooding may become a lesser priority. Projects may be re-prioritized following implementation of another project with similar benefits in the same subwatershed through the adaptive management process.

Project specific data collected through monitoring activities and/or information management systems will be managed by the responsible parties in accordance with any agreements they have in place with other involved parties (funding parties and/or project teaming partners). This data will be shared with the SBCFCD such that it may be considered when the SWRP is adaptively managed. Data collected from individual project implementation and regional monitoring will be compiled as part of the adaptive management process to determine how the program needs to be modified, likely through project re-prioritization.

The SWRP and identified projects will be submitted to and included in the latest version of the SAWPA OWOW Plan. Each project included in the SWRP and funded through an IRWM grant program will be required to provide data from approved project performance monitoring programs in formats consistent with the requirements of existing statewide databases such as the California Surface Water Ambient Monitoring Program (SWAMP), the California Environmental Data Exchange Network (CEDEN), the California Rapid Assessment Methods (CRAM) for wetland and riparian habitat conditions, and groundwater quality monitoring through the GeoTracker database, per the requirements of the OWOW

Plan. The OWOW Plan also encourages projects from the SWRP that are not funded through IRWM grant programs to upload data to the SAWPA Plan Performance Assessment Database. This database is reviewed by SAWPA staff, who will identify gaps in the data, correct erroneous data, and perform frequent backups on the database.

#### 7.5.4 Data Sharing

Performance data collected will be made available to interested parties through various platforms. Separate reporting documents will be prepared summarizing data collection and results based on the type of monitoring/data collection. For example, annual reports (and/or other regularly scheduled reports, i.e., quarterly, seasonal, etc.) are prepared for all of the regional monitoring efforts. Additionally, an Areawide Stormwater Program Annual Report is prepared, as referenced in **Section 7.5.2.1**, that summarizes the individual regional monitoring program reports. Project specific monitoring will likely include periodic reports for internal use and/or for other involved parties. Data will be assessed and reviewed through report preparation and also by the SBCFCD through the SWRP adaptive management process. Gaps will be filled as identified and appropriate.

Through these reports, the public and interested stakeholders have access to the information collected. Stakeholders and/or the public may request regional monitoring data from the SBCFCD, while some of the monitoring reports are posted directly online on their respective websites. Specific project data will be shared as appropriate by the responsible party upon consent from all teaming partners. The SBCFCD will also evaluate opportunities to post data on the SWRP website and send email blasts to stakeholders and the public whom have been involved in outreach efforts.

The data submitted to statewide databases or through the SAWPA Plan Performance Assessment Database will be available through web tools and data requests. These data sharing tools have been developed to give stakeholders the ability to perform watershed-wide analysis and may be used to influence the goals of future plan revisions.

### 7.6 Decision Support Tools

The projects identified in the SWRP undergo a detailed quantitative assessment to understand the multiple benefits the given project provides. The results from the quantitative analysis and prioritization become an important tool that will be used to make decisions, such as how and when to implement the project. The approach to perform the quantitative analysis and results are included in **Section 5** and **Section 6**. Analyses performed and documentation prepared/reviewed during project implementation will also support decision making.

Decision support tools will be used in the implementation phase of the SWRP to determine progress toward meeting the goals and objectives specified in this SWRP and to determine project priorities for future iterations of the SWRP. Decision support tools will be consistent with the requirements of the SAWPA OWOW Plan, as the SBC SARW SWRP will be submitted to and approved by the local IRWM group that manages the OWOW Plan (SAWPA). The OWOW Plan calls for project proponents to collect data and submit it through database systems that have been developed for statewide efforts, such as the CEDEN and SWAMP databases, or through the SAWPA Plan Performance Assessment Database.

Updates to the watershed goals and objectives will occur whenever the OWOW Plan is updated. The OWOW Plan has been updated several times to evolve with the changing objectives of the SARW, and will be updated in the future. The OWOW Plan is a planning document with a 20-year horizon, and the needs of the watershed will require reassessment of the goals and objectives at the end of that time horizon at the very latest.

## 8. Education, Outreach, and Public Participation

Stakeholders, including elected and appointed officials, municipal and county staff, watershed groups, local water agencies, and NGOs, along with the public (e.g., residents, businesses, homeowners associations, etc.) are crucial to the development of the SWRP. The diverse motivation and viewpoints of each audience has shaped the development of this plan. Information regarding the goals, projects, programs, and needs identified in the SWRP was shared and the public (including stakeholders) was provided opportunities to provide feedback on the development of this plan, while the TAC provided technical guidance. The various educational outreach/education efforts for stakeholders and the public are detailed within the following subsections. Some of these approaches may also be used during community engagement executed during project design and implementation.

### 8.1 Education

The SBC SARW SWRP development provided an opportunity to educate local stakeholders and the public. In addition to the stakeholder and public outreach events described in **Section 4** and the sections below, education was promoted through printed materials, a SWRP webpage, and social media, each of which are further described in the subsections below. Printed materials and the SWRP webpage will be available during project design and implementation. The responsible party will incorporate these resources into future public outreach efforts.

#### 8.1.1 Printed Materials

Printed materials were developed in an effort to educate stakeholders and the public. Printed materials included graphic posters displayed at outreach events, flyers, and informational handouts. The goals of the printed materials were to simply convey through illustrations and simplified text:

1. What is a SWRP?
2. Why is a SWRP necessary?
3. What types of solutions are included in the SBC SARW SWRP?

Multiple benefits provided through the SBC SARW SWRP implementation (water quality, water supply, flood management, environmental, and community benefits) were highlighted in printed material. The printed materials were also used to advertise stakeholder and public outreach events and solicit public review and comment of the SWRP. Printed materials were available to the public at the SBCFCD office, online, and outreach events. Some of the outreach material was printed in both English and Spanish. Copies of the printed materials available for distribution are included in **Attachment K**. Responsible parties will reference these printed materials during project design and implementation outreach efforts.

#### 8.1.2 SWRP Webpage

The SBCFCD developed a webpage on their website providing accessible information to stakeholders and the public on the SBC SARW SWRP development. The webpage features an overview of the SWRP and included announcements regarding the outreach events and public comment period (schedule, start, end,

etc.). The webpage includes links to download educational materials, as detailed in **Section 8.1.1**. During the public review period, the Draft SBC SARW SWRP was posted on this webpage with directions on how to provide comments and feedback. The webpage provides contact information, which allows interested parties to contact key personnel with any comments/questions. The webpage allows stakeholders and the public to easily find information specific to the SBC SARW SWRP development and support the outreach and education efforts described in this section. The webpage will continue to host these resources and be utilized by responsible parties to support individual project design and implementation outreach efforts.

### 8.1.3 Social Media

Social media was used to advertise for the public outreach event. In particular, Facebook was utilized to support education and outreach efforts. The SWRP webpage link was included in posts, encouraging the public to access and review additional information. The SBCFCD collaborated with the Areawide Program and utilized their Facebook page. The Areawide Program Facebook page has over 13,000 followers.

## 8.2 Stakeholder Outreach

The SBCFCD sought opportunities to partner with local stakeholders in the implementation of projects/programs that provide multiple benefits (combination of water quality, water supply, flood management, community, and environmental benefits). Potential participants were invited to the stakeholder event. Opportunities included elected and appointed officials, municipal and county staff, watershed groups, local water agencies, and NGOs, along with other stakeholders, as summarized in **Table 8-1**.

**Table 8-1 Participants Invited to the Stakeholder Outreach Events**

Stakeholder Category	Potential Stakeholders
Elected/appointed officials	Local officials
Local municipalities	Big Bear Lake, Chino, Chino Hills, Colton, Fontana, Grand Terrace, Highland, Loma Linda, Montclair, Ontario, Rancho Cucamonga, Redlands, Rialto, San Bernardino, Upland, and Yucaipa
Neighboring counties	Orange County (Department of Public Works and Flood Control District) Riverside County Flood Control and Water Conservation District
Non-governmental organizations	Council for Watershed Health Inland Empire Waterkeeper
Regulators	SARWQCB SWRCB USACE
SBC departments	Flood Control District Public Health (Mosquito and Vector Control) Public Works Regional Parks Special Districts
Water agencies and member agencies	BBMWD - BBMWC CBWCD and Chino Basin Watermaster

Stakeholder Category	Potential Stakeholders
Water agencies and member agencies (continued)	IEUA – Cities of Chino, Chino Hills, Ontario, and Upland, Crawford Canyon Municipal Water Company, Cucamonga Valley Water District, Fontana Water Company, Monte Vista Water District, and San Antonio Water Company
	SBVMWD – Cities of Colton, Loma Linda, Redlands, and Rialto, EVWD, Marygold Mutual Water Company, Muscoy Mutual Water Company, RHWC, SBMWD, SBVWCD, South Mesa Water Company, Terrace Water Company, WVWD, Western Heights Water Company, and YVWD
	Six Basins Watermaster
	WMWD
	Warren Valley Basin Watermaster
	Other – City of Big Bear Lake Water Department, Big Bear City Community Service District, Fallsvale Service Company, Lake Arrowhead Community Services District, Lytle Creek Springs Water Company, and Running Springs Water District
Watershed groups	MSAR TMDL Task Force SAWPA
Other agencies	Bureau of Reclamation California Department of Transportation California Department of Water Resources California State Parks School Districts United States Forest Service (Trails Unlimited)

SBCFCD contacted potential participant agencies/organizations to identify the personnel that would best serve as the stakeholder representatives. Contact information of the potential participants was obtained at other outreach events by the members of the TAC. Invitations were distributed by email. Invitations were distributed a few weeks in advance, such that a preliminary head count was determined prior to the event. A running list of agencies/organizations and personnel invited were tracked along with any input received.

The stakeholder outreach events were held in mid-August 2017. Due to the large area the SBC SARW covers, the two stakeholder outreach events were in similar formats and were hosted at two different locations, one on the east side of the SBC SARW and the other on the west to encourage stakeholders throughout the watershed to participate.

The main goals of the stakeholder events were:

- Collect information regarding challenges faced in relationship to water quality, water supply, flood management, environmental, and the community;
- Gather details pertaining to current projects and programs conceptualized, planned, and implemented;
- Solicit project/program ideas to be included in the SWRP; and
- Obtain data pertinent to quantifying project/program benefits, including, but not limited to, monitoring data, flood studies, project/program concepts, system operations, etc.

Questions, comments, and concerns were addressed at the end of the meeting. The format of the stakeholder event was facilitated as a conversation, while a presentation was used to support discussions. The event included a sign-in sheet, which was used to gather information on the participants, and send out updates on the SWRP to allow stakeholders to review the SWRP during the public review period. Hard copies of the agenda were distributed along with informational handouts. The information identified in the agenda was presented utilizing a PowerPoint presentation, while discussions were encouraged after the presentation. Comment cards were provided to attendees to leave feedback.

### 8.3 Public Outreach

A public outreach event was held on July 24, 2018, to advertise the release of the public draft SWRP, provide an overview of the plan, and encourage public review and comment. The public outreach event was a model for the type of public outreach that shall be conducted during the implementation phase of the plan. The public was informed of the meeting through printed advertisements, email blasts, and social media. More than two dozen stakeholders and members of the public attended the event hosted at the SBCFCD office.

The subsections below describe mechanisms, processes, and milestones that were used to facilitate public participation and communication during development and implementation of the plan, including strategies to engage particular communities in project design and implementation. Additional details pertaining to the outreach efforts are included in the SPOEEP, which is included in **Attachment E**. **Figure 8-1** below is a picture from the outreach event on July 24, 2018.

**Figure 8-1 Public Outreach Event**

#### 8.3.1 Strategies to Engage Disadvantaged Communities

A DAC is defined as a census geography (place, tract, or block group) where the annual median household income is less than 80 percent of the statewide annual median household income. Approximately 800,000 people lived in a DAC within the SBC SARW as of 2013, which was nearly half the entire population of the SBC SARW. Cities predominated by DACs tend to have limited resources and technical expertise, resulting in limited community support for multi-benefit project initiatives.

Engagement with DACs is an important aspect of project identification and implementation and is essential to develop support and understanding for the multi-benefit projects identified in the SWRP.

**Figure 8-2** illustrates DAC blocks/tracts in the SBC SARW and the SWRP-identified projects. There are 37 projects that will be physically located within the boundaries of a census tract or block designated as a DAC. The remaining projects not located in a DAC will still provide benefits to DACs in terms of water supply to groundwater used to service DACs, water quality improvements for downstream DACs, or recreation benefits for nearby DACs.

The public outreach event held on July 24, 2018, during the development of the SBC SARW SWRP included strategies to engage DACs. The strategies included the production of notices and handouts in multiple languages (English and Spanish). The outreach materials for the July 24, 2018, SWRP public outreach event are included in **Attachment K**. These strategies can be replicated for the outreach effort for each project in the SWRP. Additionally, the sign-in sheets used at the public outreach event collected zip code information in an effort to track engagement from DAC areas. It was found that all of the attendees live within a zip code that contains a DAC area.

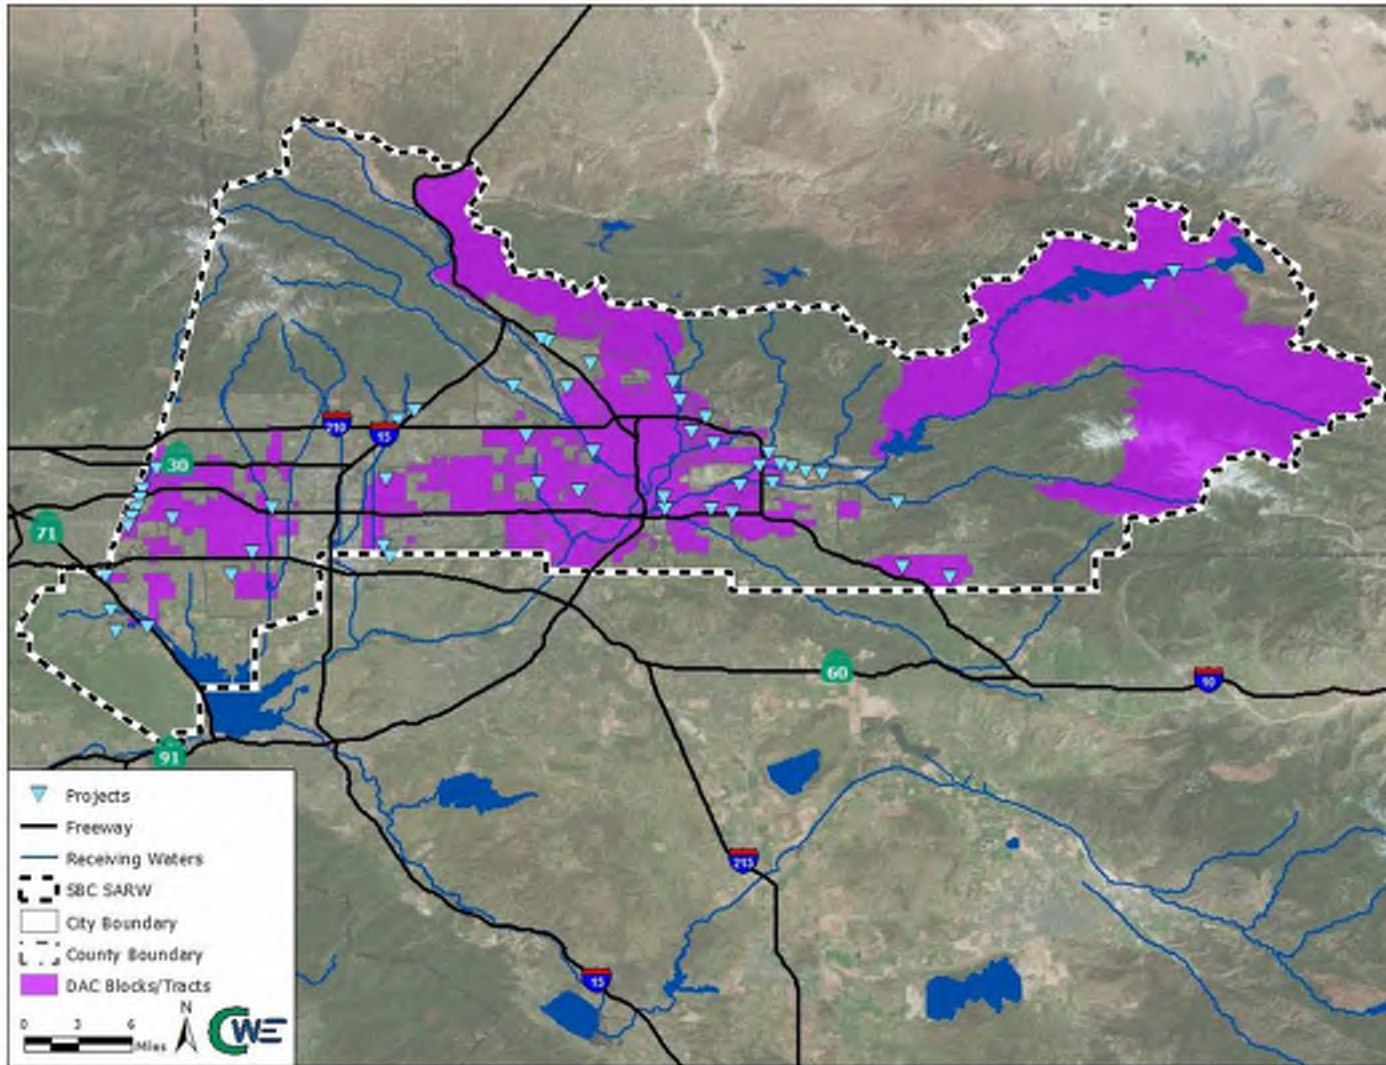

Figure 8-2 DAC Blocks/Tracts and SWRP Projects

### 8.3.2 Strategies to Address Environmental Injustice Needs and Issues

The USEPA defines environmental justice as “the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.” The goal of environmental justice will be achieved, according to the USEPA, only when everyone has the same degree of protection from environmental and health hazards, and when everyone enjoys equal access to the decision-making process.

Many of the strategies to encourage DAC participation are the same strategies to encourage equal access to the decision-making process, such as multilingual outreach efforts and dynamic approaches to community notification. Many projects in the SWRP help DACs achieve protection from environmental and health hazards. Because DACs are often located near industrial areas, DACs tend to experience stormwater or groundwater pollution more directly. Projects located within a DAC that improve water quality will help address environmental injustice caused by pollution, and there are many projects within the SWRP that achieve this goal. Additional details pertaining to the outreach approach in regards to engaging areas impacted by environmental injustice needs and issues are included in the SPOEEP (**Attachment E**).

### 8.3.3 Engagement during Project Design and Implementation

The public was engaged during the development of the SWRP and will also be engaged with during project design and implementation. **Section 8.1** describes how the educational components developed as part of this SWRP (printed materials, webpage, etc.) will be utilized to support outreach efforts conducted during design and implementation. Parties responsible for project implementation will also be responsible for conducting public outreach. Public outreach is typically performed by the responsible parties in the vicinity of the project being implemented. Agencies typically send informational flyers and host outreach events. Information regarding the SWRP and multiple benefits will be incorporated into these outreach efforts.

Responsible parties will evaluate opportunities to allow for public input on the project during the design process. This may include input on landscape materials, educational signage, etc. If public input is appropriate, then outreach will be conducted during the earlier phases of design, such as during preliminary design and also after 50% design is complete to share how input was incorporated. In instances where public input is not beneficial, educational outreach may be conducted as project design is being finalized and prior to construction in an effort to educate the public on the project, the multiple benefits it provides, and how it fits into the SWRP.

## TECHNICAL MEMORANDUM

To: Arlene Chun, PE  
Harold Zamora, PE

From: Katie Thomas, PE  
Ilana Ton

Date: June 9, 2017

Subject: **San Bernardino County Santa Ana River Watershed Stormwater Resource Plan: Annotated List of Data and Reports**

---

### 1. Introduction

California voters passed the Water Quality, Supply, and Infrastructure Improvement Act of 2014 (Proposition 1) during the general election of November 4, 2014. As a precursor to the passage of Proposition 1, the California Legislature adopted Senate Bill (SB) 985 entitled the Stormwater Resource Planning Act (SB 985), requiring the development of a Stormwater Resource Plan (SWRP) to be eligible to receive grants from a bond act approved after January 1, 2014, for stormwater and dry-weather runoff capture projects. A SWRP is a stormwater management document developed on a watershed basis that identifies a prioritized list of projects to address stormwater and dry-weather runoff, while also providing multiple benefits, such as water supply, flood management, and environmental and community enhancements. The State Water Resources Control Board (SWRCB) developed Stormwater Resource Plan Guidelines (2015) to help facilitate the proper preparation of SWRPs. Proposition 1 includes numerous categories of projects to be funded, one being the Stormwater Grant Program. Planning and implementation grants were included in the Stormwater Grant Program. Planning grants are to be used for developing SWRPs and/or conducting studies prior to project implementation while the implementation grants are used to fund projects identified in a SWRP or equivalent document.

The San Bernardino County Flood Control District (SBCFCD) was awarded planning grant funds through the Stormwater Grant Program for the development of the San Bernardino County Santa Ana River Watershed (SBC SARW) SWRP (Grant Agreement No. D1612627). The SBC SARW SWRP encompasses the upper limits of the Santa Ana River (SAR) Watershed that lies within the San Bernardino County jurisdictional boundary.

A variety of Technical Memorandums (TMs) will be prepared throughout the development of the SBC SARW SWRP consistent with the final Grant Agreement. The information included in the TMs will be incorporated into the SWRP. Additional information pertaining to the SBC SARW SWRP planning area is

included in the Planning Area Description TM. This TM describes references that will be reviewed, and utilized as appropriate, to support the development of the SBC SARW SWRP. References have been categorized as existing permits; planning documents; studies and reports; GeoTracker; Geographic Information Systems (GIS) data; Total Maximum Daily Loads (TMDLs); and additional data. The list of references summarized in this TM will continue to grow as the SWRP is being developed. In addition to the references identified, the SWRP Guidelines will be referenced throughout the development of the SWRP, as these guidelines serve as the basis for the SWRP being prepared. The SWRP Guidelines were developed consistent with Water Code section 1560 et seq. It is likely the Water Code will also be referenced as a guiding document to support the SWRP development.

## 2. National Pollutant Discharge Elimination System Permits

Section V.D of the SWRP Guidelines (2015) states that all SWRPs must be implemented in accordance with applicable National Pollutant Discharge Elimination System (NPDES) permits and waste discharge requirements. This section summarizes the Municipal Separate Storm Sewer System (MS4) Permit covering the SBC SARW area and the Report of Waste Discharge (ROWD) submitted for renewal of the MS4 Permit. In addition to these, other NPDES permit programs will be under consideration, such as the NPDES General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit), which are not as applicable to the development of the SWRP.

### 2.1 NPDES Municipal Separate Storm Sewer System Permit Order No R8-2010-0036

The NPDES Permit and Waste Discharge Requirements for the SBCFCD, the County of San Bernardino, and the Incorporated Cities of San Bernardino County within the Santa Ana Region, Order No. R8-2010-0036 (MS4 Permit) was adopted on January 29, 2010, and expired on January 29, 2015. The MS4 Permit was administratively extended until a new permit is issued. The MS4 Permit regulates the discharge of pollutants from anthropogenic sources from MS4s. Among many things, the MS4 Permit outlines the responsibilities of the Permittees, defines discharge prohibitions and receiving water limitations, and identifies programs that must be implemented in an effort to minimize pollutant discharges. The MS4 Permit details the granted legal authority and expectations of the Permittees which include inspections, enforcement, prohibition of waste discharge, and other actions necessary to uphold the MS4 Permit requirements. Although the expiration date has passed, the MS4 Permit must be abided by until a new MS4 Permit is adopted by the Santa Ana Regional Water Quality Control Board (RWQCB). The MS4 Permit applies to the SBC SARW area and the SWRP will be developed to be consistent with the requirements contained within it.

#### 2.1.1 Report of Waste Discharge: Application for Renewal of the Municipal NPDES Stormwater Permit (NPDES Permit No. CAS618036)

The ROWD was prepared as part of the MS4 Permit renewal application process, which will result in the development and adoption of a fifth-term MS4 Permit by the RWQCB in the near future. The ROWD identifies the accomplishments of the Areawide Stormwater Program (Program), which implements the

shared requirements set forth by the MS4 Permit, and develops priorities for the watershed area. The document presents evidence that the iterative Program Best Management Practice (BMP) approach works well in this area. The data and findings included within the ROWD will be referenced throughout the SWRP development and may be used to support approaches taken to address the SWRP Guidelines (2015).

## 3. Planning Documents

Various plans and programs have been developed and will be reviewed and utilized as appropriate in the development of the SWRP. Relevant documents include planning documents prepared by San Bernardino County, local agencies, groups of agencies, and regulatory entities. The following sections summarize integrated water resource plans, water quality and monitoring plans, stormwater planning documents developed for San Bernardino County, urban water management plans, and other planning documents.

### 3.1 Integrated Water Management Plans

#### 3.1.1 SAWPA: One Water, One Watershed Plan 2.0

The One Water, One Watershed (OWOW) Plan is the Santa Ana River Watershed Integrated Regional Water Management (IRWM) Plan (IRWMP) prepared by the Santa Ana Watershed Project Authority (SAWPA). This plan reflects a collaborative planning process that addresses various aspects of water resources in the region (watershed). This collaborative plan crosses multiple jurisdictional boundaries and includes a public input process. The plan includes an approach for identifying and prioritizing multi-benefit projects and program, presents innovative solutions, and addresses other water resource related issues. The current version of this plan is 2.0, while an update is currently in progress. The SBC SARW SWRP will be submitted to SAWPA for incorporation into the OWOW Plan. This document will be referenced for information pertaining to the watershed and projects identified in the plan that are located within the SBC SARW may be identified and prioritized in the SWRP.

#### 3.1.2 IEUA Integrated Water Resources Plan

The Integrated Water Resources Plan: Water Supply & Climate Change Impacts 2015 - 2040 (IRP) was prepared by the Inland Empire Utilities Agency (IEUA) in 2015. This document identifies a plan for ensuring reliable, cost-effective, and environmentally responsible water supplies for the next 25 years. The IRP goals are to integrate and update water resources planning documents in a comprehensive manner and develop an implementation strategy to improve near-term and long-term water resources management for the region. The IRP also evaluates new growth, development, and water demand patterns within the service area and assesses the water needs and supply source vulnerabilities under climate change. This document will provide information pertaining to water supply and demand within the IEUA service area, which will be included in the SWRP, as required by the Water Code. Potential projects identified within the document will also be reviewed to identify if there are opportunities to include them in the SWRP.

### 3.1.3 Upper Santa Ana River Watershed Integrated Regional Water Management Plan (SBVMWD)

San Bernardino Valley Municipal Water District (SBVMWD) prepared an IRWMP in 2015 to integrate planning among the agencies in the IRWM Region which begins upstream of Prado Dam and extends into the San Bernardino Mountains covering an area over 850 square miles. The IRWMP recognizes the priority of improving water supply reliability by implementing local supply projects given that imported water is increasingly viewed as a less reliable supply. The plan includes a water budget, goals and objectives, water management strategies, projects identified to help meet the region's objectives, and an implementation plan for doing so. The goals and objectives identified in this IRWMP will be reviewed and the goals and objectives of the SWRP will be made consistent with these goals, as appropriate. Potential projects identified within the document will also be reviewed to identify if there are opportunities to include them in the SWRP.

### 3.1.4 Updated Integrated Regional Water Management Plan (WMWD)

Western Municipal Water District (WMWD) prepared an Updated Integrated Regional Water Management Plan in 2015 covering their service area, which is located in Riverside County, adjacent to the SBC SARW area. The update addresses long range water quantity, quality, and environmental planning needs within the service area. This document identifies and evaluates water management strategies; addresses local and regional water quality, environmental, and disadvantaged community issues; discusses other regional planning efforts; and compiles an estimate of water demands by member agencies. Although WMWD's service area does not cover any portion of the SBC SARW area, a portion of the water served by WMWD is pumped from a groundwater aquifer that extends into San Bernardino County; therefore, actions taken over the groundwater aquifer may impact WMWD. This plan will be reviewed to determine if information presented within it is applicable to the SBC SARW SWRP. Projects identified in the IRWMP will be evaluated for inclusion in the SWRP.

## 3.2 Water Quality and Monitoring Plans

### 3.2.1 Basin Plan

The Water Quality Control Plan for the Santa Ana River Basin (Basin Plan) is the basis for the RWQCB's regulatory program for controlling water quality. The Basin Plan includes a collection of water quality goals, descriptions of water quality conditions, and discussions of solutions. The Basin Plan establishes water quality standards for ground and surface waters of the region. The Basin Plan contains information on policies, beneficial uses of the waters of the Santa Ana Region, monitoring programs, and other miscellaneous topics in regards to water quality management. The SWRP will identify water bodies within the SBC SARW area, along with their beneficial uses. Water quality data will be analyzed to determine the pollutant priorities within each water body. The Basin Plan will serve as an important reference for classifying water bodies and determining priorities.

### 3.2.2 Big Bear Lake Watershed-Wide Nutrient Monitoring Plan

The Big Bear Lake Watershed-Wide Nutrient Monitoring Plan was submitted by the Big Bear Lake TMDL Task Force (TMDL Task Force) with the intent to: review and update the Big Bear Lake Nutrient TMDL; determine the sources of nutrients; develop TMDLs for wet and moderate years hydrologic conditions; and determine compliance with the Big Bear Lake Dry Nutrient TMDL, including Waste Load Allocations (WLAs) and Load Allocations (LAs). Similar to the Santa Ana River Watershed Bacteria Monitoring Plan described below in **Section 3.2.6**, monitoring results associated with the implementation of this monitoring program will be utilized in the SWRP to identify water quality priorities and assess the need for projects at key locations within the SBC SARW. Additionally, this monitoring program will be assessed to determine if continued implementation will support the goals and adaptive management of the SWRP.

### 3.2.3 Comprehensive Bacteria Reduction Plan

The Comprehensive Bacteria Reduction Plan (CBRP) was prepared in response to the MS4 Permit. The CBRP is a long-term plan designed to achieve compliance with dry-weather condition WLAs for bacterial indicators established by the Middle Santa Ana River (MSAR) Bacterial Indicator TMDL as well as a monitoring program to track progress towards compliance. The CBRP will be referenced for information regarding the MSAR Bacterial Indicator TMDL, such as requirements, and implementation actions (projects and programs).

### 3.2.4 Hydromodification Management and Monitoring Plan

A Hydromodification Management and Monitoring Plan for the Santa Ana River Watershed Region, within the County of San Bernardino, was developed to fulfill the requirements of Section XI.B.3.b.ii of the MS4 Permit. The Plan evaluates hydromodification impacts for drainage channels deemed most susceptible to degradation, identifies sites to be monitored (including assessment methodology and required follow-up actions based on results), and identifies monitoring sites that may be used to evaluate the effectiveness of stormwater BMPs. This document will be referenced during the project selection process. Areas susceptible to hydromodification will be identified and projects may be proposed to mitigate concerns. Additionally, this plan will be reviewed to verify projects proposed in the SWRP will not worsen impacts associated with hydromodification.

### 3.2.5 Integrated Watershed Monitoring Program

The Integrated Watershed Monitoring Program (IWMP) was prepared in response to the MS4 Permit. The objective of the IWMP is to provide data to support the development of an effective watershed and key environmental resources management program that focuses resources on the priority pollutants of concern. The IWMP includes the following monitoring programs: core; illegal discharge/illicit connection; hydromodification; source identification and special studies; and regional watershed. Monitoring results associated with the implementation of this monitoring program will be utilized in the SWRP to identify water quality priorities and assess the need for projects at key locations within the SBC SARW. Additionally, this monitoring program will be assessed to determine if continued implementation will support the goals and adaptive management of the SWRP.

### 3.2.6 Santa Ana River Watershed Bacteria Monitoring Plan

The Santa Ana River Watershed Bacteria Monitoring Plan establishes the requirements for bacteria sampling to support the following objectives: fulfill the monitoring and surveillance requirements of the 2012 adopted Basin Plan Amendment to Revise Recreation Standards for Inland Freshwaters in the Santa Ana Region; conduct sampling to support implementation of the MSAR Bacterial Indicator TMDL; and support any additional bacterial indicator monitoring that may be conducted in the watershed to support regional regulatory activities or requirements. Monitoring results associated with the implementation of this monitoring program will be utilized in the SWRP to identify water quality priorities and assess the need for projects at key locations within the SBC SARW. Additionally, this monitoring program will be assessed to determine if continued implementation will support the goals and adaptive management of the SWRP.

### 3.2.7 Water Quality Monitoring Data

The existing water quality monitoring data from the monitoring programs described above will be utilized to establish the current baseline water quality conditions within the SBC SARW. The monitoring data will be compiled and compared to water quality objectives (WQOs) to identify Water Body-Pollutant Combinations (WBPC). Projects and programs identified in the SWRP will aim to address the WBPCs identified.

## 3.3 San Bernardino County Stormwater Planning

### 3.3.1 San Bernardino County Watershed Action Plan

In response to the MS4 Permit, a Watershed Action Plan (WAP) was developed for San Bernardino County in two phases. A hydromodification assessment was provided within the WAP to examine the thresholds for determining whether a creek is subject to hydromodification impacts due to future development. References were made to the System-Wide Evaluation Retrofit Opportunities TM and an Evaluation of Retrofit Sites for Water Quality Improvements, which is an extension to the TM. The TM identifies opportunities to retrofit existing stormwater conveyance systems, parks, and other recreational areas with water quality protection measures and includes recommendations for specific retrofit studies that incorporate opportunities for addressing applicable TMDLs. The evaluation explores the availability and applicability of the identified projects to a specific water quality concern. The document also includes a cost-benefit analysis of each potential retrofit site in the context of the water quality improvement needs of the subwatershed and watershed. The methodology used to identify projects and quantify benefits will be reviewed and referenced as appropriate in the SWRP.

### 3.3.2 Technical Guidance Document for Water Quality Management Plans

The Technical Guidance Document (TGD) for Water Quality Management Plans (WQMPs) was prepared in response to the MS4 Permit and describes requirements for new development and significant redevelopment projects to incorporate Low Impact Development (LID) BMPs to the maximum extent practicable. This document provides guidance for incorporation of site design/LID, source control, and treatment control BMPs. This document also addresses Hydrologic Conditions of Concern (HCOC)

mitigation measures necessary for specific new and redevelopment sites. The methodology for sizing LID BMPs along with design specifications will be referenced within the SWRP when identifying similar types of stormwater BMP projects, such that the approach and specifications are consistent with this approved and implemented guidance document.

### 3.3.3 Municipal Stormwater Management Plan

This Municipal Stormwater Management Plan (MSWMP) is an interim umbrella document that presents the overall MS4 Permit implementation approach as managed by the San Bernardino County Areawide Stormwater Program. The MSWMP is developed to delineate the following Areawide Programs: program management; illegal discharges; industrial/commercial sources; new development and redevelopment; public agency activities; residential program activities; public information and participation; program evaluation; and monitoring. The MSWMP will be referenced to verify the SWRP is consistent with the currently implemented stormwater program.

## 3.4 Urban Water Management Plans

### 3.4.1 IEUA and WFA Urban Water Management Plan

The 2015 Urban Water Management Plan (UWMP) is an update to the IEUA and Water Facilities Authority's (WFA) 2010 UWMP. IEUA provides services for the southwestern section of San Bernardino County in the SARW which also encompasses the WFA's service area of 135 square miles within the upper SARW. This UWMP lays out the region's plan for ensuring reliable, cost-effective, and environmentally responsible water supplies for the next 25 years. This document includes information about water demand, water supply, and supply reliability assessment in the IEUA service region. The IEUA and WFA UWMP will be referenced during the development of the SWRP for information regarding water supply and demand and potential projects that may be included in the SWRP.

### 3.4.2 San Bernardino Valley Regional Urban Water Management Plan

The SBVMWD prepared the San Bernardino Valley Regional Urban Water Management Plan (UWMP) in 2015 and updated it in 2016. The SBVMWD service area includes nine additional water agencies, which are served by SBVMWD. The UWMP provides a summary of the anticipated supplies and demands for the years of 2015 through 2040. This document includes 16 sections and is over 1,100 pages. The sections include, but are not limited to, regional water sources, regional water use, contingency planning, future goals, and recommended projects. The SBVMWD UWMP will be referenced during the development of the SWRP for information regarding water supply and demand. Potential projects identified within the document will also be reviewed to identify if there are opportunities to include them in the SWRP.

## 3.5 Other Planning Documents

### 3.5.1 Chino Basin Stormwater Resources Plan Functional Equivalency Document

The objective of the Chino Basin Stormwater Resources Plan Functional Equivalency Document is to demonstrate that the accumulation of existing stormwater and dry-weather flow management programs and their implementation agreements in the Chino Basin are functionally equivalent to a SWRP. The IEUA, Chino Basin Watermaster, Chino Basin Water Conservation District (CBWCD), SBCFCD, and the region's cities and water districts have worked together since 2000 to implement regional programs within the Chino Groundwater Basin to increase groundwater recharge by using stormwater and dry-weather runoff. This collaboration has resulted in the development of recharge master plans; the construction, operation, maintenance, and monitoring of new recharge project facilities; periodic reviews of these recharge projects' performance; and periodic updates to recharge master plans. This document references a variety of other documents that together satisfy the SWRP Self-Certification Checklist, making projects referenced in these documents eligible for Proposition 1 implementation grant funding. This document, and the documents referenced within it, will be reviewed throughout the development of the SWRP development. Projects identified in this plan may also be included in the SBC SARW SWRP as appropriate.

### 3.5.2 Recharge Master Plan Update

The Chino Basin Watermaster and IEUA prepared a Recharge Master Plan Update (RMPU) in 2010 that was amended in 2013. The RMPU was prepared in response to a court order and includes a discussion on safe yield, review of water supply plans, description of existing stormwater recharge projects, assessment of stormwater recharge opportunities, evaluation of supplemental water recharge opportunities, and identifies future recharge plans. The 2013 amendment: addresses the changes since the 2010 RMPU and impacts of the revised groundwater production and replenishment projections; maintains an inventory of existing recharge facilities and their capabilities; utilizes monitoring, reporting, and accounting practices to estimate long-term average annual net stormwater recharge; and organizes recharge improvement projects and how to evaluate, rank, and apply the projects. The RMPU and amendment will be reviewed during the development of the SWRP to identify existing initiatives (projects and programs) that may be applicable to the SWRP. Potential projects identified within the documents will also be reviewed to identify if there are opportunities to include them in the SWRP.

### 3.5.3 Master Plans of Drainage

Master Plans of Drainage (MPD) were created to evaluate the existing drainage systems and recommend improvements and new facilities in an area based on localized drainage issues. MPDs are often developed based on projected future land uses in an undeveloped area and identify locations where storm drain facilities will be necessary. They address the current and future drainage needs of a city or area. SBCFCD has developed area specific MPDs covering developed portions of their jurisdiction (County unincorporated areas), some of which are available online and others available at their office. Additionally, some cities within the SBC SARW area have developed an MPD inclusive of their current and planned storm drain system. MPDs will be referenced as needed to verify storm drain locations and may

be used as a tool for identifying potential projects, as planned facilities (new and/or improved) may be incorporated into projects identified and prioritized in the SWRP.

### 3.5.4 Comprehensive Storm Drain Plans

Comprehensive Storm Drain Plans (CSDPs) are similar to MPDs, as they evaluate existing drainage systems, identify deficiencies, and recommend improvements based on localized drainage issues. The main difference between CSDPs and MPDs is that CSDPs do not plan for future facilities in undeveloped areas; rather, they may identify future facilities needed to mitigate existing developed areas. Various CSDPs were developed by the SBCFCD and are available at their office. Similar to MPDs, CSPDs will be referenced as needed to verify storm drain locations and may be used as a tool for identifying potential projects, as planned facilities (new and/or improved) may be incorporated into projects identified and prioritized in the SWRP.

## 4. Studies and Reports

Information and findings from various studies and reports will be reviewed and referenced in the development of the SWRP as appropriate.

### 4.1 Annual Water Use Reports

IEUA monitors and compiles water use data from each of its retail agencies to track overall water demands and sources of supply. Each fiscal year, this data is compiled into an Annual Water Use Report. Data includes monthly water use (by member agency and source of supply), a five-year history of water use, and retail agency water usage as a percentage of the total water used in the service area. These reports will be reviewed for information pertaining to water use within the IEUA service area, as this information is required in the SWRP based on the SWRP Guidelines.

### 4.2 FEMA Flood Insurance Study and Flood Insurance Rate Maps

The Federal Emergency Management Agency (FEMA) prepared a Flood Insurance Study (FIS) for San Bernardino County, California and Incorporated Areas. This study revises and updates information on the existence and severity of flood hazards in the geographic area of San Bernardino County. Flood risk data that is used to establish actuarial flood insurance rates and assist the community in its efforts to promote sound floodplain management is summarized in the FIS. The FIS includes flow rate information, cross section data, and narrative descriptions of areas that have been assessed for flooding potential. In addition to the FIS, Flood Insurance Rate Maps (FIRMs) are prepared, which illustrate the extent of modeled floodplains. These maps are available through the FEMA website as image files and GIS shapefiles. The FIS and FIRMs will be reviewed to identify areas susceptible to flooding. This information may be used to identify and prioritize projects in the SWRP.

### 4.3 Preliminary Data Summary of Urban Stormwater Best Management Practices

The Preliminary Data Summary of Urban Stormwater Best Management Practices was prepared by the United States Environmental Protection Agency (USEPA) and includes information on the effects of urban land use as a contributor to acidity and nutrients in stormwater. Additionally, this document makes the case for the atmospheric deposition of nutrients and metals. This report summarizes information and data regarding the effectiveness of BMPs at controlling and reducing pollutants in urban stormwater, expected costs, and environmental benefits. This report describes how urban stormwater runoff is a source of pollutants causing water quality impairments, what those pollutants are, and where they originate from. This information will be utilized throughout the development of the SWRP to identify activities generating or contributing to the contamination of stormwater runoff. BMP design standards will also be reviewed and referenced as appropriate.

### 4.4 Use Attainability Analysis Cucamonga Creek Reach 1

A Use Attainability Analysis for Cucamonga Creek Reach 1 was prepared in 2013 by the RWQCB. This document explores the possibility of recovering the beneficial uses of Cucamonga Creek. The Use Attainability Analysis describes Reach 1 of Cucamonga Creek in detail, provides information regarding the existing beneficial uses, summarizes the factors that impact the beneficial uses, and identify future uses and the impact of those uses. Additionally, the current characteristics of the impaired creek and potential sources of pollution are discussed along with water quality monitoring data. Information presented in the Use Attainability Analysis will be reviewed and incorporated into the SWRP as appropriate. It is anticipated that the water body characterization and discussion of pollutant sources will be important to the development of the SWRP, specifically relating to the water quality prioritization and identification of potential pollutant sources.

## 5. GeoTracker

“GeoTracker” is the SWRCB’s online database management system to track and archive compliance data from discharges or spills of waste or unauthorized releases of hazardous material from underground storage tanks. A map is produced with a list of sites that impact, or had/have a potential to impact, groundwater quality in California. Also, GeoTracker contains records for various unregulated projects, as well as permitted facilities such as irrigated lands, oil and gas refineries, and other related sites. Information pertaining to both open and closed cases are available through GeoTracker. GeoTracker will be utilized as part of the project evaluation and prioritization phase of the SWRP development to identify if a project that involves infiltration will negatively impact groundwater supply due to existing contamination.

## 6. Geographic Information System Data

GIS software is designed to capture, store, manipulate, analyze, manage, and present spatial data. There are various sources of GIS data available within the SBC SARW area that will be referenced and utilized throughout the SWRP development. GIS data gathered may be used for analysis and/or creating

figures. Data from the County of San Bernardino's Geographic Information Management System will be utilized to support the development of the SWRP. Data taken from this database includes county boundary, land use, jurisdictional boundaries, and subwatershed boundaries. Data was also pulled from other governmental GIS databases. The following GIS data will be reviewed from various sources and incorporated as appropriate: floodplains, groundwater basins, impairments, soil conditions, storm drains, topography, water bodies, etc. Some examples of sources other than San Bernardino County include, but are not limited to, FEMA, Department of Water Resources (DWR), SAWPA, United States Geological Survey (USGS), and more.

## 7. Total Maximum Daily Load

TMDL requirements and supporting technical documents will be utilized during the development of the SWRP, including, but not limited to, Basin Plan Amendments (BPAs) and TMDL Staff Reports.

### 7.1 Big Bear Lake Nutrient TMDL

The BPA for the Big Bear Lake Nutrient TMDL includes background information regarding phosphorous, the principle nutrient causing the impairment, sources, and numeric targets (to be applied in all hydrologic conditions) for total phosphorus and response numeric targets for chlorophyll *a*, macrophyte coverage, and percentage of nuisance aquatic vascular plant species. The response numeric targets provide a method of tracking improvements to water quality as a result of reduced loading of phosphorus. The BPA specifies WLAs and LAs for total phosphorus for Big Bear Lake that applies to Dry Hydrologic Conditions. The BPA also specifies an implementation plan for nutrient reduction that includes compliance schedules for the numeric targets, WLAs, and LAs. The BPA outlines requirements associated with a monitoring program, which has been incorporated into the Big Bear Lake Watershed-Wide Nutrient Monitoring Program, as described in **Section 3.2.2**, which is used to track progress toward compliance. In addition to the BPA, a Staff Report is available, which provides additional details regarding the findings presented in the BPA. These documents will be referenced throughout the development of the SWRP, as the SWRP will consider objectives and schedules established by TMDLs. Additionally, projects and programs will be made consistent to TMDL documents.

### 7.2 Big Bear Lake and Rathbun Creek Draft Sedimentation/Siltation TMDLs Technical Staff Report

The Staff Report on the Sediment TMDL for Big Bear Lake and Rathbun Creek was prepared in 2005 to support the development of a TMDL. The Staff Report was created to assess the sources of sedimentation and siltation impairments in Big Bear Lake and Rathbun Creek. The Staff Report provides information on the land uses tributary to both Big Bear Lake and Rathbun Creek. References are made to weathering, mass-wasting, and watershed erosion processes to explain the impairments. Additionally, a link between sedimentation and nutrient impairment is made. A BPA/TMDL was never finalized and approved for Big Bear Lake and Rathbun Creek for sedimentation/siltation; however, this report will be reviewed for information regarding the source assessment conducted, as this information may be applicable to the SWRP.

### 7.3 Big Bear Lake Technical Support Document for Mercury TMDL

The Big Bear Lake Technical Support Document for Mercury TMDL was prepared in 2008 for the SWRCB and USEPA. This document describes the possible sources of mercury loading into Big Bear Lake and the techniques used to quantify loads from each source. Local and regional monitoring data coupled with model output for Big Bear Lake Watershed were used to estimate loading from wet and dry atmospheric deposition and watershed sources (water column and sediment bound). The Technical Report finds that the MS4 was not a significant source of mercury in the lake. This document will be reviewed and referenced as appropriate throughout the development of the SWRP, specifically in regards to the water quality evaluation and source assessment. A BPA/TMDL was never finalized and approved for Big Bear Lake for mercury; however, this report will be reviewed for information regarding the source assessment conducted, as this information may be applicable to the SWRP.

### 7.4 Middle Santa Ana River Watershed Bacterial Indicator TMDL

The BPA for the MSAR Bacterial Indicator TMDL includes background information regarding the fecal coliform impairment, potential sources, and numeric targets to be achieved in the MSAR. The BPA also includes the USEPA requirement of the states to evaluate and incorporate *Escherichia coli* (*E. coli*) as water quality standards based on its "Ambient Water Quality Criteria for Bacteria - 1986." The BPA specifies alternative numeric targets for *E. coli* to be achieved in the MSAR. The amendment specifies Wet and Dry Season TMDLs, WLAs for point sources, and LAs for fecal coliform and *E. coli*. Included in the amendment is an implementation plan for bacterial reduction, which was incorporated into the CBRP, as described in **Section 3.2.3**. In addition to the BPA, a Staff Report is available, which provides additional details regarding the findings presented in the BPA. These documents will be referenced throughout the development of the SWRP, as the SWRP will consider objectives and schedules established by TMDLs. Additionally, projects and programs will be made consistent to TMDL documents.

## 8. Additional Data

In addition to the sources identified above, the following additional sources may be referenced as applicable throughout the development of the SWRP. It is anticipated that references in addition to those identified in this TM will be identified throughout the development of the SWRP.

- Clean Water Act Section 303(d) List
- Future MS4 Permits (if made available)
- Other applicable NPDES Permits
- San Bernardino County Areawide Stormwater Program Annual Reports
- Local Implementation Plans (LIPs)
- Applicable laws and ordinances
- Planning documents prepared by local agencies and Non-Governmental Organizations (NGOs)
- Groundwater monitoring data

## Acronyms

BBMWD	Big Bear Municipal Water District
DAC	Disadvantaged Community
District or SBCFCD	San Bernardino County Flood Control District
DWR	Department of Water Resources
IEUA	Inland Empire Utilities Agency
MHI	Median Household Income
NPDES	National Pollutant Discharge Elimination System
RCFCWCD	Riverside County Flood Control and Water Conservation District
RWQCB	Regional Water Quality Control Board (Santa Ana)
SAWPA	Santa Ana Watershed Project Authority
SB	Senate Bill
SBC SARW	San Bernardino County Santa Ana River Watershed
SBVMWD	San Bernardino Valley Municipal Water District
SPOEEP	Stakeholder and Public Outreach, Education, and Engagement Plan
SWRCB	State Water Resources Control Board
SWRP	Stormwater Resource Plan
TAC	Technical Advisory Committee
TMDL	Total Maximum Daily Load
WMWD	Western Municipal Water District

# 1. Introduction

California voters passed the Water Quality, Supply, and Infrastructure Improvement Act of 2014 (Proposition 1) during the general election of November 4, 2014. As a precursor to the passage of Proposition 1, the California Legislature adopted Senate Bill (SB) 985 entitled the Stormwater Resource Planning Act (SB 985), requiring the development of a Stormwater Resource Plan (SWRP) to be eligible to receive grants from a bond act approved after January 1, 2014, for stormwater and dry-weather runoff capture projects. A SWRP is a stormwater management document developed on a watershed basis that identifies a prioritized list of projects to address stormwater and dry-weather runoff, while also providing multiple benefits, such as water supply, flood management, and environmental and community enhancements. The State Water Resources Control Board (SWRCB) developed Stormwater Resource Plan Guidelines (2015) to help facilitate the proper preparation of SWRPs or equivalent documents. Proposition 1 includes numerous categories of projects to be funded, one being the Stormwater Grant Program. Planning and implementation grants were included in the Stormwater Grant Program. Planning grants are to be used for developing SWRPs and/or conducting studies prior to project implementation while the implementation grants are used to fund projects identified in a SWRP or equivalent document.

The San Bernardino County Flood Control District (SBCFCD or District) was awarded planning grant funds through the Stormwater Grant Program for the development of the San Bernardino County Santa Ana River Watershed (SBC SARW) SWRP (Grant Agreement No. D1612627). The SBC SARW SWRP encompasses the upper limits of the SARW that lies within the San Bernardino County jurisdictional boundary.

This Stakeholder and Public Outreach, Education, and Engagement Plan (SPOEEP) has been developed to support the outreach efforts that will be conducted throughout the SWRP development, consistent with the SWRP Guidelines (2015), applicable Water Code (Sections 10561-10573), and the Proposition 1 Grant Agreement. The Grant Agreement identifies the following tasks (Task 5) associated with stakeholder and public outreach, education, and participation:

- Provide a stakeholder outreach, education, and engagement plan and submit to the Grant Manager for review and approval.
- Conduct a minimum of two (2) stakeholder meetings and one (1) public outreach meeting for interested stakeholders over the course of the SWRP development. At a minimum, one outreach meeting shall include a request for stakeholders to propose multi-benefit stormwater management projects.
- Submit a summary of stakeholder outreach, education and public participation and collaboration activities including meeting agenda(s) and materials, meeting summaries, sign-in sheets, and photos in the associated quarterly progress report(s).

The Grant Agreement also discusses the development of a Technical Advisory Committee (TAC) which involves stakeholders (Task 2). The SPOEEP summarizes efforts associated with the TAC, as they relate to stakeholder outreach, while the tasks identified in the bulleted list above are the main focus.

## 1.1 SPOEEP Goals

The SPOEEP provides the scope of work for the stakeholder and public outreach and education that will be implemented throughout the SWRP development. The SPOEEP identifies how input, ideas, and information will be solicited and collected from stakeholders and the public focusing on multi-benefit projects that provide water quality, water supply, flood management, environmental, and community benefits. The SPOEEP also describes the efforts that will be made during the SWRP development to educate stakeholders and the public. The information collected through SPOEEP implementation will be considered, and incorporated as applicable, throughout the SWRP development.

A key goal of the SPOEEP is to outline the steps that will be taken to involve interested stakeholders and the public in the development and review of the SWRP. These efforts include reaching out to a broad range of stakeholders, including elected and appointed officials, municipal and county staff, watershed groups, local water agencies, and non-governmental organizations, along with the public (e.g., residents, businesses, homeowners associations, etc.). Each of these audiences has a slightly different point of view and motivation for participating in the SBC SARW SWRP development. Understanding the different points of view will allow the SWRP to be prepared in a way that benefits the community and encourages support during SWRP development and implementation.

It is important to understand the roles the stakeholders will play versus how the public will be involved. **Section 2** defines the different groups involved in these efforts and the sections of the SPOEEP clarify how the District will interact with the public versus the stakeholders. Additional outreach efforts are required with stakeholders, as they will provide technical information to support the SWRP development. The public will be involved in the SWRP in a different capacity, which is further detailed herein. The District will use the development of the SWRP as an educational opportunity for both the stakeholders and the public. Information regarding the goals, projects, programs, and needs identified in the SWRP will be shared and the public (including stakeholders) will be given an opportunity to provide feedback on the plan itself, while not being as involved in the technical aspects. Goals associated with each specific type of outreach/education effort are detailed within their appropriate sections.

## 1.2 SPOEEP Structure

The development of the SBC SARW SWRP provides an opportunity to collect regional data, promote discussion between agencies, and creates a platform for transparency concerning both the SWRP and future project/program implementation. The SPOEEP structure is as follows:

- **Section 2 – Definitions:** defines key terms such as “public,” “stakeholders,” and “TAC” to clarify how outreach, education, and engagement will be tailored to each group.
- **Section 3 – Stakeholder Involvement in TAC:** summarizes goals and strategies related with the stakeholder involvement in the TAC, which is separate from general stakeholder outreach, education, and engagement efforts.
- **Section 4 – Stakeholder Outreach:** describes who, what, when, why, and how relating to the two (2) stakeholder outreach events that will be conducted during SWRP development.
- **Section 5 – Public Outreach:** describes who, what, when, why, and how relating to the one (1) public outreach event that will be held during the SWRP development.

- **Section 6 – Education:** details the efforts that will be made in educating stakeholders and the public, such as print material, webpage, and social media.
- **Section 7 – Alignment with SWRP Guidelines:** summarizes how the stakeholder and public outreach, education, and engagement efforts meet the SWRP Guidelines and corresponding sections of the Water Code.

## 2. Definitions

This section defines key terms that will be used throughout the SPOEEP. The terms defined below have similar definitions and understanding the differences will provide clarity regarding the outreach and education efforts that will be made during the SBC SARW SWRP development.

**Public:** Ordinary people in general; the community. Examples include residents, businesses, homeowners associations, etc.

**Stakeholders:** A person, group, or organization that has interest or concern in an organization and/or project (such as the SBC SARW SWRP). Stakeholders can affect or be affected by the organization's and/or project's actions, objectives, and policies. Examples include, and are not limited to, elected and appointed officials, municipal and county staff, watershed groups, local water agencies, and non-governmental organizations.

**TAC Stakeholders:** Key stakeholders (see definition above) that have service areas that overlaps (at least in part) with the SBC SARW. These stakeholders work closely with the District and partnerships have been/are in place for projects/programs that have been and continue to be implemented.

### 3. Stakeholder Involvement in TAC

The SBC SARW SWRP TAC was formed to solicit expert advice and technical support throughout the SWRP development. In addition to the requirements identified in the Grant Agreement for stakeholder and public outreach (refer to **Section 1**), the Grant Agreement requires that the District:

1. Establish a TAC for the SWRP development that includes the SWRCB, Regional Water Quality Control Board (RWQCB), and other interested parties, such as municipalities, water suppliers, local agencies, non-governmental organizations, public utilities, and regulatory agencies. A list of TAC members, their roles and responsibilities, and affiliations must be submitted to the Grant Manager.
2. Convene a kickoff meeting to develop the SWRP water management goals and objectives, formalize roles, and develop a schedule for future meetings. A summary of SWRP objectives, meeting schedule, and updates to the TAC participant list must be submitted to the Grant Manager.
3. Conduct a minimum of three (3) additional meetings and submit the agendas, meeting notes, sign-in sheets, and a list of current action items for each meeting to the Grant Manager.

Information pertaining to the TAC is presented in this SPOEEP to clarify how the effort being made to involve stakeholders in the TAC is separate from other stakeholder outreach efforts (detailed in **Section 4**). TAC member roles and responsibilities and the TAC schedule are presented in subsections below. Additional information required based on the Grant Agreement is submitted separately to the Grant Manager.

#### 3.1 Roles and Responsibilities

Key stakeholders were invited to serve on the TAC based on proximity to the SBC SARW, involvement in similar efforts (watershed planning, multi-benefit projects, etc.), and existing relationships/partnerships. It is important that the TAC is able to provide region-specific input and understands the current challenges faced in the SBC SARW. The District has agreements in place with the TAC stakeholders and anticipates future partnership opportunities will come out of the SWRP development. **Table 3-1** summarizes the key stakeholders invited to participate in the TAC and their role/responsibility.

**Table 3-1 TAC Roles and Responsibilities**

Agency	Status	Role/Responsibility
Bureau of Reclamation	Unable to Participate	Not applicable
Chino Basin Water Conservation District	Active	Guidance on water accounting and project selection
Inland Empire Utilities Agency (IEUA)	Active	Guidance on water supply, waste water, recycled water and joint use project selection
Riverside County Flood Control and Water Conservation District (RCFCWCD)	Invited, No Response	Not applicable
RWQCB	Active	Guidance on permit requirements and project selection

Agency	Status	Role/Responsibility
Santa Ana Watershed Project Authority (SAWPA)	Active	Guidance on regional water and project selection
San Bernardino County Department of Public Works, National Pollutant Discharge Elimination System (NPDES)	Active	TAC lead
San Bernardino County Flood Control District, Flood Planning	Active	Guidance on flood control and project selection
San Bernardino Valley Municipal Water District (SBVMWD)	Active	Guidance on water supply, groundwater recharge and project selection
Western Municipal Water District (WMWD)	Pending	Guidance on groundwater recharge in service area and project selection

### 3.2 Tentative Schedule

**Table 3-2** summarizes the TAC meeting schedule and meeting purpose, which includes the kickoff meeting and three additional meetings. At the time this SPOEEP was prepared, the kickoff meeting and one additional meeting had been held. The schedule and scope for the last two meetings are tentative and may change.

**Table 3-2 Tentative TAC Meeting Schedule and Purpose**

TAC Meeting	Schedule	Purpose
Kickoff Meeting	April 12, 2017	<ul style="list-style-type: none"> <li>➤ Present background/overview of SBC SARW SWRP</li> <li>➤ Define roles and responsibilities</li> <li>➤ Discuss water management goals and objectives</li> <li>➤ Outline TAC involvement and schedule</li> </ul>
Meeting #2	July 6, 2017	<ul style="list-style-type: none"> <li>➤ Examine quantifiable benefit goals and targets to be included in the SWRP</li> <li>➤ Review multi-benefit projects identified in other planning documents that may be included in the SBC SARW SWRP</li> <li>➤ Identify data needed for projects to quantify benefits</li> </ul>
Meeting #3	Late August 2017	<ul style="list-style-type: none"> <li>➤ Present/discuss results associated with benefit quantification for example projects</li> <li>➤ Collaborate on project concepts</li> <li>➤ Evaluate opportunities to enhance projects to provide additional benefits</li> </ul>
Meeting #4	December 2017	<ul style="list-style-type: none"> <li>➤ Walk through the Draft SBC SARW SWRP</li> <li>➤ Discuss structure and key sections</li> <li>➤ Solicit feedback, comments, questions, and suggestions</li> </ul>

## 4. Stakeholder Outreach

Two (2) stakeholder outreach events will be held during the development of the SBC SARW SWRP, consistent with the Grant Agreement requirements. The goals of the stakeholder outreach event are:

1. Collect information regarding challenges faced in relationship to water quality, water supply, flood management, environmental, and the community;
2. Gather details pertaining to current projects and programs conceptualized, planned, and implemented;
3. Solicit project/program ideas to be included in the SWRP; and
4. Obtain data pertinent to quantifying project/program benefits, including, but not limited to, monitoring data, flood studies, project/program concepts, system operations, etc.

The District will utilize the stakeholder events to solicit technical information and identify projects/programs that include partnerships with the District and/or are mutually beneficial. The stakeholder events will also promote education, as the District will share details pertaining to the SBC SARW SWRP, which will increase awareness and encourage support. It is important to include local stakeholders in the region throughout the SWRP development, as partnerships may be formed and local support will lead to a successful plan and projects/programs implementation.

### 4.1 Potential Participants

Potential participants in the stakeholder event will include the stakeholders participating in the TAC along with additional local stakeholders. Opportunities to include elected and appointed officials, municipal and county staff, watershed groups, local water agencies, and non-governmental organizations, along with other stakeholders, have been and will continue to be evaluated. The TAC will work together to compile lists of stakeholders that have participated in outreach efforts of similar scope/magnitude. **Table 4-1** identifies potential participants. This list will be further refined prior to the stakeholder outreach event.

**Table 4-1 Potential Participants for the Stakeholder Outreach Events**

Stakeholder Category	Potential Stakeholders
Elected/appointed officials	To be determined
Local municipalities	Big Bear Lake, Chino, Chino Hills, Colton, Fontana, Grand Terrace, Highland, Loma Linda, Montclair, Ontario, Rancho Cucamonga, Redlands, Rialto, San Bernardino, Upland, and Yucaipa
Neighboring counties	Orange County (Department of Public Works and Flood Control District) Riverside County (RCFCWCD)
Non-governmental organizations	Council for Watershed Health Inland Empire Waterkeeper
Regulators	RWQCB (Santa Ana) SWRCB United States Army Corps of Engineers

Stakeholder Category	Potential Stakeholders
SBC departments	Flood Control District Public Health (Mosquito and Vector Control) Public Works Regional Parks Special Districts
Water agencies and member agencies	Big Bear Municipal Water District (BBMWD) – Big Bear Municipal Water Company Chino Basin Water Conservation District/Watermaster IEUA – Cities of Chino, Chino Hills, Ontario, and Upland, Crawford Canyon Municipal Water Company, Cucamonga Valley Water District, Fontana Water Company, Monte Vista Water District, and San Antonio Water Company SBVMWD – Cities of Colton, Loma Linda, Redlands, and Rialto, East Valley Water District, Marygold Mutual Water Company, Muscoy Mutual Water Company, Riverside Highland Water Company, San Bernardino Municipal Water District, San Bernardino Valley Conservation District, South Mesa Water Company, Terrace Water Company, West Valley Water District, Western Heights Water Company, and Yucaipa Valley Water District Six Basins Watermaster WMWD Warren Valley Basin Watermaster Other – City of Big Bear Lake Water Department, Big Bear City Community Service District, Fallsvale Service Company, Lake Arrowhead Community Services District, Lytle Creek Springs Water Company, and Running Springs Water District
Watershed groups	Middle Santa Ana River Total Maximum Daily Load (TMDL) Task Force SAWPA
Other agencies	Bureau of Reclamation California Department of Transportation California State Parks Department of Water Resources (DWR) School Districts United States Forest Service (Trails Unlimited)

The District will contact potential participant agencies/organizations in an effort to identify the personnel that would best serve as the stakeholder representative. If these potential participant agencies have been involved in outreach efforts implemented by members of the TAC, then contact information obtained at those events will be utilized if possible. Invitations will be distributed by email, when possible, and mail. The District will evaluate opportunities to utilize Doodle Poll or a similar web application to collect information on availability. A running list of agencies/organizations and personnel invited will be tracked along with their responses.

## 4.2 Event Format

The main purpose of the stakeholder events will be to identify projects/programs for inclusion in the SWRP. The District will seek opportunities to partner with local stakeholders in the implementation of projects/programs that provide multiple benefits (combination of water quality, water supply, flood management, community, and environmental benefits). It is anticipated that the stakeholder outreach events will be no longer than 1.5 hours. The tentative agenda is provided below. Ample time will be set aside to answer questions and listen to comments and concerns. In contrast to the format of the public outreach event described in **Section 5.2**, the stakeholder event will be structured more like a conversation rather than a presentation, while a presentation will be used to support discussions.

1. Project background (Proposition 1)
2. Goals of stakeholder outreach
3. Goals of the SBC SARW SWRP
4. SWRP overview
5. Quantifiable benefits
  - a. Water quality
  - b. Water supply
  - c. Flood management
  - d. Environmental
  - e. Community
6. Potential projects
  - a. Project types
  - b. Partnerships
  - c. Data needs
7. Next steps
8. Questions and answers

Only one agenda is identified in this section, as the District will conduct two stakeholder events that focus on the same topic, as further detailed in **Section 4.3**. A sign-in sheet will be used to gather information on the participants, which will be used to send out updates on the SWRP, as it would be beneficial if the stakeholders reviewed the SWRP during the public review period. Hard copies of the agenda will be distributed along with informational handouts as determined to be helpful. The information identified in the agenda will be presented utilizing a PowerPoint presentation, while discussions will be encouraged. Comment cards will be available to encourage attendees to leave feedback.

## 4.3 Tentative Schedule

The stakeholder outreach events will be held in mid-August. Due to the large area the SBC SARW covers, the two stakeholder outreach events will be of a similar format and hosted at two different locations, one on the east side of the SBC SARW and the other on the west. This will encourage

stakeholders throughout the watershed to participate. It is anticipated that these events will be held during business hours and the locations will be further evaluated. The District will evaluate opportunities to utilize Doodle Poll or a similar web application to collect information on availability, which will provide useful information regarding the schedule of the stakeholder events. Invitations will be distributed a few weeks in advance, such that a preliminary head count can be determined prior to the event.

## 5. Public Outreach

One (1) public outreach event will be held during the SBC SARW SWRP development, as required in the Grant Agreement. The goals of the public outreach event are:

1. Educate the public (additional education information in **Section 6**);
2. Rally community support for the SBC SARW SWRP; and
3. Encourage the public to review the document and provide input.

It is important that the public is aware of the effort being made by the District to develop the SWRP and are in support of the development and implementation. The SWRP will be posted for public review and the public outreach event will serve as an advertisement and introduction. The public is more likely to review the SWRP and provide meaningful comments if they have a base understanding of the efforts made, SWRP development process, and contents. This section details how potential participants will be invited, event format, and schedule.

### 5.1 Potential Participants

The general public will be solicited for involvement in the public outreach event rather than specific audiences. Alternatively, the goal will be to advertise as much as possible for the outreach event in an effort to identify participants. Existing platforms will be used when possible, as mentioned below. Invitations for the public outreach event will be posted online on the District's website, distributed via email, and will be available in printed format at the District office.

The San Bernardino County Areawide Stormwater Program (Areawide Program) consists of the District, San Bernardino County, and 16 municipalities within the County, all of which are located within the SBC SARW SWRP. The Areawide Program has been implementing an outreach program for several years that pertains mostly to stormwater quality. Over the past few years, the Areawide Program has focused on collecting email addresses, which are used to share information related to the Areawide Program and associated events. The District will work with the Areawide Program to distribute invitations to the SWRP public outreach event to the community currently involved in outreach efforts implemented by the Areawide Program. This is a good audience to focus on, as they have some knowledge of stormwater quality and shown interest in the stormwater program.

The SBC SARW SWRP TAC will be solicited for similar types of mailing groups. Agencies involved in the TAC implementation projects and programs that include community outreach. The District will look for opportunities to leverage those existing relationships in an effort to encourage participation in the SBC SARW SWRP public outreach event. These email lists will be utilized, if available, to distribute the invitation.

In addition to email invites, invitations will be posted on Facebook. The District will post invitations on the San Bernardino County and San Bernardino County Department of Public Works Facebook pages. The District will also coordinate with the Areawide Program to post on their Facebook page. The SBC SARW SWRP TAC members will be consulted to determine if their agencies can post on their Facebook pages and/or they will be tagged in the original post in an effort to reach a larger audience. Opportunities to utilize other social media platforms, such as Twitter, will also be explored.

Print invitations will also be utilized. The invitation will be posted in local newspapers and printed versions will be available at the District office near other print materials. A website will be created that will allow potential participants to RSVP, such as Eventbrite or a similar platform. This will allow the District to have a general idea as to how many participants will attend the event. The sign-in sheet at the public outreach event will ask how each participant heard of the event. This will provide useful data that may be referenced for future public outreach events, such as those that may be conducted during the SWRP implementation.

## 5.2 Event Format

As described in the goals above, the event will be structured in a way that will educate attendees by providing general background information and details specific to the SBC SARW SWRP. It is anticipated that the public outreach event will be no longer than 1.5 hours. The tentative agenda is provided below. Ample time will be set aside to answer questions and listen to public comments and concerns.

1. Project background (Proposition 1)
2. Goals of public outreach
3. Goals of the SBC SARW SWRP
4. SWRP overview (aligns with SWRP structure)
  - a. Watershed identification
  - b. Water quality compliance
  - c. Organizations, coordination, and collaboration
  - d. Quantitative methods
  - e. Identification and prioritization of projects
  - f. Implementation strategy and schedule
  - g. Education, outreach, and public participation
5. SWRP public review
6. Next steps
7. Questions and answers

A sign-in sheet will be used to gather information on the participants, which will be used to send out reminders regarding the public review of the SWRP. Hard copies of the agenda will be distributed along with informational handouts as determined to be helpful throughout the SWRP development. The information identified in the agenda will be presented utilizing a PowerPoint presentation. Comment cards will be available to encourage attendees to leave feedback.

## 5.3 Tentative Schedule

The SWRP public outreach event will be held near the date the draft SWRP is posted for public review (before or just after it is posted). The draft SWRP will tentatively be posted for public review in early February 2018. This event will be used to encourage the public to review the SWRP and provide

feedback. It will also be used to rally public support of the SWRP, which is important, as support will encourage long-term success. The District will evaluate opportunities to hold the outreach event during the day or in the evening. Different locations will also be evaluated, as the SBC SARW covers a large area and it will be important to find a central location.

## 6. Education

The District sees the SBC SARW SWRP development as an opportunity to educate local stakeholders and the public. In addition to the stakeholder and public outreach events described in **Section 4** and **Section 5**, education will be promoted through printed materials, a SWRP webpage, and social media, each of which are further described in the subsections below.

### 6.1 Printed Materials

Printed materials will be developed in an effort to educate stakeholders and the public. As the SBC SARW SWRP development progresses, the contents of the printed materials will be further defined. Printed materials may include graphic posters, postcards, and/or brochures. The goals of the printed materials are to simply convey through illustrations and minimal text:

1. What is a SWRP?
2. Why is a SWRP necessary?
3. What types of solutions are included in the SBC SARW SWRP?

Printed material will highlight the multiple benefits that will be provided through the SBC SARW SWRP implementation (water quality, water supply, flood management, environmental, and community benefits). Printed materials will also be used to advertise the stakeholder and public outreach events and solicit public review and comment of the SWRP. Printed material will be available at the District's office and outreach events. The District will evaluate opportunities to provide educational material to educational institutes, which may be dependent on their involvement in the outreach events. In addition to printed material, the contents of these materials will be posted on the SWRP webpage and social media accounts, as described in **Section 6.2** and **Section 6.3**, respectively. The District will evaluate opportunities to prepare materials in both English and Spanish.

### 6.2 SWRP Webpage

The District will develop a webpage on their website that provides information on the SBC SARW SWRP development, consistent with the SWRP Guidelines, which state that SWRP information must be accessible to the stakeholders and public. The webpage will provide an overview of what the SWRP is and will include announcements as necessary. For example, announcements will be posted regarding the outreach events and public comment period (schedule, start, end, etc.). The webpage will include links to download educational materials, as detailed in **Section 6.1**. During the public review period, the Draft SBC SARW SWRP will be posted on this webpage and the ability to provide comments and feedback will be enabled. The webpage will provide contact information, which will allow interested parties to contact key personnel. The webpage will allow stakeholder and the public to easily find information specific to the SBC SARW SWRP development and support the outreach and education efforts described in this SPOEEP.

## 6.3 Social Media

Opportunities to utilize social media will be evaluated throughout the SBC SARW SWRP development. It is anticipated that, at a minimum, Facebook will be utilized to support education and outreach efforts. Facebook would be used to post educational materials, as detailed in **Section 6.1**, encourage local engagement and support, and advertise events (outreach and public review). The District will work with the Areawide Program to utilize their Facebook page, either through a direct post or by sharing a post made on the San Bernardino County Department of Public Works Facebook page. Working with the Areawide Program would be beneficial, as there is a large following currently and the followers are aware of stormwater issues and programs, thus represent a target audience.

The District will also encourage the TAC agencies/organizations to share posts related to the SBC SARW SWRP, or these agencies/organizations may be tagged in the posts. This will allow the posted materials to reach a larger audience. **Table 6-1** summarizes the current number of followers for the San Bernardino County Department of Public Works, Areawide Program, and TAC agencies/organizations (as of July 2017). The District will also evaluate opportunities to utilize other social media platforms, such as Twitter.

**Table 6-1 Summary of Facebook Pages and Number of Followers**

Facebook Page	Number of Followers
San Bernardino County Department of Public Works	608
Areawide Program	13,103
<b>TAC Agencies/Organizations</b>	
Chino Basin Water Conservation District	1,222
IEUA	404

## 7. Alignment with SWRP Guidelines

Section VI.F of the SWRP Guidelines identifies guidance related to education, outreach, and public participation based on the Water Code. This section clearly explains how the stakeholder and public outreach, education, and engagement implemented throughout the SBC SARW SWRP development are in alignment with the SWRP Guidelines. The SWRP Guidelines identify the following goals for stakeholder and public outreach, education, and engagement. Subsections below address each item in order.

- i. Public education and public participation opportunities to engage the public when considering major technical and policy issues related to the development and implementation of the plan;
- ii. Mechanisms, processes, and milestones that have been or will be used to facilitate public participation and communication during development and implementation of the plan;
- iii. Mechanisms to engage members of affected communities in project design and implementation;
- iv. Identification and inclusion of specific audiences including local ratepayers, developers, locally regulated commercial and industrial stakeholders, non-governmental organizations, non-profit organizations, and the general public;
- v. Strategies to engage disadvantaged and climate vulnerable communities within the SWRP boundaries and ongoing facilitation and tracking of their involvement in the planning process;
- vi. Efforts to identify and address specific, runoff-related environmental injustice issues within the watershed; and
- vii. A schedule for initial public engagement and education.

### 7.1 Consideration of Policy Issues

Stakeholders and the public will be consulted regarding technical and policy issues related to the development and implementation of the SWRP. Stakeholders through the TAC (**Section 3**) and at the stakeholder outreach events (**Section 4**) will be consulted on technical issues in different ways. The TAC is being consulted for guidance on the direction taken in the SWRP to quantify benefits, identify, and prioritize projects/programs from a technical standpoint. The public will also be engaged regarding technical and policy issues through the SWRP public review process. Guidance identified in this SPOEEP demonstrates that the District will work to engage stakeholder and the public in participating through printed materials, webpage, and social media (**Section 6**).

### 7.2 Mechanisms, Processes, and Milestones

**Section 3**, **Section 4**, and **Section 5** describe the mechanisms, processes, and milestones used to facilitate stakeholder and public participation and communication. The "Tentative Schedule" subsections in the sections referenced above describe the milestones utilized to schedule stakeholder and public outreach efforts. **Section 6** additionally details communication efforts through printed materials, webpage, and social media.

## 7.3 Engagement of Affected Communities

**Section 6** describes the mechanisms used to engage the public and stakeholders, which will be used during the development of the SBC SARW SWRP and likely during implementation. These efforts may become more targeted during SWRP implementation within the affected communities, including both stakeholders and the public. Stakeholder and public outreach, education, and engagement efforts during the implementation of projects/programs identified in the SBC SARW SWRP will vary by project/program. The District will follow internal standard operating procedures, while projects/programs implemented by stakeholder partners will follow the lead implementing agency's procedures. Outreach efforts by either the District and/or partners will also follow guidelines identified by funding partners as applicable.

## 7.4 Identification and Inclusion of Specific Audiences

This SPOEEP identifies a variety of specific audiences to be included in both the stakeholder and public outreach, education, and engagement efforts, as identified in **Section 3**, **Section 4**, and **Section 5**. Audiences identified in the SWRP Guidelines, local ratepayers, developers, locally regulated commercial and industrial stakeholders, non-governmental organizations, non-profit organizations, and the general public, fall within the potential participants identified in the sections referenced above.

## 7.5 Strategies to Engage Disadvantaged Communities

Disadvantaged Communities (DACs) are defined as areas where the Median Household Income (MHI) is less than 80 percent of the statewide annual MHI. In addition, severely DACs are those areas where the MHI is less than 60 percent of the statewide annual MHI. DACs were mapped by DWR to better define geographies that meet DAC definitions based on census designated places (city/community boundaries), tracts (development areas), and blocks (smaller pockets of the community). As suggested in the definition, places are larger than tracts, which are larger than blocks. Based on the mapping published by DWR, illustrated in the figures below, 27 percent of the SBC SARW is considered a DAC tract and/or block. **Figure 7-1** illustrates the DAC tracts within the SBC SARW, while **Figure 7-2** illustrates the DAC blocks, and **Figure 7-3** illustrates the area covered by either a DAC tract and/or block.

The District will follow the approach described herein to communicate with stakeholders and the public in an effort to encourage outreach, education, and engagement with respect to the SBC SARW SWRP, which will include DACs. The District will ask for participants address and/or zip code in an effort to understand whether or not DACs were effectively reached and willing to participate. The District will evaluate opportunities to prepare printed material and webpage in both English and Spanish, which may better cater to existing DAC communities. Item iv described above also mentions climate vulnerable communities, which are not applicable in this region.

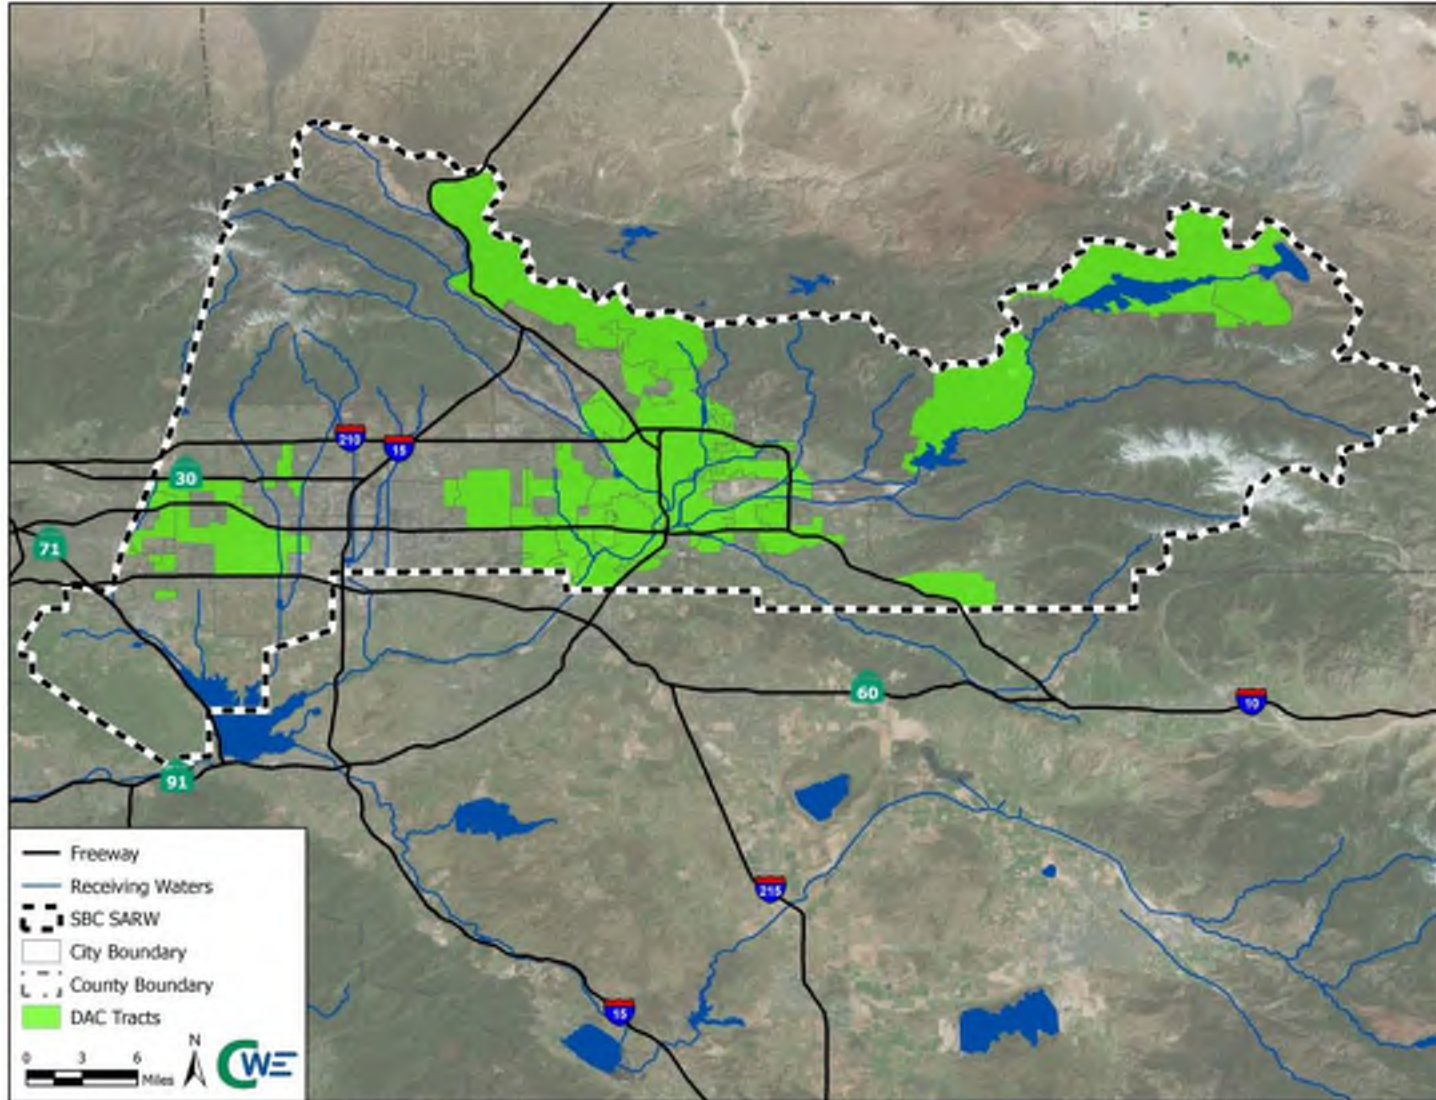

Figure 7-1 DAC Tracts within the SBC SARW

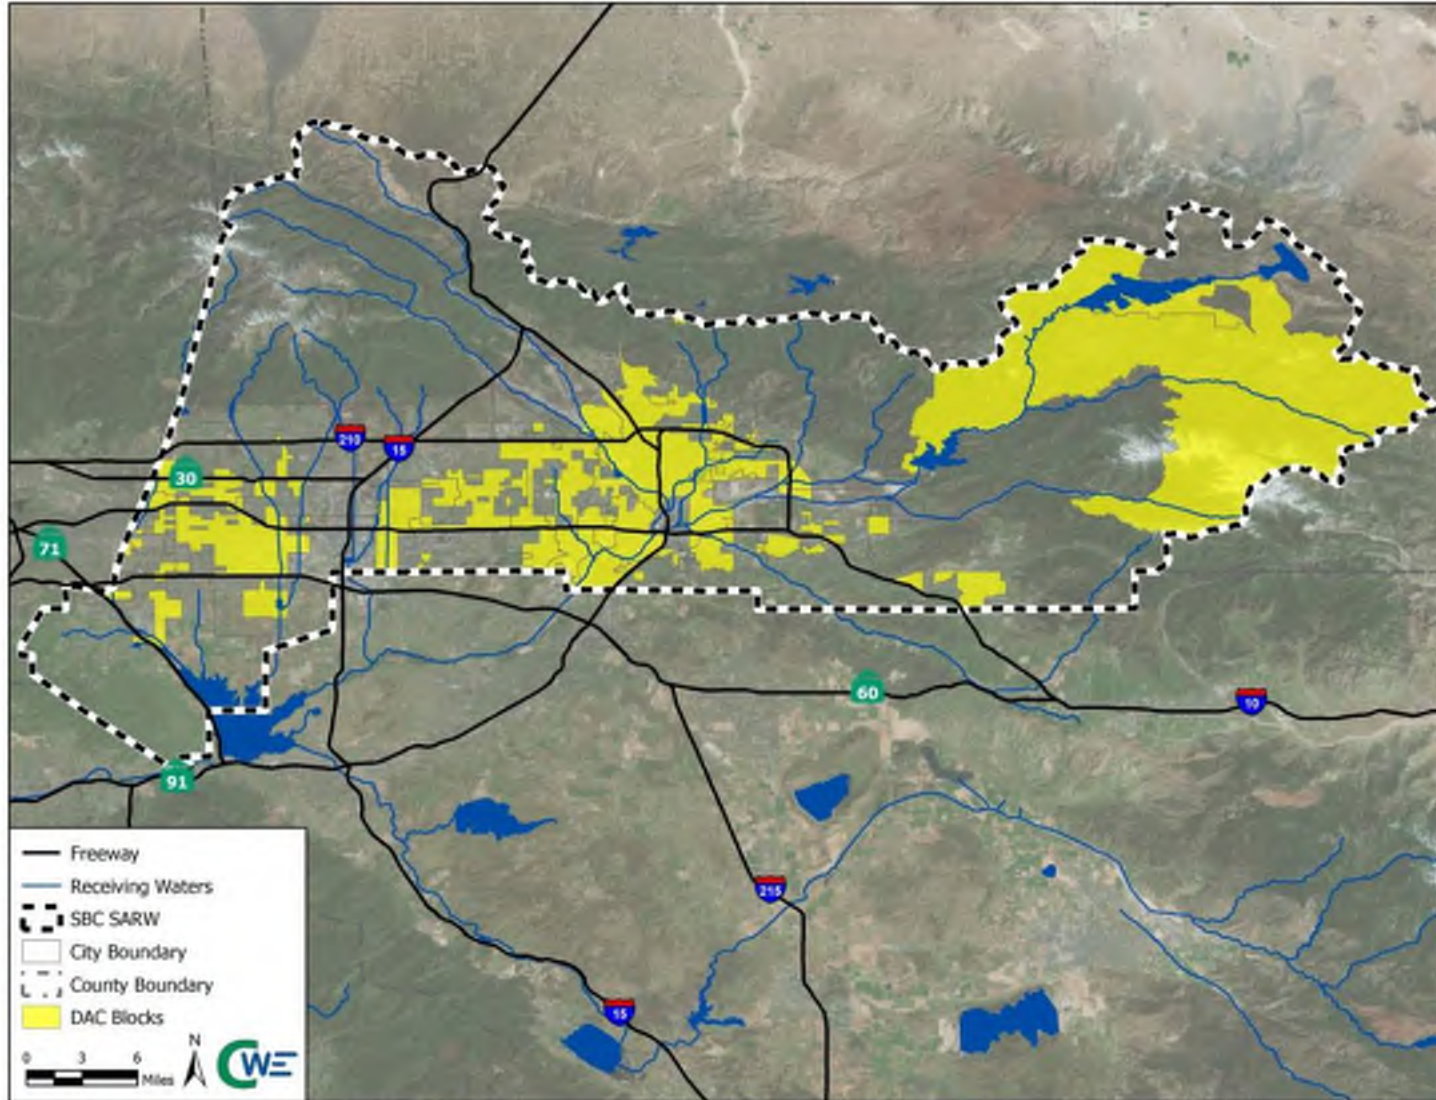

Figure 7-2 DAC Blocks within the SBC SARW

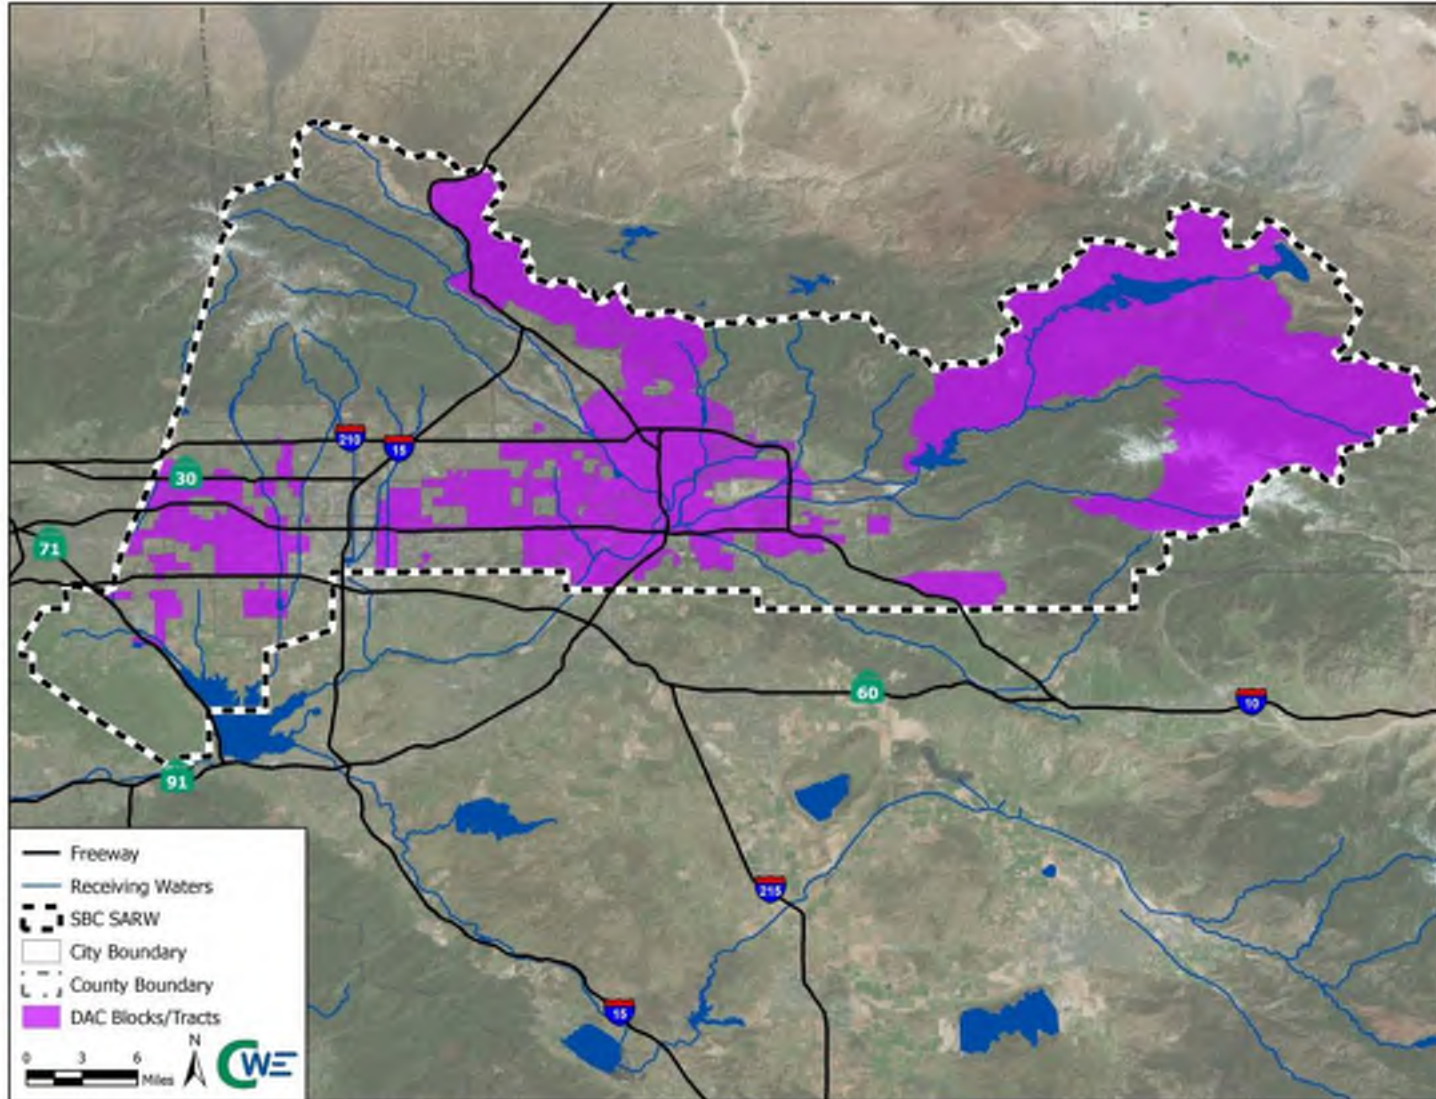

Figure 7-3 DAC Blocks and Tracts within the SBC SARW

## 7.6 Environmental Injustice Issues

When environmental injustice issues exist, it is common that they have a more significant impact on DACs. Including DACs in the stakeholder and public outreach, education, and engagement, as described in **Section 7.5**, may also address runoff-related environmental injustice issues, which may be of greater concern within DACs. Projects/programs will be identified in the SBC SARW SWRP which will address DACs and may in turn address and/or minimize runoff-related environmental injustice issues if they exist. Through the stakeholder and public outreach events, participants will be asked to share their concerns, such that solutions may be provided. These concerns may include runoff-related environmental injustice issues; therefore, by hosting these outreach events, these issues may be identified and addressed.

## 7.7 Schedule

The tentative schedule associated with stakeholder involvement in the TAC, stakeholder outreach, and public outreach is presented in **Section 3**, **Section 4**, and **Section 5**, respectively. The schedule for educational materials will be further evaluated during the SWRP development; however, it is anticipated the schedule for the release of material will closely follow the schedule for both the stakeholder and public outreach events. In summary, the schedule associated with stakeholder meetings through the TAC, stakeholder outreach events, and the public outreach event are summarized in **Table 7-1**.

**Table 7-1 Tentative Schedule**

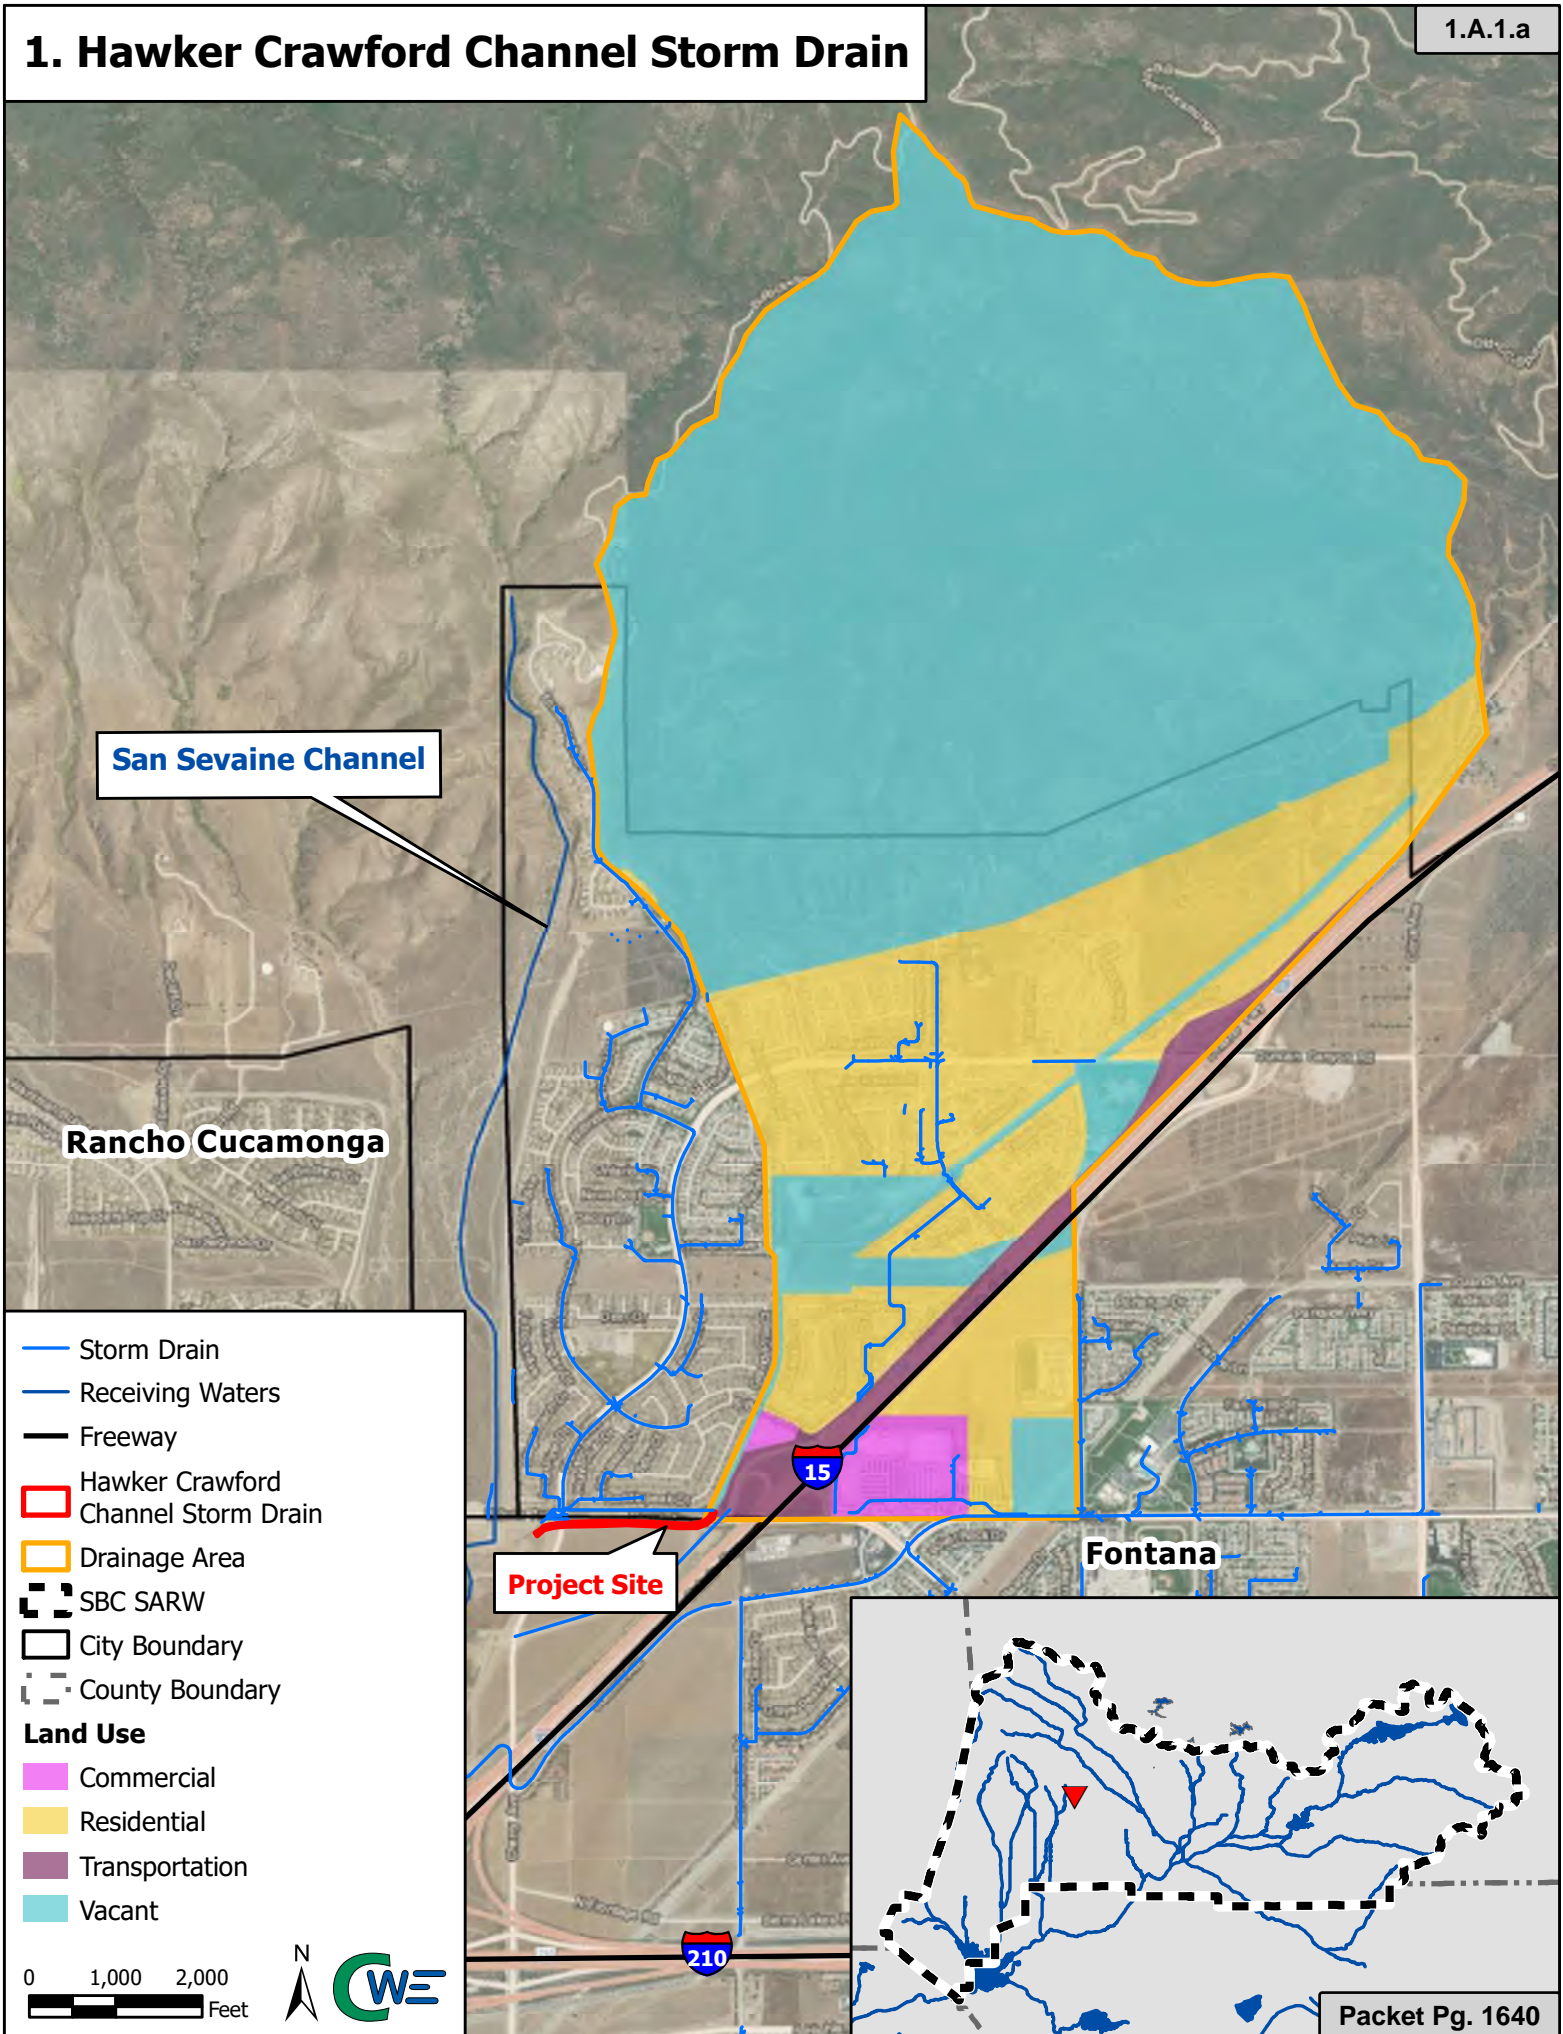

Audience	Event	Tentative Schedule
Stakeholder Meetings through the TAC	Kickoff Meeting	April 12, 2017
	Meeting #1	July 6, 2017
	Meeting #2	Late August 2017
	Meeting #3	December 2017
Stakeholder Outreach	Event #1	Mid-August 2017
	Event #2	
Public Outreach	Event #1	February 2018

## Project Selection and Metrics-Based Analysis

San Bernardino County  
Santa Ana River Watershed  
Storm Water Resource Plan

Project Selection and Metrics-Based Analysis

Project Number	Project	Lead Agency	Project Description	Water Quality Benefits	Pollutant Load Reduction	Stormwater Runoff Reduction	Water Supply Benefits	Stormwater Recharge	Recycled Water Recharge	Flood Management Benefits	Runoff Rate Reduction	Runoff Volume Reduction	Flood Elevation Reduction	Removal of Parcels/Structures from the 100-Year Floodplain	Property Value Saved	Environmental Benefits	Wetlands Enhancement/Creation	Riparian Area Enhancement	Streambed Restoration	Increased Urban Green Space	Community Benefits	Provide Employment Opportunities	Increase Public Education	Increase Community Involvement	Trails Enhancement/Creation	Public Use Areas Enhancement/Creation	Full Project Cost Estimate	SBCFCD has approved concept?
1	Hawker Crawford Channel Storm Drain	SBCFCD	Existing undersized trapezoidal channel cuts through a field and discharges into San Seavine Basin No. 3, which has an infiltration rate of 0.5 feet per day. Proposed project will take flow into a box culvert sized to carry the 100-year flow rate (Q) and discharge into San Seavine Basin No. 1, which has a higher infiltration rate (2.5 ft/day).	X	2.4E+12 MPN <i>E. coli</i>	12 afy	X	12 afy		X		12 afy		3 parcels	\$1.8 million						X	67 job-years					\$6,231,000	Y
2	West Fontana Channel - Hickory Basin to Banana Basin	SBCFCD	Existing undersized riprap-lined trapezoidal channel floods surrounding parcels during high return interval events. Proposed project will enlarge the channel to contain the 100-year storm event and add a bioswale to the north side that treats stormwater runoff from areas north of the channel.	X	1.3E+12 MPN <i>E. coli</i>	7.4 afy				X		7.4 afy	up to 4.76 ft	6 parcels	\$0.2 million	X	0.75 ac			0.75 ac	X	108 job-years					\$10,000,000	Y
3	Grove Basin Storm Drain	SBCFCD	Grove Basin has a gated outlet structure which is connected to a 66-inch Reinforced Concrete Pipe (RCP). This 66-inch RCP currently discharges onto Grove Avenue causing street flooding and the polluted discharge eventually reaches Prado Park Lake. Proposed project will reroute the flows to a 108-inch RCP going eastward along Chino Avenue and discharge to Lower Cucamonga Spreading Grounds.	X	3.8E+12 MPN <i>E. coli</i>	61 afy	X	61 afy		X	X	61 afy									X	108 job-years					\$10,000,000	Y
4	Randall Basin Outlet and Colton Storm Drain Project 3-5	SBCFCD	Randall Basin is a flood control basin that currently can only discharge excess flows overland in an uncontrolled emergency spillway to Randall Avenue. Proposed project will allow Randall Basin to be managed as a recharge facility. Project will include control structure at basin outlet and a new storm drain to the Santa Ana River.	X	3.5E+12 MPN <i>E. coli</i>	57 afy	X	57 afy		X		180 afy									X	108 job-years					\$10,000,000	Y
5	Cable Creek Basin (Upper)	SBCFCD	Currently uncontrolled and unregulated flows from Cable Creek discharge to the Cajon Wash. Proposed project will create a new basin on Cable Creek upstream of Little League Drive in north San Bernardino. The basin will capture sediment and polluted runoff. The project will also provide a water supply benefit to the Bunker Hill groundwater basin through groundwater recharge.	X	1.7E+14 MPN <i>E. coli</i>	859 afy	X	859 afy		X	X	859 afy									X	217 job-years					\$20,000,000	Y
6.1	Warm Creek - Baseline Street to Sand Creek Confluence - Concept 1	SBCFCD	Warm Creek is an undersized earth-lined trapezoidal channel between Baseline Street and the improved confluence with Sand Creek. Warm Creek Concept 1 will increase the width of the channel, which will increase infiltration. The channel will be lined with riprap and velocity will be controlled by grouted riprap grade breaks. A trail is also proposed along a portion of the site, to be maintained by the Cities of San Bernardino and Highland.	X	1.4E+13 MPN <i>E. coli</i>	13.5 afy	X	13.5 afy		X		13.5 afy	up to 0.32 ft				X			2.42 ac	X	69 job-years			5,280 ft	2.42 ac	\$6,350,000	N
6.2	Warm Creek - Del Rosa Confluence to Sand Creek Confluence - Concept 2	SBCFCD	Warm Creek Concept 2 will improve water quality by adding a bioswale on each side of the channel at locations where it is feasible to capture runoff from intersecting storm drains. Walls will separate the bioretention facilities from the flood control channel, and the channel will be deep enough to contain the entire 100-year flood flow. The project will incorporate a trail to be maintained by the Cities of San Bernardino and Highland.	X	3.7E+13 MPN <i>E. coli</i>	44 afy				X			up to 2.00 ft	119 parcels	\$36.6 million	X		2.08 ac		6.02 ac	X	284 job-years			8,580 ft	6.02 ac	\$26,126,325	N
7.1	Little Sand Creek - Concept 1	SBCFCD	Little Sand Creek is a channel with a riprap bottom and rail-and-wire revetment with sheet metal backing on the sides. Concept 1 will improve water quality and flood control with the incorporation of a bioswale to capture and treat stormwater flows entering from the north side of the channel. The bioswale will be separated from the improved flood control channel by a concrete wall.	X	1.5E+12 MPN <i>E. coli</i>	9 afy				X			up to 3.08 ft				X		1.06 ac	1.06 ac	X	74 job-years					\$6,825,600	N
7.2	Little Sand Creek - Concept 2	SBCFCD	Little Sand Creek Concept 2 will take advantage of publicly owned lands on the north side of the channel to improve water supply and water quality. A small basin will be constructed that will take diverted dry-weather runoff from Little Sand Creek for infiltration/groundwater recharge.	X	5.4E+13 MPN <i>E. coli</i>	116 afy	X	116 afy		X	0.7 cfs	116 afy									X	35 job-years					\$3,216,957	N
8	Mission Channel - Santa Ana River to Tennessee Street	SBCFCD	Mission Channel is an undersized earth and riprap trapezoidal channel that bisects a disadvantaged community in eastern San Bernardino and western Redlands. Proposed project will benefit the community by adding a trail connecting the Santa Ana River Trail and the Orange Blossom Trail, while upgrading the channel to be capable of carrying the 100-year storm event. The channel will continue to be an earthen channel, and the increased width will increase the volume of infiltration.	X	1.3E+13 MPN <i>E. coli</i>	51 afy	X	51 afy		X	1.3 cfs	51 afy	X	X	X		X			3.08 ac	X	89 job-years			8,900 ft	3.08 ac	\$8,190,000	N
9	Wilson Creek - 10th Street to Interstate 10	SBCFCD	Wilson Creek flows through west Yucaipa as a 60-foot wide channel with rail and wire revetment on the side slopes. The efficiency of infiltration from the earth-lined channel is less than optimal, as the channel is prone to scour and deposition, which alters the stream bed and constricts the spread of flows. The proposed project will improve infiltration efficiency, reduce scour, enhance the flood capacity, and improve the trail system along the channel.	X	8.8+12 MPN <i>E. coli</i>	19 afy	X	19 afy		X	0.4 cfs	19 afy	up to 8.80 ft	131 parcels	\$30.8 million	X				3.47 ac	X	120 job-years			7,550 ft	3.47 ac	\$11,000,000	N
10.1	Rialto Channel - Etiwanda to Willow - Concept 1	SBCFCD	Rialto Channel conveys urban runoff from the Cactus Basin complex in an undersized earth and rock-lined trapezoidal channel. The proposed project concept will widen the channel to allow for more infiltration while deepening the channel to provide additional flood capacity. The project will also provide community benefits to severely disadvantaged communities within the City of Rialto through the creation of a multi-use trail to connect with the popular Pacific Electric Trail.	X	2.5E+13 MPN <i>E.coli</i>	114 afy	X	114 afy		X	2.3 cfs	114 afy	X	X	X		X			7.16 ac	X	223 job-years			15,600 ft	7.16 ac	\$20,580,000	N
10.2	Rialto Channel - Etiwanda to Willow - Concept 2	SBCFCD	Rialto Channel Concept 2 will widen and deepen Rialto Channel to provide flood protection for surrounding residents and businesses. The concept will increase infiltration in the upper portion through Armorflex blocks, while the lower portion will convey flood flows through a concrete lined rectangular channel. The project will include a multi-use trail, as described under Concept 1 above.	X	7.1E+12 MPN <i>E.coli</i>	33 afy	X	33 afy		X	0.6 cfs	33 afy	X	X	X		X			7.16 ac	X	142 job-years			15,600 ft	7.16 ac	\$13,098,000	N
11	Cactus Basin #4 & 5	SBCFCD	Cactus Basin #4 and 5 will provide multiple benefits to disadvantaged communities in the City of Rialto and the Inland Empire. The project will provide a large increase in the volume of stormwater that can be captured for groundwater recharge. The project will enhance water quality by preventing bacteria from reaching downstream water bodies. The project will also protect thousands of structures from flooding.	X	3.7E+13 MPN <i>E. coli</i>	170 afy	X	170 afy		X	600 cfs	170 afy	up to 3.44 ft	1,504 parcels	\$451 million						X	304 job-years					\$28,000,000	Y
12	Plunge Creek Stream Bed Restoration and Elder Creek Channel Improvement	SBCFCD	The project, a continuation of San Bernardino Valley Water Conservation District's Plunge Creek restoration project, will rehabilitate the ecological function of the wash. The project will spread stormwater through braided channels to restore natural watershed processes, enhance groundwater recharge, and improve downstream water quality. The project will also improve Elder Gulch upstream of the confluence in a way that reduces sedimentation and protects surrounding areas from flooding.	X	1.6E+13 MPN <i>E.coli</i>	80 afy	X	80 afy		X	3.6 cfs	80 afy	X	X	X		X		25 ac	1,700 ft	X	81 job-years					\$7,477,000	Y

San Bernardino County  
Santa Ana River Watershed  
Storm Water Resource Plan

Project Selection and Metrics-Based Analysis

Project Number	Project	Lead Agency	Project Description	Water Quality Benefits			Water Supply Benefits			Flood Management Benefits					Environmental Benefits					Community Benefits	Full Project Cost Estimate	SBCFCD has approved concept?						
				Pollutant Load Reduction	Stormwater Runoff Reduction	Stormwater Recharge	Stormwater Recharge	Recycled Water Recharge	Runoff Rate Reduction	Runoff Volume Reduction	Flood Elevation Reduction	Removal of Parcels/Structures from the 100-Year Floodplain	Property Value Saved	Wetlands Enhancement/Creation	Riparian Area Enhancement	Streambed Restoration	Increased Urban Green Space	Provide Employment Opportunities	Increase Public Education				Increase Community Involvement	Trails Enhancement/Creation	Public Use Areas Enhancement/Creation			
13	Wildwood Channel - Interstate 10 to Holmes Street	SBCFCD	Wildwood Channel conveys flow in an undersized channel lined with sand and gravel. The proposed project will widen the channel to increase infiltration capacity and flood protection, while providing grade breaks that reduce velocities. The project will also enhance the existing multi-use trails in this disadvantaged community.	X	1.8E+12 MPN <i>E. coli</i>	38 afy	X	38 afy			X	0.8 cfs	38 afy	X	X	X				6.49 ac	X	181 job-years			14,140 ft	6.49 ac	\$16,670,920	N
14.1	Del Rosa Channel - Pacific Street to Del Rosa Avenue - Concept 1	SBCFCD	Del Rosa Channel is an undersized rectangular channel with a riprap-lined bottom and rail-and-wire revetment on the sides. The limited amount of public right-of-way reduces the opportunities for additional enhancements. Concept 1 will widen the channel from 20 feet to 30 feet and deepen it to handle flood flows. The composition of the channel bottom will remain porous for infiltration. A new culvert will be required across Pacific Avenue.	X	2.6E+12 MPN <i>E. coli</i>	12 afy	X	12 afy			X		12 afy	up to 5.43 ft	97 parcels	\$26.7 million					X	86 job-years					\$7,878,445	N
14.2	Del Rosa Channel - Pacific Street to Del Rosa Avenue - Concept 2	SBCFCD	Del Rosa Channel Concept 2 will only widen the channel without deepening it. The slopes will be protected with stairstepped rock gabion walls, eliminating the need for permanent concrete structures within the channel right-of-way. Flooding will be reduced, but the channel will not be capable of carrying the 100-year flood. The existing culvert at Pacific Avenue will remain in place.	X	1.1E+12 MPN <i>E. coli</i>	5 afy	X	5 afy			X		5 afy	up to 1.86 ft							X	32 job-years					\$2,930,297	N
15	Etiwanda Channel Invert Repair and Trail Project	SBCFCD	Etiwanda Channel and San Seavine Channel are two rectangular concrete channels laterally contiguous to one another separated by a channel wall. The channels are subject to scour issues. The proposed project will remove the wall between the channels, address the scouring issues, and provide a trail improvement, benefiting the community as part of the San Seavine Trail Phase I Segment 2 in the City of Fontana.								X			X					X		X	16 job-years	X		X	X	\$1,500,000	N
16	West State Street Storm Drain Segment III and Brooks Basin Inlet Enhancement	SBCFCD	West State Street Storm Drain is an open channel that runs between West State Street and the Union Pacific Railroad in the Cities of Montclair and Ontario. The storm drain conveys runoff westward to San Antonio Creek Channel, while upstream of the Channel there is an inlet that diverts low flows into Brooks Basin. The project will enlarge the inlet and enhance the channel to provide flood protection and to capture, convey, and divert more stormwater to Brooks Basin for infiltration (groundwater recharge).	X	5.4E+12 MPN <i>E. coli</i>	117 afy	X	117 afy			X	10 cfs	117 afy	X	X	X					X	126 job-years					\$11,660,000	Y
17	Carbon Canyon Creek Channel - Pipeline Avenue to Peyton Drive	SBCFCD	Carbon Canyon Creek Channel is a riprap lined undersized trapezoidal channel between Pipeline Avenue and Peyton Drive. The proposed project will widen the channel but maintain a soft bottom. This design will increase flood protection and provide additional opportunity for stormwater flows to infiltrate and recharge groundwater supplies.	X	3.2E+12 MPN <i>E. coli</i>	15 afy	X	15 afy			X	0.3 cfs	15 afy	X	X	X					X	228 job-years					\$21,000,000	N
18	Santa Ana River Trail Phase III	SBC Parks	Santa Ana River Trail Phase III will extend the popular public use trail from its current endpoint at Waterman Avenue in San Bernardino to California Street in the City of Redlands. Stormwater improvements along the trail will be sized for the 100-year flood flow from future development conditions. The trail will provide public use areas and green space for disadvantaged communities.																X			41 job-years			19,992 ft	9.18 ac	\$3,786,000	Y
19	Santa Ana River Trail Phase IV	SBC Parks	Santa Ana River Trail Phase IV will complete the trail to Garnet Street in Mentone. The project will provide public use areas and enhance green space. The project will also feature interpretive signage as a public education component.																X			109 job-years	7 signs		52,865 ft	24.27 ac	\$10,000,000	Y
20	Lytle Creek Basin	SBVMWD	The proposed Lytle Creek Basin will be located in the City of Rialto east of Interstate 15, upstream of an existing CEMEX plant. The 60 acre site will have a wetted area of 48 acres and a storage volume of 460 acre-feet.	X	5.5E+14 MPN <i>E. coli</i>	4,023 afy	X	4,023 afy			X	X	4,023 afy								X	159 job-years					\$14,685,038	N
21	Devil Canyon Basins	SBVMWD	The existing Devil Canyon Spreading Grounds diverts flow from Devil Creek during very high flow events. The proposed project would increase the capacity of the diversion through the construction of an inflatable armored dam across Devil Creek. Two new recharge cells will be constructed below the existing Basin No. 1, and the transfer structures between the existing basins would be improved. The site will have a wetted area of 35.9 acres and a total storage volume of 242 acre-feet.	X	3.7E+14 MPN <i>E. coli</i>	3,631 afy	X	3,631 afy			X	X	3,631 afy								X	258 job-years					\$23,768,911	N
22	City Creek Basin	SBVMWD	The series of nine proposed basins that will be constructed for the City Creek Basin project will be located along over a mile of City Creek on both sides of the 210 Freeway in the City of Highland. The site will have a wetted area of 37.7 acres and a storage volume of 254 acre-feet, and it will be connected at the downstream end to the proposed Plunge Basin II project.	X	7.5E+14 MPN <i>E. coli</i>	5,247 afy	X	5,247 afy			X	X	5,247 afy								X	356 job-years					\$32,823,285	N
23	Cable Creek Basin (Lower)	SBVMWD	This Cable Creek Basin project will be located just downstream of the proposed SBCFCD Cable Creek Basin project. Unlike the SBCFCD project, flow will be diverted into the lower Cable Creek Basin project from the main channel via an inflatable rubber dam. The 37.9 acres of wetted area will have a storage volume of 281 acre-feet over three separate basin cells.	X	4.1E+14 MPN <i>E. coli</i>	2,978 afy	X	2,978 afy			X	X	2,978 afy								X	266 job-years					\$24,520,683	N
24	Lytle-Cajon Basins	SBVMWD	The Lytle-Cajon Basin project will be located just upstream of the Lytle-Cajon Radial Gate and spillway. The proposed project would result in the construction of eight in-channel recharge basins. In total the project would have a total wetted are of 43 acres and a storage volume of 244 acre-feet.	X	X	3,408 afy	X	3,408 afy			X	X	3,408 afy								X	115 job-years					\$10,668,323	N
25	Mill Creek Inlet	SBVMWD	The Mill Creek Inlet project will improve the transfer of flow from Mill Creek into the existing series of percolation basins in the Mill Creek wash area. The capacity of the existing inlet will be increase from 110 cubic feet per second (cfs) to 210 cfs and will involve replacement of culverts underneath the existing flood control levee.	X	1.8E+14 MPN <i>E. coli</i>	887 afy	X	887 afy			X	100 cfs	887 afy								X	28 job-years					\$2,595,052	N
26	Plunge Creek Basin I	SBVMWD	The Plunge Creek Basin I project will place a basin downstream of the SBVMWD and SBCFCD Plunge Creek Restoration Projects. The single cell basin will capture water from an inflatable rubber dam diversion across Plunge Creek. The project will have a total wetted area of 6 acres and a storage volume of 40 acre-feet.	X	3.5E+14 MPN <i>E. coli</i>	2,481 afy	X	2,481 afy			X	X	2,481 afy								X	118 job-years					\$10,900,345	N

San Bernardino County  
Santa Ana River Watershed  
Storm Water Resource Plan

Project Selection and Metrics-Based Analysis

Project Number	Project	Lead Agency	Project Description	Water Quality Benefits	Pollutant Load Reduction	Stormwater Runoff Reduction	Water Supply Benefits	Stormwater Recharge	Recycled Water Recharge	Flood Management Benefits	Runoff Rate Reduction	Runoff Volume Reduction	Flood Elevation Reduction	Removal of Parcels/Structures from the 100-Year Floodplain	Property Value Saved	Environmental Benefits	Wetlands Enhancement/Creation	Riparian Area Enhancement	Streambed Restoration	Increased Urban Green Space	Community Benefits	Provide Employment Opportunities	Increase Public Education	Increase Community Involvement	Trails Enhancement/Creation	Public Use Areas Enhancement/Creation	Full Project Cost Estimate	SBCFCD has approved concept?
27	Plunge Creek Basin II	SBVMWD	The Plunge Creek Basin II project will be located just upstream of the confluence of Plunge Creek and City Creek. The basin will receive flows from an inflatable dam placed across Plunge Creek. The project will have a total wetted area of 10.7 acres and a storage volume of 66 acre-feet.	X	X	1,050 afy	X	1,050 afy		X	X	1,050 afy									X	139 job-years					\$12,808,867	N
28	Twin Creek Spreading Grounds	SBVMWD	The existing Twin Creek Spreading Grounds are flow-through basins located within Twin Creek north of Lynwood Drive in the City of San Bernardino. Existing basins within the spreading grounds were originally built to attenuate flows, but over the years the basin walls have been eroded or purposely breached, so flows currently pass through unobstructed. The proposed project will reconstruct and armor the basin walls, constructing one new cell, and providing new transfer structures between the basin cells.	X	5.9E+14 MPN E. coli	4,087 afy	X	4,087 afy		X	X	4,087 afy									X	181 job-years					\$16,677,990	N
29	Vulcan 2 Basin	SBVMWD	The Vulcan 2 Basin project will improve groundwater recharge in a new basin located near the severely disadvantaged community of Muscoy. The basin will divert flow from the Devil Creek Diversion Channel through an inflatable dam. The total wetted area will be 35.2 acres and the storage volume will be 383 acre-feet.	X	X	3,441 afy	X	3,441 afy		X	X	3,441 afy									X	339 job-years					\$31,221,404	N
30	Waterman Basins	SBVMWD	The Waterman Basins project will improve the existing diversion structure at the Waterman Basins northeast of Waterman Avenue and 40th Street in the City of San Bernardino. The improvements will refurbish two existing radial gate systems and provide two new gates for a maximum diversion capacity of 1,000 cfs. Upon completion, Waterman Basins will attain a total wetted area of 31.5 acres and a storage volume of 180 acre-feet.	X	X	1,675 afy	X	1,675 afy		X	X	1,675 afy									X	110 job-years					\$10,207,218	N
31	Wineville Recycled Pipeline Project	IEUA	The Wineville Recycled Pipeline Project will make changes to three basins. The project will include upgrading Wineville Basin to be capable of infiltration by adding a gate to the outlet and improving the dam. Detained stormwater will be pumped to Jurupa Basin via a new pump and conveyance pipeline. Stormwater will then be pumped from Jurupa Basin through existing lines to the RP3 Basins, which will be enlarged and improved to accept more stormwater and recycled water.	X	1.4E+14 MPN E. coli	3,166 afy	X	3,166 afy	3,535 afy	X	X	3,166 afy									X	231 job-years					\$21,300,000	N
32	San Seavine Basins	IEUA	Recharge in San Seavine Basin will be increased by recycling water through a new pump and conveyance pipeline from the Basin No. 5, which has a low infiltration rate, to Basin No. 3, which has a higher infiltration rate. A new berm will also be constructed within Basin No. 5.	X	9.1E+13 MPN E. coli	642 afy	X	642 afy	1,911 afy	X		642 afy									X	38 job-years					\$3,550,000	N
33	Lower Day Basin	IEUA	The improvements proposed as part of the Lower Day Basin project include the construction of a secondary diversion structure within the channel to more efficiently divert flows into the basin. Within the basin, capacity will be increased by removing a mid-level outlet and reconstructing an embankment.	X	1.0E+13 MPN E. coli	75 afy	X	75 afy		X		75 afy									X	26 job-years					\$2,480,000	N
34	Declaz Basin	IEUA	Declaz Basin will be improved by reconstructing the existing embankment and spillway at a higher elevation to increase storage. Additionally, a gate will be installed on an existing outlet, improving the ability of IEUA to manage the basin as a recharge facility. The improvements will recharge an average of 241 acre-feet of stormwater to the groundwater basin annually.	X	1.1E+13 MPN E. coli	241 afy	X	241 afy		X		241 afy									X	44 job-years					\$4,070,000	N
35	Victoria Basin	IEUA	The proposed Victoria Basin project will improve the recharge and flood control capabilities of the existing Victoria Basin by abandoning the mid-level outlet that allows flows to the San Seavine Channel. By blocking the outlet and extending the existing lysimeter stations, the capacity of the basin for recharge will be increased, as the basin will be able to hold a greater volume of water.	X	6.1E+12 MPN E. coli	43 afy	X	43 afy	120 afy	X		43 afy									X	1 job-years					\$150,000	N
36	Turner Basin	IEUA	The existing spillway at Turner 2 Basin was built long before upstream development in the City of Rancho Cucamonga required larger stormwater basins at the confluence of Cucamonga Channel and Deer Creek Channel, and it is one of the last remaining pieces of the Turner Basin complex that has yet to be replaced. A new spillway at a higher elevation will allow IEUA to store additional stormwater volume within the basin complex, which will produce an additional annual recharge volume of 66 acre-feet.	X	2.2E+13 MPN E. coli	66 afy	X	66 afy		X		66 afy									X	9 job-years					\$890,000	N
37	Ely Basins	IEUA	The Ely Basin improvements include excavating 470,000 cubic yards of material from within the existing footprint of the basins. IEUA estimated that the increase in the capacity of the basin would yield an average of 221 acre-feet of additional stormwater recharge per year.	X	4.8E+13 MPN E. coli	221 afy	X	221 afy		X		221 afy									X	34 job-years					\$3,200,000	N
38	Montclair Basins	IEUA	The proposed project at Montclair Basin will add one drop inlet structure from Basin 1 to Basin 2, and one drop inlet structure from Basin 2 to Basin 3. The project will allow for better management of groundwater recharge in the basins, and the efficiencies attained will yield an average of 248 acre-feet of additional recharge per year.	X	3.5E+13 MPN E. coli	248 afy	X	248 afy		X		248 afy									X	15 job-years					\$1,440,000	N
39	Montclair - Arrow Highway	City of Montclair	This project will reduce the current four lane major arterial street to a two lane road, allowing for a median that will capture runoff from the street, treat it, and infiltrate it back into the ground.	X	X	X	X	X		X	X	X									X	X					X	N
40	Montclair - Fremont Avenue	City of Montclair	This project will reduce the current four lane arterial street to a two lane road, allowing for a median that will capture runoff from the street, treat it, and infiltrate it back into the ground.	X	X	X	X	X		X	X	X									X	X					X	N
41	Montclair - Sunset Park	CBWCD / Montclair	This project will develop a walking and biking environmental trail that incorporates a water feature moving nuisance water from Orchard Street from the north end to the south end where it will infiltrate into the ground. San Bernardino County  
Santa Ana River Watershed  
Storm Water Resource Plan

Project Selection and Metrics-Based Analysis

Project Number	Project	Lead Agency	Project Description	Water Quality Benefits	Pollutant Load Reduction	Stormwater Runoff Reduction	Water Supply Benefits	Stormwater Recharge	Recycled Water Recharge	Flood Management Benefits	Runoff Rate Reduction	Runoff Volume Reduction	Flood Elevation Reduction	Removal of Parcels/Structures from the 100-Year Floodplain	Property Value Saved	Environmental Benefits	Wetlands Enhancement/Creation	Riparian Area Enhancement	Streambed Restoration	Increased Urban Green Space	Community Benefits	Provide Employment Opportunities	Increase Public Education	Increase Community Involvement	Trails Enhancement/Creation	Public Use Areas Enhancement/Creation	Full Project Cost Estimate	SBCFCD has approved concept?	
42	Urban Walkable Watersheds	CBWCD	The Urban Walkable Watersheds project will feature a community walking trail that provides connectivity by water infrastructure projects while actively capturing and infiltrating runoff through green infrastructure demonstration projects. An emphasis will be placed on increasing public education and community involvement through educational programs involving nearby public schools.	X	X	X	X	X		X	X	X				X				X	X	X	X	X	X	X	X	X	N
43	Multipurpose Recharge Basins	CBWCD	The Multipurpose Recharge Basins project proposed by CBWCD will reconceptualize the role of urban recharge basin by integrating native plant restoration and passive recreation with interpretation on perimeters of existing basins. The project will increase areas for public education and recreation while continuing basin recharge.													X		X		X	X	X				X	X	X	N
44	College Heights and Upland Percolation Basins	CBWCD	The improvements proposed to the College Heights and Upland Percolation Basins will include water quality features to improve urban runoff, flood mitigation, streetscape, passive recreation, and education.													X				X	X	X				X	X	X	N
45	Streamflow Restoration on Plunge Creek	SBWVCD	The Streamflow Restoration on Plunge Creek project will continue the enhancement of the SBWVCD Plunge Creek Conservation Project by an additional half mile. The additional stream enhancements will converge water onto Plunge Creek or onto Orange Street lessening chances of backflow during high flow events.	X	X	X	X	X		X	X	X				X		X	X		X	X					X	X	N
46	Spreading on Woolly Star Preserve Area	SBWVCD	The Spreading on Woolly Star Preserve Area (WSPA) will spread Santa Ana River water on the WSPA during events of high flow through the installation of new gates and pipes. Stormwater infiltration will occur in historical remnant channels to better mimic pre-development processes, and this will enhance riparian habitat.	X	X	X	X	X		X	X	X				X		X	X		X	X					X	X	N
47	Mission/Zanja Basin	SBWVCD	The Mission/Zanja Groundwater Recharge Basin project will place a groundwater recharge basin in vacant lands along the Mission Zanja, reducing stormwater runoff and increase groundwater recharge. Seven possible locations have been identified with the smallest being 65,000 square feet with a recharge rate of 10 feet per day. 15 acre-feet per day could recharge at a flow rate of 7.5 cfs.	X	X	X	X	X		X	7.5 cfs	X										X	X				X	X	N
48	Riverside Corona Feeder	WMWD	Connect SWP feeder to Riverside; recharge Riverside County basins																		X	X					X	X	N
49	Confluence Regional Water Resources Project	CBWCD	The Confluence Regional Water Resources Project will construct a new groundwater recharge and storage reservoir at the confluence of Chino Creek and San Antonio Creek. Pumps will send excess stormwater to upstream CBWCD-managed basins to enhance recharge opportunities. The project will also include an artificial habitat and bioremediation channel as an educational and wetland habitat feature.	X	3.1E+13 MPN E. coli	1,830 afy	X	1,830 afy		X		1,830 afy				X	2.03 ac	2.03 ac	627 ft	2.03 ac	X	217 job-years	X	X		2.03 ac	\$20,000,000	Y	
50	Big Bear Valley Water Sustainability Project	City of Big Bear Lake	Big Bear Valley wastewater currently is treated and sent outside of the SARW to irrigate crops in Lucerne Valley. The Big Bear Valley Water Sustainability Project will upgrade the WWTP and reuse tertiary treated wastewater locally to recharge local groundwater, provide critical habitat for endangered species, and stabilize the water level at Big Bear Lake.	X	X		X		1,950 afy							X	145 ac	145 ac			X	478 job-years		X			\$44,000,000	N	
51	Rathbun Creek Floodway Improvement Project	City of Big Bear Lake	The Rathbun Creek Floodway Improvement Project will increase the size of three culverts to be able to convey the 100-year discharge without flooding nearby properties. The project will also enhance the natural streambed downstream of Big Bear Boulevard and enhance riparian habitat. A multiuse trail facility will also be constructed along the banks to extend Rathbun Trail all the way to Big Bear Lake.							X			up to 3.44 ft	1,504 parcels	\$451 million	X	1.50 ac	2.04 ac	2,218 ft	3.54 ac	X	65 job-years	1 sign	X	3,500 ft	3.54 ac	\$6,000,000	N	
52	Treat, Recycle, Educate (TRE) Plan	City of Redlands	The TRE Plan consists of several green street improvements combined with a new 0.8-acre stormwater basin near the existing WWTP in the City of Redlands. The area will include a new educational park featuring interpretive signage describing the LID BMPs that will be included in the park and on Nevada Street. The park's vegetation will recycled water from the WWTP.	X	X	X	X	X	X	X	X	X				X				1.20 ac	X	22 job-years	6 signs	X	1,920 ft	0.40 ac	\$2,000,000	N	
53	Los Serranos Park	City of Chino Hills	The Los Serranos Park project will create a new community park in the City of Chino Hills. The design will include green infrastructure and habitat enhancement and protection.	X	X	X										X		X		X	X	43 job-years			X	X	\$4,000,000	N	
54	Restoration and Enhancement of Creeks	City of Chino Hills	This project will improve the ecosystem and protect valuable riparian habitat through a creek rehabilitation and streambed restoration project. The project will also provide public walking trails and educational opportunities.	X	X	X										X		X	X	X	X	8 job-years	X		X	X	\$750,000	N

## Funding Matrix

## Summary of Potential Funding Sources for SWRP Projects

**Summary of Potential Funding Sources for SWRP Projects**

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
<b>Grants</b>							
California Climate Investments	Urban Greening Program	Round 2 Solicitation now closed. Schedule for future solicitations unknown	Funding of projects that reduce greenhouse gases by sequestering carbon, decreasing energy consumption and reducing vehicle miles traveled, while also transforming the built environment into places that are more sustainable, enjoyable, and effective in creating healthy and vibrant communities	<ul style="list-style-type: none"> <li>➤ Establishment, enhancement, and expansion of neighborhood parks and community spaces</li> <li>➤ Greening of public lands and structures, which may include incorporation of riparian habitat for water capture</li> <li>➤ Green streets and alleyways</li> <li>➤ Non-motorizes urban trails</li> <li>➤ Urban heat island mitigation</li> </ul>	None	California Natural Resources Agency (916) 653-2812 urbangreening@resources.ca.gov	<a href="#">UGP</a>
California Department of Parks and Recreation	Habitat Conservation Fund	Continuous; application must be submitted by first work day of October	Protecting, restoring, and enhancing wildlife habitat and fisheries	<ul style="list-style-type: none"> <li>➤ Enhancement or restoration of wetlands</li> <li>➤ Enhancement or restoration of riparian habitat</li> </ul>	No minimum or maximum amounts (2,000,000 total available each year) Requires 50% match	Barbara Baker Habitat Conservation Fund Program (916) 6511-7743 Barbara.Baker@parks.ca.gov	<a href="#">HCF</a>
California Department of Parks and Recreation	Land and Water Conservation Fund (LWCF)	Continuous Next cycle in 2020	To provide for the health, inspiration, and education of the people of California by helping to preserve the State's extraordinary biological diversity, protecting its most valued natural and cultural resources, and creating opportunities for high-quality outdoor recreation	<ul style="list-style-type: none"> <li>➤ Acquisition and development projects to create outdoor recreational resources</li> </ul>	\$3,000,000 maximum	Luan Aubin (916) 651-8573 Luan.Aubin@parks.ca.gov  Richard Rendon (916) 651-7600 richard.rendon@parks.ca.gov	<a href="#">LWCF</a>
California Department of Parks and Recreation	Outdoor Environmental Educational Facilities	Schedule for future solicitations unknown	To provide for the health, inspiration, and education of the people of California by helping to preserve the state's extraordinary biological diversity, protecting its most valued natural and cultural resources, and creating opportunities for high-quality outdoor recreation	<ul style="list-style-type: none"> <li>➤ Development of public outdoor structures and exhibits that facilitate focused learning</li> <li>➤ Focused learning must take place in a natural outdoor setting, with native vegetation</li> <li>➤ Learning must encompass the natural environment, and inspire environmental stewardship and an appreciation of the natural world</li> <li>➤ Learning must include an understanding of how humans interact with, and are dependent on, natural ecosystems</li> <li>➤ Structures and exhibits may provide outdoor education on their own (such as signs, kiosks, nature trails), or facilitate providing outdoor education (such as campfire centers, amphitheaters, group campgrounds)</li> </ul>	Up to \$500,000; Match funds optional (5/100 possible points with applicant paying all non-construction costs)	Luan Aubin (916) 651-8573 Luan.Aubin@parks.ca.gov	<a href="#">OEEF</a>

## Summary of Potential Funding Sources for SWRP Projects

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
California Department of Parks and Recreation	Recreational Trails Program	Schedule for future solicitations are unknown at this time (anticipated 2019)	Provides funds annually for recreational trails and trails-related projects	<ul style="list-style-type: none"> <li>➤ Provides funds annually for recreational trails and trails-related projects</li> </ul>	12% minimum match requirement	Luan Aubin San Bernardino Project Officer Office of Grants and Local Services State of California Department of Parks and Recreation Luan.Aubin@parks.ca.gov (916) 651-8573	<a href="#">RTP</a>
California Department of Parks and Recreation	Statewide Park Program (Proposition 68)	Final application guide to be published by January 2019; applications due Summer 2019	Creates new parks and new recreation opportunities in critically underserved communities across California	<ul style="list-style-type: none"> <li>➤ Development of a new park</li> <li>➤ Expansion of an existing park</li> <li>➤ Renovation of an existing park</li> <li>➤ Acquisition of land to develop a park</li> <li>➤ Each project must create or renovate at least one recreation feature (dog parks, athletic fields, trails, etc.)</li> </ul>	\$200,000 to \$8,500,000; no match requirement	Luan Aubin San Bernardino Project Officer Office of Grants and Local Services State of California Department of Parks and Recreation Luan.Aubin@parks.ca.gov (916) 651-8573	<a href="#">SPP</a>
California Department of Water Resources	Local Levee Assistance Program	Continuous (Last cycle: 2014-2016)	Provide financial assistance to local public agencies responsible for flood management outside the Sacramento-San Joaquin Delta	<ul style="list-style-type: none"> <li>➤ Fund repair of local flood control facilities critically damaged by erosion, levees with unstable slopes, and other unstable facilities</li> <li>➤ Geotechnical exploration of existing local levees and evaluation of the data for stability, seepage, and underseepage deficiencies</li> </ul>	Not stated	Patrick Luzuriaga Chief, Local Assistance Section A Division of Flood Management (916) 574-0932 Patrick.Luzuriaga@waterboard.ca.gov	<a href="#">LLAP</a>
California Department of Water Resources	Flood Control Subventions Program	Schedule for future solicitations are unknown at this time	Provide financial assistance to local agencies cooperating in the construction of federally authorized flood control projects	<ul style="list-style-type: none"> <li>➤ Funds major flood control projects</li> <li>➤ Funds small flood control projects</li> <li>➤ Watershed protection projects</li> </ul>	Cost share ranging between 50% and 70%	Patrick Luzuriaga Chief, Local Assistance Section A Division of Flood Management (916) 574-0932 Patrick.Luzuriaga@waterboard.ca.gov	<a href="#">FCSP</a>
California Department of Water Resources	Flood Corridor Program	Schedule for future solicitations are unknown at this time	Provide funding for primarily nonstructural flood management solutions	<ul style="list-style-type: none"> <li>➤ Wildlife habitat enhancement</li> <li>➤ Agricultural land preservation</li> </ul>	No funding left in program at this time	Patrick Luzuriaga Chief, Local Assistance Section A Division of Flood Management (916) 574-0932 Patrick.Luzuriaga@waterboard.ca.gov	<a href="#">FCP</a>
California Department of Water Resources	Integrated Regional Water Management (IRWM) Grant (Proposition 1)	Applicant must have been involved in IRWM planning process (collaboration may be required); Round 1 Grant Applications Due to DWR anticipated April 2019	To encourage integrated regional strategies for management of water resources and to provide funding for implementation projects that support integrated water management	<ul style="list-style-type: none"> <li>➤ Water supply reliability, water conservation, and water use efficiency</li> <li>➤ Stormwater capture, storage, clean-up, treatment, and management</li> <li>➤ Non-point source pollution reduction, management, and monitoring</li> <li>➤ Groundwater recharge and management projects</li> <li>➤ Contaminant and salt removal through reclamation, desalting, and other treatment technologies and conveyance of reclaimed water for distribution to users</li> </ul>	Minimum 50% cost share	Zaffar Eusuff (916) 651-9266 Muzaffar.eusuff@water.ca.gov  Ted Daum (916) 651-9264 Theodore.Daum@water.ca.gov	<a href="#">IRWM</a>

## Summary of Potential Funding Sources for SWRP Projects

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
California Department of Water Resources	Urban Streams Restoration Program	Continuous, Draft guidelines anticipated in Spring 2019	To reduce flooding and erosion and associated property damage; restore, enhance or protect the natural ecological values of streams; and promote community involvement, education and stewardship	<ul style="list-style-type: none"> <li>➤ Projects that restore environmental and recreational benefits to streams previously channelized for flood control are eligible</li> <li>➤ Projects that include removing the concrete and re-establishing the natural stream meander and floodplain topography</li> <li>➤ Flood management, erosion control, or environmental restoration are the main objective, but may include some trail work</li> </ul>	\$1000-\$1,000,000; no match requirement	Stefan Lorenzato Program Manager (916) 651-9617 Stefan.Lorenzato@water.ca.gov  Marc Commandatore (916) 651-9630	<a href="#">USRP</a>  <a href="#">USRP Grants</a>
California Department of Water Resources	Water-Energy Grant Program	Continuous, schedule for solicitation unknown at this time	To implement water efficiency programs or projects that reduce greenhouse gas emissions, and reduce water and energy use	<ul style="list-style-type: none"> <li>➤ Commercial or institutional water-energy efficiency programs or projects</li> <li>➤ Residential water-energy efficiency programs or projects benefiting Disadvantaged Communities (DACs)</li> <li>➤ Proposal must demonstrate that it will directly reduce GHG emissions and also reduce water and energy use</li> </ul>	\$3,000,000	(916) 651-9613 DWR_IRWM@water.ca.gov  Matt Botill (Branch Chief, CA Climate Investments) (916) 324-0934 Matthew.Botill@arb.ca.gov	<a href="#">WEGP</a>
California Natural Resources Agency	Environmental Enhancement and Mitigation Program	Next solicitation in April 2019	Funding projects to mitigate, either directly or indirectly, the environmental impacts of the modification of an existing transportation facility or the environmental impacts of the construction of a new transportation facility	<ul style="list-style-type: none"> <li>➤ Urban forestry to offset vehicular emissions of carbon dioxide</li> <li>➤ Resource lands for acquisition or enhancement of resource lands</li> <li>➤ Mitigation Projects Beyond the Scope of the Lead Agency</li> </ul>	Maximum \$1,000,000 for acquisitions, \$500,000 for development projects	California Natural Resources Agency (916) 653-2812 eemcoordinator@resources.ca.gov  Carol Carter carol.carter@resources.ca.gov	<a href="#">EEMP</a>
California Natural Resources Agency	California River Parkways Grant Program (Proposition 68)	Continuous; Concept Proposals August 15, 2018 – September 27, 2018	To protect and manage the State's natural, historical, and cultural resources	<ul style="list-style-type: none"> <li>➤ Funding for projects that involve natural creeks, streams, and/or rivers. Projects must meet at least two of the following five statutory objectives:                             <ul style="list-style-type: none"> <li>▪ Recreation- provide compatible recreational opportunities, including trails for strolling, hiking, bicycling, and equestrian uses along rivers and streams</li> <li>▪ Habitat- protect, improve, or restore riverine or riparian habitat, including benefits to wildlife habitat and water quality</li> <li>▪ Flood management- maintain or restore the open space character of lands along rivers and streams so that they are compatible with periodic flooding as part of a flood management plan or project</li> <li>▪ Conversion to river parkways- convert existing developed riverfront land into uses consistent with river parkways</li> <li>▪ Conservation and interpretive enhancement- provide facilities to support or interpret river or stream restoration or other conservation activities</li> </ul> </li> </ul>	No minimum or maximum grant amounts	(916) 653-2812 urban.rivers@resources.ca.gov	<a href="#">CURGP</a>  <a href="#">CURGP</a>

## Summary of Potential Funding Sources for SWRP Projects

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
California State Coastal Conservancy	Proposition 1	Continuous; RFP in Winter 2018-2019 Applications due Spring 2019	To work proactively with local communities to implement multi-benefit projects that protect and enhance coastal resources	<ul style="list-style-type: none"> <li>➤ Implement watershed adaptation projects in order to reduce the impacts of climate change on communities and ecosystems</li> <li>➤ Restore river parkways throughout the state, including but not limited to projects pursuant to the California River Parkways Act of 2004 and urban river greenways</li> <li>➤ Protect and restore rural and urban watershed health to improve watershed storage capacity, forest health, protection of life and property, storm water resource management, and greenhouse gas reduction</li> <li>➤ Protect and restore coastal watersheds including but not limited to, bays, marine estuaries, and near shore ecosystems</li> <li>➤ Reduce pollution or contamination of rivers, lakes, streams, or coastal waters, prevent and remediate mercury contamination from legacy mines, and protect or restore natural system functions that contribute to water supply, water quality, or flood management</li> <li>➤ Assist in the recovery of endangered, threatened, or migratory species by improving watershed health, instream flows, fish passage, coastal or inland wetland restoration, or other means, such as natural community conservation plan and habitat conservation plan implementation</li> </ul>	No minimum or maximum amount	Mary Small mary.small@scc.ca.gov (510) 285-4181	<a href="#">CSCC Prop 1</a>
California State Water Resources Control Board (SWRCB)	Cleanup and Abatement Account (CAA)	Continuous; schedule for solicitation unknown at this time	To provide public agencies with grants for the cleanup or abatement of a condition of pollution when there are no viable responsible parties available to undertake the work	<ul style="list-style-type: none"> <li>➤ Emergency Cleanup Projects – Public Safety</li> <li>➤ Projects that address Disadvantaged Communities Environmental Justice infrastructure needs</li> <li>➤ Cleanup and/or abatement of 2006-listed water bodies that will help to implement a Total Maximum Daily Load (TMDL)</li> <li>➤ Cleanup and/or abatement of non-point source legacy pollutants (i.e. stormwater) when the source(s) of the pollution have been mitigated</li> <li>➤ Cleanup and/or abatement of pollution in high-use groundwater basins</li> <li>➤ Cleanup and/or abatement of contaminated sites when the viable responsible party has not been identified</li> <li>➤ Projects that promote habitat restoration through non-profit organizations that collaborate with the Regional Water Boards and encourage public outreach and education</li> <li>➤ Completion of a study/plan and/or monitoring addressing significant Statewide water quality problems</li> </ul>	Division of Financial Assistance allows requests for up to \$250,000 Projects more than \$250,000 will require approval from the SWRCB.	Kim Hanagan Senior WRCE (916) 323-0624	<a href="#">CAA</a>
California State Water Resources Control Board (SWRCB)	Orphan Site Cleanup Fund (OSCF)	Continuous	Provides financial assistance to eligible applicants for the cleanup of sites contaminated by leaking petroleum underground storage tanks (USTs) where there is no financially responsible party, and the applicant is not an eligible claimant to the UST Cleanup Fund	<ul style="list-style-type: none"> <li>➤ Assessment: preliminary site assessment and soil and water investigation and the preparation of a corrective action plan in accordance with California Code of Regulations, Title 23, Chapter 16, Article 11</li> <li>➤ Cleanup: Provide funding for response actions that carry out cleanup activities and include implementing a corrective action plan and verification monitoring, in accordance with California Code of Regulations, Title 23, Chapter 16, Article 11</li> </ul>	Maximum \$1,000,000	Lola Barba Manager (916) 341-5009 lola.barba@waterboards.ca.gov	<a href="#">OSCF</a>

## Summary of Potential Funding Sources for SWRP Projects

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
Federal Transit Administration (FTA)	Flexible Funding Program: Congestion Mitigation & Air Quality Program (CMAQ)	Continuous	To provide a flexible funding source to State and local governments for transportation projects and programs to help meet the requirements of the Clean Air Act. Funding is available to reduce congestion and improve air quality for areas that do not meet the National Ambient Air Quality Standards for ozone, carbon monoxide, or particulate matter (nonattainment areas) and for former nonattainment areas that are now in compliance (maintenance areas)	<ul style="list-style-type: none"> <li>➤ Funds may be used for a transportation project or program that is likely to contribute to the attainment or maintenance of a national ambient air quality standard, with a high level of effectiveness in reducing air pollution, and that is included in the metropolitan planning organization's (MPO's) current transportation plan and transportation improvement program (TIP) or the current state transportation improvement program (STIP) in areas without an MPO</li> <li>➤ Project must: must be a transportation project, must generate an emissions reduction and must be located in or benefit a nonattainment or maintenance area</li> </ul>	80% Federal share, 100% for special projects	Mark Glaze mark.glaze@dot.gov	<a href="#">CMAQ</a>
Federal Transit Administration (FTA)	Flexible Funding Program: Surface Transportation Block Grant (STBG)	Continuous	To preserve and improve the conditions and performance on any Federal-aid highway, bridge and tunnel projects on any public road, pedestrian and bicycle infrastructure, and transit capital projects, including intercity bus terminals	<ul style="list-style-type: none"> <li>➤ Recreational trails projects, pedestrian and bicycle projects</li> <li>➤ Environmental restoration and pollution abatement to minimize or mitigate impacts of any transportation project funded under this title (including retrofitting and construction of stormwater treatment systems to meet Federal and State requirements under sections 401 and 402 of the Federal Water Pollution Control Act</li> <li>➤ Establishment of plants selected by State and local transportation authorities to perform one or more of the following functions: abatement of stormwater runoff, stabilization of soil, and aesthetic enhancement</li> </ul>	Up to 80% Federal share,	David Bartz Office of Program Administration (512) 536-5906 david.bartz@dot.gov	<a href="#">STBG FHWA</a>  <a href="#">STBG FTA</a>
Federal Transit Administration (FTA)	Pilot Program for Transit-Oriented Development Planning	Continuous; last cycle 2016	To improve economic development and ridership, foster multimodal connectivity and accessibility, improve transit access for pedestrian and bicycle traffic, engage the private sector, identify infrastructure needs, and enable mixed-use development near transit stations	<ul style="list-style-type: none"> <li>➤ Enhance economic development and ridership</li> <li>➤ Facilitate multimodal connectivity and accessibility</li> <li>➤ Increase non-motorized access to transit hubs</li> <li>➤ Enable mixed-use development</li> <li>➤ Identify infrastructure needs associated with the transit project</li> <li>➤ Include private sector participation</li> </ul>	\$250,000 - \$2,000,000, Maximum Federal share 80%	Ben Owen FTA Office of Planning and Environment (202) 366-5602 benjamin.owen@dot.gov	<a href="#">PPTODP</a>

## Summary of Potential Funding Sources for SWRP Projects

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
Federal Transit Administration (FTA)	Urbanized Area Formula Grant	Continuous	FTA apportions Urbanized Area Formula Program funds to urbanized areas (UZAs) and to states for public transportation capital projects, operating assistance, job access and reverse commute projects, and for transportation-related planning	<ul style="list-style-type: none"> <li>➤ Planning, engineering, design and evaluation of transit projects and other technical transportation-related studies</li> <li>➤ Capital investments in bus and bus-related activities such as replacement of buses, overhaul of buses, rebuilding of buses, crime prevention and security equipment and construction of maintenance and passenger facilities</li> <li>➤ Capital investments in new and existing fixed guideway systems including rolling stock, overhaul and rebuilding of vehicles, track, signals, communications, and computer hardware and software</li> <li>➤ Provide access for bicycles to public transportation facilities</li> <li>➤ Provide shelters and parking facilities for bicycles in or around public transportation facilities</li> </ul>	80% Federal share, 90% if project involves vehicle-related equipment costs attributable to compliance with the Americans with Disabilities Act (ADA) and Clean Air Act 50% for Operating Assistance costs Funds are available the year appropriated plus five years	Office of Program Management Federal Transit Administration 1200 New Jersey Avenue, S.E. Washington, DC 20590 United States (202) 366-2053	<a href="#">UAFG</a>
National Endowment for the Arts	Our Town Grant	Schedule for future solicitations are unknown at this time	To support creative place making projects that help to transform communities into lively, beautiful, and resilient places with the arts at their core	<ul style="list-style-type: none"> <li>➤ Design projects that demonstrate artistic excellence while supporting the development of places where creative activities occur, or where the identity of place is created or reinforced</li> <li>➤ Design of public spaces, e.g., parks, plazas, landscapes, neighborhoods, districts, infrastructure, bridges, and artist-produced elements of streetscapes</li> <li>➤ Design of cultural facilities – new or adaptive reuse</li> </ul>	\$25,000-\$200,000 in matching grants for Arts Engagement, Cultural Planning, and Design Projects \$25,000-\$100,000 in Matching Grants for Projects that Build Knowledge About Creative Placemaking	NEA Staff OT@arts.gov	<a href="#">NEA</a>
National Fish and Wildlife Foundation	Environmental Solutions for Communities Grant Program	Applicant must be a nonprofit organization (collaboration required); schedule for future solicitations are unknown at this time	To promote sustainable communities by supporting projects that link economic development and community well-being to the stewardship and health of the environment	<ul style="list-style-type: none"> <li>➤ Demonstration projects that showcase innovative, cost-effective and environmentally-friendly approaches to improve environmental conditions within urban communities by 'greening' traditional infrastructure and public projects such as stormwater management and flood control and renovations to public facilities</li> <li>➤ Projects that provide measurable and meaningful conservation/environmental outcomes</li> </ul>	\$25,000-\$100,000	Sarah McIntosh Coordinator sarah.mcintosh@nfwf.org (202) 595-2434  Carrie Clingan Program Director, Community Stewardship and Youth (202) 595-2471 carrie.clingan@nfwf.org	<a href="#">NFWF</a>

## Summary of Potential Funding Sources for SWRP Projects

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
National Fish and Wildlife Foundation	Five Star & Urban Waters Restoration Grant Program	Annual; 2019 proposals due January 31, 2019	To develop community capacity to sustain local natural resources for future generations by providing modest financial assistance to diverse local partnerships focused on improving water quality, watersheds and the species and habitats they support.	<ul style="list-style-type: none"> <li>➤ Restore and/or create wetlands, coastal or riparian areas</li> <li>➤ Integrate meaningful outreach, education and/or training into the proposed on-the-ground activities that advance local watershed and conservation goals</li> <li>➤ Involve five or more partners (public and private entities) including the applicant</li> <li>➤ Result in specific, measurable ecological, educational and community benefits</li> <li>➤ Include a plan for maintenance and care of the project beyond the grant period</li> </ul>	\$20,000 to \$50,000 is a typical range: minimum 1:1 non-federal match	Danny Bowater (All Geographies) Coordinator, Community-Based Conservation (202) 595-2434 Daniel.Bowater@nfwf.org  Easy Grants Helpdesk Easygrants@nfwf.org Voicemail: (202) 595-2497 Hours: M-F 9am-5pm ET Include: Name, Proposal ID#, email, phone number, program applied and issue	<a href="#">FSUWR</a>
Ocean Protection Council	Proposition 1	Solicitation anticipated in July 2019	To preserve, protect, and restore the resources of the California coast	<ul style="list-style-type: none"> <li>➤ Reduce pollution and contaminants, including nutrients, toxics, and contaminants of emerging concern from sources including stormwater, non-point discharges, agricultural runoff, etc.</li> <li>➤ Prevent land-based litter from reaching the ocean and becoming marine debris</li> <li>➤ Remove micro-plastics and microfibers from agricultural runoff and stormwater</li> </ul>	Minimum \$250,000	Marina Cazorla, Program Manager OPC_Prop1grants@resources.ca.gov	<a href="#">OPC Prop 1</a>  <a href="#">OPC Prop 1</a>
People For Bikes	Community Grant Program	1-2 cycles per year, Fall 2018 grant cycle closed to new applications October 2019 for 2019 grant schedule	To provide funding for important and influential projects that leverage federal funding and build momentum for bicycling in communities across the U.S	<ul style="list-style-type: none"> <li>➤ Bike paths, lanes, trails, and bridges</li> <li>➤ Mountain bike facilities</li> <li>➤ Bike parks and pump tracks</li> <li>➤ BMX facilities</li> <li>➤ End-of-trip facilities such as bike racks, bike parking, bike repair stations and bike storage</li> <li>➤ Programs that transform city streets, such as Ciclovías or Open Streets Days</li> <li>➤ Campaigns to increase the investment in bicycle infrastructure</li> </ul>	Maximum \$10,000, 50% share	Zoe Kircos Director of Grants and Partnerships (303) 449-4893 x106 zoe@peopleforbikes.org	<a href="#">CGP</a>  <a href="#">CGP</a>
Rails to Trails Conservancy	Doppelt Family Trail Development Fund	Annual, applications due each January	To support organizations and local governments that are implementing projects to build and improve multi-use trails	<ul style="list-style-type: none"> <li>➤ New trail construction, trail facility/infrastructure (e.g., trailheads, bathrooms)</li> <li>➤ Land acquisition</li> <li>➤ Trail signage</li> <li>➤ Improvements to existing trails and significant maintenance tasks</li> <li>➤ Promoting a local trail project in the local media</li> <li>➤ Conducting feasibility studies</li> <li>➤ Adding personnel or volunteer coordination capacity</li> </ul>	\$5,000-\$50,000	grants@railstotrails.org	<a href="#">DFTDF</a>
San Bernardino County Transportation Authority	Measure I	Continuous	Measure I is the half-cent sales tax collected throughout San Bernardino County for transportation improvements	<ul style="list-style-type: none"> <li>➤ Major Street Projects - defined as congestion relief and safety improvements to major streets that connect communities, serve major destinations, and provide freeway access</li> <li>➤ Local Street Projects - defined as local street and road construction, repair, maintenance and other eligible local transportation priorities</li> </ul>	Not Stated Limits depend on tax revenue and region within county	Andrea Zureick Director Fund Administration and Programming azureick@gosbcta.com (909) 884-8276	<a href="#">SBCTA</a>

## Summary of Potential Funding Sources for SWRP Projects

Funding Agency	Program	Timeline	Purpose	Eligible Uses	Funding Limits	Contact Information	Link
State of California Wildlife Conservation Board	Habitat Restoration Grant	Continuous	Awards grants for projects to restore and enhance wildlife habitats	<ul style="list-style-type: none"> <li>➤ Riparian habitat conservation</li> <li>➤ Inland wetlands conservation</li> <li>➤ Ecosystem restoration on agricultural lands</li> <li>➤ Habitat enhancement and restoration</li> </ul>	Not Stated	John P. Donnelly, Executive Director, Wildlife Conservation Board 1416 9 <sup>th</sup> Street, Room 1266 Sacramento, CA, 95814	<a href="#">HRG</a>
Surdna Foundation	Surdna Foundation Grant	Applicant must be a nonprofit organization (collaboration required); letters of inquiry are accepted on a rolling basis	To foster sustainable communities in the United States, communities guided by principles of social justice and distinguished by healthy environments, strong local economies, and thriving cultures	<ul style="list-style-type: none"> <li>➤ Clean, affordable, equitable, high-quality and efficient transportation and land use development that better connects critical services, jobs, schools, housing and other regional destinations</li> <li>➤ Efforts to help people make homes, businesses and other buildings more energy efficient</li> <li>➤ Efforts to capture stormwater and slowly release it into the existing network of drains, or reuse it where it falls to cultivate natural green spaces</li> </ul>	Indirect costs for program grants up to 15% of project expenses allowed for grants of \$25,000 or more	Grants Manager, Surdna Foundation 330 Madison Ave., 30th Floor New York, NY 10010 grants@surdna.org	<a href="#">Surdna</a>
United States Army Corp of Engineers	Small Flood Damage Reduction Projects	Continuous	To study, design, and construct small flood control projects in partnership with non-Federal government agencies, such as cities, counties, special authorities, or units of state government	<ul style="list-style-type: none"> <li>➤ Projects may be structural (i.e., levees, flood walls, diversion channels, pumping plants and bridge modifications) or non-structural (i.e., flood proofing, relocation of structures and flood warning systems)</li> </ul>	Feasibility Study: 100% up to \$100,000 - 50/50 cost-share above that Design/ Construction: 65%	Chris Hatfield of the Special Studies Section (978) 318-8520	<a href="#">SFDRP</a>
United States Army Corp of Engineers	Emergency Watershed Protection	Continuous	To help people and conserve natural resources by relieving imminent hazards to life and property caused by floods, fires, windstorms, and other natural occurrences	<ul style="list-style-type: none"> <li>➤ Remove debris from stream channels, road culverts, and bridges</li> <li>➤ Reshape and protect eroded and unstable banks</li> <li>➤ Correct damaged drainage facilities</li> <li>➤ Establish cover on critically eroding lands</li> <li>➤ Repair levees and structures</li> <li>➤ Repair conservation practices</li> </ul>	Up to 75% of construction costs, 90% in limited resource areas	Shawn Anderson National Emergency Watershed Protection Program Coordinator (202) 720-5795	<a href="#">EWP</a> <a href="#">EWP</a>
United States Department of the Interior (DOI) - Bureau of Reclamation	Drought Response Program: Drought Resiliency Projects	Future cycles unknown at this time	To help communities prepare for and respond to drought	<ul style="list-style-type: none"> <li>➤ Groundwater recharge and benefits for fish and wildlife</li> <li>Implement projects that support proactive approach to drought control</li> <li>Improving Water Management</li> <li>Update comprehensive drought plans with resiliency projects</li> </ul>	Applicants must provide a 50 percent non-Federal cost-share. Award Ceiling: \$750,000	Darion Mayhorn Reclamation Drought Coordinator dmayhorn@usbr.gov (303) 445-3121	<a href="#">DRP</a>
U.S. Department of the Interior (DOI) - Bureau of Reclamation	Cooperative Watershed Management Program: Phase II	Continuous	Provides financial assistance to locally led watershed groups to encourage diverse stakeholders to form local solutions to water management needs	<ul style="list-style-type: none"> <li>➤ Implementation of on-the-ground watershed management projects that address critical water supply needs, water quality, and ecological resilience of the watershed</li> </ul>	For Phase II Reclamation will award up to \$100,000 per project over a two-year period. Applicants must contribute at least 50% of the total project costs	Avra Morgan aomorgan@usbr.gov (303) 445-2906	<a href="#">CWMP</a>

## Multi-Benefit Project Request Form

# The Flood Control District is seeking partners Multi-Benefit Project Request Form

We want to know about your projects for inclusion in the Stormwater Resource Plan. If your project involves a partnership with the District and provides at least two benefits, then complete the form below. We will perform a metrics-based analysis of project benefits. Potential project benefits are listed below.

### Water Quality

- Pollutant load reduction
- Stormwater runoff reduction

### Flood Management

- Runoff rates and runoff volume reductions
- Flood elevation reduction
- Parcel/structure removal from floodplain
- Property value saved

### Water Supply

- Groundwater recharge
  - Stormwater
  - Recycled water

### Community

- Employment opportunities
- Public education
- Community involvement
- Enhancement/creation of
  - public spaces
  - walking paths
  - bike trails
  - sidewalks

### Environmental

- Wetlands enhancement/creation
- Riparian area enhancement
- Streambed restoration
- Increased urban green space

# You are invited!

The San Bernardino County Flood Control District is leading the development of a **Stormwater Resource Plan** for the San Bernardino County portion of the Santa Ana River Watershed and needs your **valuable insight**.

Be a part of this exciting process!

Join the District in one of two outreach events!

Learn about:

- Proposition 1 Grant Funding
- The Stormwater Resource Plan (SWRP)
- How your agency can get involved

The District is seeking partners on future multi-benefit projects. Come share your ideas.

For more information  
please email  
[swrp@cwecorp.com](mailto:swrp@cwecorp.com)

## Stakeholder Outreach Events

### Event #1

August 30, 2017 from 1:30 - 3:00 pm  
Inland Empire Utilities Agency Board Room  
6075 Kimball Avenue, Chino

### Event #2

August 31, 2017 from 1:30 - 3:00 pm  
Department of Public Works Hearing Room  
825 E. Third Street, San Bernardino

We look forward to ongoing collaboration!

Packet Pg. 1719

# You are invited!

The San Bernardino County Flood Control District is leading the development of a **Stormwater Resource Plan** for the San Bernardino County portion of the Santa Ana River Watershed. We need your help planning for the future of our **valuable water resources**.

Be a part of this exciting process!

Join the District at this public outreach event!

Learn about:

- Our water resources
- The Stormwater Resource Plan (SWRP)
- Multi-benefit projects
- How you can get involved

Provide feedback on the Draft SWRP

Come share your ideas.

For more information and to provide comments please email [swrp@cwecorp.com](mailto:swrp@cwecorp.com)

## Public Outreach Event

July 24, 2018 from 5:00 - 7:00 pm  
Department of Public Works Hearing Room  
825 E. Third Street, San Bernardino

Refreshments will be provided

Review the draft SWRP at <http://bit.do/SWRP> and provide comments by August 7, 2018.

We look forward to seeing you there!

# ¡Esta invitado!

El Distrito de Control de Inundaciones del Condado de San Bernardino esta liderando el desarrollo de un **Plan de Recursos de Aguas Pluviales (SWRP)** para la porción del Condado de San Bernardino localizado en la Cuenca del Río Santa Ana. Necesitamos su ayuda para planear el futuro de nuestros **valiosos recursos hídricos**.

**¡Sea parte de este proceso facinante!**

**¡Acompañe el Distrito en nuestro evento para el publico!**

Aprende sobre:

- Nuestros recursos hídricos
- El Plan de Recursos de Aguas Pluviales (SWRP)
- Proyectos de beneficios múltiples
- Como puede participar

Ofrece su opinión sobre el borrador del SWRP

**Vengan a compartir sus ideas.**

## Junta de información para el publico

**24 de julio de 2018, 5:00 - 7:00 pm**  
Department of Public Works Hearing Room  
825 E. Third Street, San Bernardino

**Refrescos serán proporcionados**

Para más información y para ofrecer su comentario, envíe un correo electrónico a [swrp@cwecorp.com](mailto:swrp@cwecorp.com)

**Revise el borrador del SWRP que se encuentra en <http://bit.do/SWRP> y proporcione su comentario por el 7 de agosto de 2018.**

**¡Esperamos verlos en la junta!**

# Frequently Asked Questions

## 1. What is a SWRP?

A Stormwater Resource Plan (SWRP) is a watershed based planning document that includes an evaluation of existing water resources and an identification of projects, programs, and activities that will enhance the beneficial uses of stormwater and dry-weather runoff. A metrics-based approach is used to quantify project/program benefits and prioritize future implementation. Projects/programs that provide multiple benefits, such as water quality, water supply, flood management, environmental, and community benefits, are identified in SWRPs. SWRPs are developed in coordination with multiple stakeholders and the public. The development of a SWRP provides opportunities for agencies and organizations to collaborate to find ways to capture, clean, infiltrate, and/or use runoff that otherwise would leave the watershed. SWRPs are adaptively managed overtime to address ongoing changes in regulatory policies and needs.

## 2. Who needs a SWRP and what are the benefits?

Any public agency, nonprofit organization, public utility, federally recognized Indian tribes, State Indian tribes, and mutual water companies may develop a SWRP. Developing a SWRP provides opportunities to receive funding through the Proposition 1 Stormwater Grant Program, administered through the State Water Resources Control Board (State Board). With limited exceptions for certain small disadvantaged communities, Water Code Section 10563(c)(1) requires stormwater and dry-weather runoff capture projects be included in a SWRP to receive stormwater grants from bond measures passed by the State of California after January 1, 2014. One such bond measure is Proposition 1, passed by voters in November 2014, which authorized \$200 million in funding for multi-benefit stormwater management projects. Additionally, the development of a SWRP encourages agencies/organizations to evaluate the health of the watershed and plan projects and programs that will provide multiple benefits and address existing concerns.

## 3. What are the goals of a SWRP?

The development of SWRPs is a collaborative process that involves both stakeholders and the public. Goals pertaining to specific SWRPs are established through those collaborative efforts. In general, SWRPs have the following goals:

- Improve water quality by reducing runoff volumes and pollutants entering receiving waters to support beneficial uses
- Capture and use stormwater as a water supply resource
- Protect life and property through better management of flooding risks
- Use stormwater projects to enhance environmental and community benefits
- Identify multi-benefit projects that accomplish more than one of the goals identified above

## 4. What are the goals of the SBC SARW SWRP?

The San Bernardino County Santa Ana River Watershed (SBC SARW) SWRP will meet the general goals identified above in addition to some region specific goals. The main goal of the SBC SARW SWRP is to quantify the various benefits that result from implementation of projects and programs included in the plan. This allows the San Bernardino County Flood Control District (District) and partnering agencies to easily apply for funding opportunities available not only through the State Board and the Stormwater Grant Program, but also other water related funding opportunities. The quantification of benefits is required within the SWRP; however, the SBC SARW SWRP goes above and beyond those expectations to make applying for and obtaining funds easier.

## 5. What information is included in a SWRP?

Each SWRP will be different, but all will be prepared considering guidance set forth in the SWRP Guidelines developed by the State Board. At a minimum, the following information will be included in SWRPs, consistent with the guidelines:

- Description of watershed and sub-watersheds covered in the plan, including water quality priorities, identification of surface water and groundwater resources, account of local water supplies and suppliers, and a summary of existing natural habitat and open space within the watershed
- Identification of existing regional water management groups, public agencies, governments, non-profit organizations, utilities, and other stakeholders and the development of a process by which organizers of the SWRP consult, cooperate, and collaborate with each other
- Quantitative methods for identification and prioritization of stormwater and dry-weather runoff capture projects, including an integrated metrics based analysis of multi-benefit projects
- Identification and prioritization of stormwater projects based on how each project would improve water supply, water quality, flood management, environmental, and community benefits
- Identification of resources for plan implementation and project scheduling, including strategies for maintaining and amending the SWRP for future projects through an adaptive management process
- Provisions for community participation in plan development and implementation

## 6. How can we get a project included in the SBC SARW SWRP?

If your agency would like partner with the District on a multi-benefit project located within the SBC SARW area, and that project aligns with the goals of the SWRP, we would like to hear from you. Please send an email to [SWRP@cwecorp.com](mailto:SWRP@cwecorp.com) and include the information requested in the project request flyer, such as contact person, partnering agencies, project name/components, and the status of the project. The more well-planned and well-quantified your project is, the likelier it will be to get matching funds from the State. The multiple benefits provided by projects included in the SBC SARW SWRP will be quantified and the results of this analysis will not only support future Proposition 1 grant applications, but other related funding opportunities that may exist in the future.

## 7. What is the difference between a SWRP and IRWMP?

An Integrated Regional Water Management Plan (IRWMP), such as the One Water One Watershed (OWOW) Plan prepared by the Santa Ana Water Project Authority (SAWPA), is different than a SWRP and an IRWMP does not automatically become a SWRP Equivalent document. According to the California Department of Water Resources, an IRWMP is a comprehensive planning document to encourage development of voluntary regional strategies for management of water resources. Projects identified in an IRWMP must address at least one water-related concern, but are not required to provide multiple benefits, as is required in a SWRP. Additionally, IRWMPs were developed in response to Proposition 50 and SWRPs are being developed in response to Proposition 1. IRWMPs are prepared by larger watershed areas, while individual SWRPs covering a much smaller area may be prepared.

# Preguntas Más Frecuentes

## 1. ¿Qué es un SWRP?

Un Plan de Recursos de Aguas Pluviales (SWRP; por sus siglas en inglés) es un documento de planificación basado en cuencas que incluye una evaluación de los recursos hídricos existentes y una identificación de proyectos, programas y actividades que mejorarán los usos beneficiosos de las aguas pluviales y la escorrentía en clima seco. Se utiliza un enfoque basado en criterios para cuantificar los beneficios del proyecto/programa y priorizar la implementación futura. Los proyectos/programas que brindan múltiples beneficios, como la calidad del agua, el suministro de agua, el manejo de inundaciones, el medio ambiente y los beneficios para la comunidad, se identifican en un SWRP. Cada SWRP se desarrolla en coordinación con múltiples partes interesadas y el público. El desarrollo de un SWRP ofrece oportunidades para que las administraciones públicas y organizaciones colaboren para encontrar formas para capturar, limpiar, infiltrar y/o utilizar la escorrentía que de otro modo dejaría la cuenca. Cada SWRP se maneja de forma adaptativa a lo largo del tiempo para abordar los cambios en curso en las políticas y necesidades normativas.

## 2. ¿Quién necesita un SWRP y cuáles son los beneficios?

Cualquier administración pública, organización sin fines de lucro, utilidad pública, tribus indígenas reconocidas a nivel federal, tribus indígenas del estado y compañías de agua mutuales pueden desarrollar un SWRP. Desarrollar un SWRP brinda oportunidades para recibir fondos a través del Programa de Subvención de Aguas Pluviales de la Proposición 1, administrado a través de la Junta Estatal de Control de Recursos Hídricos (State Board). Con excepciones limitadas para ciertas comunidades pequeñas desfavorecidas, la Sección 10563 (c) (1) del Código de Agua exige que las aguas pluviales y los proyectos de captura de escorrentía se incluyan en un SWRP para recibir concesiones de aguas pluviales de medidas de bonos aprobadas por el Estado de California después del 1 de enero de 2014. Una de esas medidas de bonos es la Proposición 1, aprobada por los votantes en noviembre de 2014, que autorizó \$ 200 millones en fondos para proyectos de administración de aguas pluviales de múltiples beneficios. Además, el desarrollo de un SWRP promueve a las agencias/organizaciones a evaluar el estado de la cuenca y planificar proyectos y programas que proporcionarán múltiples beneficios y abordarán las preocupaciones existentes.

## 3. ¿Cuáles son los objetivos de un SWRP?

El desarrollo de SWRP es un proceso de colaboración que involucra tanto a los interesados como al público. Las metas relacionadas con un SWRP específicos se establecen a través de esos esfuerzos de colaboración. En general, cada SWRP tiene los siguientes objetivos:

- Mejorar la calidad del agua al reducir los volúmenes de escorrentía y los contaminantes que ingresan a las aguas receptoras para apoyar usos beneficiosos
- Capturar y usar aguas pluviales como un recurso de suministro de agua
- Proteger la vida y la propiedad a través de un mejor manejo de los riesgos de inundación
- Utilizar proyectos de aguas pluviales para mejorar los beneficios ambientales y comunitarios
- Identificar proyectos de múltiples beneficios que logren más de uno de los objetivos identificados anteriormente

## 4. ¿Cuáles son los objetivos del SBC SARW SWRP?

El SWRP de la Cuenca del Río Santa Ana del Condado de San Bernardino (SBC SARW) cumplirá con los objetivos generales identificados anteriormente, además de algunos objetivos específicos de la región. El objetivo principal del SBC SARW SWRP es cuantificar los diversos beneficios que resulten debido a la implementación de proyectos y programas incluidos en el plan. Esto permite que el Distrito de Control de Inundaciones (Distrito) y las agencias asociadas del Condado de San Bernardino soliciten fácilmente las oportunidades de financiamientos disponibles no solo a través del State Board y el Programa de Subvenciones de Tormentas, sino también de otras oportunidades de financiamiento relacionadas con el agua. La cuantificación de los beneficios se requiere dentro del SWRP; sin embargo, el SBC SARW SWRP va más allá de esas expectativas para facilitar la solicitud y obtención de fondos.

## 5. ¿Qué información está incluida en un SWRP?

Cada SWRP será diferente, pero todos serán preparados teniendo en cuenta la pauta establecida en el documento SWRP Guidelines desarrolladas por el State Board. Como mínimo, la siguiente información se incluirá en los SWRP, en conformidad con las directrices:

- Descripción de cuencas y subcuencas cubiertas en el plan, incluidas las prioridades de calidad del agua, identificación de aguas superficiales y recursos de aguas subterráneas, cuenta de suministros de agua locales y proveedores, y un resumen del hábitat natural existente y el espacio abierto dentro de la cuenca
- Identificación de grupos regionales de administración del agua, agencias públicas, gobiernos, organizaciones sin fines de lucro, servicios públicos y otras partes interesadas y el desarrollo de un proceso mediante el cual los organizadores del SWRP consultan, cooperan y colaboran entre sí
- Métodos cuantitativos para la identificación y priorización de proyectos de captura de escorrentía en aguas pluviales y clima seco, incluyendo un análisis basado en métricas integradas de proyectos de múltiples beneficios
- Identificación y priorización de proyectos de aguas pluviales en función de cómo cada proyecto mejoraría el suministro de agua, la calidad del agua, el manejo de las inundaciones, el medio ambiente y los beneficios para la comunidad
- Identificación de recursos para la implementación del plan y la programación del proyecto, incluyendo estrategias para mantener y modificar el SWRP para proyectos futuros a través de un proceso de manejo adaptativa
- Disposiciones para la participación de la comunidad en el desarrollo e implementación del plan

## 6. ¿Cómo podemos incluir un proyecto en el SBC SARW SWRP?

Si su agencia quisiera asociarse con el Distrito en un proyecto de beneficios múltiples ubicado dentro del área de SBC SARW, y ese proyecto se alinea con los objetivos del SWRP, nos gustaría saber de usted. Envíe un correo electrónico a [SWRP@cwecorp.com](mailto:SWRP@cwecorp.com) e incluya la información solicitada en el folleto de solicitud del proyecto, incluyendo nombre de la persona de contacto, agencias asociadas, nombre/componentes del proyecto y las condiciones del proyecto. Cuanto mejor planeado y mejor cuantificado sea su proyecto, más probable será obtener fondos del Estado. Los beneficios múltiples provistos por los proyectos incluidos en SBC SARW SWRP se cuantificarán y los resultados de este análisis no solo respaldarán las futuras solicitudes de subvenciones de la Proposición 1, sino también otras oportunidades de financiamiento relacionadas que puedan existir en el futuro.

## 7. ¿Cuál es la diferencia entre un SWRP y un IRWMP?

Un Plan Regional Integrado de Administración del Agua (IRWMP), como el Plan One Water One Watershed (OWOW) preparado por la Autoridad del Proyecto Acuático de Santa Ana (SAWPA), es diferente de un SWRP y un IRWMP no se convierte automáticamente en un documento equivalente a un SWRP (SWRP Equivalent). De acuerdo con el Departamento de Recursos Hídricos de California, un IRWMP es un documento de planificación integral para alentar el desarrollo de estrategias regionales voluntarias para el manejo de los recursos hídricos. Los proyectos identificados en un IRWMP deben abordar al menos un problema relacionado con el agua, pero no están obligados a proporcionar beneficios múltiples, como se requiere en un SWRP. Además, el desarrollo del IRWMP fue en respuesta a la Proposición 50, mientras el desarrollo del SWRP fue en respuesta a la Proposición 1. Otra diferencia es que los IRWMP se preparan en general por áreas de cuencas hidrográficas grandes, mientras un SWRP se puede preparar para una área mucho más pequeña.

# The Flood Control District is seeking partners Multi-Benefit Project Request Form

We want to know about your projects for inclusion in the Stormwater Resource Plan. If your project involves a partnership with the District and provides at least two benefits, then complete the form below. We will perform a metrics-based analysis of project benefits. Potential project benefits are listed below.

- Water Quality**
- Pollutant load reduction
  - Stormwater runoff reduction

- Flood Management**
- Runoff rates and runoff volume reductions
  - Flood elevation reduction
  - Parcel/structure removal from floodplain
  - Property value saved

- Water Supply**
- Groundwater recharge
    - Stormwater
    - Recycled water

- Community**
- Employment opportunities
  - Public education
  - Community involvement
  - Enhancement/creation of
    - public spaces
    - walking paths
    - bike trails
    - sidewalks

- Environmental**
- Wetlands enhancement/creation
  - Riparian area enhancement
  - Streambed restoration
  - Increased urban green space

# What is a SWRP?

A SWRP is a watershed based, public/stakeholder-driven, and adaptively managed plan that evaluates existing water resources and identifies projects, programs, and activities that will enhance the beneficial uses of stormwater and dry-weather runoff.

## Adaptive Management

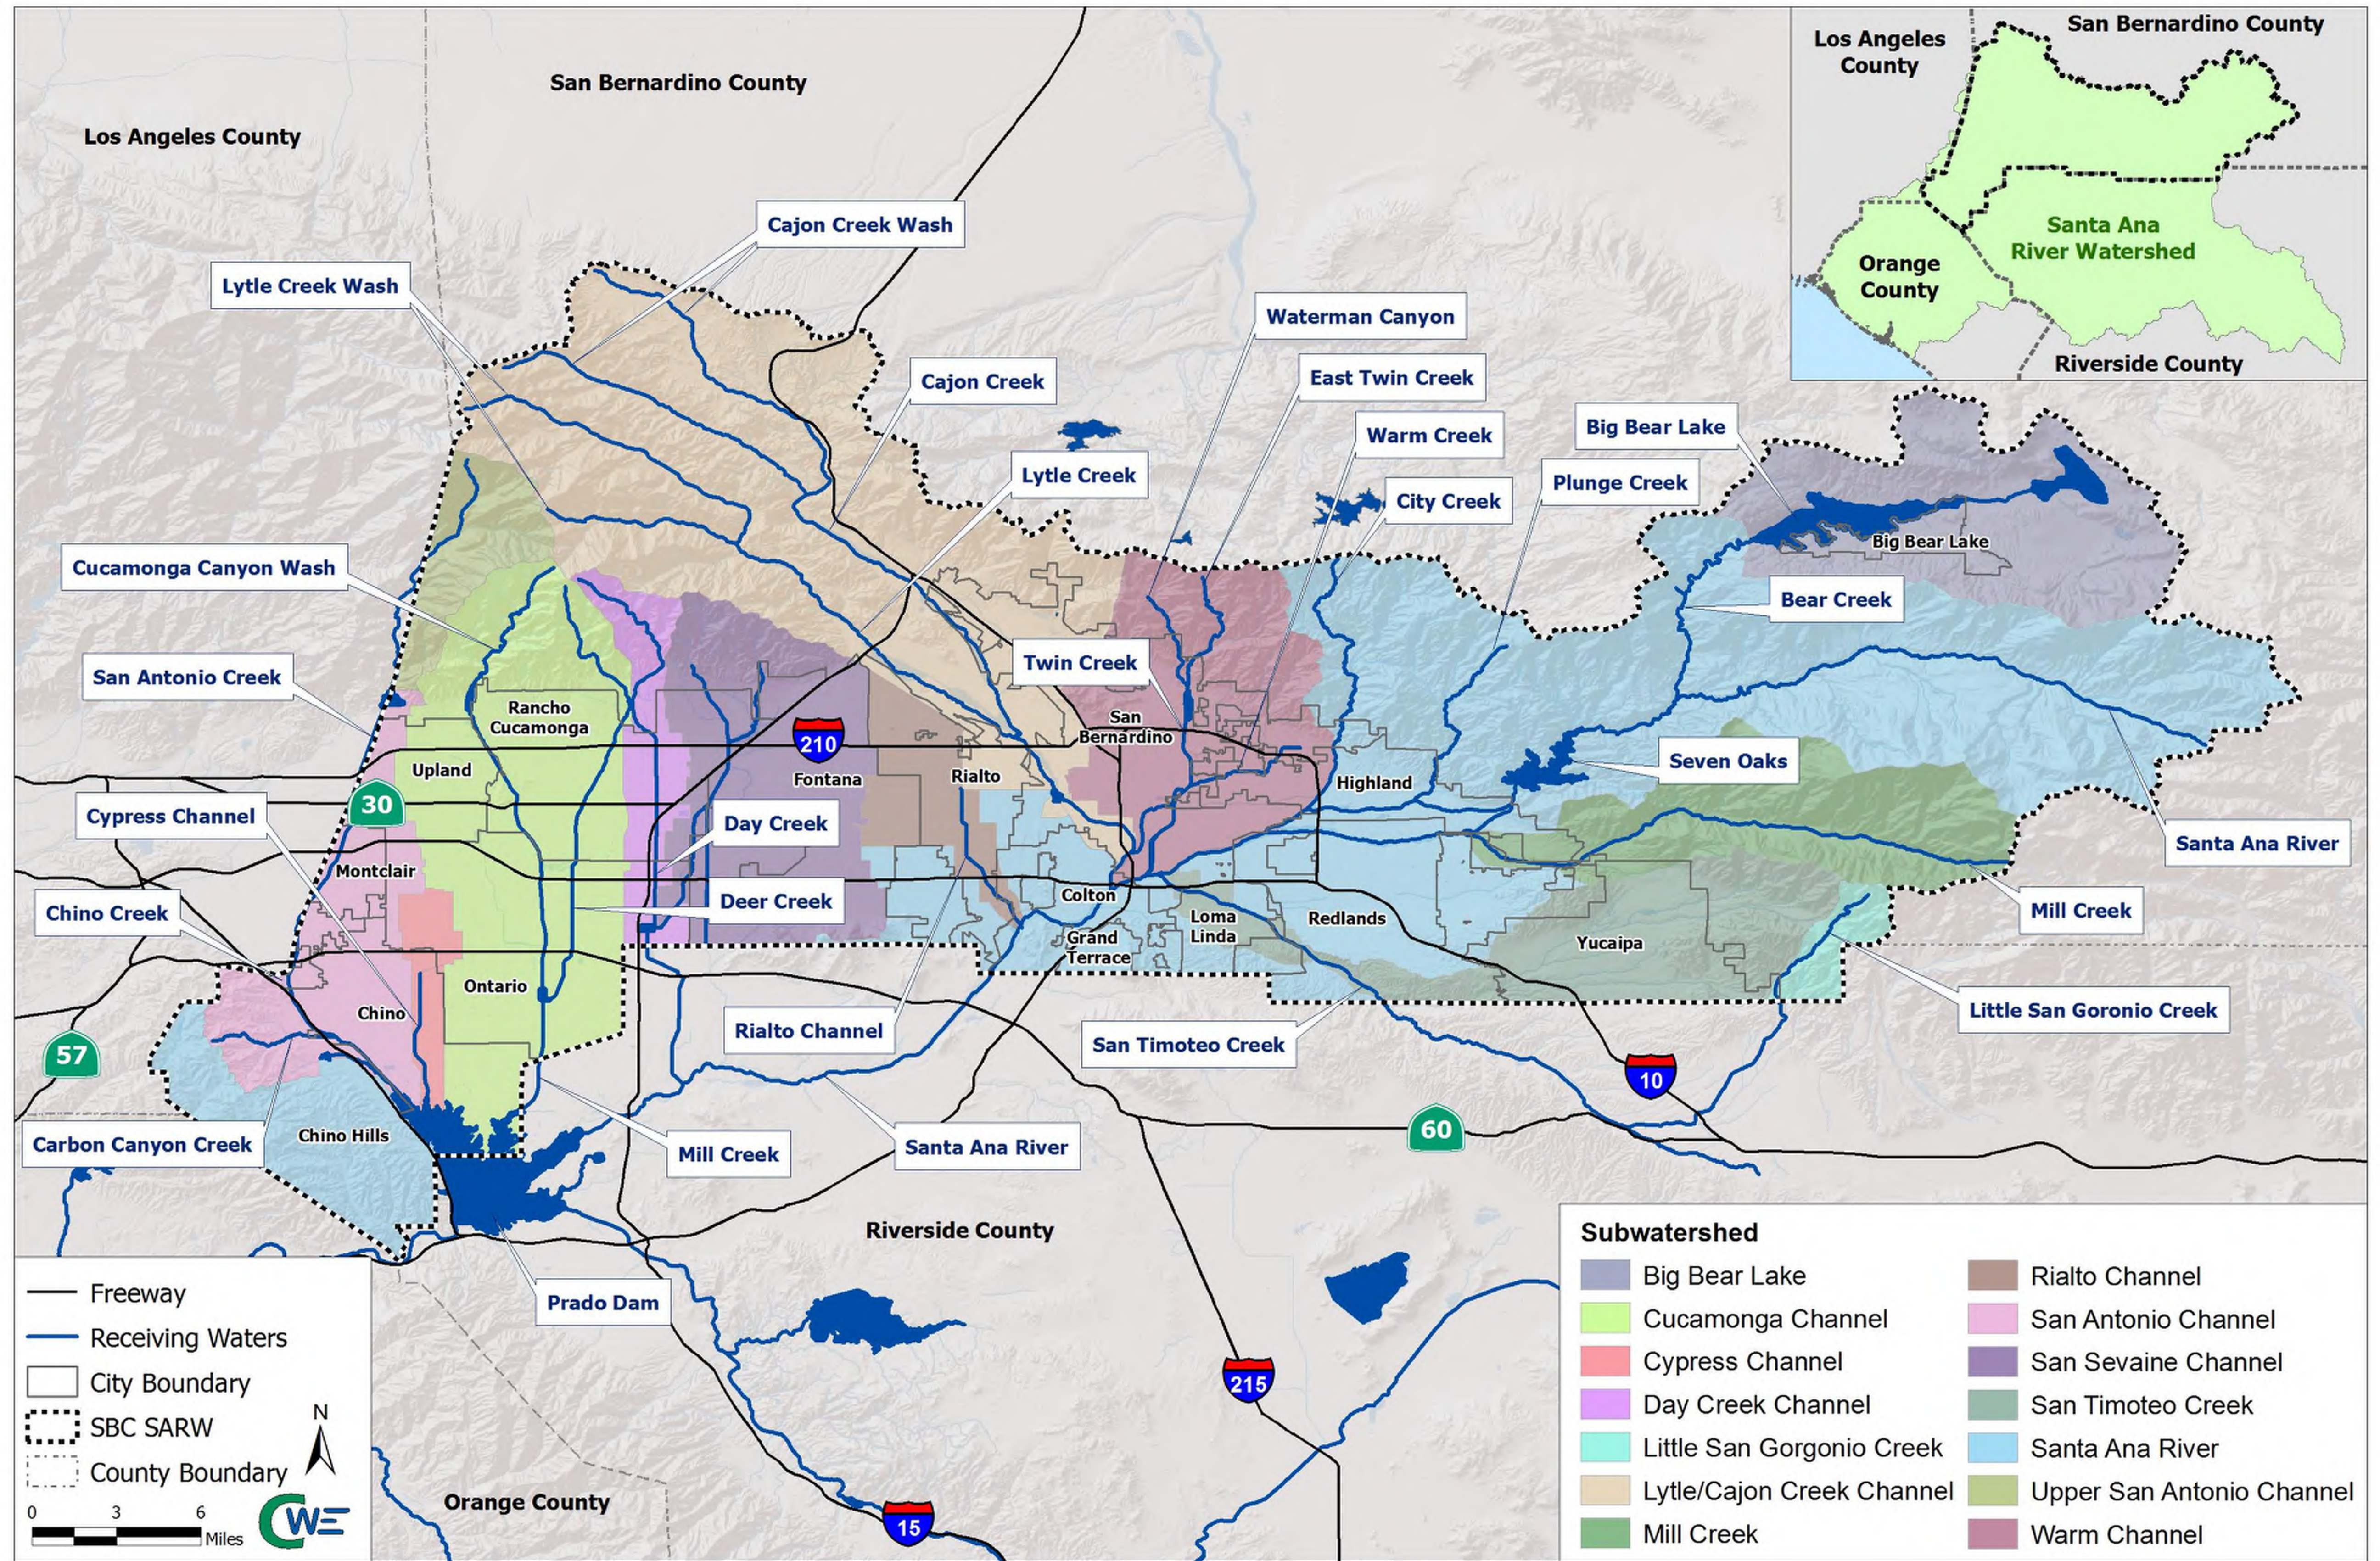

## Benefit Categories

-  Water Quality
-  Flood Management
-  Water Supply
-  Community
-  Environmental

# SWRP Area Map

San Bernardino County

# Santa Ana River Watershed Stormwater Resource Plan

# What types of projects are included?

## Groundwater Recharge

## Habitat Restoration

## Channel Improvements

## Water Quality Enhancements

## Passive Recreation

## Recycled Water

# What are the multiple benefits?

Projects, programs, and activities identified in the SWRP will provide the multiple benefits described below.

## GOALS

## OBJECTIVES

## OUTCOMES

Enhance Water Quality

Pollutant Load Reduction  
Stormwater Runoff Reduction

Maximize Water Supply

Stormwater Recharge  
Recycled Water Recharge

Improve Flood Management

Runoff Rate & Volume Reduction  
Flood Elevation Reduction  
Floodplain Parcels/Structures Removal  
Saved Property Value

Protect the Environment

Wetlands Enhancement/Creation  
Riparian Area Enhancement  
Streambed Restoration  
Increased Urban Green Space

Provide Community Benefits

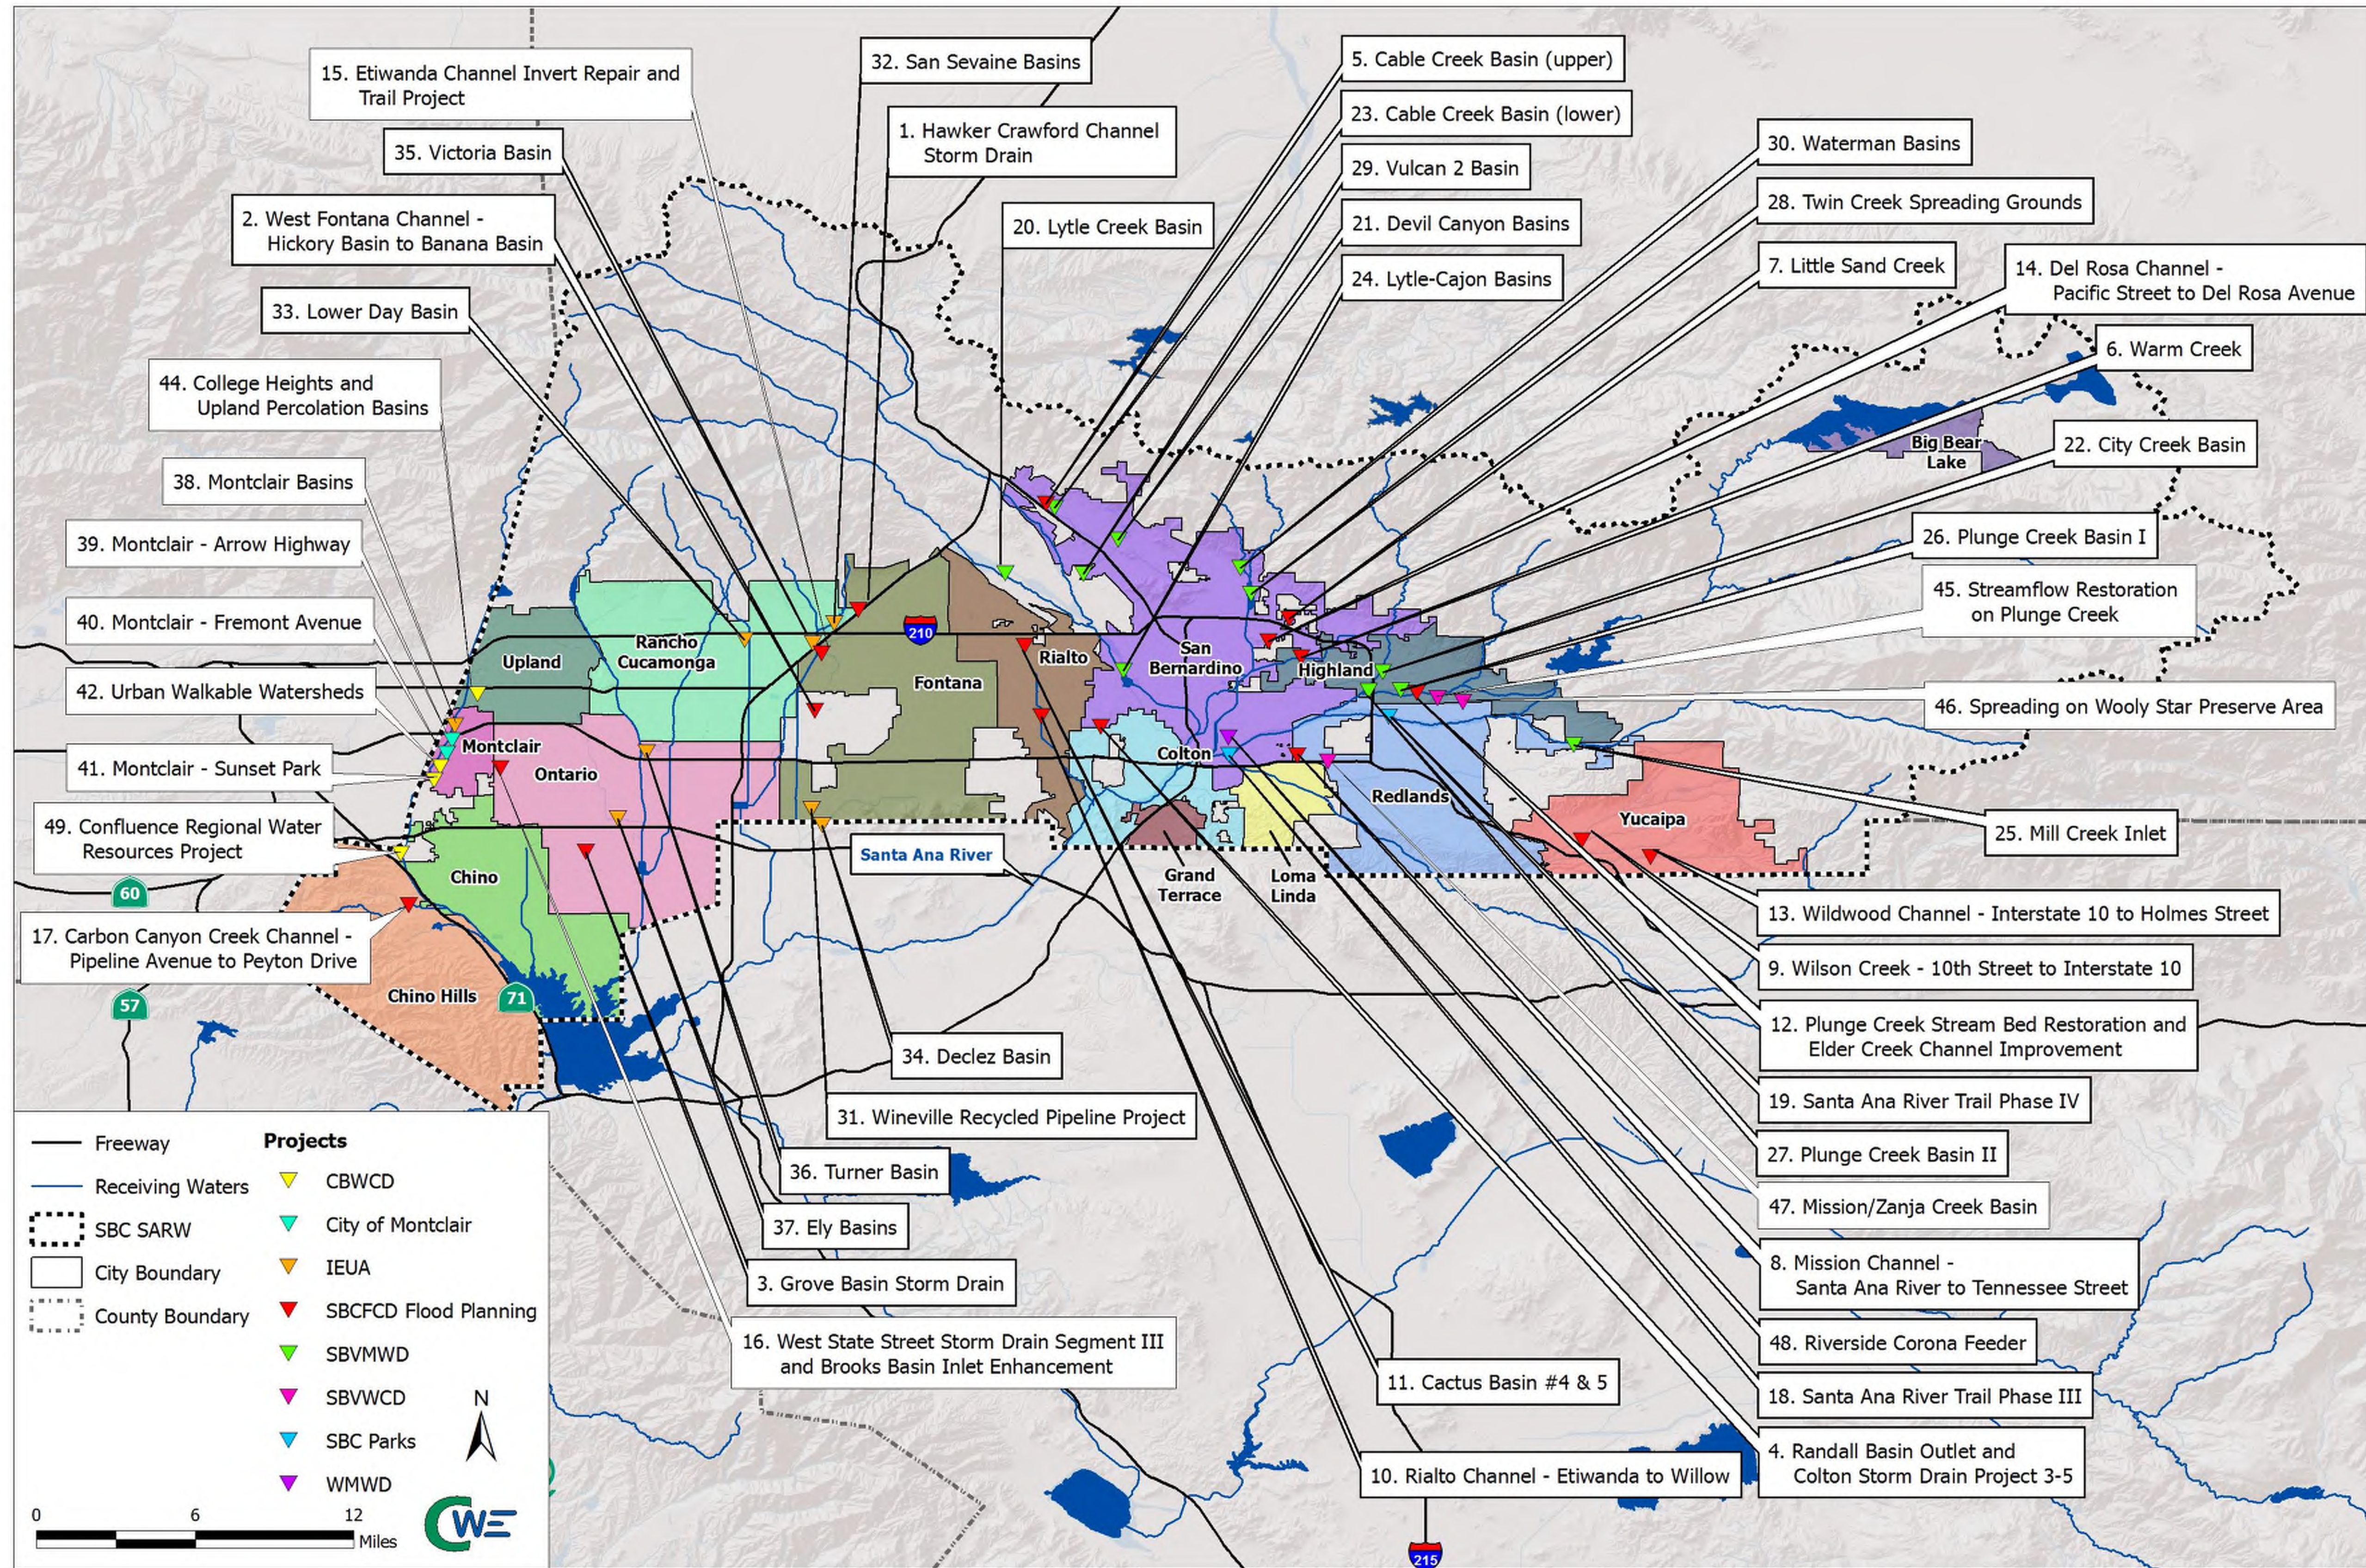

Employment Opportunities  
Public Education and Community Involvement  
Recreational Paths Enhancement/Creation  
Public Use Area Enhancement/Creation

- Removal of roughly four quadrillion (4 x 10<sup>15</sup>) MPN E. coli bacteria per year.
- Reduce the discharge of untreated stormwater by approx. 41,500 acre-feet per year.
- Cumulatively capture on average around 41,500 acre-feet of stormwater per year and use the volume to recharge local aquifers.
- Capture about 5,600 acre-feet of recycled water per year for groundwater recharge.
- Provide a benefit of reducing the peak flow rate during floods, with a maximum predicted flow rate reduction of 600 cfs.
- Cumulatively prevent 41,500 acre-feet of stormwater from reaching flood-prone areas.
- Reduce the water surface elevation during a flood event, with a maximum predicted flood elevation reduction of almost 9 feet.
- Remove over 1,700 parcels from the risk of flooding during a 100-year storm event. These parcels have a combined value of over **\$510 million**.
- Enhance or create 2 acres of wetlands.
- Restore or enhance almost 31 acres of riparian habitat.
- Restore at least 2,300 feet of streambed to natural conditions, creating and preserving critical habitat for endangered species.
- Increase the amount of urban green space by about 66 acres.
- Construction is estimated to provide roughly 4,400 job-years of employment opportunities to the community. Estimated at cumulatively providing over 1,100 new jobs.
- Public education in at least five projects, including interpretive signage to increase the public's understanding of water quality protection and using stormwater as a resource.
- Increased permanent community involvement in at least three projects.
- Create or enhance over 24 miles of multi-use paths and trails for public use.
- Over 64 acres of new public use and recreational space will be created by the construction of the projects.

# SWRP Projects

# SWRP Example Projects

## Cactus Basin No. 4 and 5

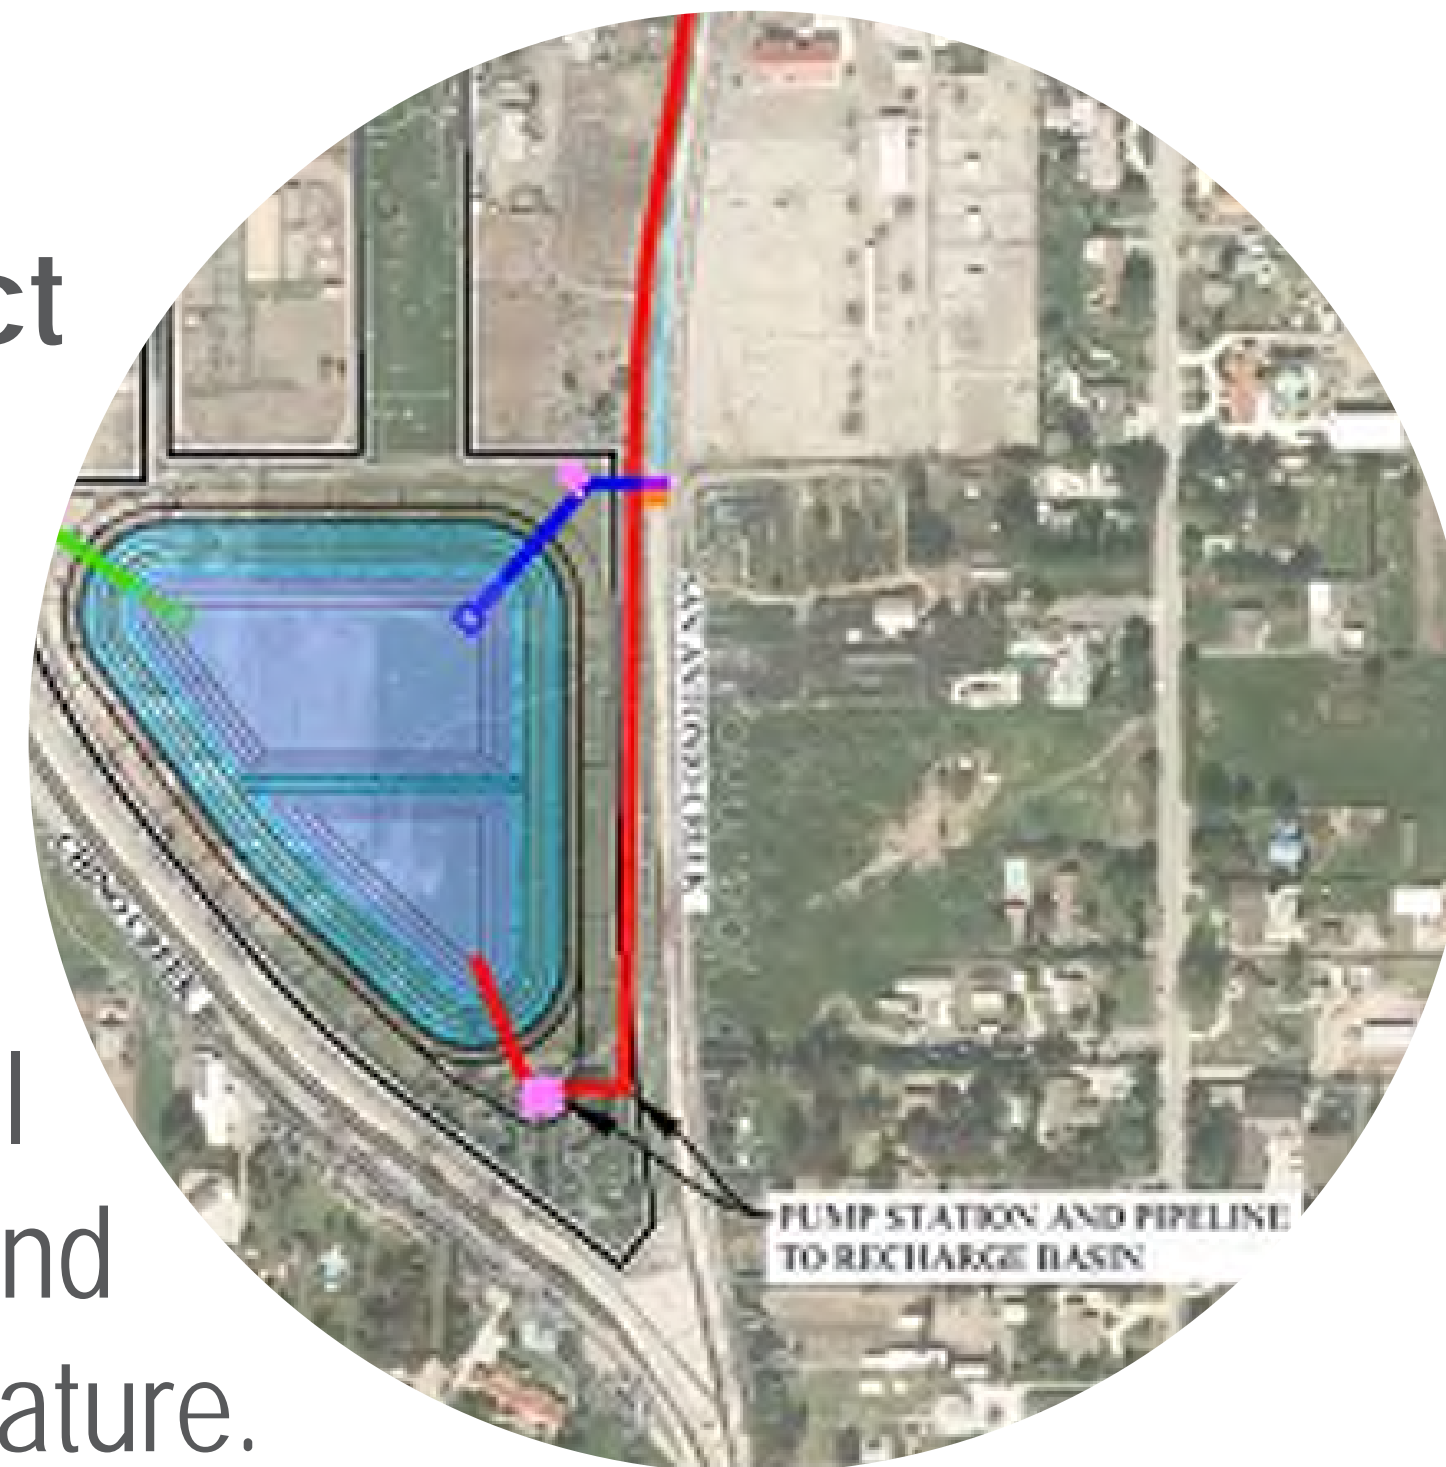

This project will provide beneficial uses in Disadvantaged Communities in Rialto and the Inland Empire by increasing the volume of stormwater captured to recharge groundwater, while enhancing water quality and protecting thousands of structures from flooding.

## Elder Creek

The Elder Creek/Plunge Creek confluence project, a continuation of SBVWCD's Plunge Creek restoration project, will rehabilitate the ecological function of the Santa Ana River Wash area. The project will spread stormwater through braided channels to restore natural watershed processes, enhance groundwater recharge, and improve downstream water quality. The project will also improve Elder Gulch upstream of the confluence to reduce sedimentation and protect surrounding areas from flooding.

## Confluence Basin Project

This project will construct a new groundwater recharge and storage reservoir where Chino and San Antonio Creeks meet. A habitat and bioremediation channel will be used as an educational and wetland habitat feature.

### **Attachment 1 – Earthquake Literature Search**

# 1 Background

---

This appendix addresses vulnerability of the region’s water supply system to catastrophic events that may interrupt the water supply system in the Upper Santa Ana IRWM Plan Region (region). California Water Code Section 10632 (c) requires that Urban Water Management Plans address catastrophic supply interruptions. While not the only cause for catastrophic water supply interruption, the postulated Magnitude 8+ Earthquake certainly will be the predominant example in the region. Since a large magnitude earthquake is generally considered the most significant event for the region, we will concentrate on earthquake effects as our primary water supply interruption, knowing that other events would be treated similarly. Literature to be reviewed includes post-earthquake surveys of water system damage, earthquake planning reports, purveyor’s Urban Water Management Plans and available reports prepared by the Department of Water Resources. We have concentrated the following discussions with a magnitude 8+ earthquake. Other catastrophic interruptions caused by regional power failure, terrorist attack, or other man-made or natural catastrophic event could cause similar conditions and issues to water supply systems in the region. For purposes of this report, a major earthquake is defined as an earthquake on the San Andreas Fault (SAF) on the order of 8.0.<sup>1</sup>

The work conducted for this appendix is intended to be the first step and is at the conceptual level. Additional detailed work should be conducted in the future to further evaluate options to effectively address water supply system vulnerabilities. This appendix includes the discussion of the following:

- An earthquake literature search of major earthquake events and what has been learned from such events.
- Evaluation of Catastrophic interruption of the regional facilities
- Vulnerabilities of region’s water supply system to SWP supply interruption.
- Vulnerability of local purveyors’ system to an earthquake .
- Summary of Finding and Recommendations including Water Shortage Contingency Plan

---

<sup>1</sup> The California Division of Mines and Geology has prepared two “Planning Scenarios” for major earthquakes in southern California. The first was a Magnitude 8.3 Earthquake on the San Andreas Fault (California, 1982). The second was a magnitude 7 earthquake on the San Bernardino Valley segment of the San Jacinto Fault (California, 1993).

(PARTIAL REVISION 1/5/2015)

- Options to reduce the impacts in case of catastrophic water supply system failure.
- Water Shortage contingency planning.

The region is located in a seismically active area of Southern California. Four major fault zones are found in the region, including the San Jacinto Fault, the Chino-Corona segment of the Elsinore Fault, the Cucamonga Fault, and the San Andreas Fault (SAF). Numerous other minor faults associated with these larger fault structures may also present substantial hazards.

The SAF is a right-lateral strike-slip fault that runs approximately 800 miles through western and southern California. The fault marks a transform boundary between the Pacific Tectonic Plate and the North American Tectonic Plate.

In Southern California, the SAF runs along the southern base of the San Bernardino Mountains, crosses through Cajon Pass, and continues northwest along the northern base of the San Gabriel Mountains. Historical records indicate that massive earthquakes have occurred in the central section of the SAF in 1857 and in the northern section in 1906 (the San Francisco Earthquake). In 1857, an estimated magnitude 8+ earthquake occurred on the San Andreas Fault rupturing the ground for 200 to 275 miles, from near Cholame to Cajon Pass and possibly as far south as San Geronio Pass. The recurrence interval for a magnitude 8 earthquake along the total length of the fault is estimated to be between 50 and 200 years. It has been 147 years since the 1857 rupture. A study completed by Yuri Fialko (2005) suggests that the SAF in Southern California has been stressed to a level sufficient for an earthquake of magnitude 7.0 or greater.

A detailed earthquake-related literature search was conducted to prepare this report. The literature search included review of the following events and reports:

- Loma Prieta Earthquake of October 17, 1989
- Northridge Earthquake of January 17, 1994
- Santa Clara Valley Water District Water Infrastructure Reliability Project
- San Simeon Earthquake of December 22, 2003
- Denali Earthquake of November 3, 2002
- City of San Diego Water Supply Study
- City of Vancouver Regional Water Distribution System Study
- San Fernando Earthquake of 1971
- Kobe (Japan) Earthquake of January 17, 1995
- California Division of Mines and Geology Planning Scenarios

Attachment A summarized this literature search.

## 2 Evaluation of a Catastrophic Interruption to Regional Facilities

---

The California Aqueduct has been designed to “break” at the Devil Canyon Powerplant in a large earthquake.

Some of Valley District’s pipelines cross the San Andreas Fault. This section evaluates the impact of a catastrophic interruption on Valley District’s regional facilities used to convey SWP water supplies and specific actions that may be taken to minimize the impact on water deliveries.

### 2.1 Facility Evaluation

The individual facilities that were examined in this analysis are as follows:

- Foothill Pipeline
- Santa Ana River Connector (SARC) Pipeline
- Greenspot Pump Station
- Morton Canyon Connector
- Greenspot Pipeline
- Tate Pump Station
- Crafton Hills Pump Station
- Crafton Hills Reservoir
- Crafton Hills Pipeline, portion of EBX
- Yucaipa Pipeline
- Bryant Street Pipeline
- Lytle Pipeline
- Baseline Feeder System

Given a loss of each of the above facilities, the examination will include:

- How the water supply needs of the affected service area could be met.
- To what degree local groundwater and/or surface water can replace the loss of the SWP
- What projects would be required to mitigate the loss of the facility.

- What projects could be implemented to mitigate the impact of catastrophic failures of these facilities.

Figure AF-1 shows the location of Valley District’s major facilities relative to fault lines.

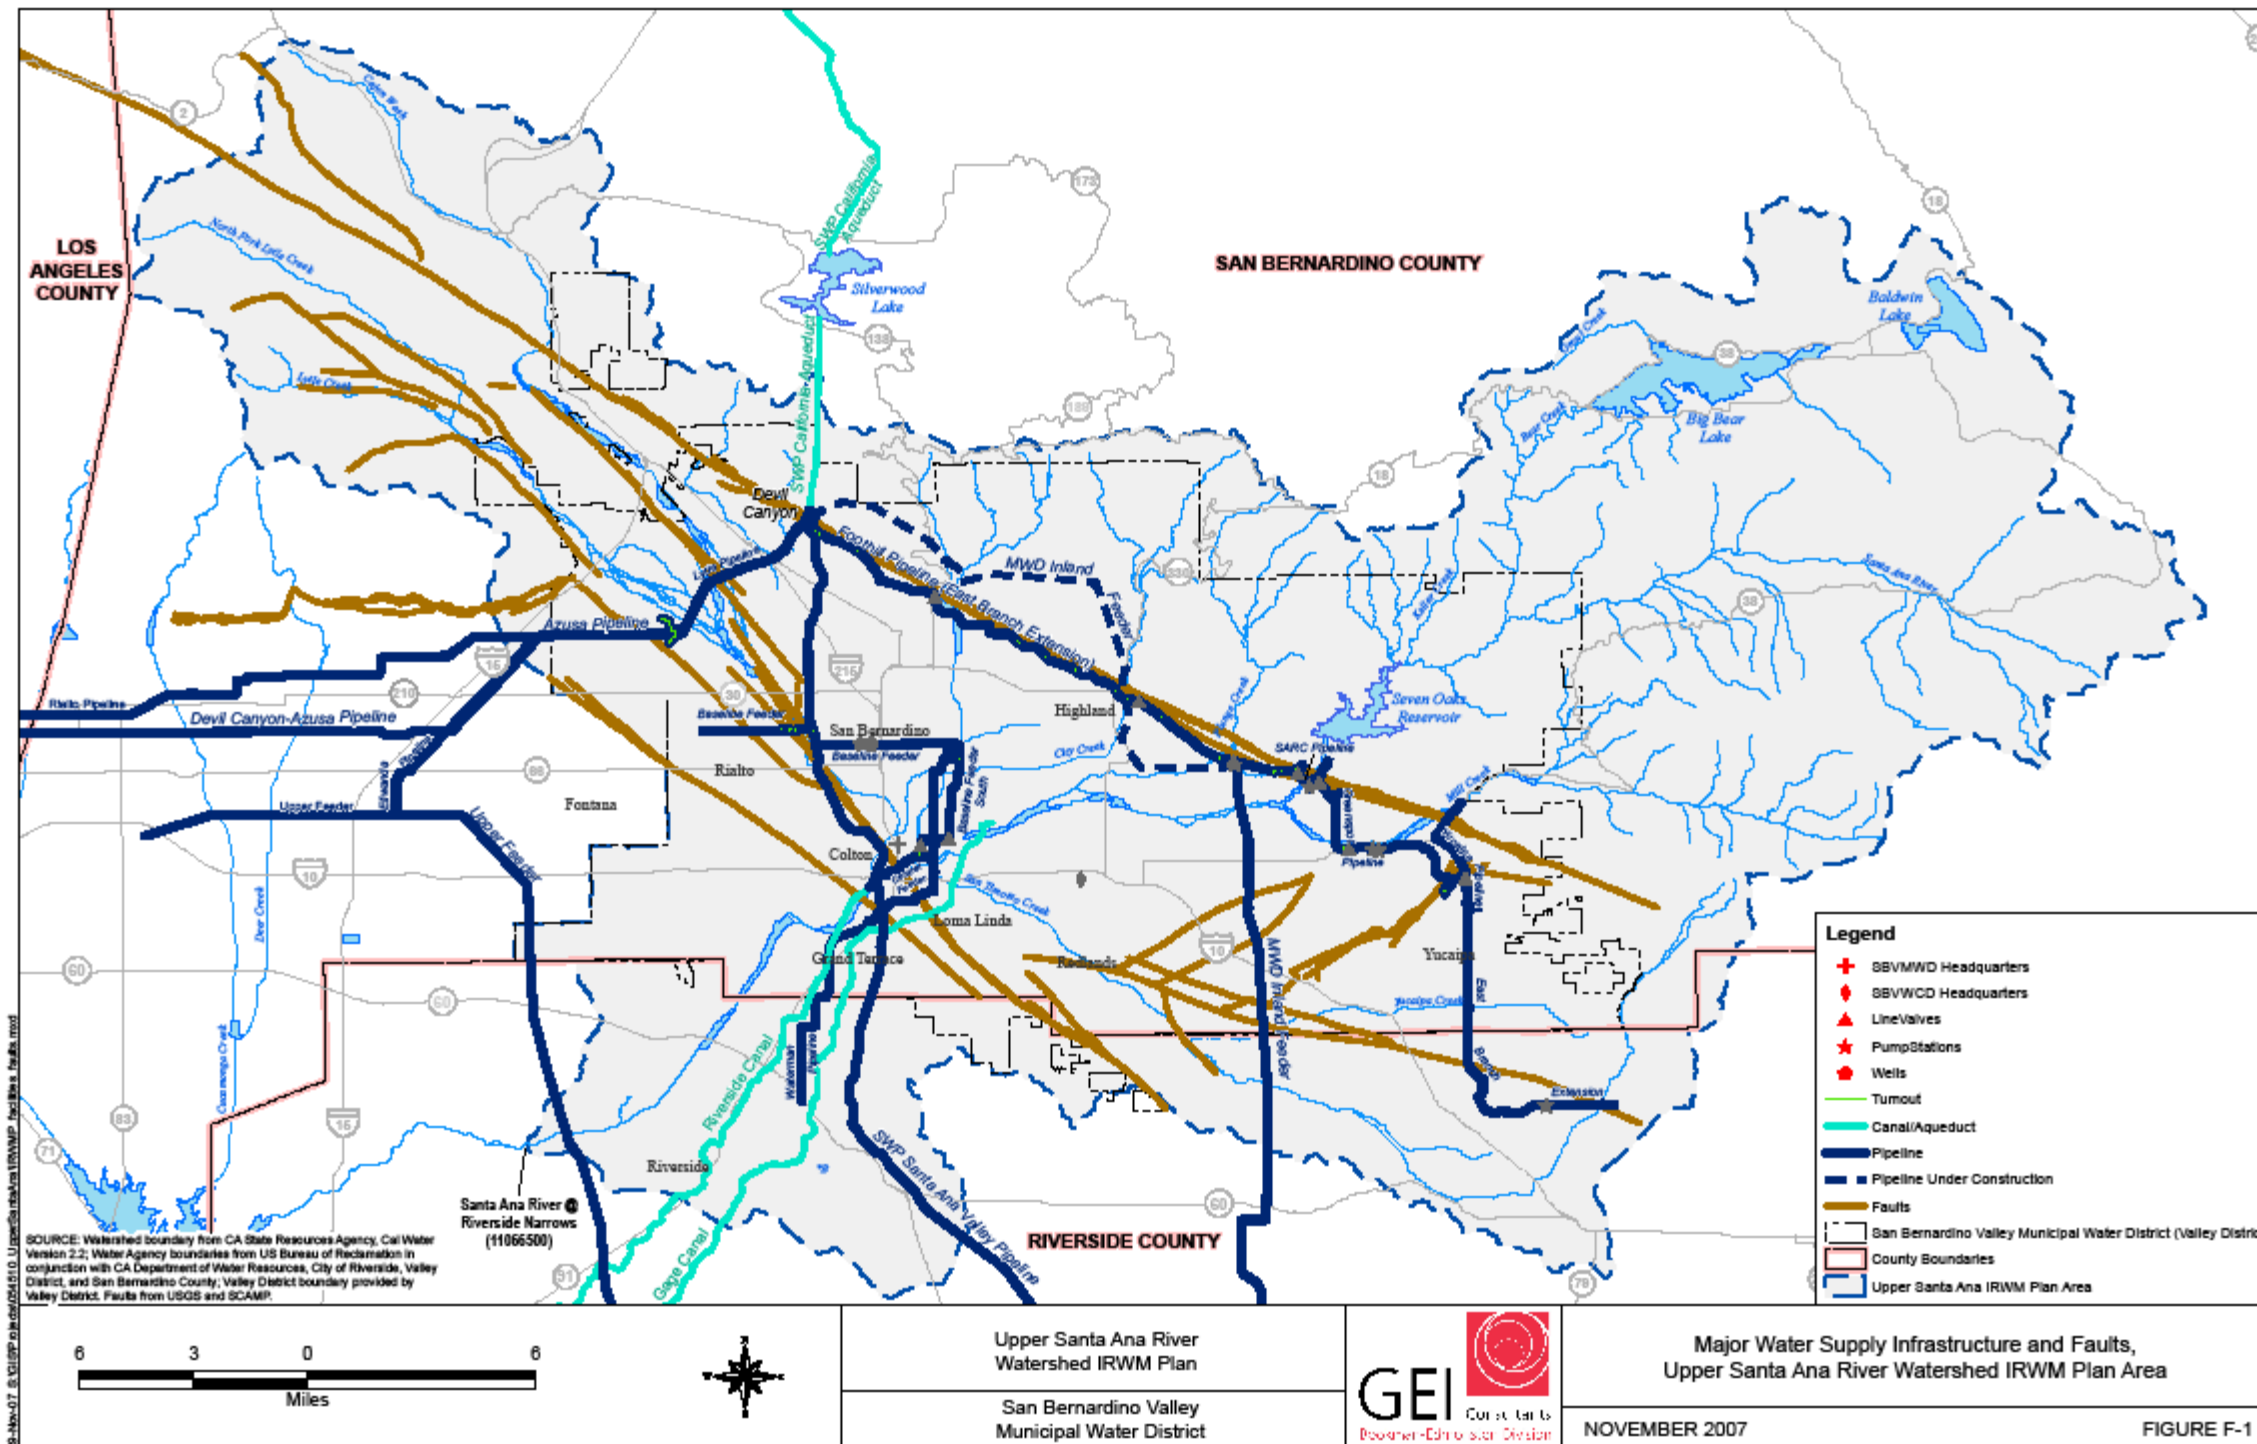

In general, Valley District direct deliveries are to surface water treatment plants that were built to treat local surface water and SWP water. Local surface water, collected and conveyed by the purveyor’s own system is the least costly and highest quality. Valley District’s SWP deliveries supplement these supplies.

Valley District also makes direct deliveries for irrigation. These deliveries are assumed to be able to be suspended during severe events and will not be investigated further.

Table AF-1 shows the Valley District conveyance facilities and the surface water treatment plants that receive deliveries of imported and surface water from those facilities. This table shows how interruption in each of the Valley District facilities may impact water deliveries for the local purveyors. Valley District’s conveyance system is used to implement the Santa Ana-Mill Creek Cooperative Water Project and effect deliveries of local surface water and exchanges of local surface water and SWP water. Furthermore, these facilities could be used to convey local surface water from the Santa Ana River and/or Mill Creek in the east to delivery points in the west along the Lytle Creek Pipeline. In the past, Valley District has demonstrated this capability by delivering local surface water from the Santa Ana River to Devil Canyon where it was transferred to Metropolitan Water District of Southern California and conveyed to the Weymouth Water Filtration Plant.

It should also be mentioned that the California Division of Mine and Geology planning scenario for a major earthquake on the San Jacinto Fault concludes that the Santa Ana Valley (a SWP facility) Pipeline will also be damaged extensively as the fault and pipeline cross several times. Since Valley District does not have any current delivery points along this pipeline, it is not considered in this analysis.

Notes:  
<sup>1</sup>EBX: East Branch Extension of the California Aqueduct  
<sup>2</sup> Used only in an emergency condition to deliver Santa Ana River and/or Mill Creek water in a westerly direction.  
<sup>3</sup> Could be used to receive a water delivery from Bear Valley Mutual Water Company  
 Valley District’s conveyance system is used to implement the Santa Ana-Mill Creek Cooperative Water Project and effect deliveries of local surface water and exchanges of local surface water and State Project water.  
 The Devil Canyon - Azusa Pipeline is owned by San Gabriel Valley Municipal Water District. Valley District owns 50% of the conveyance capacity of the pipeline from Devil Canyon to the Lytle Creek area and uses this capacity to convey water to West Valley, Rialto, and Fontana. It could also be used in an emergency to convey local surface water.  
 The Baseline Feeder is used to convey groundwater to Rialto and West Valley. The groundwater is produced by the City of San Bernardino on behalf of Valley District and by Rialto for Rialto. Valley District deliveries to San Bernardino Municipal Water Department are for recharge. Changes in recharge impact well hydrographs in six to seven months.

## 2.2 Findings and Recommendations

Table AF-1 summarizes the Valley District facilities which purveyors utilize. This table also includes Valley District facilities that could be used to make other deliveries in an emergency situation. Table AF-1 shows that all purveyors listed could be impacted by interruption in the Foothill Pipeline, SARC Pipeline and Morton Canyon Connector. Therefore, these four pipelines are the most vulnerable Valley District facilities in the case of a major earthquake along the San Andreas Fault. Specific recommendations to manage the catastrophic interruption are discussed below.

### 2.2.1 *Alternative Local Supplies*

#### 2.2.1.1 Interties between Purveyors

Table AF-2 lists interconnections between purveyors. These interties could be used to balance supplies between purveyors. An interconnection between the City of San Bernardino and East Valley is currently being used to facilitate blending. This use is anticipated to end in the near future.

(PARTIAL REVISION 1/5/2015)

**Table AF-2 – System Interties between Purveyors**

Transfer	Direction	Capacity (MGD)	Remarks/data source
City of San Bernardino/East Valley	Either	4	Three interties. One currently used to facilitate blending.
City of San Bernardino/Riverside	To San Bernardino	2	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/West Valley	Either	3	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Loma Linda	Either	5	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Colton	To Colton	3	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Rialto	Either	3.6	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Riverside Highland	To Riverside/Highland	3	(San Bernardino UWMP, Pg 2-10)
Fontana/Cucamonga Valley	Either	3.6	Fontana UWMP (2500 gpm)
West Valley/Fontana	Either		West Valley UWMP.
West Valley/Rialto	Either		West Valley UWMP.
West Valley/Colton			West Valley UWMP.
Redlands/Loma Linda	To Loma Linda		Greg Gage
Rialto <sup>1</sup> /Marygold	To Marygold		Rialto has historically conveyed 1,500 afy of groundwater to Marigold. The agreement under which this was accomplished is expiring.

<sup>1</sup> Rialto has several connections with other systems, including four connections with West Valley Water District, and connections with City of San Bernardino, Fontana Water Company, and Riverside Highland Water Company.			
Based on the limited sources of data, this list may be incomplete.			

### 2.2.1.2 Use of Big Bear Lake

Big Bear Lake has a capacity of over 70,000 acre-feet. The goal of Big Bear Lake Municipal Water District is stabilization of the level of Big Bear Lake by managing the amount of water released to the downstream water rights holder. That is, water is kept stored in the lake at all times for recreational use. Bear Valley Mutual Water Company (Mutual) has rights to a large portion of the lake. Through an agreement with Big Bear Municipal Water District (Big Bear), Valley District provides SWP water to Mutual instead of water being released from the lake. However, in an emergency situation, it may be possible for water to be released from the lake for a short duration. A legal framework could be established to make this water available in case of a catastrophe that prevented Valley District from making its deliveries under the agreement with Big Bear.

(PARTIAL REVISION 1/5/2015)

**2.2.2 Increased Groundwater Production Capacity and Reliability**

In general, the groundwater basin is presently able to meet peak demands using wells without Valley District facilities. If the catastrophe is an earthquake, the most likely impact on groundwater production capacity will be damage to the electrical system of the well or to the electricity supplier's system, and backup power supplies at key production wells will be necessary.

Thus, depending on the system of each purveyor, increasing the purveyor's groundwater production capacity and the reliability of that capacity may improve the area's ability to operate after a catastrophic failure.

**2.2.3 Alternative Conveyance of Surface Water****2.2.3.1 Alternatives to Foothill Pipeline System**

As stated earlier, Foothill Pipeline together with Santa Ana River Connector Pipeline are the most vulnerable facilities if a major earthquake were to occur along the San Andreas Fault and the most critical during a catastrophic interruption. The following systems could provide some alternative conveyance of surface water should portions of the Foothill Pipeline System fail:

- Metropolitan's Inland Feeder can provide redundancy of the Foothill Pipeline to the intertie at Opal Avenue. The Inland Feeder could also be used to pump water from Diamond Valley Lake north to the intertie with the Valley District Foothill Pipeline. The conveyance capacity of the Inland Feeder operating from Diamond Valley Lake to the north is reported to be 250 cfs.
- The proposed conjunctive use project would include facilities that could convey stored groundwater from the San Bernardino Basin Area to purveyors as a substitute for imported water.

**2.2.4 Additional Surface Storage**

If the ability to import SWP water is lost or the region is faced with major interruption of regional and local facilities due to a catastrophic event, it is important to have ample local surface storage to meet immediate water demands. While there may be significant water stored below ground, the ability to extract and deliver this water may also be disrupted by a catastrophic event. The following suggestions could further prepare the Region for such an emergency:

- Inventory surface water storage facilities throughout the region and determine the amount of existing storage capacity compared to need to satisfy emergency water

(PARTIAL REVISION 1/5/2015)

demands. The Valley District should conduct an evaluation of feasible storage needs for the Region.

- Select appropriate delivery methods for the waters (i.e., trucking or alternative or backup pipelines).
- Rank agencies by their current amount of surface water storage and their operating storage amounts to determine which areas of the Region are in need of additional surface storage. (How far would people have to walk or drive to get to water? Which cities or communities are most at risk for water shortages?)
- Investigate adding additional local surface water storage facilities that could supply water to the entire Region in the event of an emergency. (North and South Lake projects and conservation pool behind Seven Oaks Dam.)

### **3 Vulnerability of Region’s Water Supply System to SWP Supply Interruption**

---

The scenario considered by this document is a large earthquake along the San Andreas Fault severing the State Water Project (SWP) California Aqueduct just above Devil Canyon power plant. In addition to the threat of earthquake, a disruption on the SWP could be caused by levee failure in the Sacramento-San Joaquin Delta or by other disruptions in transmissions facilities. These two disasters would have an impact on the delivery of SWP water into the region. This chapter will investigate the effects of an interruption of the SWP system on Valley District’s customers.

#### **3.1 Valley District SWP Deliveries**

Deliveries of SWP water to Valley District have averaged approximately 15,000 acre-feet per year (1999-2003 Western-San Bernardino watermaster records). San Geronian Pass Water Agency is also receiving SWP water that would be affected by interruption of SWP deliveries. These direct deliveries are projected to increase to 34,000 acre-feet per year by 2030 based on the UWMP projections within the Region. Historically, direct deliveries have peaked during summer months with the greatest deliveries in July, August, and September. In the event that State Water Project deliveries are severely reduced, more demand will be placed on local groundwater supplies. For example, in a one-month shutdown, additional demands on groundwater within the Valley District service area would be 3,000 to 6,000 acre-feet (current to future demands, shut down in the summer); in a six-month shutdown, additional groundwater demands would be 10,000 to 30,000 acre-feet (current to future demands, shut down in May to September); and in a 12-month shutdown, additional demands on groundwater would be 15,000 to 34,000 acre-feet (current to future demands).

#### **3.2 Overview of Known Earthquake Vulnerabilities of State Water Project**

Publications available from the Department of Water Resources address the institutional requirements of responding to an emergency.

##### **3.2.1 California Division of Mines and Geology Planning Scenarios**

The California Division of Mine and Geology planning scenario for a major earthquake on the San Jacinto Fault concludes that the Santa Ana Valley Pipeline of the SWP will be damaged extensively as the fault and pipeline cross several times.

(PARTIAL REVISION 1/5/2015)

The planning scenario for a magnitude 8.3 earthquake north of the San Bernardino area and on the San Andreas Fault concludes that though all of the SWP facilities of the California Aqueduct are designed to resist the effects of a great earthquake comparable to the scenario event, widespread damage to the aqueduct will inevitably occur. For planning purposes, a minimum of three months will be required to accomplish those repairs necessary to restore water deliveries to southern California. Severe damage to the East Branch where it crosses the San Andres Fault at Barrel Springs is expected. No major damage to aqueduct facilities between Lake Silverwood and the Devil Canyon Power Plant is expected (this scenario assumes that surface fault rupture would terminate some 25 km northwest of Devil Canyon). The Santa Ana Valley Pipeline would be subjected to intense shaking and possible ground failure.

### **3.2.2 Seismic Risk Analysis for California State Water Project – Reach C**

The objective of this study (Shah, 1976) was to develop a seismic hazard map for the east branch of the SWP. The study concluded that with respect to the pumping and power plants, the hazard or probability of exceeding the design load level employed for the substructures and superstructures during the next 50 years was very small (on the order of 5 percent). For the switchyards, however, the probability of exceeding their design load level during the next 50 years is large (on the order of 30 to 60 percent).

The following recommendations were made as a result of the above study.

- “The risk of damage or destruction to the pumping and power plant substructures and superstructures is minimal during the next 50 to 100 years, and therefore no action is required. However, for the mechanical and electrical equipment within these plants it is recommended that a thorough survey be made to evaluate their ability to resist seismic loads.”
- “All switchgear equipment should be modified so as to resist a minimum peak ground acceleration of 0.3 g. This load level corresponds to a return period of approximately 200 years or more along [the East Branch].”
- “Since the ground shaking along the Santa Ana Valley pipeline is relatively high, in excess of 0.5 g for a 1000 year return period), an investigation should be made to determine the advisability of providing a cut-off facility for this portion of the [East Branch].”
- “Because of the large risk potential, a central operations and maintenance center with facilities and capabilities for dealing with earthquake induced damage should be set up for the region south of the Devil Canyon Power Plant.”

### 3.3 Finding and Recommendations

Valley District currently requires the agencies it serves to have a back-up water supply in case the State Water Project (SWP) supply is not available. Assuming the back-up supply is groundwater produced from the San Bernardino Basin Area (SBBA), 15,000 additional acre-feet per year of groundwater production would be needed if the earthquake happened in the near future, and potentially 34,000 acre-feet of additional groundwater production if the earthquake happened around 2030.

The average instantaneous pumping rate for the 199 wells (with data available) of the major water purveyors in the SBBA is approximately 1,438 gpm. Based on well production rates at 70 percent of their instantaneous pumping rate, annual production would be about 323,100 acre-feet. For the remaining wells without instantaneous pumping rate data, the total maximum annual production between 2001 and 2005 was about 60,800 acre-feet. This yields a total maximum annual groundwater production capability of 383,900 acre-feet. The projected actual groundwater pumping for the Baseline Run 1 ranged from between 193,200 acre-feet in 2010 to 289,100 acre-feet in 2034, with an annual average of 248,900 acre-feet per year for the period 2006-2044. Thus, the additional groundwater production that could be used if the state aqueduct was severed is approximately 95,000 acre-feet (383,935 – 289,105) which is greater than the estimated 2030 need of 34,000 acre-feet. The 95,000 acre-feet represents approximately 9 percent of the 1,000,000 acre-feet of usable storage in the SBBA.

In the event of a SWP shutdown, there is sufficient groundwater storage, production facilities and transmission facilities to likely provide short-term water deliveries to customers in the Valley District service area. To prepare for such an outage, SWP and local supplies should be stored in the local groundwater basins, whenever available.

#### 3.3.1 Pipeline Redundancy

Pipeline redundancy in the region is important if interruption occurs in the region along the Foothill Pipeline. On a regional-scale, projects like the Baseline Feeder, the proposed conjunctive use project and the MWDSC Inland Feeder provide additional options of conveyance in an emergency situation.

Although a loss of SWP water for a short period of time can be overcome, the SWP is critical to long-term management of the groundwater basin. The following suggestions are intended to help further prepare the Region for a shutdown of the State Water Project.

#### 3.3.2 Recharge with SWP Water when it is Available

The SBBA is essentially an underground storage reservoir that contributes to the water reliability of the Region during periods of drought. By recharging water from the SWP when it is available, the Region can prepare in advance for drought or disruptions in the SWP

(PARTIAL REVISION 1/5/2015)

system. This is a primary management strategy of the San Bernardino Valley Regional Urban Water Management Plan and the Upper Santa Ana River Watershed Integrated Regional Water Management Plan.

### **3.3.3 Surface Storage in the Region**

Additional surface storage in the region can help provide water supplies during a catastrophic failure of the California Aqueduct.

### **3.3.4 Exchange and Banking Program Utilizing Santa Ana River Water**

In years when water available from the Santa Ana River exceeds the capacity of local treatment plants and spreading grounds, the excess amount could physically be delivered to the Inland Feeder and into Metropolitan's water system in exchange for SWP water from Metropolitan. This banked water could be recovered and delivered to the region if a catastrophe occurs along the California Aqueduct.

## **4 Vulnerabilities of Local Purveyors Water Supply System to an Earthquake in the Region**

---

A catastrophic 8.0 earthquake near San Bernardino could lead to pipeline rupture, loss of electricity, and well failure, substantially reducing water supplies available in the Region. The quality of both surface and groundwater supplies could also be affected by the failure of existing wastewater treatment facilities. Figure AF-1 shows the San Andreas Fault trace through the Valley District service area with a five mile fault buffer zone. In the case of a 7.8 earthquake, anything within five miles of the fault is likely to be damaged or destroyed (Caltech meeting, July 31, 2007). In addition, regional infrastructure within this zone includes the SWP CA Aqueduct coming from Lake Silverwood to Devil Canyon, regional water facilities owned by Valley District (Foothill Pipeline, Greenspot Pipeline, Lytle Canyon Pipeline, and the East Branch Extension), and Metropolitan’s Inland Feeder will be impacted. Prudent preparation for a catastrophic earthquake would suggest planning for no water deliveries from the SWP.

### **4.1 Overview of Known Earthquake Vulnerabilities of Purveyor’s Systems**

This section has been prepared based on review of Urban Water Management Plans of agencies receiving direct deliveries from Valley District. California Water Code Section 10632 (c) requires that Urban Water Management Plans address catastrophic supply interruptions.

#### **4.1.1 San Bernardino Municipal Water Department**

San Bernardino Municipal Water Department’s Supplemental Emergency Plan is designed for implementation during emergency water shortages that could occur as a result of earthquake, flood, fire, or other catastrophes. SBMWD maintains portable backup power supply and diesel- and/or natural gas-driven wells at critical locations within the distribution system to provide domestic water for emergency purposes during sustained power outages. Additionally, they have entered into a Mutual Aid Agreement with surrounding water agencies.

#### **4.1.2 East Valley Water District**

East Valley has in place back-up power supplies at critical locations within the distribution system. The District maintains portable pumps that can be used to transfer water between zones, but cannot be used for production. East Valley’s storage capacity of 25.5 million gallons would provide a potable supply for customers’ non-irrigation uses (assumes

(PARTIAL REVISION 1/5/2015)

implementation of Water Shortage Contingency Plan) for an estimated two to three days. A Mutual Aid Agreement with surrounding water agencies is also in place for the provision of water supply and/or manpower.

East Valley has an agreement with Arrowhead Drinking Water Company to deliver potable water tanks to selected sites within the District's service area. The trucks will be manned by District personnel to distribute water to customers for drinking purposes.

Were surface water deliveries to East Valley disrupted, East Valley has adequate groundwater production capacity to meet peak day. This presumes that East Valley's facilities remained intact.

#### **4.1.3 West Valley Water District**

Extended multi-week supply shortages due to natural disasters or accidents that damage all West Valley water sources are unlikely. The District's 23 storage reservoirs hold 65.6 million gallons, which is sufficient water to meet the health and safety requirements of 50 gallons per day per capita for the 60,121 customers for 21 days. This assumes zero non-residential use. Under emergency power outages or catastrophic earthquake conditions, the existing storage is expected to provide a minimum supply of 3.5 days of average day demand or 1.7 days under maximum summer demand.

The District is planning to construct an additional 12.5 million gallons of storage within the next few years for a total of 78.11 million gallons, which would give the District 4.2 days of average day demand. The District also has interconnections with three other agencies for emergency supplies.

The District has portable back-up generators that can be used in the event of an area-wide power outage. These generators can be located on both wells and booster stations to continue water production. These generators will be located in the northern part of the distribution system. Water can then be boosted to higher zones or gravity fed to the lower zones. In addition to the portable generators, the District is constructing back-up generators at the Zone 5 and 6 booster stations.

West Valley's groundwater production capacity is approximately 80 percent of peak day demand. It obtains water from two Valley District facilities, the Lytle Pipeline and the Baseline Feeder. These facilities are required to meet peak day demand.

#### **4.1.4 Yucaipa Valley Water District**

Yucaipa Valley's Major Disaster Plan and Alerting Procedures deal with non-drought-related water shortages, including those that might result from earthquakes. It outlines the responsibilities of the District's designated emergency response personnel, alerting

(PARTIAL REVISION 1/5/2015)

procedures, alternate headquarters, communications, transportation, and relationships with regional and state emergency response officials.

To the extent well capacity exists, the Yucaipa basin can be temporarily exercised beyond its long-term safe yield in response to shortages.

It is East Valley's intent to maintain groundwater production facilities adequate to meet peak day demand without use of surface water.

#### **4.1.5 City of Redlands**

The Redlands UWMP notes that the Redlands Municipal Utilities Department has an emergency plan that supplements the Citywide Emergency Plan. It notes that in case of an earthquake, required actions are to “coordinate the resources necessary for repair of water infrastructure,” and to “utilize vendor lists to identify available water haulers, temporary water lines, piping, heavy equipment, etc.”

Redlands does not have adequate capacity to meet peak day demand without use of surface water. Redlands obtains surface water from Mill Creek and SWP wheeled by SBVWMD. During a typical summer, Mill Creek is the main source during early summer, but this supply is substantially reduced by late summer. SWP water is the dominate source in late summer. Depending on the supply of Mill Creek water, Redlands may not be able to meet peak day demands without SWP water.

#### **4.1.6 Fontana Water Company**

Fontana is dependent on imported surface water to meet demands. Presently, the water is all delivered via the Lytle Pipeline. It is possible that in the future, some of the imported water will be conveyed by Metropolitan's Foothill Feeder (also known as the Rialto Pipeline). These two lines are parallel, however, and it is reasonable to presume that the same event that damages one will damage the other.

#### **4.1.7 City of Rialto**

Rialto's UWMP notes that the city's storage reservoirs can meet the health and safety requirements of 50 gallons per day per capita for 11 days. This assumes no non-residential use. The City is retrofitting key well sites to enable the City to bring in portable generators for use during a power outage.

Rialto obtains water from two Valley District facilities, the Lytle Pipeline and the Baseline Feeder. It is believed that both these facilities are required to meet peak day demand.

## 4.2 Findings and Recommendations

- The purveyors in the region will primarily rely on groundwater during catastrophic events. Therefore, they must ensure they have reliable and adequate backup power supplies at critical locations within the distribution system as well as key production wells. The backup power supplies should be tested periodically to ensure proper operations during emergencies.
- Local purveyors should examine their current storage and interties capacities and plan for additional storage and interties to ensure adequate water supply is available for health and safety during catastrophic events.

## 5 Summary of Findings and Recommendations

---

### 5.1 Findings

These findings have been developed from a search of literature reporting the impacts of major earthquakes and limited work by water purveyors. More detailed, site-specific analyses are needed to better quantify and identify impacts from major earthquakes or other catastrophic outages.

- **Reliability of Groundwater Wells.** Review of post-earthquake lifeline performance reports reveals little discussion of groundwater well failure. However, loss of commercial power, damage to electrical equipment and aboveground appurtenances, or damage to the distribution system may effectively put the well out of service. Liquefaction, especially in areas where there is high groundwater levels between depths of 5 to 50 feet, may cause ground settlement and interfere with continued well operation.

No discussion of the performance of well head treatment systems during earthquakes was found. This may be due to the limited amount of well head treatment in place during prior earthquakes. As well head treatment typically includes purchased equipment installed in a field location, there is significant opportunity for lapses in the seismic design.

The groundwater basin and the groundwater production wells are a reliable part of the water supply system for the San Bernardino area.

- **Reliability of Pipelines.** Pipelines are generally the most fragile part of a water system. Generally, damage is a function of displacement rather than shaking. Empirical algorithms have been developed to predict seismic reliability of pipelines.
- **Reliability of Pump Stations.** Past earthquakes indicate that the structural and mechanical elements of a pump station are highly resistant to earthquake damage. The most likely failures are to the electrical equipment and loss of commercial power.
- **Reliability of Surface Water Treatment Facilities.** The major elements of a surface water treatment system are typically concrete structures that are very resistant to damage. However, these facilities include a large variety of mechanical equipment, much of it long and light weight that is subject to damage not only from the direct force of an earthquake, but also to the wave action created by the earthquake. Similar to a pump station, power supply and electrical equipment are fragile.

(PARTIAL REVISION 1/5/2015)

- **Reliability of the State Water Project.** While little specific information was found on anticipated damage to the SWP, the high susceptibility of the Santa Ana Valley Pipeline is recognized. A major vulnerability of the SWP is the Sacramento-San Joaquin Delta. The SWP does have a Business Resumption Plan and an Emergency Operations Plan.
- **Length of Outages.** The Loma Prieta earthquake affected a large number of separate systems. The San Jose Water Company serves most of San Jose and all of Los Gatos. Los Gatos was hard hit and half of the water customers lost water service. In San Francisco, the worst hit area was the Marina District. Fires and liquefaction both affected the district. East Bay Municipal Water District serves 1.1 million customers and suffered \$3.7 million in damage. Damage included a break in a 60-inch raw water line.

After the Northridge earthquake, the Los Angeles Aqueducts No. 1 and 2 were in and out of service for temporary and permanent repairs over several months, these facilities were not critical at that time. Alternate supplies were available and drought conditions limited supply to these aqueducts.

Table AF-3 shows the length of outages for water operation during the Loma Prieta and Northridge earthquakes.

Valley District's Emergency Operations Plan includes estimates for repair of Valley District facilities. Electrical and pipe repairs are estimated to take 35 to 77 days. Pump repairs are estimated to take 168 to 273 days.

Tables AF-4 and AF-5 summarize the degree to which purveyors depend on Valley District facilities for deliveries over a period of days to one year. These tables presume normal operations by the purveyor with the exception that non-potable deliveries (West Valley and Yucaipa) are suspended.

**Table AF-3 – Length of Outages for Water Operation during Loma Prieta and Northridge Earthquakes**

Earthquake	Purveyors	Time to Restore Water Operation
Loma Prieta	San Jose WC	36 hrs/98%
	San Francisco	6 days/most areas
	East Bay MWD	3 days/normal operation
Northridge	City of L.A.	12-65 days

UPPER SANTA ANA INTEGRATED RESOURCES WATER MANAGEMENT PLAN  
 APPENDIX F – VULNERABILITY TO CATASTROPHIC INTERRUPTION OF WATER SUPPLY AND DISASTER PREPAREDNESS

(PARTIAL REVISION 1/5/2015)

**Table AF-4 – Percent of Present (P) and Future (F) Peak Day, Potable Demand conveyed by SBVWMD facilities when no local surface water is available.  
 Assumes imported water used prior to local groundwater**

Purveyor	Foothill Pipeline	SARC Pipeline	Greenspot Pump Station	Morton Canyon Connector	Greenspot Pipeline	Tate Pump Station	Crafton Hills PS	Crafton Hills Reservoir	Crafton Hills Pipeline	Bryant Street Pipeline	Yucaipa Pipeline	Lytle Pipeline	Baseline Feeder
San Bernardino Municipal Water Dept	0	0		0	0								
East Valley Water District	12 (P) 24 (F)	12 (P) 24 (F)		12 (P) 24 (F)	0								
Redlands	36 (P) 41 (F)	36 (P) 41 (F)	24 (P) 25 (F)	51 (P) 35 (F)	24 (P) 25 (F)	24 (P) 25 (F)							
Yucaipa Valley Water District	24(P) 49 (F)	24(P) 49 (F)	24(P) 49 (F)	24(P) 49 (F)	24(P) 49 (F)		24(P) 49 (F)	24(P) 49 (F)	24(P) 49 (F)	24(P) 49 (F)	0		
Fontana Water Company	0	0		0	0							unknown	
West Valley Water District	0	0		0	0							23 (P) 36 (F)	12(P) 27 (F)
City of Rialto	0	0		0	0							7 (P) 6 (F)	unknown

Notes:  
 San Bernardino Municipal Water Department figure does not include deliveries of surface water for wells under the influence of surface water as it takes six to seven months for the hydrographs of these wells to respond. If these deliveries were included, they would be 14% of peak day demand.  
 Does not include deliveries for irrigation or indirect deliveries.  
 Gray shading indicates a conveyance facility that cannot under any circumstances be used to convey water to the agency.

(PARTIAL REVISION 1/5/2015)

**Table AF-5 – Groundwater and Local Surface Water Production Capacity as percent of peak day demand**

Purveyor	Percentage	Remarks
San Bernardino Municipal Water Department	113%	
East Valley Water District	104%	
Redlands	≈ 75 to 85%	Assumes late summer when local surface water supplies are low. When local surface water supplies are high, Redlands can produce approximately 85 to 95% of demand.
Yucaipa Valley Water District	95%	Yucaipa's intent is to maintain groundwater production facilities adequate to meet peak demand. As of August 2007, they do not meet this goal.
Fontana Water Company	Significantly less than 100%	
West Valley Water District	78%	Projected to decrease to 59% in the future.
Rialto	unknown	
Notes: Does not include non-potable use by West Valley and Yucaipa.		

## 5.2 Recommendations for Disaster Preparedness

This section includes the consultants recommendations based on the literature review and discussions with District staff and purveyors. The following recommendations have not been included in the administrative draft of the IRWM Plan. After these recommendations, the projects already included in the IRWM Plan that would enhance disaster preparedness will be reviewed.

### 5.2.1 General Recommendations

- Consider a Seismic Improvement Program/Water Infrastructure Reliability Project to review the adequacy of Valley District facilities to withstand an earthquake. East Bay Municipal Utilities District and Santa Clara Valley Water District (Santa Clara Valley Water District, 2005) are two agencies that have performed such studies. High priority facilities include Foothill Pipeline, Santa Ana River Connector, Morton Canyon Connector, and Greenspot Pipeline.
- Consider the opportunities that Big Bear Lake presents as an emergency source of water after an earthquake that interrupts SWP deliveries for many weeks.
- Consider using the existing MWD agreements to allow the use of Metropolitan Water District facilities to bypass failed Valley District facilities (and the reverse).

(PARTIAL REVISION 1/5/2015)

- Review ability to provide drinking water immediately following an earthquake. Arrangements to provide bottled water may be appropriate.
- The USGS Multi-hazards Demonstration Project (MHDP) is leading an effort to create a scenario document for a future M7.8 southern San Andreas Fault earthquake. The document will describe in detail the effects of the earthquake. It will form the basis for a November 2008 statewide earthquake response exercise. The USGS contact for this project is Dale Cox, [dacox@usgs.gov](mailto:dacox@usgs.gov), 916/997-4209. It is probable that useful information for disaster preparedness planning will come out of this effort.

### **5.2.2 Proposed Projects to Provide Conveyance System Redundancies for the Regional Facilities**

The proposed conjunctive use project could provide the backup well production needed for the retail water agencies in an emergency when SWP supplies have been severed.

## **5.3 Alternative Local Supplies**

This section is intended to initiate a discussion of options that would improve the water supply reliability in case of a catastrophic failure of portions of the Valley District water system.

### **5.3.1 Interties between Purveyors**

Table AF-6 lists interconnections between purveyors. These interties could be used to balance supplies between purveyors. An interconnection between the City of San Bernardino and East Valley is currently being used to facilitate blending. This use is anticipated to end in the near future. Fontana Water Company has historically depended on supplies delivered through its interconnection with Cucamonga Valley to meet peak day demand.

(PARTIAL REVISION 1/5/2015)

**Table AF-6 – System Interties between Purveyors**

Transfer	Direction	Capacity (MGD)	Remarks/data source
City of San Bernardino/East Valley	Either	4	Three interties. One currently used to facilitate blending.
City of San Bernardino/Riverside	To San Bernardino	2	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/West Valley	Either	3	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Loma Linda	Either	5	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Colton	To Colton	3	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Rialto	Either	3.6	(San Bernardino UWMP, Pg 2-10)
City of San Bernardino/Riverside Highland	To Riverside/Highland	3	(San Bernardino UWMP, Pg 2-10)
Fontana/Cucamonga Valley	Either	3.6	Fontana UWMP (2500 gpm)
West Valley/Fontana	Either		West Valley UWMP.
West Valley/Rialto	Either		West Valley UWMP.
West Valley/Colton			West Valley UWMP.
Redlands/Loma Linda	To Loma Linda		Greg Gage
Rialto <sup>1</sup> /Marigold	To Marigold		Rialto has historically conveyed 1,500 afy of groundwater to Marigold. The agreement under which this was accomplished is expiring.
Sources: San Bernardino Municipal Water Department 2005 UWMP; Jack Nelson, Yucaipa Valley; Ron Buchenwald, East Valley; Greg Gage, Valley District, West Valley 2005 UWMP.			
<sup>1</sup> Rialto has several connections with other systems, including four connections with West Valley Water District, and connections with the City of San Bernardino, Fontana Water Company, and Riverside Highland Water Company.			
Based on the limited sources of data, this list may be incomplete.			

### 5.3.2 Big Bear Lake

Big Bear Lake has a capacity of over 70,000 acre-feet, most of which is owned by the Bear Valley Mutual Water Company. To enhance tourism, Big Bear Municipal Water District entered into an agreement with BVMWC and Valley District whereby Valley District makes deliveries to BVMWC “in lieu” of BVMWC taking delivery from the lake. The net effect is that water remains in the lake to enhance tourism. An agreement could be written that might make water from the lake available for municipal use in case of a catastrophe.

### 5.3.3 Increased Groundwater Production Capacity and Reliability

If the catastrophe is an earthquake, the most likely impact on groundwater production capacity will be damage to the electrical system of the well or to the electricity supplier’s system.

Thus, providing emergency generators for “key” wells would help improve the area’s ability to operate after a catastrophic failure.

## **5.4 Alternative Conveyance of Surface Water**

### **5.4.1 Alternatives to Foothill Pipeline System**

The following systems could provide some alternative conveyance of surface water should portions of the Foothill Pipeline System fail:

- Metropolitan’s Inland Feeder parallels the Foothill Pipeline from Devil Canyon to Opal Avenue. The Inland Feeder could also be used to convey water stored in Diamond Valley north to the Valley District service area. The conveyance capacity of the Inland Feeder operating from Diamond Valley Lake to the north is reported to be 250 cfs.
- The proposed conjunctive use project would increase the ability to convey groundwater between agencies following a catastrophe.
- The proposed East Branch Extension Phase II will convey SWP water from the eastern portion of the Foothill Pipeline to Crafton Hills Pump Station. This will provide redundancy for the SARC Pipeline, Greenspot Pump Station, Morton Canyon Connector I, and Greenspot Pipeline.

### **5.4.2 Alternatives to the Lytle Pipeline**

- Metropolitan’s Foothill Feeder, also called the Rialto Pipeline, parallels the Lytle Creek Pipeline from Devil Canyon east for approximately nine miles. With turnouts it could provide alternative conveyance to West Valley’s and Fontana’s surface water treatment plants.
- The Baseline Feeder conveys groundwater to West Valley and Rialto. This groundwater is an alternative to SWP water conveyed by the Lytle Pipeline. It should be noted that Rialto’s connection to Lytle Pipeline is not yet completed.

### **5.4.3 Alternatives to Baseline Feeder System**

- The Lytle Creek Pipeline conveys SWP water to West Valley and can convey SWP water to Rialto when the connection is completed. This surface water is an enhancement to groundwater conveyed by the Baseline Feeder.

## **5.5 Back-Up Power Supplies**

### **5.5.1 Power Supplies for Groundwater Wells**

A catastrophic earthquake may cause loss of electricity for an indeterminate amount of time. In order to ensure water supplies in the immediate aftermath and weeks following a major earthquake, it is critical to have back-up generators or internal combustion engines for important production wells throughout the Region.

- Inventory wells in the Region with back-up generators.
- Determine the number of wells that could be equipped with internal combustion engines.
- Rank groundwater wells by their ability to supply water to purveyors. Wells with higher production capacities, more conveyance connections, or delivery pipeline options are preferential.
- Select a distribution of wells across the basin to be provided with back-up generators or internal combustion engines, decreasing the likelihood of a localized event impacting a majority of the most important wells.

### **5.5.2 Back-Up Power Supplies for Other Water Supply Facilities:**

Similar evaluations should be conducted for other facilities such as water treatment plants and the key pumping plants, and back-up power generation should be put in place for use during emergencies.

## 6 Water Shortage Contingency Plan

---

Each water agency in the region is required by law to have a water shortage plan and emergency catastrophe plan. If there is a shutdown in the SWP system or a long-term drought that affects imported or local supplies, each agency in the region should participate in conservation activities that maximize use of the shared water supplies, both local surface water and ground water. These conservation efforts should be coordinated at a regional level.

The following provides examples of rules, regulations, and procedures that could be implemented to restrict or reduce water use. These could be implemented upon determination that there exists, or there is a threat of, a water shortage that affects the region's ability to provide adequate potable water supplies for the purveyors to deliver to their customers. Each agency should have a water shortage plan that is tailored to their customers in order to reach water conservation targets.

### 6.1 Stage I Conservation – Additional 20% Reduction

Upon determination that additional water conservation is needed, the following prohibitions can be considered and adopted with the goal of achieving an additional **20 percent** reduction in water consumption—the water conservation measures referenced in Stage I, and the following:

- (a) All outdoor irrigation should occur only after 8 p.m. and before 7 a.m.
- (b) Prohibit the use of potable water to wash sidewalks, walkways, driveways, parking lots, open ground, and other hard-surface areas by direct application.
- (c) Prohibit the use of non-drinking-water fountains, except for those using recycled water.
- (d) Prohibit the use of water that results in any flooding or run-off in gutters or streets. Limit water deliveries to residential and non-residential users to 90 percent of their water consumption for the same billing cycle during a pre-determined Base Year.
- (b) Levy a surcharge of **200 percent** on all water use in excess of the maximum water use allotment referenced in subparagraph (a) above, assessed to the account of the customer.

(PARTIAL REVISION 1/5/2015)

- (c) Limit the use of water from fire hydrants to fire suppression and/or other activities immediately necessary to maintain health, safety, and welfare of residents.
- (d) Prohibit the use of potable water for dust control and compaction for construction projects.
- (e) Prohibit the washing of automobiles, trucks, trailers, boats, and other types of mobile equipment not occurring upon the immediate premises of a commercial car wash and/or commercial service station that uses recycled water.
- (f) Encourage restaurants to refrain from serving water to their customers, except upon specific request.
- (g) Limit the use of potable water to irrigate grass, lawns, ground cover, shrubbery, crops, vegetation, ornamental trees, etc., to Saturdays, Mondays, and Wednesdays for even-numbered addresses and Sundays, Tuesdays, and Thursdays for odd-numbered addresses, or as otherwise established by resolution from the Board of Directors of the respective agencies.
- (h) Limit water main flushing to emergency situations only.
- (i) Wait list applications for Intent to Serve Letters and suspend their further processing.

Pursue a vigorous public information campaign regarding current water supply conditions and the need to reduce water consumption by such means deemed appropriate.

Meet with other water purveyors, public school districts, park agencies, and golf courses that use water sources other than purveyor-supplied water, to seek voluntary reduction in irrigation of decorative landscape and reduce irrigation of turf and play areas.

In addition to those measures stated above, adoption of water conservation measures on an urgency basis may be warranted.

## 6.2 Stage II Conservation – Additional 35% Reduction

Upon determination that additional water conservation is needed, the following prohibitions can be considered and adopted with the goal of achieving up to an additional **35 percent** reduction in water consumption. The water conservation measures referenced in Stage I and Stage II, and the following:

(PARTIAL REVISION 1/5/2015)

- (a) Limit water deliveries for residential uses to **65 percent** of their water consumption for the same billing cycle during a pre-determined Base Year.
- (b) Levy a surcharge of **400 percent** on all water use in excess of the maximum water use allotment reflected in subparagraph (a) above, and that can be assessed to the account of the customer.
- (c) Require all swimming pools to be covered when not in use.
- (d) Prohibit the use of potable water to irrigate grass, lawns, ground cover, shrubbery, crops, vegetation, ornamental trees, etc., and lock all irrigation meters.
- (e) Suspend Intent-To-Serve Letters. However, the expiration period can be extended commensurate with the time of suspension.

In addition to those measures stated above, adoption of water conservation measures on an urgency basis may be necessary.

### 6.3 Stage III Conservation – Additional 50% Reduction

Upon determination that additional water conservation is needed, the following prohibitions can be considered and adopted with the goal of achieving up to an additional **50 percent** reduction in water consumption. The water conservation measures referenced in Stage I, II, and III above, and the following:

- (a) Limit water deliveries for residential uses to **50 percent** of their water consumption for the same billing cycle during a pre-determined Base Year.
- (b) Levy a surcharge of **500 percent** on all water use in excess of the maximum water use allotment reflected in subparagraph (a) above, and that can be assessed to the account of the customer.
- (c) Prohibit the setting of new water meters and suspend all Will-Serve Letters.

In addition to those measures stated above, adoption of additional water conservation measures on an urgency basis may be necessary.

## Earthquake Literature Search

(PARTIAL REVISION 1/5/2015)

This section has been prepared based on the insights included in reports prepared by water agencies outside this IRWM Plan area that summarize their experience and include their after-action reports prepared following earthquakes.

### **Loma Prieta, California, Earthquake of October 17, 1989.**

The U.S. Geological Survey's Professional Paper on the performance of the built environment in the Loma Prieta Earthquake was compiled of a number of separate papers. Information from two of those papers that focused on water systems is discussed here (Schiff, 1998).

A section of the Professional Paper (Le Val Lund, primary author) had the following conclusions:

“On the basis of this preliminary reconnaissance survey, the 1989 Loma Prieta earthquake has reinforced the lessons learned in previous earthquakes that water and wastewater systems should do the following.

- Provide emergency power for critical operating, treatment, and support facilities
- Maintain portable light plants, generators, chlorinators, and pumps
- Develop a separate radio-communication system, independent of the telephone system
- Maintain an inventory of repair materials, parts, and fuel
- Improve the State-wide and mutual-aid programs
- Establish guidelines for State-wide emergency water-quality sampling and public notification
- Conduct an earthquake-response assessment of system facilities
- Develop an emergency-response plan
- Incorporate into local or regional emergency-response plans a more active participation by water and wastewater agencies
- Provide a method, possibly computer based, for logging problems and system operations to establish priority for repair activities
- Conduct a cross-training program to include all personnel in emergency response
- Train personnel in appropriate communication procedures
- Conduct regular periodic emergency-response exercises
- Provide flexible pipe joints
- Provide flexible pipe connections to wells, tanks, pumps, and other rigid structures

(PARTIAL REVISION 1/5/2015)

- Provide adequate anchorage for air valves and other heavy appurtenances that are installed in an inverted-pendulum position
- Design mechanical appurtenances in treatment-plant basin facilities for wave action
- Provide for a breakaway or fusible connections and (or) safety cables or chains to prevent malfunctioning mechanical equipment from interfering with other equipment in treatment-based basins
- Provide for redundancy in water and wastewater systems
- Install isolation valves and establish a regular valve-maintenance program
- Anchor water-quality-testing equipment and supply cabinets”

A separate section of the Professional Paper (Mark Pickett, primary author) focused in part on the lessons learned from the Loma Prieta Earthquake for utility operations, including preparedness and response. A brief review of the points made on utility operations is below:

- **Organization.** Important improvements in organization that were frequently identified were (1) better definition of leadership roles, (2) clearer statement of unit duties, (3) improved emergency planning to reflect the detailed events that must be dealt with in real disasters, and (4) better preparation through “what if” thinking and plan exercising.
- **Energy Sources.** Points that could provide better preparedness for loss of electrical power included:
  - Maintain close relationships with the local electrical-power company to ensure priorities of the utility and the water agency are understood.
  - Portable electrical-power generators should be provided with the proper fittings and connections for each intended use. Generators should be periodically tested.
  - Permanent engine-driven generator sets should be provided at critical support facilities.
  - Regularly scheduled periodic tests should be conducted under load.
- **Portable Equipment.** All utility personnel noted that more portable equipment was needed than was on hand in their organization. Portable equipment needs scheduled maintenance and safe and accessible storage. Personnel need to know how to operate the equipment and the equipment limitations.
- **Communications and Public Information.** Pre-disaster preparation includes development of “fill-in-the-blank” media-release forms, development of procedures to disseminate information to the media, securing of communications equipment and access to communications networks, and preparation for post-disaster investigations.

(PARTIAL REVISION 1/5/2015)

- **Inventory.** Adequate supplies and access to those supplies needs to be maintained.
- **Emergency-Response Planning.** In general, utility emergency-response plans were not well documented or pre-exercised before the earthquake.
- **Mutual-Aid Planning.** Adequate mutual-aid planning includes coordination with other water agencies, participation in regional meetings and test exercises, preparation to provide aid to adjacent Federal and State organizations, and authorization from fire department officials for utilization of fire engines as booster equipment.
- **Training.** Extensive training of employees is required.
- **Long-Term Recovery Planning.** Recovery planning needs to take into account reconstruction, rate-structure changes, integration of new knowledge into operations, collection of revenues, and record keeping for State or Federal reimbursement.

### **Northridge Earthquake, California, Magnitude 6.8 Earthquake of January 17, 1994**

The National Institute of Standards and Technology report on the lifeline performance in the Northridge Earthquake had the following observations and recommendations concerning the performance of water facilities (Schiff, 1997).

“Seismic performance of dams, large buried reservoirs, and wells in the 1994 Northridge earthquake showed significant improvement from the 1971 San Fernando earthquake. Facilities constructed since the San Fernando earthquake that incorporated lessons learned from that earthquake performed well. These include concrete tanks and pumping stations that were subjected to very strong ground motions. The prestress-concrete water tanks were constructed using criteria more conservative than those contained in AWWA Standards for Wire-Wound Circular Prestressed Water Tanks (AWWA D110).”

“There is a need for performance criteria for water systems so that piping systems and other water system facilities and equipment can be evaluated and seismic specification established in a consistent manner. With performance criteria, water systems performance and the consequences of disruption can be evaluated. With this information a case can be made for getting public support to enhance system performance in a timely and cost-effective manner.”

“The largest impact on water system performance was the failure of water lines, both large supply lines and smaller lines in the distribution system. Most pipeline damage has the result of ground deformations. This earthquake had no surface faulting, but there were many areas with ground deformations in locations that had not previously been predicted. Thus, a general level of improved materials and methods may be needed to improve system performance rather than concentrating on special problems of fault crossings. The uncertainty in predicting the location of damage increases the importance of system

(PARTIAL REVISION 1/5/2015)

redundancy and alternate supplies from other sources, such as groundwater basins and alternate aqueduct systems for water supplies.”

“Many of the pipe failures appear to be related to cracks in bells that are probably associated with their method of fabrication. There is a need to study the seismic strength of welded steel bell and spigot joints and methods to improve the seismic performance of the joint. The joint performance should be compared with the current (AWWA) Standard for Welded Steel Pipe.”

“The performance of surface-supported tanks was poor and damage was similar to that observed in previous earthquakes. Many of the damaged tanks were old and predate current seismic design standards. The loss of tank contents was frequently associated with failure of input and output pipe connections. These failures are due to the use of cast iron fittings and inadequate flexibility to accommodate the movement of the tank, which was typically lifting rather than sliding. The roofs and upper parts of side walls on several tanks were damaged due to sloshing. Several examples of elephant foot buckling were observed.”

“There is a need for follow up surveys to determine the performance of tanks constructed using current seismic standards and to determine the relative performance of anchored and unanchored tanks. Methods to address the damage due to sloshing should be identified for existing and new tanks. Based on the effect of tank performance on water system performance, the need for reducing the risk of tank damage by improving anchorage, stiffening to prevent buckling, and reducing effects of sloshing can be determined.”

“Sloshing in large basins in water filtration and water reclamation plants caused damage in both 1989 Loma Prieta and the Northridge events. Although not critical, the damaged equipment can cause malfunction of other equipment. For example, sloshing caused the jamming of the chain drive sludge scrapers in seven out of 44 final clarifiers of a water reclamation plant. There is a continuing need to consider sloshing and shaking in the design of mechanical equipment and baffles in large basins of water and wastewater treatment plants.”

“Air and vacuum valves on pipelines are configured in an inverted pendulum above the ground surface. In the Northridge event many valves toppled, had cracked bodies or damaged floats (balls). Also the damage may have been caused by transient pressures in the pipeline. A study is required to improve the performance of these valves in an earthquake.”

“The disruption of commercial power emphasizes the need for reliable emergency power supplies. While emergency power for pumping stations and treatment plants performed well, there were indications that testing units under full load may enhance performance.

(PARTIAL REVISION 1/5/2015)

“The 1971 San Fernando and 1987 Whittier Narrows earthquakes experience had encouraged water agencies to prepare emergency response plans and establish emergency operations centers. These plans have been tested and implemented by lifeline agencies. Water system emergency response plans generally worked well in the Northridge earthquake. This was attributed to their periodic testing. It is important that plans address expected problems in communicating with personnel and with transportation problems. Because of transportation problems and the disruption of several lifelines, it is important that water system disaster plans make provisions for supporting most needs of their workers, including food and temporary housing. In the recovery after the earthquake, outside contractors may be retained to speed the recovery. It is important that all personnel be aware of OSHA requirements for entering confined spaces, such as large diameter pipes, conduits and tunnels. To improve the performance of utility work crews, utilities should consider providing support for worker families that have been directly affected by the earthquake. For example, this could include providing assistance with getting shelter or help in evaluating damage to homes.”

“Boil water orders were issued as a precaution. Because of the time needed to confirm that water is safe once an order is issued, the public may be needlessly inconvenienced. Consideration should be given to developing a mobile water quality laboratory to expedite, in the field after repairs have been made, the determination if the water is safe for drinking. More rapid methods for evaluating the safety of water should be explored.”

“There is a need for adequate documentation of emergency response and recovery costs. For public utilities, as is the case for most water systems, a record is needed for reimbursement from FEMA. Documentation is also needed to substantiate insurance claims.”

“The disruption of the water supply demonstrated that many critical facilities were not prepared with emergency water supplies or even a means for connecting an external source into their system.”

“This is a need for better public education about the consequences of water system disruption and use of appropriate mitigation measures.”

“While the performance of customer water is outside of the jurisdiction of water utilities, damage to these systems was costly and disruptive in the Northridge earthquake. The Oliveview Hospital, which was reconstructed after experiencing severe damage in the San Fernando earthquake had to be evacuated due to the failure of water systems within the hospital. The vulnerability of water systems in buildings should be evaluated and standards improved to reduce the losses and disruption from these systems.”

This report also addresses damage and repair of supply pipelines. Since supply pipelines are the main facilities of SBVWMD, these estimates may be of particular interest. They are summarized in Table 1.

(PARTIAL REVISION 1/5/2015)

**Table 1– Repair of Supply Pipelines after Northridge Earthquake**

Pipeline Description	Repair time	Remarks
54- to 33-inch modified prestressed concrete cylinder pipe	65 days	Castaic Lake Water Agency's pipeline from treatment plant to service area. 35 leaks. New fabricated sections were installed and pulled rubber gasket joints were welded in place.
SWP – West Branch, 85-inch welded steel pipe to Jensen WTP	2 days	10-foot section of damaged pipe replaced with pipe fabricated at MWD yard.
Los Angeles Aqueduct No.1		Aqueduct No. 1 had damage at four locations; and it was able to be operated at very low flow for about a week to allow repairs to Aqueduct No. 2, then shut down for repairs. Operated at one-half capacity, after temporary repairs were made, during a planned Metropolitan shutdown. It was out of service from April 1 until summer for permanent repairs.
Los Angeles Aqueduct No. 2	One week	Out of service for the first week after earthquake for repairs.
78-inch North Branch Feeder (Metropolitan)	45 days	From Jensen Plant to Simi Valley. 15 to 20 major pulled pints and 500 cracks. Replacement air and vacuum valves delivered by manufacturer in two days.
48-inch, Granada Trunk Line (LADWP)	12 days	Welded Steel Pipe and modified prestressed concrete cylinder pipe. Four major pulled mechanical couplings and two tension and compression failures.
68-inch, WSP, Rinaldi Trunk Line (LADWP)		Welded Steel Pipe. Three pulled welded bell and spigot joints and a tension and compression failure.

## Santa Clara Valley Water District Water Infrastructure Reliability Project

At the time of Santa Clara's Water Infrastructure Reliability Report, the system could suffer up to a 60-day outage if a major event, such as a 7.9 magnitude earthquake on the San Andreas Fault, were to occur.

Recommended improvements to the system included:

- Life Safety – retrofit of all operations buildings
- Emergency Planning and Studies – Recovery Plan and Retailer Shortages Agreement
- Agreements – Mutual aid, contractor retainer, pipe rental companies, welder retainer, retailer incentives
- Capital Improvements – SCVWD-owned well fields
- Operational Improvements – Stockpile pipes and system materials
- SCADA Improvements

The estimated cost of these improvements was \$150 million (report data May 2005). With these improvements the estimated outage period would reduce to 7 to 14 days.

## **San Simeon, California, Magnitude 6.5 Earthquake of December 22, 2003**

The San Simeon earthquake damaged two of 19 dams in the area.

There was no reported damage to groundwater wells other than the loss of power from a few hours to several days.

Steel water tanks damaged included two in the City of Paso Robles water system, one in a private system serving a mobile home park, three (of four) at the City of Templeton, and an elevated tank in the City of Guadalupe.

Pipeline breaks were reported in most purveyor systems (Lund, 2003).

## **Denali, Alaska, Magnitude 7.9 Earthquake of November 3, 2002**

Population near the epicenter is limited to about 10,000 people in rural locations. Nearly all residents rely on private wells for water supply. Two events of well casings ejecting out of the ground were reported. These events may be attributed to accumulated frost heave forces on casing pipe that lost its soil resistance temporarily due to shaking and/or liquefaction.

## **City of San Diego**

In 2001, the City of San Diego completed a study of the expected operational performance of the City of San Diego Water Supply pipelines when exposed to possible future scenario earthquakes. The analysis used a specialized GIS software package.

For the most serious earthquake, the study determined that it would take 1.7 days to stabilize the system, 20 days to restore backbone pipes, 35 days to restore distribution pipes, and 74 days to complete all pipe repairs.

The study also examined the costs and benefits of different seismic improvement programs and developed benefit/cost ratios for each program (Collins, 2001).

While the City of San Diego has a large number of reservoirs in the distribution system, this study did not examine those systems.

## **City of Vancouver, Canada**

In 2000, the City of Vancouver completed a study of the expected operational performance of the Regional Water Distribution System. In the event of a Design Basis Earthquake, a 475-year event, the report concluded the following (JELC Working Committee, 2000):

(PARTIAL REVISION 1/5/2015)

1. The present system will be severely impacted. Chlorine facilities evaluated have life safety concerns. Fiberglass tanks containing sodium hypochlorite and ammonia may overturn due to lack of anchorage.
2. An estimated 30 pipeline failures will occur, making much of the system inoperable.
3. All pump stations that were evaluated will likely be inoperable as a result of nonstructural and, in some cases, structural damage. All but two pump stations are dependent on commercial power. If power is out, pump stations without self-contained power will be inoperable.
4. All reservoir roofs/column supports are vulnerable. Some may collapse. In general, tanks should remain operable.

A later discussion of the development of an alternate water supply for Vancouver proposed development of procedures to allow use of two existing irrigation wells for potable supply should the city's supplies from reservoirs fail in an earthquake. In addition, a dedicated fire protection system, possibly supplied with sea water, was proposed (City of Vancouver).

### **San Fernando, California, Magnitude 6.7 Earthquake of 1971**

Immediately following the earthquake, approximately 100,000 customers were without water, and a citywide "boil water" advisory was issued. Within 5 days, water service was restored to all but a few thousand customers; after 10 days, less than 100 scattered customers were without water. All "boil water" orders were lifted after 12 days (Housing and Urban Development, 2001).

Two dams, Van Norman and Pacoima were seriously damaged by this earthquake. Van Norman was replaced and Pacoima was repaired.

### **Kobe, Japan, Magnitude 6.8 Earthquake of January 17, 1995**

An estimated 2,000 water pipeline failures occurred, draining reservoirs and limiting water available for fire suppression. Transmission and distribution pipeline and water purification plant damage resulted in 300,000 people still without water one month following the earthquake.

An aggressive earthquake mitigation program had replaced most of the city's cast iron pipe prior to the earthquake. Without that, program failures and restoration time could have been far greater. About 6 percent of Kobe's ductile iron pipe had a special seismic joint that appears to have had little or no damage. An earthquake monitoring and control system isolated 18 reservoirs saving the water for drinking in the days following the event.

(PARTIAL REVISION 1/5/2015)

The earthquake monitoring and control system consists of an earthquake ground motion monitoring center, telemetry, and reservoirs with earthquake isolation valves at 21 locations. There are dual reservoirs at each of the 21 sites; one has an isolation valve to be controlled following an earthquake, and one does not. This concept allows shutdown of one reservoir while maintaining service should the second reservoir inadvertently shut down. If the system can keep up with system leakage, the isolated reservoir can be put back on line from the control center. If the system cannot keep up with demand, the reservoir remains isolated (Ballantyne, 1995).

There were two major issues identified that had delayed system restoration:

- No water pressure was available to check the repairs while the tunnels remained out of service.
- Access – limited by collapsed buildings and traffic congestion.

### **California Division of Mines and Geology Planning Scenarios**

The California Division of Mines and Geology has prepared two special publications intended to provide an understanding of the impacts of major earthquakes in southern California. The first was a Magnitude 8.3 Earthquake on the San Andreas Fault (California, 1982). The second was a magnitude 7 earthquake on the San Bernardino Valley segment of the San Jacinto Fault (California, 1993). Both studies anticipate significant damage to the State Water Project. That information is discussed in a later section of this report that focuses on the State Water Project. Impacts to other water facilities in the SBVWMD service area are discussed here.

The San Andreas publication hypothesized an earthquake in which the southern limit of surface fault rupture is outside of the San Bernardino service area (approximately 10 miles northwest of Devil Canyon Power Plant). Thus, it does not directly address facilities within the San Bernardino service area. Within the area that is affected (generally west and north of San Bernardino), it does not anticipate widespread damage to primary transmission lines, although some pipe failures will occur. In distribution lines, there will be hundreds of breaks and thousands of leaks. Pumping plants are generally more compact structures and, with the exception of related electrical equipment and transformers, will probably not suffer as great of damage as distribution pipelines.

The San Jacinto publication hypothesized an earthquake within Valley District's service area and thus, substantially more impact on SBVWMD. The publication's planning scenario states that within 25 miles of the fault, damage to treatment facilities, pumping stations, and transmission and distribution pipelines will reduce service by 20 percent for up to five days. Restoration will take up to two weeks. People will be asked to use emergency supplies, boil their water, or take other safety measures against contamination. Delays will be necessary because waste water lines must be repaired before fresh water lines. The most serious

(PARTIAL REVISION 1/5/2015)

problems will be concentrated in the low lying areas of San Bernardino and the Santa Ana River Basin. The extent of damage and contamination of wells and groundwater will depend on groundwater levels at the time of the earthquake.

Specific failures hypothesized by the San Jacinto publication to facilities that convey SBVWMD water include (State Water Project facilities are discussed in a later section):

- San Gabriel Valley MWD’s pipeline closed for 5 to 10 days. Fault displacement.
- Valley District’s Foothill Pipeline closed for 4 to 6 days. Moderate liquefaction potential.
- Valley District’s Baseline Feeder closed for 4 to 6 days.

The main source for this hypothesis was the then General Manager of SBVWMD, Louis Fletcher.

## **Regional Electrical System Vulnerability**

During this evaluation, no recent information was available from Southern California Edison on the anticipated likelihood of a widespread failure of the electrical system serving the San Bernardino Area. Nor was information found on the times required to restore power after the Loma Prieta Earthquake. In the absence of that data, we reviewed the impacts of the Northridge earthquake.

The total generating capacity supplying the greater Los Angeles area at the time of the Magnitude 6.8 Northridge Earthquake of January 17, 1994, was approximately 10,000 MW. When the earthquake occurred at 4:30 AM the southern California area was exporting approximately 1800 MW to the Northwest over AC and DC interties that link Southern California to Oregon and Washington State. As a result of the earthquake, the AC and DC interties were opened and the power grid in the United States west of Denver was spilt into three separate islands. Due to the loss of power, there were short-term outages, up to three hours, in British Columbia, Montana, Wyoming, Idaho, Oregon, and Washington.

Within the City of Los Angeles, restoration times of power at major substations varied from 6:18 AM to 11:03 PM on the day of the earthquake. Due to distribution system failures, power remained out for a longer period for some customers. But, within 24 hours power was restored to over 90 percent of its customers. Had the earthquake occurred during the summer when loads are heavier, restoration would have taken longer.

## F: Objectives Workshop Feedback Matrix

## IRUWMP Workshop #4 (February 2021)

The following tables list the feedback obtained regarding measuring success in meeting goals during a ConceptBoard exercise, and how the information was incorporated into the IRUWMP.

### Goal #1: Improve Water Supply Reliability

How will we know we've achieved this goal?	How do we measure success?	How was this item captured in the IRUWMP?
<b>Increased GW basin recharge</b>	Completion of GW basin storage projects	Captured under Objective 1c.
	Continue to develop SW capture basins throughout the San Bernardino Basin	Captured under Strategies – “Increase Stormwater Capture”, and notes that this strategy supports Goals 1, 2, 3 and 5.
	GW model will help answer the question of the deficit in each basin. Then look at supplies to determine reasonable recharge targets. Use Usable Storage Study to inform decisions	Captured under Objective 1c. The 10,000 AFY metric is within the available storage amount for local basins. The limitation is assumed to be water available for recharge, not storage capacity. Also included mention of the integrated model under needs discussion.
	Regular updates to model for each basin	Captured as part of groundwater management strategies.
	Better utilize in-lieu recharge via SWP/RW	Captured as a part of Objective 1b.
	Replenish Big Bear - in-lieu recharge ~200 AFY/ reduce in-lieu deliveries of SWP to BVMWC	Captured as a part of Objective 1c (separate numerical objectives not available for all basins, so one numerical objective used for all basins)
<b>Increased local supplies</b>	Annual Change in Groundwater Storage Report can track and measure success.	Incorporated into metrics for Objective 1c
	Additional local storage to capture and or import supplies	Captured as a part of Objective 1c
	Additional recharge locations/options to benefit all groundwater producers in the Basins. (new recharge basins or Injection wells??)	Captured as part of Objective 1c and as part of strategies
	Increased use of RW (SNRC, Clean Water Factory, Replenish Big Bear) - quantifiable	Captured as a part of Objective 1b.

	Make sure we have enough wells to extract the available gw supply (declining gw levels, Usable Storage Study could inform quantifying this)	Captured as a part of Objective 1b.
<b>Maintained access to clean drinking water for all</b>	Community surveys: Do residents believe they have access to clean water?	Included under the needs discussion related to water quality
	Low numbers of boil water/ do not drink orders?	Captured as part of Objective 3a
<b>Improved resiliency to supply interruptions</b>	Water Infrastructure specs. inventory (awareness of the condition of different portions of our delivery system allows us to plan for potential failures)	Captured under the needs discussion of Chapter 6 under "Disaster Preparedness"
	Continue to import as much SWP water as available	Captured as a part of Objective 1c
	Create additional interties, mutual aid agreements, etc..	Captured under Objective 1d.
	4 interties planned - keep this as a metric	Captured under Objective 1d. Numerical objective not used for this objective as the objective was expanded to include all strategies for improving system resiliency and ability to respond to emergencies.
	More emergency storage to supply water during power outages (BBLDWP Wolf Reservoir project)	Captured under Objective 1d
<b>Robust emergency response approach</b>	Increased participation in regional emergency groups (ex: ERNIE) alongside operations staff	Captured under Objective 1d
	Revitalize ERNIE group so everyone is aware of the regional resources available/try to get full participation of all Integrated Plan stakeholders	Added "developing agreements for mutual aid" to Objective 1d. ERNIE added to the objective narrative.
	Evaluate how a seismic event may impact groundwater wells, especially older wells	This information is captured by the seismic risk assessments conducted by each agency as part of meeting urban Water Management Plan requirements.
	Risk assessment and mitigation plan/prioritized actions	This information is captured by the seismic risk assessments conducted by each agency as part of meeting urban Water Management Plan requirements.

	Power outage vulnerabilities (PSPS and other) - what are the best options available to mitigate? Battery backups being considered	Captured under Objective 1d.
	Emergency response plans and mutual aid agreements that address pressing disasters as well as after action summaries	Captured under Objective 1d
	Exercises between agencies around communication and disaster response - once a year meeting/forum	Captured under Objective 1d
	could survey stakeholders to see who is involved/where needs are	Captured as part of the disaster preparedness needs narrative that notes a more detailed analysis is needed to determine impacts.
<b>Comply with conservation legislative requirements</b>	All agencies comply with Urban Water Use Objective (2024)	Captured under Objective 1a.
	Agencies continue to meet and report their achievements. Seek input on any hurdles.	Captured as part of plan for annual reporting of progress towards meeting goals and objectives.

**Goal #2: Balance Flood Management and Increase Stormwater Recharge**

How will we know we've achieved this goal?	How do we measure success?	How was this item captured in the IRUWMP?
<b>Urban stormwater capture to increase recharge and improve surface water quality</b>	Balance capacity required for flood control with available capacity to retain storm water.	Captured under Objective 2a.
	Number and acre feet of projects	Captured under Objective 2b.
	Sample WQ at sites before and after project installation	This type of monitoring would be expected to be included as part of pre- and post- project monitoring of stormwater capture projects.
	Requires coordination among agencies	Coordination among agencies is encouraged across all projects. Project partners is a scoring criteria for project prioritization.
	Consider potential water quality impairments that might impact GW	Captured under the groundwater management needs discussion.

<b>Multi-benefit flood projects</b>	Number of new project permitted and acre feet of projected recharge	Captured under Objective 2b.
	Number and type of alternate benefits, water quality, habitat, recharge, recreation	Captured under Objective 2b.
<b>Flood control projects in DAC areas</b>	Identify areas in most need and track project completion, # ppl impacted, flood risk reduction etc.	Captured under needs discussion and Objective 2c.
<b>Joint use of flood control basins for recharge</b>	Number and capacity of planned and implemented projects which benefit both flood management and water supply.	Captured under Objectives 2a and 2b.
	Number of Planning MOU's for new joint use projects	Captured under Objective 2a.

**Goal #2: Balance Flood Management and Increase Stormwater Recharge**

How will we know we've achieved this goal?	How do we measure success?	How was this item captured in the IRUWMP?
<b>Urban stormwater capture to increase recharge and improve surface water quality</b>	Balance capacity required for flood control with available capacity to retain storm water.	Captured under Objective 2a.
	Number and acre feet of projects	Captured under Objective 2b.
	Sample WQ at sites before and after project installation	This type of monitoring would be expected to be included as part of pre- and post- project monitoring of stormwater capture projects.
	Requires coordination among agencies	Coordination among agencies is encouraged across all projects. Project partners is a scoring criteria for project prioritization.
	Consider potential water quality impairments that might impact GW	Captured under the groundwater management needs discussion.
<b>Multi-benefit flood projects</b>	Number of new project permitted and acre feet of projected recharge	Captured under Objective 2b.
	Number and type of alternate benefits, water quality, habitat, recharge, recreation	Captured under Objective 2b.

<b>Flood control projects in DAC areas</b>	Identify areas in most need and track project completion, # ppl impacted, flood risk reduction etc.	Captured under needs discussion and Objective 2c.
<b>Joint use of flood control basins for recharge</b>	Number and capacity of planned and implemented projects which benefit both flood management and water supply.	Captured under Objectives 2a and 2b.
	Number of Planning MOU's for new joint use projects	Captured under Objective 2a.

**Goal #3: Improve Water Quality**

<b>How will we know we've achieved this goal?</b>	<b>How do we measure success?</b>	<b>How was this item captured in the IRUWMP?</b>
<b>No violations of drinking water standards</b>	Continue to work with DDW on current and upcoming PHG's, and MCL's. The objective would be there are no MCL violations for our region over the next five years	Captured under objective 3a
	Formulate a regional response to DDW, SWRCB and OEHHA to the upcoming PFAS/PFOA and other CEC's PHG and MCL's.	The need to address PFAS is noted under the water quality needs discussion.
<b>Additional groundwater treatment to improve quality</b>	WVWD has treatment on 4 wells alone - the Valley has a phenomenal amount of groundwater treatment. Next step - quantify capacity of all groundwater treatment and determine what percentage of total water supply comes from treated groundwater to set an objective for how much additional treatment to add in next 5 years.	Captured under Objective 3b
	Track pounds of contaminants removed from wellhead treatment facilities	Captured under Objective 3b
	Review periodic reports that indicate a reduction of contaminants over time.	Captured under Objective 3b
	Report the amount of Pounds of a constituent is removed during the treatment processess (e.g., 500 pounds of TCE removed during treatment (insert other constituents removed)	Captured under Objective 3b

<b>Coordinated strategy to manage TDS and nitrogen in groundwater</b>	Improving the quality of water in Big Bear Lake through Replenish Big Bear. Improves quality of groundwater and supports habitat downstream of Seven Oaks Dam	Project can be included in the recycled water supplies discussion. This is a great example of a multi-benefit project that uses highly treated recycled water.
	Continue to develop the Salt and Nutrient Management Plan for the Upper Santa Ana River Watershed Groundwater basins with the SAR Integrated Model	Captured under Objective 3c
	Review and follow recommendations in TDS/Nitrogen Mgmt Plans	Captured under Objective 3c

**Goal #4: Improve Habitat and Open Space**

<b>How will we know we've achieved this goal?</b>	<b>How do we measure success?</b>	<b>How was this item captured in the IRUWMP?</b>
<b>Implement multi-benefit projects that increase recreation, public access and education opportunities</b>	Propose a planning element during new project siting, which evaluates if the proposed project site's region is presently underserved in terms of recreation and open space.	Captured by the strategy "Incorporate Opportunities to Improve Habitat and Increase Recreation and Public Access During the Facilities Design Process"
	Seek new grant funding in bonds or local programs for including recreation or public access in flood/water supply projects	Pursuing funding is included as a part of the plan implementation chapter.
	Bring in representatives from different levels of the community to ensure benefits for all.	Captured by the strategy "Incorporate Opportunities to Improve Habitat and Increase Recreation and Public Access During the Facilities Design Process"
	Have multi-year plan in place across agencies and have action plan for grant funding to help secure federal funding	Pursuing funding is included as a part of the plan implementation chapter.
<b>Preserved and improved habitat</b>	Implementation of the HCP - what is currently being done. HCP has identified projects that have been required to meet permits. This would show baseline and projects that have been implemented.	Project acres identified in the HCP incorporated into Objective 4a.
	Track additional projects currently not included in HCP that would help meet requirements (ex: project in Rialto).	Project tracking for the IRUWMP is not limited to HCP projects.

	Do not duplicate efforts. Monitor implementation of the HCP through this integrated plan.	Tracking of progress in meeting objectives is captured under the Implementation chapter.
	Track number of acres/sq ft of public access/recreational spaces or linear feet of walkways/trails etc tied to our projects	Captured under Objectives 4a and 4b.
	Serve as a resource to other agencies projects to advise them on how to preserve water quality, improve stormwater runoff in their own projects (preservation of native plants etc)	Falls under the strategy of "Increase Outreach and Engagement"
<b>Coordinate with San Bernardino County and the Cities on General Plans for Open Space and the RCIP</b>	Number of new acres of open space or habitat preserves under endowed management	Captured under Objective 4a.
	Request members provide an update on if they have served on a committee, attended workshops or otherwise participated in County Plans	This will be a part of the annual report card development process.

**Goal #5: Address Climate Change through Adaptation and Mitigation**

How will we know we've achieved this goal?	How do we measure success?	How was this item captured in the IRUWMP?
<b>Adapt to climate change impacts to water resources</b>	Diverse, robust portfolio of imported and local supplies to be resilient to climate change impacts	Captured under Objectives 1b and 5a.
	Increased production and use of recycled water - producing a valuable resource with nominal increase in energy demand.	Captured under Objectives 1b and 5a.
	Manage changes in water supply variability, both local and imported.  Success Measure: Long-term reliability of supply - ability to maintain level of service even with reductions in imported and local supplies	Captured under Objectives 1b, 1c and 5a.

	Quantify the number and size of multi-benefit flood/recharge projects. Water supply adaptation, and flood protection adaptation	Captured under Objectives 2b and 2d.
<b>Reduce/offset energy consumption and GHG emissions associated with water facilities</b>	If agencies meet urban water use objectives to prove effective demand management.  Both a water supply and energy issue (both adaptation and mitigation)	Captured under Objective 1a
	Measurable reduction in energy intensity of water supplies (e.g. KWh/AF)	Captured under Objective 5b
	Helpful to measure changes in demand over time, both average and seasonal	Captured under Objective 1a
	X MW of renewable energy generation capacity installed  X MWh of energy storage installed	Captured under Objective 1b
	Energy management in water distribution and wastewater collection systems. (e.g. storing water for use in high electricity demand periods, pumping off-peak)	Captured under Objective 1b
<b>Meeting state level climate change objectives, as well as objectives from local Climate Action Plans.</b>  <b>Successful implementation of local and regional projects for adaptation / mitigation</b>  <b>Continue to improve local, regional and statewide</b>	Threat of wildfire and flooding impacts on water quality. - Protection of supplies -Emergency aid agreements -Ability to bounce back, evaluate performance, share resources  Success Measure: Number of partnerships / mutual aid agreements Looking back on results of disasters - were we able to avoid severe impacts and/or recover quickly? Reduced impact of event	Captured under Objective 1a

<b>understanding of climate change impacts</b>	Implementation of microgrids (local generation, storage and use of electricity) where feasible and appropriate to improve resilience to potential impacts to the regional electricity grid due to climate change. When electricity system is experiencing peak demand, so is water system.	Captured under Objective 5b.
	Increased public awareness of climate change and its impacts	Falls under the strategy of "Increase Outreach and Engagement"
	YVWD working on energy project at WWTP. (Jennifer to provide more info)	Specific projects to be included under Projects chapter.
	Key question - how can we measure regional impacts of a local program?	Captured under the Implementation chapter that discusses progress tracking.

## G: Project List

Primary Goal	Project	Project Sponsor	Project Costs and Funding	Contact Name	Contact Email	Project Location
IMPROVE WATER SUPPLY RELIABILITY	<b>IMPROVE WATER SUPPLY RELIABILITY</b>					
	Active Recharge City Creek Tributary Project	San Bernardino Valley Water Conservation District	\$32,823,285	Daniel Cozad	dcozad@sbvwcd.org	City Creek East of the 210 Freeway
	Active Recharge in the Santa Ana River Tributaries [East]	San Bernardino Valley Water Conservation District	\$88,000,000			
	Active Recharge in the Santa Ana River Tributaries [West]	San Bernardino Valley Municipal Water District	\$127,000,000	Bob Tincher	bobt@sbvmwd.com	
	Active Recharge Mill Creek Tributary Project	San Bernardino Valley Water Conservation District	\$2,595,052	Daniel Cozad	dcozad@sbvwcd.org	Mill Creek at SBVWCD Diversion
	Active Recharge Transfer Project [East]	San Bernardino Valley Conservation District	\$88,000,000	Erwin Forgeron	Eforgeron@sbvwcd.org	
	Active Recharge Twin Creek Tributary Project	San Bernardino Valley Water Conservation District	\$16,667,990	Daniel Cozad	dcozad@sbvwcd.org	Twin Creek Spreading Grounds
	Active Recharge Waterman Creek Tributary Project	San Bernardino Valley Water Conservation District	\$23,709,212	Daniel Cozad	dcozad@sbvwcd.org	Waterman Spreading Grounds
	Active Recharge Plunge Creek Tributary Project	San Bernardino Valley Water Conservation District	\$10,207,218	Daniel Cozad	dcozad@sbvwcd.org	Plunge Creek West of Orange Street
	Bunker Hill Conjunctive Use Project	San Bernardino Vally Municipal Water District	\$14,200,000	Bob Tincher	bobt@sbvmwd.com	
	Cactus Basin Recharge Pipeline	San Bernardino Valley Municipal Water District	\$2,500,000	Bob Tincher	bobt@sbvmwd.com	
	Calimesa Aquifer Storage and Recovery	Yucaipa Valley Water District	\$6,250,000	Matthew Porras	mporras@yvwd.us	City of Calimesa, 33°58'24"N, 117° 2'54.29"W
	Calimesa Recycled Water Conveyance Project	Yucaipa Valley Water District	\$5,500,000	Matthew Porras	mporras@yvwd.us	This project is a linear pipeline mainly located in Calimesa Blvd. 33°58'57.03"N, 117°3'5.16"W
	Central Feeder and EBX Intertie Project	San Bernardino Valley Municipal Water District	\$2,000,000	Wen Huang	wenh@sbvmwd.com	
	City of Beaumont WWTP	City of Beaumont		Amer Jakher	ajakher@ci.beaumont.ca.us	

Primary Goal	Project	Project Sponsor	Project Costs and Funding	Contact Name	Contact Email	Project Location
IMPROVE WATER SUPPLY RELIABILITY	City of Redlands WWTP	City of Redlands		Kevin Watson	kwatson@cityofredlands.org	1950 Nevada Street, Redlands
	City of San Bernardino Tertiary Treatment System (Formerly known as City of San Bernardino)	San Bernardino Municipal Water Department	\$8,730,000			
	Devil Canyon Recharge Project	San Bernardino Valley Municipal Water District	\$10,000,000	Bob Tincher	bobt@sbvmwd.com	
	Enhanced Recharge in Santa Ana River Basins Phase 1B	San Bernardino Valley Municipal Water District	\$55,000,000	Bob Tincher	bobt@sbvmwd.com	
	Enhanced Recharge in Santa Ana River Basins Intake Improvement	San Bernardino Valley Municipal Water District	\$3,000,000	Bob Tincher	<a href="mailto:bobt@sbvmwd.com">bobt@sbvmwd.com</a>	
	Enhanced Recharge in Santa Ana River Basins Phase 1C	San Bernardino Valley Municipal Water District	\$3,000,000	Bob Tincher	bobt@sbvmwd.com	
	Erwin Lake Fire Flow	Big Bear Lake Department of Water and Power		Reggie Lamson	rlamson@bbldwp.com	
	Foothill Pipeline Infrastructure Improvements	San Bernardino Valley Municipal Water District	\$10,000,000	Bob Tincher	<a href="mailto:bobt@sbvmwd.com">bobt@sbvmwd.com</a>	
	Foothill Pipeline Interior Relining	San Bernardino Valley Municipal Water District	\$10,000,000	Bob Tincher	bobt@sbvmwd.com	
	Groundwater Reclamation Interagency Project (GRIP)	City of Redlands	\$9,100,000	Kevin Watson	<a href="mailto:kwatson@cityofredlands.org">kwatson@cityofredlands.org</a>	
	Henry N. Wochholz WWTP (Salinity and Groundwater Enhancement Project)	Yucaipa Valley Water District	\$27,700,000	Kathryn Hallberg	khallberg@yvwd.us	880 W. County Line Rd, Yucaipa CA, 92399
	IEUA Regional Treatment Plant 4	Inland Empire Utilities Agency		Elizabeth Hurst	ehurst@ieua.orh	
	Medical Center No. 2 Reservoir	San Bernardino Municipal Water Department	\$18,100,000	Miguel Guerrero	miguel.guerrero@sbmwd.org	X = 6767194.45 feet; Y = 1874365.95 feet (NAD 83, State Plane, Zone 5, CA, Feet)
	Recharge in Cactus Basin		\$5,000,000			
	Recycled Water System Expansion	City of Redlands	\$4,858,700	Kevin Watson	<a href="mailto:kwatson@cityofredlands.org">kwatson@cityofredlands.org</a>	1950 Nevada Street, Redlands

Primary Goal	Project	Project Sponsor	Project Costs and Funding	Contact Name	Contact Email	Project Location
IMPROVE WATER SUPPLY RELIABILITY	Regional Recycled Water Recharge Pipeline	San Bernardino Valley Municipal Water District	\$25,000,000	Bob Tincher	bobt@sbvmwd.com	
	Replenish Big Bear (formerly Big Bear Valley Water Sustainability Project)	Big Bear Area Regional Wastewater Agency	\$61,152,000	David Lawrence	dlawrence@bbarwa.org	BBARWA Wastewater Treatment Plant 121 Palomino Drive, Big Bear
	Reservoir Seismic Upgrades	City of San Bernardino Municipal Water Department	\$27,800,000	Steve Miller	Steve.Miller@sbmwd.org	Thirteen (13) reservoir sites spanning the City of San Bernardino.
	Riverside North Aquifer Storage & Recovery Project	San Bernardino Valley Municipal Water District	\$45,000,000	Bob Tincher	bobt@sbvmwd.com	
	Riverside-Corona Feeder	Western Municipal Water District	\$176,000,000			
	Seven Oaks Dam Borrow Pit Groundwater Recharge and Habitat Restoration Project	San Bernardino Valley Water Conservation District	\$7,700,000	Daniel Cozad	dcozad@sbvwcd.org	Latitude: 34° 5'58.32"N Longitude: 117° 7'12.28"W
	Calimesa Recharge Basin	South Mesa Water Company	\$5,872,190	Dave Armstrong	darmstrong@southmesawater.com	
	Stormwater Capture and Recharge	City of Riverside Public Utilities	\$3,000,000	Leo Ferrando	lferrando@riversideca.gov	33.98346 , -117.34607
	Twin Creek Channel and Spreading Grounds	San Bernardino Valley Municipal Water District		Michael Fam	mfam@dpw.sbcounty.gov	Lat. 34.1657 Long.-117.2674
	Weaver Basins	San Bernardino Valley Municipal Water District	\$6,000,000	Wen Huang	wenh@sbvmwd.com	Recycled Water Recharge from SNRC & CWF
IMPROVE WATER QUALITY	<b>IMPROVE WATER QUALITY</b>					
	Big Bear Lake Management Plan	Multiple Agencies	\$260,000			
	Cable Creek Basin (Upper)	County of San Bernardino Flood Control District	\$20,000,000	Michael Fam	mfam@dpw.sbcounty.gov	Lat. 34.1961 Long. -117.3635

## H: Blank Project Submittal Form

# Upper Santa Ana River Watershed 2020 Integrated Regional Urban Water Management Plan

## Call for Projects – Project Submittal Form

Please email all forms and supporting documents to Dawn Flores ([dflores@woodardcurran.com](mailto:dflores@woodardcurran.com)) and Laine Carlson ([lcarlson@wsc-inc.com](mailto:lcarlson@wsc-inc.com))

**Please check one. This form is to:**

- Update an existing project in the 2015 IRWMP/current project list  
If updating an existing project, only the information that has changed needs to be provided; other sections can be left blank
- Submit a new project to be included in the 2020 IRUWMP  
Note: new projects can be submitted at any time and will be added to the list once approved.

### 1. Contact Information

General Information	
Project Name	
Lead Agency or Organization	
Organization Address	
Project Partners (if applicable)	
Contact Information	
Primary Contact Name	
Organization	
Title	
Phone Number	
Email	

### 2. Project Description

Project Information	
Readiness for implementation (conceptual or developed)	
Type (planning or implementation)	
Location (address, coordinates and/or other location description to describe the project area)	

#### Project Description

Provide a 1-2 paragraph project description. Include a discussion of any facilities that will be constructed or programs to be implemented, and how these will provide water resource-related benefits to the Region.

#### Relationship to other Projects in the Region

Can the project be integrated with other regional projects?

Has there been any coordination with other entities within or outside of the Region?

### 3. Project Benefits

Check the benefits the project will provide. All projects must provide one or more benefits. Project components that will ensure these benefits should be included in the Project Description.

#### Improve Water Supply Reliability

- Reduce demand for water
- Increase utilization of local supplies
- Increase storage of water in groundwater basins during wet years
- Improve system resiliency and the ability to respond to emergency supply interruptions
- Ensure equitable access to clean drinking water

#### Balance Flood Management and Increase Stormwater Recharge

- Utilize flood control retention/detention basins for recharge
- Reduce the risk of flooding while providing multiple benefits, where possible
- Improve flood control or reduce the risk of flooding in disadvantaged communities
- Improve surface water quality and increase recharge by capturing stormwater in urban areas

#### Improve Water Quality

- Reduce or eliminate violations of drinking water quality standards
- Improve surface and groundwater quality by treating water supply
- Manage total dissolved solids and nitrogen in groundwater
- Ensure equivalent water quality services for disadvantaged communities

#### Improve Habitat and Open Space

- Improve habitat and open space
- Increase recreation and public access in and around local waterways

#### Address Climate Change through Adaptation and Mitigation

- Adapt to the impacts of climate change on water resources
- Reduce or offset energy consumption or GHG emissions associated with water and wastewater systems

#### Additional Benefits

Check which Disadvantaged Communities (DAC), Native American Tribal Communities and Environmental Justice concerns are features of the project:

- Benefits to DACs. Explain:
  
- Benefits to Native American Tribal communities. Explain:
  
- Addresses Environmental Justice<sup>1</sup> concerns. Explain:

<sup>1</sup> Environmental Justice is defined by State Law as: “the fair treatment and meaningful involvement of all people regardless of race, color, sex national origin, or income with respect to the development, implementation and enforcement of environmental laws, regulations, and policies.”

#### 4. Project Schedule

Provide the current status of the project (e.g., initial study, planning, design, environmental review, in construction) and include a timeline for the project.

#### 5. Project Costs and Funding

##### Project Costs

*Provide the total estimated project cost.*

##### Funding

*List potential sources of funding for the project and percent of project that has been funded or financed, if available.*

##### Basis for Project Cost

*Describe the basis for the project cost, such as a feasibility study, partial design, etc. If a cost estimate has been prepared, please list that document here.*

#### 6. Supporting Information

##### Technical Feasibility

*Provide the name of supporting documents that indicate/justify project feasibility.*

##### Economic Feasibility

*Has a cost-effectiveness or benefit-cost analysis been performed for the Project? Provide a copy of (or link to) the economic analysis, if available.*

#### 7. Other Considerations

*Has the lead agency or organization adopted the latest Upper Santa Ana River Watershed 2015 Integrated Urban Water Management Plan and/or will the lead agency or organization adopt the 2020 Integrated Regional Urban Water Management Plan?*

## I: Water Management Strategies

## Appendix I: Description of Water Management Strategies

The water management strategies identified in Part 1 Chapter 6 are described in detail in this Appendix.

### Reduce Water Demand

#### Implement Urban Water Use Efficiency

Urban Water Use Efficiency (WUE) involves reducing potable water used for municipal, commercial, industrial, irrigation and aesthetic purposes, and is an important element in almost every water purveyor's water resource planning efforts. Such efficiency methods include incentives, public education, and other efficiency-enhancing programs. Significant progress has been made to reduce urban water use in the Region. This strategy will also mitigate against climate change by reducing the energy use and GHG emissions associated with conveying water over long distances and treating water for potable use. The Region plans to continue these programs and work on other strategies such as implementing water rate structures that reduce water waste.

This strategy aligns with the Region's objective to comply with conservation legislative requirements (AB 1668 and SB 606).

#### Implement Agricultural Water Use Efficiency

Agricultural WUE includes improvements in technology and management of water, both on-farm and at the water supplier level through incentives, public education, and other programs. Future agricultural WUE measures will focus on development of new technologies and further economic incentives.

Though implementation of this strategy will help the Region to achieve its goal of improving water supply reliability and adaptively managing climate change impacts, since agriculture is not a large industry in the Region, implementing agricultural WUE will provide limited benefit to the Region.

### Increase Water Supply

#### Increase Recharge

Recharge projects increase local groundwater supplies, which can help the Region both mitigate and adapt to climate change. Groundwater use may be a critical resource during droughts, which are expected to intensify as a result of climate change. Local groundwater supplies can also mitigate climate change by offsetting GHGs associated with transporting imported water over long distances. Recharging surface water runoff also protects downstream surface water flows and key habitats that sequester carbon and reverse GHG pollution.

Flood control projects, such as new detention basins, can be used to increase recharge of local stormwater runoff in addition to reducing flood risk in the Region. These projects will have the

additional benefit of increasing groundwater storage to improve water supply reliability. Secondly, these projects will improve water quality in surface waters by reducing stormwater runoff volumes.

#### Increase Surface Water and Groundwater Storage Inside and Outside the Region

This strategy will improve water supply reliability by increasing storage, increasing utilization of local supplies, and preparing for disasters that could cause an interruption in imported water or failure of regional water conveyance. Supplies stored in water banks and other reservoirs can be used as a buffer for drought periods, which are expected to become more frequent and longer as a result of climate change.

#### **Optimize Wet Year Storage and Dry Year Pumping (Conjunctive Use & Groundwater Management)**

Conjunctive use, storing water in wet years for later use during dry years, can help improve the Region's long-term and seasonal water supply reliability. This strategy also helps to maximize the utilization of California's "feast or famine" hydrology which is characterized by wet years and dry years with relatively few years in between. Implementation of this strategy supports the Region's objectives of increasing utilization of local supplies and increasing storage. This strategy also increases water supply reliability by helping meet the objective to prepare for disasters by implementing storage projects.

Conjunctive use can help improve the Region's long-term and seasonal water supply reliability. This strategy helps to maximize water storage in wet years for later use during dry years. This supply is essential in drought periods, which are projected to become more common and intense as a result of climate change. Implementation of this strategy supports the Region's objective of managing climate change impacts.

#### **Increase Recycled Water Use**

Water supply reliability in the Region can be improved by increasing the use of recycled water. Use of recycled water eliminates the need for an equivalent amount of potable water. Recycled water is also extremely reliable since wastewater flows continue independent of whether it is a wet period or a dry period.

Water recycling can also reduce energy consumption and associated GHG emissions by lowering dependence on imported water supplies. Although recycled water supplies can be affected by drought and increased conservation, the impacts are typically lower than other resources. This supply source is also considered more resilient to temperature and precipitation variation expected with climate change.

#### **Increase Stormwater Capture**

Water supply reliability in the Region can be increased by capturing local stormwater that historically flowed to the ocean. The Region is working on a variety of projects that would capture more of this local resource. This strategy will help increase storage and utilization of local supplies and increase local supply reliability. Implementation of this strategy will help

mitigate climate change by decreasing regional dependence on imported water and reducing GHG emissions associated with conveying imported water to the Region.

In addition, local stormwater is of very high quality. Therefore, capturing and recharging more local stormwater not only improves water supply reliability but also improves water quality. Capturing stormwater for groundwater recharge can apply to the Region's objective to manage TDS and nitrogen by diluting these constituents with water that is of higher quality than imported water.

### **Support Bay Delta Conveyance Project**

The DCP is intended to improve habitat in the Delta while improving supply reliability for the SWP. The DCP will also result in improved water quality for the SWP, primarily in dry years when there is less fresh water to keep salt water from flowing into the Delta. The freshwater increases in salts as it passes through the Delta. The DCP will move the SWP intakes to the north and bypass the Delta, limiting the increase in salinity during dry years and thereby improving the quality of water delivered through the SWP to the Region and the rest of Southern California.

### **Operate Existing Facilities to Increase Recharge**

Increasing recharge in existing facilities would maximize groundwater infiltration and storage in recharge areas. Local groundwater supplies are key for the Region as they can reduce the need to import water, effectively decreasing the amount of energy associated with water conveyance over large distances. Groundwater recharge also prevents water tables from dropping and then being pumped from lower depths with high energy costs. Local water supplies will also increase the Region's resiliency to droughts as imported water becomes increasingly vulnerable to climate change.

Modifications and/or adjustments to SBCFCD facilities may be needed to effectively integrate water recharge concepts. While the primary function of SBCFCD is 'flood control', water conservation is part of the SBCFCD mission. Cooperation between the SBCFCD and water agencies will allow for further adaptation of flood control facilities with the facilities of other local agencies for the preservation of local waters. All basins and SBCFCD storm water conveyance systems in Zones 2 and 3 have potential for utilization in groundwater recharge scenarios given the proper study, design concept, and configuration. In addition, avenues for future SBCFCD/local agency agreements can be identified to truly integrate mutual efforts for water conservation.

### **Implement System Reoperation**

System reoperation allows for better management and movement of existing water supplies and includes managing surface storage facilities to optimize the availability and quality of stored water supplies. System reoperation could involve balancing supply and delivery forecasts, coordinating and interconnecting reservoir storage, and optimizing depth and timing of

withdrawals. This strategy will help the Region improve water supply reliability by helping to meet objectives such as increasing utilization of local supplies and increasing storage.

### **Improve Supply Conveyance – Delta**

The Region relies on the SWP for imported water supplies. Improvements to the SWP system increase the reliability of this supply source. The Region recognizes the importance of the SWP and, therefore, desires to support the Delta Conveyance Project (DCP) which would restore reliability to the SWP while also improving habitat.

### **Improve Supply Conveyance – Regional/Local**

Local and regional water supply conveyance in the Region can include both natural watercourses and man-made facilities such as pipelines and flood control channels. Infrastructure associated with these conveyance facilities includes pumping plants and diversion structures. The local/regional conveyance strategy seeks to improve existing conveyance systems by upgrading aging distribution systems, as well increasing system flexibility and reliability through the addition of interconnections among water resource systems. Establishing performance metrics for quantitative/qualitative indicators and assuring adequate resources to maintain the condition and capacity of existing conveyance facilities are also aspects of this strategy.

Conveyance infrastructure improvements and upgrades can improve the operational flexibility of delivery systems to better accommodate peak demands and emergency water needs, which will help the Region to meet its objective of preparing for disasters. Additional local and regional conveyance can also increase utilization of local supplies and continue to ensure equitable access to clean drinking water for all communities. This strategy will also help the Region mitigate climate change by reducing the energy use and GHG emissions associated with transporting water.

### **Identify Water Transfer Opportunities**

Water transfers are temporary or long-term changes in the point of diversion, place of use, or purpose of use by contracting or moving water from one beneficial use to another. Through pipeline interties and other facilities, the Region can make a variety of water transfers and increase supply resiliency. These transfers would typically be used in times of shortage caused by drought or emergency, such as an earthquake. The Region will continue identifying additional interties that would increase the opportunity for future water transfers.

## **Improve Water Quality**

### **Match Water Quality to Use**

Matching water quality to use recognizes that not all water uses require the same quality of water. Agricultural, municipal, landscape and residential water uses have different water quality needs. Achieving water quality standards can also be impacted by natural background

conditions, natural flow conditions, irreversible human impacts, hydrologic modifications, natural features of the water body and economic hardships.

Matching water quality to water use by recognizing the different needs, natural background conditions, hydrologic limitations, and economics ensures that limited public resources can be focused on the most significant problems. Benefits of this strategy can include providing cost saving opportunities by reducing treated water costs if users can be supplied with raw water or recycled water, while reserving high quality water for drinking water purposes. This strategy can help the Region to achieve its goal to improve water quality.

### **Improve Drinking Water Treatment and Distribution**

Public water systems must develop and maintain adequate water treatment and distribution facilities to meet the goal of providing a reliable supply of safe drinking water. The drinking water treatment and distribution strategy includes improving the quality of potable water supplied to customers and improving conveyance systems to improve the quality of supplies delivered from treatment facilities. Implementing this strategy will support the Region's objectives to ensure no violations of drinking water standards by improving water quality and the ability to access and increase groundwater supply that may not have been previously available due to quality concerns. Overall water quality is reported to customers in annual consumer confidence reports. The Region plans to use these reports as a strategy to ensure drinking water quality standards are met. Improving supply quality and distribution will also help achieve the Region's objective to continue to provide high quality drinking water to all communities.

### **Implement Pollution Prevention Measures**

Pollution prevention controls or reduces pollutants from point and nonpoint sources that can affect multiple environmental resources, including water supply, water quality, and riparian and aquatic habitat. Strategies that prevent pollution can include public education, efforts to identify and control pollutant contributing activities, and regulation of pollution-causing activities.

Pollution prevention includes implementation of water quality BMPs that reduce contaminant concentrations to reduce loading to 303(d) listed receiving waters and/or supply sources. BMPs can include either structural BMPs, where the BMP involves designing and building structural treatment and control facilities, or non-structural BMPs, where the BMP does not require construction of a physical component to filter stormwater.

Projects that remove contaminants using the soil as a filter have the secondary benefit of mitigating flood risk and increasing stormwater recharge, thereby increasing water supply reliability. Pollution prevention can improve water quality for all beneficial uses by protecting water at its source and therefore reducing the need and cost for other water management and treatment options. By preventing pollution throughout the watershed, water supplies can be used and reused for a broader number and types of downstream water uses. Protecting source water is consistent with a watershed management approach to water resources problems.

### **Manage Salt and Salinity**

This strategy encourages stakeholders to proactively identify the sources of salinity, prioritize the necessary mitigation actions, and work collaboratively with entities that have the authority to take appropriate actions. Effective salt and salinity management will reduce the accumulation of salinity in drinking water supplies. This strategy can help the Region meet several objectives including improving surface and groundwater quality and managing TDS and nitrogen.

### **Manage Sediment**

Sediment management decreases turbidity and suspended sediment concentrations in surface waters that provide drinking water supplies. Sediment management also improves the permeability of drainage areas by filtering water and reducing turbidity, suspended solids, nutrients, and concentrations of trace metals and organic contaminants present in the sediments before the water enters aquifers.

The sediment management strategy can also be used to preserve or improve habitat by conserving or restoring riparian, wetland, and permanent water areas. This strategy protects sediment as a valuable resource for the restoration and renewal of stream habitats, wetlands, riparian vegetation, and floodplains and prevents excessive amounts from degrading surface water quality.

### **Manage Urban Runoff**

The Region plans to work with land use authorities to improve urban runoff management which includes strategies for managing or controlling urban runoff, such as intercepting, diverting, controlling, or capturing stormwater runoff or dry weather runoff. Urban runoff management strategies, coupled with centralized groundwater recharge or decentralized low impact development (LID) projects, can also help to improve groundwater recharge. Several BMPs can be used to manage urban runoff and prevent surface water quality contamination such as public education, bioswales, permeable pavers, vegetated buffers, rainwater harvesting, construction erosion control, and others. Reducing dry weather flows that are often caused by over-irrigation may also be improved through water conservation programs that aim to improve water use efficiency.

The urban runoff management strategy supports the Region's objective to improve surface and groundwater quality and has the secondary benefits of reducing flood risk.

### **Remediate Groundwater Contamination Plumes**

Groundwater management is currently influenced by the presence of contamination plumes. Avoiding any impacts to and from the plumes and removing the contaminants when possible is a Basin Management Objective for the Region and is also consistent with SGMA.

## **Flood Management**

### **Manage Flood Risk**

Integrated water management seeks a balance between exposure of people and property to flooding, the quality and functioning of ecosystems, the reliability of water supply and water quality, and economic stability that includes both economic and cultural considerations. Through the implementation of integrated flood management techniques, the Region intends to improve stormwater recharge and reduce runoff flows.

## Practice Resources Stewardship

### Continue Basin Management in Local Groundwater Basins

Local groundwater basins are a major source of supply for the Region. Projects that will implement this strategy should align with management structures already in place for each groundwater basin. For example, the BTAC monitors and manages the SBB. The Region is currently working to maximize the conjunctive use of the SBB. The BTAC also evaluates liquefaction potential on a monthly basis and has a dewatering plan should additional pumping be required to lower water levels and reduce liquefaction potential. As another example, the Yucaipa Subbasin has been designated as a high-priority basin under SGMA and is therefore required to have a Groundwater Sustainability Plan put into place to sustainably manage the Subbasin over the long-term planning and implementation horizon. The Rialto Basin has also just established a Groundwater Council that will be developing a groundwater management plan.

Included in the basin management strategy is the management of high groundwater potential in the SBB. The SBB is uniquely constrained by shallow groundwater levels when the basin is too full. The shallow groundwater conditions have been artesian in the past and occur in an area of South San Bernardino called the Pressure Zone, or Area of Historic High Groundwater. High groundwater levels increase the risk of liquefaction, flood basements and can impact underground utilities. These conditions can also limit opportunities for recharge and/or groundwater banking in the basin.

### Develop Watershed Management Projects and Programs

Watershed management utilizes planning, programs, and projects to restore and enhance watershed functions. Watershed planning encompasses a broader perspective on water resources management, including improving and protecting water quality, ecosystems, and open space. Using the watershed as a basic management unit promotes multi-benefit, integrated projects and collaboration among policies and actions, often requiring the involvement of stakeholders. Given this, projects that use watershed management can help the Region to meet several of its objectives including improving surface and groundwater quality and managing TDS and nitrogen.

Development of watershed management projects and programs also promotes integrative planning that enhances ecosystem services. Typically, a diversified watershed ecological system is more robust and resilient to rapid climate changes. Maintaining a healthy watershed

through effective land and resource management will ensure that ecosystems continue to provide key benefits in the face of a changing climate.

### **Identify Corridors for Species**

In anticipation of further growth in the Region, there is a need for a balance between growth of urban areas and the environment to maintain viable habitat for native plant and wildlife species, and to maintain a high quality of life for watershed residents and visitors. An effective means of establishing this balance is the development of open space corridors that allow for multiple species habitat, wetlands, storm flow capture and aquifer recharge, water quality improvements, and passive and active recreational facilities and open spaces. This strategy is currently being implemented through two habitat conservation plans by identifying corridors used by sensitive wildlife species to move from place to place.

### **Restore Ecosystems**

Ecosystem restoration affects the return of selected ecosystems to a condition similar to their undisturbed state, directly improving habitat and open space. Some ecosystems within the Region remain undisturbed; however, much of the low-lying areas are urbanized and therefore highly disturbed. Additionally, fire suppression in the San Bernardino forest has resulted in tree overgrowth that contributes to basins being clogged with debris as mentioned above.

Ecosystem restoration, where possible, will indirectly improve stormwater recharge and the preservation of flood plains, and will support climate change mitigation through the sequestration of carbon into plants and trees.

### **Protect Recharge Areas**

The protection of recharge areas focuses on safeguarding of lands that are important locations for groundwater recharge. Natural recharge areas include stream beds and open spaces that allow water to permeate into the ground, while artificial recharge areas can include ponds or basins that collect water and allow it to permeate. These recharge areas can be protected through land use planning, land conservation and habitat protection programs. If recharge areas cease functioning properly, there may not be sufficient groundwater for storage or use.

In the Region, the United States Geological Survey (USGS) determined that most of the natural recharge occurs in the unlined streams and creeks within the San Bernardino Valley. Recharge also occurs in the flood control detention basins along the foothills. Protection of recharge areas include two primary goals: 1) ensuring that the streams, creeks, and flood control detention basins are not lined with concrete; and 2) preventing pollutants from entering groundwater to avoid expensive treatment that may be needed prior to potable, agricultural, or industrial beneficial uses.

Due to the Region's high utilization of local groundwater basins, recharge area protection is a key strategy to ensure the sustainability and reliability of the groundwater supply. Protecting recharge areas will help the Region increase utilization of the local water source and contribute to multi-use opportunities such as habitat and recreation.

### **Implement Agricultural Lands Stewardship**

Agricultural lands stewardship protects and promotes agricultural production through integrating positive water resource management strategies into agricultural activities. This includes preserving agricultural land, maintaining and creating wildlife habitat within agricultural land, reducing land erosion and runoff pollution, removing invasive species, and creating riparian buffers. Since agriculture is not a large industry in the Region, practicing agricultural lands stewardship will provide limited benefit to the Region.

### **Continue Forest Management and Hazardous Fuels Reduction in Forest**

SBCFCD uses the Fuels Management Program to proactively thin trees in the forest that would have historically been thinned by wildfire. This practice reduces flood risk by reducing, or eliminating, debris that runs down streams and fills debris/detention basins following wildfire. Because proactively thinning the forest is a fraction of the cost of cleaning debris, the Region should continue to proactively thin the forest to decrease the potential risk of debris inundating basins after a wildfire. Implementation of this strategy will reduce flood risk and improve the functionality of flood control basins so that more stormwater can recharge the groundwater basins and reduce sediment flowing into channels.

Effective forest management can also help the Region mitigate climate change. Maintaining healthy forested lands and woodlands can help sequester carbon from the atmosphere, reducing GHGs in the atmosphere and mitigating climate change. Wildfire risk is anticipated to increase particularly in the urban-wildland interface communities as a result of climate change. The Hazardous Fuels Reduction program can also help the Region adapt to climate change through the removal of dead, dying, and diseased trees, and any vegetation which creates a hazardous fuel for fires.

#### **Coordinate Land Use Planning and Management with Water Resources Management**

Land use planning and management uses land controls to manage, minimize, or control activities that may negatively affect the quality and availability of groundwater and surface waters, natural resources, or endangered/threatened species. More efficient and effective land use patterns promote integrated regional water management and has been incorporated into guidelines for programs such as IRWM and SGMA. Integrating land use and water management consists of planning for housing and economic development needs of a growing population while providing for the efficient use of water, water quality, energy, and other resources.

Through the land use planning and management strategy, the Region intends to work more closely with land use planning agencies to ensure that they consider and implement low impact development policies and other BMPs that improve stormwater infiltration and reduce runoff flows, as well as look for opportunities to expand recreation and public access.

**Incorporate Environmental Opportunities and Constraints into the Design Process for Facilities**

There may be opportunities to improve environmental resources when designing stormwater capture and recharge facilities. When possible, facilities may be designed to reduce environmental impacts and promote natural habitat.

**Incorporate Opportunities to Improve Habitat and Increase Recreation and Public Access During the Facilities Design Process**

The Region’s expanding population means that new facilities will continue to be needed to manage water supplies. The Region has an opportunity to incorporate habitat improvement, and recreation and public access during the design process of these new facilities. This strategy will maintain and create new opportunities for the public to enjoy the area’s waterways and other recreational amenities; enhance the watershed’s natural features; and ensure access to the Region’s wetlands, lakes, and streams.

**Participate in SAWPA Basin Management Task Force**

The SAWPA Basin Management Task Force compiles and collects monitoring data to evaluate water quality in the SAR and the groundwater basins. Participation in the Task Force contributes to understanding and reacting to surface and groundwater quality issues in the Region. This strategy will help the Region meet the objective to improve surface and groundwater quality and manage TDS and nitrogen in the groundwater.

**People and Water**

**Provide Economic Incentives**

Economic incentives, in the form of loans, grants, or water pricing support, are important for successful implementation of projects as a lack of adequate funds can prevent a project from moving forward. Incentives can result in lower operation costs or lower local costs of implementing a project. The economic incentives strategy can be used to help the Region meet all objectives, depending on the type of project to be implemented.

**Maintain and Improve Water-Dependent Recreation**

The strategy to maintain and improve water-dependent recreation seeks to enhance and protect water-dependent recreational opportunities and public access to recreational lands through water resources management. Water-dependent recreation within the Region includes opportunities to access or be alongside lakes and river corridors. This strategy is especially applicable to Big Bear Lake where people fish, swim, boat, and participate in other recreational within the reservoir.

**Increase Outreach and Engagement**

Effective public outreach and engagement increases public awareness of where water comes from and instills water conservation/water use efficiency as a public ethic, resulting in

decreasing demands on local and imported water supplies. Effective outreach and engagement can also prevent pollutants from entering water supplies at the source, helping the Region meet the objective to improve surface and groundwater quality.

The strategy to increase outreach and engagement can also encourage the involvement of community members in meaningful water resources and land use planning. This strategy ensures that the development of recreational and open spaces not only meets the needs of the community but is also widely supported by the general public.

### **Consider Water and Culture**

Linking cultural considerations to water management helps project expected water demands for cultural activities and improves understanding of the perspectives that influence water conservation. This strategy can help the Region meet the objective to comply with conservation legislative requirements. Consideration of water and culture also identifies customer expectations for water quality and land use as they relate to subsistence activities, recreational activities, spiritual activities, historic preservation, public art, and lifeways.

## 2020 IRUWMP Part 4 West Valley Water District Appendix J

## J-1: UWMP Compliance Checklist

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
Chapter 1	10615	A plan shall describe and evaluate sources of supply, reasonable and practical efficient uses, reclamation and demand management activities.	Introduction and Overview	Part 2 Chapter 10
Chapter 1	10630.5	Each plan shall include a simple description of the supplier's plan including water availability, future requirements, a strategy for meeting needs, and other pertinent information. Additionally, a supplier may also choose to include a simple description at the beginning of each chapter.	Summary	Part 2 Chapter 10
Section 2.2	10620(b)	Every person that becomes an urban water supplier shall adopt an urban water management plan within one year after it has become an urban water supplier.	Plan Preparation	Part 2 Chapter 10
Section 2.6	10620(d)(2)	Coordinate the preparation of its plan with other appropriate agencies in the area, including other water suppliers that share a common source, water management agencies, and relevant public agencies, to the extent practicable.	Plan Preparation	Part 1
Section 2.6.2	10642	Provide supporting documentation that the water supplier has encouraged active involvement of diverse social, cultural, and economic elements of the population within the service area prior to and during the preparation of the plan and contingency plan.	Plan Preparation	Part 4 Appendix J-2
Section 2.6, Section 6.1	10631(h)	Retail suppliers will include documentation that they have provided their wholesale supplier(s) - if any - with water use projections from that source.	System Supplies	Part 1 Chapter 5
Section 2.6	10631(h)	Wholesale suppliers will include documentation that they have provided their urban water suppliers with identification and quantification of the existing and planned sources of water available from the wholesale to the urban supplier during various water year types.	System Supplies	N/A
Section 3.1	10631(a)	Describe the water supplier service area.	System Description	Part 2 Chapter 10 Section 1

<b>2020 Guidebook Location</b>	<b>Water Code Section</b>	<b>Summary as Applies to UWMP</b>	<b>Subject</b>	<b>2020 UWMP Location (Optional Column for Agency Review Use)</b>
Section 3.3	10631(a)	Describe the climate of the service area of the supplier.	System Description	Part 1 Chapter 2
Section 3.4	10631(a)	Provide population projections for 2025, 2030, 2035, 2040 and optionally 2045.	System Description	Part 2 Chapter 10 Section 1.1
Section 3.4.2	10631(a)	Describe other social, economic, and demographic factors affecting the supplier's water management planning.	System Description	Part 1 Chapter 2
Sections 3.4 and 5.4	10631(a)	Indicate the current population of the service area.	System Description and Baselines and Targets	Part 2 Chapter 10 Section 1.1
Section 3.5	10631(a)	Describe the land uses within the service area.	System Description	Part 3 Chapter 3 Section 1.2
Section 4.2	10631(d)(1)	Quantify past, current, and projected water use, identifying the uses among water use sectors.	System Water Use	Part 2 Chapter 10 Section 2
Section 4.2.4	10631(d)(3)(C)	Retail suppliers shall provide data to show the distribution loss standards were met.	System Water Use	Part 2 Chapter 10 Section 2.1.2
Section 4.2.6	10631(d)(4)(A)	In projected water use, include estimates of water savings from adopted codes, plans and other policies or laws.	System Water Use	Part 2 Chapter 10 Section 2.2.1
Section 4.2.6	10631(d)(4)(B)	Provide citations of codes, standards, ordinances, or plans used to make water use projections.	System Water Use	Part 2 Chapter 10 Section 2.2
Section 4.3.2.4	10631(d)(3)(A)	Report the distribution system water loss for each of the 5 years preceding the plan update.	System Water Use	Part 2 Chapter 10 Section 2.1.2
Section 4.4	10631.1(a)	Include projected water use needed for lower income housing projected in the service area of the supplier.	System Water Use	Part 2 Chapter 10 Section 2.3
Section 4.5	10635(b)	Demands under climate change considerations must be included as part of the drought risk assessment.	System Water Use	Part 2 Chapter 10 Section 2.4 Part 1 Chapter 2
Chapter 5	10608.20(e)	Retail suppliers shall provide baseline daily per capita water use, urban water use target, interim urban water use target, and compliance daily per capita water use, along with the bases for determining those estimates, including references to supporting data.	Baselines and Targets	Part 2 Chapter 10 Section 3

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
Chapter 5	10608.24(a)	Retail suppliers shall meet their water use target by December 31, 2020.	Baselines and Targets	Part 2 Chapter 10 Section 3.2
Section 5.1	10608.36	Wholesale suppliers shall include an assessment of present and proposed future measures, programs, and policies to help their retail water suppliers achieve targeted water use reductions.	Baselines and Targets	N/A
Section 5.2	10608.24(d)(2)	If the retail supplier adjusts its compliance GPCD using weather normalization, economic adjustment, or extraordinary events, it shall provide the basis for, and data supporting the adjustment.	Baselines and Targets	N/A
Section 5.5	10608.22	Retail suppliers' per capita daily water use reduction shall be no less than 5 percent of base daily per capita water use of the 5 year baseline. This does not apply if the suppliers base GPCD is at or below 100.	Baselines and Targets	Part 4 Appendix J-7
Section 5.5 and Appendix E	10608.4	Retail suppliers shall report on their compliance in meeting their water use targets. The data shall be reported using a standardized form in the SBX7-7 2020 Compliance Form.	Baselines and Targets	Part 4 Appendix J-7
Sections 6.1 and 6.2	10631(b)(1)	Provide a discussion of anticipated supply availability under a normal, single dry year, and a drought lasting five years, as well as more frequent and severe periods of drought.	System Supplies	Part 2 Chapter 10 Section 4 Part 2 Chapter 10 Section 5.3
Sections 6.1	10631(b)(1)	Provide a discussion of anticipated supply availability under a normal, single dry year, and a drought lasting five years, as well as more frequent and severe periods of drought, <i>including changes in supply due to climate change.</i>	System Supplies	Part 2 Chapter 10 Section 5.3 Part 1 Chapter 3
Section 6.1	10631(b)(2)	When multiple sources of water supply are identified, describe the management of each supply in relationship to other identified supplies.	System Supplies	Part 2 Chapter 10 Section 4 Part 1 Chapter 3
Section 6.1.1	10631(b)(3)	Describe measures taken to acquire and develop planned sources of water.	System Supplies	Part 2 Chapter 10 Section 4.6.2

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
Section 6.2.8	10631(b)	Identify and quantify the existing and planned sources of water available for 2020, 2025, 2030, 2035, 2040 and optionally 2045.	System Supplies	Part 2 Chapter 10 Section 4.7
Section 6.2	10631(b)	Indicate whether groundwater is an existing or planned source of water available to the supplier.	System Supplies	Part 2 Chapter 10 Section 4.2
Section 6.2.2	10631(b)(4)(A)	Indicate whether a groundwater sustainability plan or groundwater management plan has been adopted by the water supplier or if there is any other specific authorization for groundwater management. Include a copy of the plan or authorization.	System Supplies	Part 2 Chapter 10 Section 4.2 Part 1 Chapter 3
Section 6.2.2	10631(b)(4)(B)	Describe the groundwater basin.	System Supplies	Part 2 Chapter 10 Section 4.2 Part 1 Chapter 3
Section 6.2.2	10631(b)(4)(B)	Indicate if the basin has been adjudicated and include a copy of the court order or decree and a description of the amount of water the supplier has the legal right to pump.	System Supplies	Part 1 Chapter 3
Section 6.2.2.1	10631(b)(4)(B)	For unadjudicated basins, indicate whether or not the department has identified the basin as a high or medium priority. Describe efforts by the supplier to coordinate with sustainability or groundwater agencies to achieve sustainable groundwater conditions.	System Supplies	N/A
Section 6.2.2.4	10631(b)(4)(C)	Provide a detailed description and analysis of the location, amount, and sufficiency of groundwater pumped by the urban water supplier for the past five years	System Supplies	Part 2 Chapter 10 Section 4.2
Section 6.2.2	10631(b)(4)(D)	Provide a detailed description and analysis of the amount and location of groundwater that is projected to be pumped.	System Supplies	Part 2 Chapter 10 Section 4.7
Section 6.2.7	10631(c)	Describe the opportunities for exchanges or transfers of water on a short-term or long-term basis.	System Supplies	Part 2 Chapter 10 Section 4.6
Section 6.2.5	10633(b)	Describe the quantity of treated wastewater that meets recycled water standards, is being discharged, and is otherwise available for use in a recycled water project.	System Supplies (Recycled Water)	Part 2 Chapter 10 Section 4.5

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
Section 6.2.5	10633(c)	Describe the recycled water currently being used in the supplier's service area.	System Supplies (Recycled Water)	Part 2 Chapter 10 Section 4.5.1
Section 6.2.5	10633(d)	Describe and quantify the potential uses of recycled water and provide a determination of the technical and economic feasibility of those uses.	System Supplies (Recycled Water)	Part 2 Chapter 10 Section 4.5 Part 1 Chapter 3
Section 6.2.5	10633(e)	Describe the projected use of recycled water within the supplier's service area at the end of 5, 10, 15, and 20 years, and a description of the actual use of recycled water in comparison to uses previously projected.	System Supplies (Recycled Water)	Part 2 Chapter 10 Section 4.5 Part 1 Chapter 3
Section 6.2.5	10633(f)	Describe the actions which may be taken to encourage the use of recycled water and the projected results of these actions in terms of acre-feet of recycled water used per year.	System Supplies (Recycled Water)	Part 1 Chapter 3
Section 6.2.5	10633(g)	Provide a plan for optimizing the use of recycled water in the supplier's service area.	System Supplies (Recycled Water)	Part 1 Chapter 3
Section 6.2.6	10631(g)	Describe desalinated water project opportunities for long-term supply.	System Supplies	Part 1 Chapter 3 Section 7
Section 6.2.5	10633(a)	Describe the wastewater collection and treatment systems in the supplier's service area with quantified amount of collection and treatment and the disposal methods.	System Supplies (Recycled Water)	Part 2 Chapter 10 Section 4.5
Section 6.2.8, Section 6.3.7	10631(f)	Describe the expected future water supply projects and programs that may be undertaken by the water supplier to address water supply reliability in average, single-dry, and for a period of drought lasting 5 consecutive water years.	System Supplies	Part 2 Chapter 10 Section 4.6.2 Part 1 Chapter 7
Section 6.4 and Appendix O	10631.2(a)	The UWMP must include energy information, as stated in the code, that a supplier can readily obtain.	System Suppliers, Energy Intensity	Part 2 Chapter 10 Section 4.8 Part 4 Appendix J-6
Section 7.2	10634	Provide information on the quality of existing sources of water available to the supplier and the manner in which water quality	Water Supply Reliability Assessment	Part 1 Chapter 3

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
		affects water management strategies and supply reliability		
Section 7.2.4	10620(f)	Describe water management tools and options to maximize resources and minimize the need to import water from other regions.	Water Supply Reliability Assessment	Part 1 Chapter 3
Section 7.3	10635(a)	Service Reliability Assessment: Assess the water supply reliability during normal, dry, and a drought lasting five consecutive water years by comparing the total water supply sources available to the water supplier with the total projected water use over the next 20 years.	Water Supply Reliability Assessment	Part 2 Chapter 10 Section 5.3
Section 7.3	10635(b)	Provide a drought risk assessment as part of information considered in developing the demand management measures and water supply projects.	Water Supply Reliability Assessment	Part 2 Chapter 10 Section 6
Section 7.3	10635(b)(1)	Include a description of the data, methodology, and basis for one or more supply shortage conditions that are necessary to conduct a drought risk assessment for a drought period that lasts 5 consecutive years.	Water Supply Reliability Assessment	Part 2 Chapter 10 Section 6
Section 7.3	10635(b)(2)	Include a determination of the reliability of each source of supply under a variety of water shortage conditions.	Water Supply Reliability Assessment	Part 2 Chapter 10 Section 6
Section 7.3	10635(b)(3)	Include a comparison of the total water supply sources available to the water supplier with the total projected water use for the drought period.	Water Supply Reliability Assessment	Part 2 Chapter 10 Section 6
Section 7.3	10635(b)(4)	Include considerations of the historical drought hydrology, plausible changes on projected supplies and demands under climate change conditions, anticipated regulatory changes, and other locally applicable criteria.	Water Supply Reliability Assessment	Part 2 Chapter 10 Section 5.1
Chapter 8	10632(a)	Provide a water shortage contingency plan (WSCP) with specified elements below.	Water Shortage Contingency Planning	Part 4 Appendix J-9
Chapter 8	10632(a)(1)	Provide the analysis of water supply reliability (from Chapter 7 of Guidebook) in the WSCP	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 1.0

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
Section 8.10	10632(a)(10)	Describe reevaluation and improvement procedures for monitoring and evaluation the water shortage contingency plan to ensure risk tolerance is adequate and appropriate water shortage mitigation strategies are implemented.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 10.0
Section 8.2	10632(a)(2)(A)	Provide the written decision-making process and other methods that the supplier will use each year to determine its water reliability.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 2.0
Section 8.2	10632(a)(2)(B)	Provide data and methodology to evaluate the supplier's water reliability for the current year and one dry year pursuant to factors in the code.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 2.0
Section 8.3	10632(a)(3)(A)	Define six standard water shortage levels of 10, 20, 30, 40, 50 percent shortage and greater than 50 percent shortage. These levels shall be based on supply conditions, including percent reductions in supply, changes in groundwater levels, changes in surface elevation, or other conditions. The shortage levels shall also apply to a catastrophic interruption of supply.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 3.0
Section 8.3	10632(a)(3)(B)	Suppliers with an existing water shortage contingency plan that uses different water shortage levels must cross reference their categories with the six standard categories.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 3.0
Section 8.4	10632(a)(4)(A)	Suppliers with water shortage contingency plans that align with the defined shortage levels must specify locally appropriate supply augmentation actions.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 4.1
Section 8.4	10632(a)(4)(B)	Specify locally appropriate demand reduction actions to adequately respond to shortages.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 4.2
Section 8.4	10632(a)(4)(C)	Specify locally appropriate operational changes.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 4.3
Section 8.4	10632(a)(4)(D)	Specify additional mandatory prohibitions against specific water use practices that are in addition	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 4.3

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
		to state-mandated prohibitions are appropriate to local conditions.		
Section 8.4	10632(a)(4)(E)	Estimate the extent to which the gap between supplies and demand will be reduced by implementation of the action.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 4.6
Section 8.4.6	10632.5	The plan shall include a seismic risk assessment and mitigation plan.	Water Shortage Contingency Plan	Part 4 Appendix J-9 Section 4.4&4.5
Section 8.5	10632(a)(5)(A)	Suppliers must describe that they will inform customers, the public and others regarding any current or predicted water shortages.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 5.0
Section 8.5 and 8.6	10632(a)(5)(B) 10632(a)(5)(C)	Suppliers must describe that they will inform customers, the public and others regarding any shortage response actions triggered or anticipated to be triggered and other relevant communications.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 5.0
Section 8.6	10632(a)(6)	Retail supplier must describe how it will ensure compliance with and enforce provisions of the WSCP.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 6.0
Section 8.7	10632(a)(7)(A)	Describe the legal authority that empowers the supplier to enforce shortage response actions.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 7.0
Section 8.7	10632(a)(7)(B)	Provide a statement that the supplier will declare a water shortage emergency Water Code Chapter 3.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 7.1
Section 8.7	10632(a)(7)(C)	Provide a statement that the supplier will coordinate with any city or county within which it provides water for the possible proclamation of a local emergency.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 7.2
Section 8.8	10632(a)(8)(A)	Describe the potential revenue reductions and expense increases associated with activated shortage response actions.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 8.0
Section 8.8	10632(a)(8)(B)	Provide a description of mitigation actions needed to address revenue reductions and expense increases associated with activated shortage response actions.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 8.0
Section 8.8	10632(a)(8)(C)	Retail suppliers must describe the cost of compliance with Water Code Chapter 3.3: Excessive Residential Water Use During Drought	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 8.0

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
Section 8.9	10632(a)(9)	Retail suppliers must describe the monitoring and reporting requirements and procedures that ensure appropriate data is collected, tracked, and analyzed for purposes of monitoring customer compliance.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 9.0
Section 8.11	10632(b)	Analyze and define water features that are artificially supplied with water, including ponds, lakes, waterfalls, and fountains, separately from swimming pools and spas.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 4.0
Sections 8.12 and 10.4	10635(c)	Provide supporting documentation that Water Shortage Contingency Plan has been, or will be, provided to any city or county within which it provides water, no later than 30 days after the submission of the plan to DWR.	Plan Adoption, Submittal, and Implementation	Part 4 Appendix J-9 Section 11.0
Section 8.14	10632(c)	Make available the Water Shortage Contingency Plan to customers and any city or county where it provides water within 30 after adopted the plan.	Water Shortage Contingency Planning	Part 4 Appendix J-9 Section 11.0
Sections 9.1 and 9.3	10631(e)(2)	Wholesale suppliers shall describe specific demand management measures listed in code, their distribution system asset management program, and supplier assistance program.	Demand Management Measures	N/A
Sections 9.2 and 9.3	10631(e)(1)	Retail suppliers shall provide a description of the nature and extent of each demand management measure implemented over the past five years. The description will address specific measures listed in code.	Demand Management Measures	Part 2 Chapter 10 Section 8
Chapter 10	10608.26(a)	Retail suppliers shall conduct a public hearing to discuss adoption, implementation, and economic impact of water use targets (recommended to discuss compliance).	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Section 10.2.1	10621(b)	Notify, at least 60 days prior to the public hearing, any city or county within which the supplier provides water that the urban water supplier will be reviewing the plan and considering amendments or	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9 Part 4 Appendix J-6 DWR Tables

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
		changes to the plan. Reported in Table 10-1.		
Section 10.4	10621(f)	Each urban water supplier shall update and submit its 2020 plan to the department by July 1, 2021.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Sections 10.2.2, 10.3, and 10.5	10642	Provide supporting documentation that the urban water supplier made the plan and contingency plan available for public inspection, published notice of the public hearing, and held a public hearing about the plan and contingency plan.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9 Part 4 Appendix J-2 Public Outreach
Section 10.2.2	10642	The water supplier is to provide the time and place of the hearing to any city or county within which the supplier provides water.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Section 10.3.2	10642	Provide supporting documentation that the plan and contingency plan has been adopted as prepared or modified.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Section 10.4	10644(a)	Provide supporting documentation that the urban water supplier has submitted this UWMP to the California State Library.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Section 10.4	10644(a)(1)	Provide supporting documentation that the urban water supplier has submitted this UWMP to any city or county within which the supplier provides water no later than 30 days after adoption.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Sections 10.4.1 and 10.4.2	10644(a)(2)	The plan, or amendments to the plan, submitted to the department shall be submitted electronically.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Section 10.5	10645(a)	Provide supporting documentation that, not later than 30 days after filing a copy of its plan with the department, the supplier has or will make the plan available for public review during normal business hours.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Section 10.5	10645(b)	Provide supporting documentation that, not later than 30 days after filing a copy of its water shortage contingency plan with the department, the supplier has or will make the plan available for public review during normal business hours.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9

2020 Guidebook Location	Water Code Section	Summary as Applies to UWMP	Subject	2020 UWMP Location (Optional Column for Agency Review Use)
Section 10.6	10621(c)	If supplier is regulated by the Public Utilities Commission, include its plan and contingency plan as part of its general rate case filings.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9
Section 10.7.2	10644(b)	If revised, submit a copy of the water shortage contingency plan to DWR within 30 days of adoption.	Plan Adoption, Submittal, and Implementation	Part 2 Chapter 10 Section 9

## J-2: Public Outreach

March 23, 2021

Delivered via Email

**Subject: 2020 Integrated Regional Urban Water Management Plan for the Upper Santa Ana River Watershed**

**Dear Regional Stakeholder:**

Notice is hereby given that the San Bernardino Valley Municipal Water District (Valley District) and its partners (Participating Agencies) are in the process of preparing the 2020 Upper Santa Ana River Watershed Integrated Regional Urban Water Management Plan (2020 IRUWMP). The 2020 IRUWMP updates and merges the 2015 Upper Santa Ana River Watershed Integrated Regional Water Management Plan (2015 IRWMP) and the 2015 San Bernardino Valley Regional Urban Water Management Plan (2015 RUWMP) into a single comprehensive document for guiding water resource management for the Upper Santa Ana River Watershed, the first of its kind in California.

The 2020 IRUWMP is being developed in compliance with the Urban Water Management Planning Act, the Integrated Regional Water Management Planning Act, and other applicable laws and regulations. All of the agencies participating in the development of the 2020 IRUWMP are listed in the table on the following page, along with an indication of whether the 2020 IRUWMP serves as that agency's 2020 UWMP.

Water Code section 10621(b) requires an urban water supplier updating its UWMP to notify cities and counties within its service area of the update at least sixty (60) days prior to holding a public hearing. This letter serves as notice that the Participating Agencies that are using the 2020 IRUWMP as their 2020 Urban Water Management Plan (referred to hereafter as Participating UWMP Agencies), plan to adopt and submit the 2020 IRUWMP to the California Department of Water Resources by the July 1, 2021 deadline. The Participating UWMP Agencies will also be adopting their respective updated Water Shortage Contingency Plans (WSCPs) as part of the 2020 IRUWMP.

A draft of the 2020 IRUWMP, which will include the WSCPs for each of the Participating UWMP Agencies, will be available for public review on the Participating UWMP Agencies websites starting in May 2021 and each one will hold an individual public hearing on their respective chapters of the 2020 IRUWMP and WSCP, in advance of their adoption in May or June 2021. The public hearings will be noticed and announced by each Participating UWMP Agency's public meeting agenda; each agency's web site address is shown in the table on the following page.

Valley District and our regional partners invite you to submit comments and consult with Valley District or any of the agencies regarding the preparation of the 2020 IRUWMP. If you have any input for the 2020 IRUWMP or require additional information, please contact me directly at (909) 387-9230 or by email at [matth@sbvmwd.com](mailto:matth@sbvmwd.com).

Sincerely,

*Matthew Howard*

Matthew Howard  
 Water Resources Senior Project Manager  
 San Bernardino Valley Municipal Water District

## J-3: Resolutions

## J-4: Agreements

Not used. West Valley Water District does not have any relevant Agreements referenced in their UWMP.

## J-5: DWR Population Tool Output

Please print this page to a PDF and include as part of your UWMP submittal.

## J-6: DWR Tables

## 2-1R | Public Water Systems

**STATUS:**

**NOTES:** The volume of 2020 water supplied does not include exports to Rialto and Marygold. This is because Rialto's Lytle surface water and Marygold's State water are taken directly off of West Valley's supplies from each of those sources.

Public Water System Number	Public Water System Name	Number of Municipal Connections 2020	Volume of Water Supplied 2020
CA3610004	West Valley Water District	23,063	20,098
<b>Total:</b>		<b>23,063</b>	<b>20,098</b>

## 8-1 | Water Shortage Contingency Plan Levels

STATUS:

NOTES: -

Shortage Level	Percent Shortage Range <sup>1</sup> (Numerical Value as a Percent)	Water Shortage Condition
1	Up to 10%	Normal Conditions (WVWD Stage 1)
2	Up to 20%	Water Alert Condition (WVWD Stage 2)
3	Up to 30%	Water Warning Condition (WVWD Stage 3, 3A, 3B, and 3C)
4	Up to 40%	Water Emergency Condition (WVWD Stage 4)
5	Up to 50%	Water Emergency Condition (WVWD Stage 4)
6	>50%	Water Emergency Condition (WVWD Stage 4)

<sup>1</sup> One stage in the Water Shortage Contingency Plan must address a water shortage of 50%.

8-2 | Demand Reduction Actions

STATUS:

NOTES:

Shortage Level	Demand Reduction Actions	How much is this going to reduce the shortage gap?	Additional Explanation or Reference	Penalty, Charge, or Other Enforcement
All	Expand Public Information Campaign	0-20%	Provide reminder notices regarding noted water waste and offer community outreach programs	No
1	Landscape - Other landscape restriction or prohibition	0-5%	The use of sprinklers for any type of irrigation during high winds is prohibited.	Yes
1	Landscape - Limit landscape irrigation to specific times	0-5%	Limit all landscape irrigation to between the hours of 8:00 p.m. and 6:00 a.m. Hand watering should be done between 6:00 p.m. and 8:00 a.m. Drip irrigation and hand watering while gardening is exempt from this recommendation. Water being used during repair or maintenance of watering system is exempt from this section.	Yes
1	Landscape - Restrict or prohibit runoff from landscape irrigation	0-5%	Use of water for outdoor landscapes in a manner that causes runoff such that water flows onto adjacent property, non-irrigated areas, private and public walkways, roadways, parking lots, or structures is prohibited.	Yes

1	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	0-1%	No person shall permit water to leak from any facility, improvement or plumbing fixture on his/her/its premises; said leak shall be repaired in a timely manner.	Yes
1	Other - Require automatic shut of hoses	0-1%	Washing of automobiles, trucks, trailer, boats, and other mobile equipment is prohibited unless done with a hand held device equipped with an automatic shut off trigger nozzle. This does not apply to commercial car washes utilizing a recycling system or when the health and safety of the public would necessitate.	Yes
1	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	No water shall be used to clean, fill, operate or maintain levels in decorative fountains unless the water is part of a recycling system.	Yes
1	Other - Prohibit use of potable water for washing hard surfaces	0-1%	There shall be no application of water to sidewalks, walkways, driveways, parking areas, patios, porches, verandas, tennis courts, or other paved, concrete, or other hard surface areas, except that flammable or other similarly dangerous or unhealthy substances may be washed from said areas by direct hose flushing for the benefit of public health or safety.	Yes
1	Landscape - Prohibit certain types of landscape irrigation	0-5%	The irrigation of potable water of ornamental turf on public street medians is prohibited. The term "median" shall mean the strip of land between street lanes.	Yes
2	Decrease Line Flushing	0-1%		No

2	Other	0-1%	Use historical data instead of performing fire flow tests for new developments	No
2	Other	0-1%	Screen all new applications for water service installations and limit water use before occupancy	No
2	Reduce System Water Loss	0-1%	Repair all leaks within 72 hours	No
2	CII - Restaurants may only serve water upon request	0-1%	All restaurants prohibited from serving water to their customers except when requested by customer.	Yes
2	CII - Lodging establishment must offer opt out of linen service	0-1%	Operators of hotels and motels must provide guests with the option of choosing not to have towels and linens laundered daily. The hotels and motels shall prominently display notice of this option in each guestroom using clear and easily understood language.	Yes
2	Landscape - Limit landscape irrigation to specific days	0-5%	Limit all landscape irrigation to four (4) days per week for no more than ten (10) minutes per station per day. This provision does not apply to any landscape that has water efficient devices that are operated properly. Water efficient devices are drip irrigation systems and operational weather-based irrigation controllers. The term "week" is defined as Sunday through Saturday.	Yes

2	Other - Prohibit use of potable water for construction and dust control	0-1%	District will screen all new applications for water service installations and will limit water use before occupancy to that essential use for construction and testing of landscape plumbing. Limited landscaping for new development shall be allowed as approved by the District. Water use for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager or his/her designee.	Yes
2	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	0-1%	Repair all leaks within seventy-two (72) hours of notification by the District unless other arrangements are made with the general manager of the District ("General Manager").	Yes
2	Landscape - Other landscape restriction or prohibition	0-5%	Irrigating landscaping, including, but not limited to, turf and ornamental landscapes during and within forty-eight (48) hours following measurable precipitation is prohibited.	Yes
2	Other water feature or swimming pool restriction	0-1%	Swimming pools, hot tubs, and spas shall not be filled or refilled after being drained.	Yes
2	Other water feature or swimming pool restriction	0-1%	Ornamental pools, fountains, water displays, and artificial lakes shall not be filled or refilled after being drained.	Yes

2	Other - Prohibit use of potable water for construction and dust control	0-1%	Water used for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager, or his/her designee.	Yes
3	Reduce System Water Loss	0-1%	Repair all leaks within 48 hours	No
3A	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water	0-1%	Washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment are prohibited. Washing of the above-listed vehicles or mobile equipment shall be allowed only at a commercial car wash where recirculating water is being utilized.	Yes
3A	Landscape - Limit landscape irrigation to specific times	0-5%	All agricultural water users shall irrigate only at times approved by the District.	Yes
3A	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	Swimming pools, hot tubs, and spas shall not be refilled or filled after being drained.	Yes
3A	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	Ornamental pools, fountains, water displays, and artificial lakes shall not be refilled or filled after being drained.	Yes
3A	Landscape - Limit landscape irrigation to specific days	0-5%	Limit all landscape irrigation to three (3) days per week for no more than ten (10) minutes per station per day. Drip systems that are operated efficiently are exempt from these regulations.	Yes

3A	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	0-1%	Repair all leaks within forty-eight (48) hours of notification by the District unless other arrangements are made with the General Manager.	Yes
3B	Landscape - Limit landscape irrigation to specific days	5-20%	Limit all landscape irrigation to two (2) days per week for no more than ten (10) minutes per station per day.	Yes
3C	Landscape - Limit landscape irrigation to specific days	10-30%	Limit all landscape irrigation to one (1) day per week for no more than ten (10) minutes per station per day.	Yes
4	Landscape - Prohibit all landscape irrigation	10-30%	No lawn or landscape water will be allowed	Yes
4	Other - Prohibit use of potable water for construction and dust control	0-5%	No construction water use to be allowed, construction meters to be locked off or removed.	Yes
4	CII - Other CII restriction or prohibition	0-5%	Commercial nurseries shall water only between the hours of 11:00 p.m. and 6:00 a.m. and only with hand-held devices or with drip irrigation systems.	Yes
4	Landscape - Prohibit all landscape irrigation	10-30%	The use of water shall be limited to essential household, commercial, manufacturing, or processing uses only, except where other uses may be allowed by permit	Yes
4	Landscape - Limit landscape irrigation to specific times	0-5%	All agricultural water users shall irrigate only at times approved by the District.	Yes

### 8-3R | Supply Augmentation & Other Actions

STATUS:

NOTES:

Shortage Level	Supply Augmentation Methods and Other Actions by Water Supplier	How much is this going to reduce the shortage gap?	Additional Explanation or Reference
4	Other purchases	0-100%	WVWD currently has interconnections with the Cities of Rialto, Colton and San Bernardino, the Fontana Water Company, Marygold Mutual Water Company, and Valley District

O-1B | Recommended Energy Intensity - Total Utility Approach

<b>Urban Water Supplier</b>	West Valley Water District		<b>Reporting Period Start Date</b>	1/1/2020
<b>Water Delivery Product</b>	Retail Non-Potable Deliveries		<b>Reporting Period End Date</b>	12/30/2020
<b>Urban Water Supplier Operational Control</b>				
<b>Sum of all Water Management Process</b>		<b>Non-Consequential Hydropower</b>		
	<b>Total Utility</b>	<b>Hydropower</b>	<b>Net Utility</b>	
<b>Volume of Water Entering Process (AF)</b>	20098		<b>20098</b>	
<b>Energy Consumed (kWh)</b>	17,802,783		<b>17802783</b>	
<b>Energy Intensity (kWh/AF)</b>	<b>885.8</b>	<b>0.0</b>	<b>885.8</b>	
<b>Data Quality</b>	Metered Data	<b>Quantity of Self-Generated Renewable Energy</b>		kWh
<b>Data Quality Narrative</b>	Total energy consumed in 2020 was quantified through meters for well production and watertreatment. WVWD has a Hydroelectric plant that generates power from S			
<b>Water Supply Narrative</b>	WVWD utilizes three primary sources for drinking water supply: local surface water from flows on the east side of the San Gabriel Mountains, including North Fork Lytle Creek, Middle Fork Lytle Creek, and South Fork Lytle Creek; groundwater; and imported water from the State Water Project (SWP).			

## J-7: SBX7-7 Forms

SB X7-1 | Baseline Period Ranges

STATUS: Published

NOTES: -

Baseline	Parameter	Value	Units
10- to 15-year baseline period	2008 total water deliveries	22,777	Acre Feet (AF)
	2008 total volume of delivered recycled water	0	Acre Feet (AF)
	2008 recycled water as a percent of total deliveries	0	Percent
	Number of years in baseline period <sup>1, 2</sup>	10	Years
	Year beginning baseline period range	2000	
	Year ending baseline period range <sup>3</sup>	2009	
5-year baseline period	Number of years in baseline period	5	Years
	Year beginning baseline period range	2004	
	Year ending baseline period range <sup>4</sup>	2008	

<sup>1</sup>If the 2008 recycled water percent is less than 10 percent, then the first baseline period is a continuous 10-year period. If the amount of recycled water delivered in 2008 is 10 percent or greater, the first baseline period is a continuous 10- to 15-year period.  
<sup>2</sup>The Water Code requires that the baseline period is between 10 and 15 years. However, DWR recognizes that some water suppliers may not have the minimum 10 years of baseline data.  
<sup>3</sup>The ending year must be between December 31, 2004 and December 31, 2010.  
<sup>4</sup>The ending year must be between December 31, 2007 and December 31, 2010.

Water Audit Report for: **West Valley Water District (CA3610004)**  
Reporting Year: **2016**    1/2016 - 12/2016

Please enter data in the white cells below. Where available, metered values should be used; if metered values are unavailable please estimate a value. Indicate your confidence in the accuracy of the

**All volumes to be entered as: ACRE-FEET PER YEAR**

To select the correct data grading for each input, determine the highest grade where the utility meets or exceeds all criteria for that grade and all grades below it.

**WATER SUPPLIED**

----- Enter grading in column 'E' and 'J' ----->

Volume from own sources:	<input type="button" value="+"/> <input type="button" value="?"/> 3	10,576.070	acre-ft/yr
Water imported:	<input type="button" value="+"/> <input type="button" value="?"/> 3	8,028.710	acre-ft/yr
Water exported:	<input type="button" value="+"/> <input type="button" value="?"/> 3	2,069.850	acre-ft/yr

**Master Meter and Supply Error Adjustments**

Pcnt:	Value:	acre-ft/yr
<input type="button" value="+"/> <input type="button" value="?"/> 2	<input type="radio"/> <input type="radio"/>	acre-ft/yr
<input type="button" value="+"/> <input type="button" value="?"/> 2	<input type="radio"/> <input type="radio"/>	acre-ft/yr
<input type="button" value="+"/> <input type="button" value="?"/> 2	<input type="radio"/> <input type="radio"/>	acre-ft/yr

Enter negative % or value for under-registration  
Enter positive % or value for over-registration

**WATER SUPPLIED:**    **16,534.930** acre-ft/yr

**AUTHORIZED CONSUMPTION**

Billed metered:	<input type="button" value="+"/> <input type="button" value="?"/> 7	14,587.520	acre-ft/yr
Billed unmetered:	<input type="button" value="+"/> <input type="button" value="?"/> n/a	0.000	acre-ft/yr
Unbilled metered:	<input type="button" value="+"/> <input type="button" value="?"/> n/a	0.000	acre-ft/yr
Unbilled unmetered:	<input type="button" value="+"/> <input type="button" value="?"/> 5	41.337	acre-ft/yr

Click here:  for help using option buttons below

Pcnt:    Value:    acre-ft/yr

41.337

Use buttons to select percentage of water supplied OR value

**AUTHORIZED CONSUMPTION:**    **14,628.857** acre-ft/yr

**WATER LOSSES (Water Supplied - Authorized Consumption)**

**1,906.073** acre-ft/yr

**Apparent Losses**

Unauthorized consumption:      **41.337** acre-ft/yr

Enter a positive value, otherwise a default percentage of 0.25% is applied and a grading of 5 is applied but not displayed

Customer metering inaccuracies:	<input type="button" value="+"/> <input type="button" value="?"/> 3	297.704	acre-ft/yr
Systematic data handling errors:	<input type="button" value="+"/> <input type="button" value="?"/> 5	36.469	acre-ft/yr

Default option selected for Systematic data handling errors - a grading of 5 is applied but not displayed

**Apparent Losses:**        **375.511** acre-ft/yr

Pcnt:    Value:    acre-ft/yr

2.00%         acre-ft/yr

0.25%         acre-ft/yr

**Real Losses (Current Annual Real Losses or CARL)**

Real Losses = Water Losses - Apparent Losses:        **1,530.562** acre-ft/yr

**WATER LOSSES:**    **1,906.073** acre-ft/yr

**NON-REVENUE WATER**

**NON-REVENUE WATER:**        **1,947.410** acre-ft/yr

= Water Losses + Unbilled Metered + Unbilled Unmetered

**SYSTEM DATA**

Length of mains:	<input type="button" value="+"/> <input type="button" value="?"/> 7	374.5	miles
Number of <u>active AND inactive</u> service connections:	<input type="button" value="+"/> <input type="button" value="?"/> 7	20,954	
Service connection density:	<input type="button" value="?"/> 7	56	conn./mile main

Are customer meters typically located at the curbstop or property line?     Yes    (length of service line, beyond the property boundary, that is the responsibility of the utility)

Average length of customer service line has been set to zero and a data grading score of 10 has been applied

Average operating pressure:   3    70.0    psi

**COST DATA**

Total annual cost of operating water system:	<input type="button" value="+"/> <input type="button" value="?"/> 10	\$31,335,356	\$/Year
Customer retail unit cost (applied to Apparent Losses):	<input type="button" value="+"/> <input type="button" value="?"/> 8	\$2.26	\$/100 cubic feet (ccf)
Variable production cost (applied to Real Losses):	<input type="button" value="+"/> <input type="button" value="?"/> 7	\$299.95	\$/acre-ft <input type="checkbox"/> Use Customer Retail Unit Cost to value real losses

**WATER AUDIT DATA VALIDITY SCORE:**

**\*\*\* YOUR SCORE IS: 53 out of 100 \*\*\***

A weighted scale for the components of consumption and water loss is included in the calculation of the Water Audit Data Validity Score

**PRIORITY AREAS FOR ATTENTION:**

Based on the information provided, audit accuracy can be improved by addressing the following components:

- 1: Volume from own sources**
- 2: Water imported**
- 3: Customer metering inaccuracies**

WATER SHORTAGE CONTINGENCY PLAN

# West Valley Water District

This Water Shortage Contingency Plan is a strategic plan that the West Valley Water District uses to prepare for and respond to water shortages.

The Water Shortage Contingency Plan (WSCP) is a strategic plan that West Valley Water District (WVWD) uses to prepare for and respond to foreseeable and unforeseeable water shortages. A water shortage occurs when water supply available is insufficient to meet the normally expected customer water use at a given point in time. A shortage may occur due to a number of reasons, such as water supply quality changes, climate change, drought, regional power outage, and catastrophic events (e.g., earthquake). Additionally, the State may declare a statewide drought emergency and mandate that water suppliers reduce demands, as occurred in 2014. The WSCP serves as the operating manual that WVWD will use to prevent catastrophic service disruptions through proactive, rather than reactive, mitigation of water shortages. This WSCP provides a process for an annual water supply and demand assessment and structured steps designed to respond to actual conditions. This level of detailed planning and preparation provide accountability and predictability and will help WVWD maintain reliable supplies and reduce the impacts of any supply shortages and/or interruptions.

IN THIS SECTION

- Water Service Reliability
- Annual Water Supply and Demand Assessment
- Supply Shortage Stages and Response Actions

This WSCP was prepared in conjunction with WVWD’s 2020 UWMP, which is included in the 2020 Upper Santa Ana River Watershed Integrated Urban Water Management Plan (2020 IRUWMP) and is a standalone document that can be modified as needed. This document is compliant with the California Water Code (CWC) Section 10632 and incorporated guidance from the State of California Department of Water Resources (DWR) UWMP Guidebook.

The WSCP describes the following:

1. **Water Service Reliability Analysis:** Summarizes WVWD's water supply analysis and reliability and identifies any key issues that may trigger a shortage condition.
2. **Annual Water Supply and Demand Assessment Procedures:** Describes the key data inputs, evaluation criteria, and methodology for assessing the system's reliability for the coming year and the steps to formally declare any water shortage stages and response actions.
3. **Water Shortage Stages:** Establishes water shortage stages to clearly identify and prepare for shortages.
4. **Shortage Response Actions:** Describes the response actions that may be implemented or considered for each stage to reduce gaps between supply and demand.
5. **Communication Protocols:** Describes communication protocols under each stage to ensure customers, the public, and government agencies are informed of shortage conditions and requirements.
6. **Compliance and Enforcement:** Defines compliance and enforcement actions available to administer demand reductions.
7. **Legal Authority:** Lists the legal documents that grant WVWD the authority to declare a water shortage and implement and enforce response actions.
8. **Financial Consequences of WSCP Implementation:** Describes the anticipated financial impact of implementing water shortage stages and identifies mitigation strategies to offset financial burdens.
9. **Monitoring and Reporting:** Summarizes the monitoring and reporting techniques to evaluate the effectiveness of shortage response actions and overall WSCP implementation. Results are used to determine if additional shortage response actions should be adjusted.
10. **WSCP Refinement Procedures:** Describes the factors that may trigger updates to the WSCP and outlines how to complete an update.
11. **Plan Adoption, Submittal, and Availability:** Describes the process for the WSCP adoption, submittal, and availability after each revision.

## 1.0 Water Service Reliability Analysis

As part of the 2020 IRUWMP, WVWD completed a water supply reliability analysis for normal, single-dry, and five-year consecutive dry year periods from 2025-2045. A Drought Risk Assessment (DRA) was also performed to analyze supply reliability under five consecutive years of drought from 2021-2025. As described in [Chapter 3](#) of the 2020 IRUWMP, the effects of a local drought are not immediately recognized since the region uses the local groundwater basins to simulate a large reservoir for long term storage. WVWD is able to pump additional groundwater to meet increased demands in dry years and participates in efforts to replenish the basins with imported and local water through regional recharge programs. Additionally, WVWD implements several ongoing water conservation measures. Regional recharge programs and conservation help to optimize and enhance the use of regional water resources. **Based on the 2020 IRUWMP analysis, WVWD's water supply is reliable and not expected to see impactful change under drought conditions.**

Even though localized drought conditions should not affect supply, other shortages may occur due to a number of reasons, such as water supply quality changes, regional power outage, State mandates for water use efficiency standards, and catastrophic events (e.g., earthquake). Therefore, WVWD will use this WSCP as appropriate to address shortages and other supply emergencies.

## 2.0 Annual Water Supply and Demand Assessment

As an urban water supplier, WVWD must prepare and submit an Annual Water Supply and Demand Assessment (Annual Assessment). Starting in 2022, the Annual Assessment will be due by July 1 of every year, as indicated by CWC Section 10632.1. The Annual Assessment is an evaluation of the near-term outlook for supplies and demands to determine whether the potential for a supply shortage exists and whether there is a need to trigger a WSCP shortage stage and response actions in the current calendar year to maintain supply reliability. This process will take place at the same time each year based on known circumstances and information available to WVWD at the time of analysis and can be update or revised at any time if circumstances change.

WVWD will establish and convene an internal WSCP Team to conduct the Annual Assessment each year. The WSCP may include the following staff:

- **Assistant General Manager**
- **Engineering Services Manager**
- **Operations Manager**
- **Production Supervisor**
- **Chief Water Treatment Plant Operator**
- **Director of Finance**

The Annual Assessment procedure, including key data inputs and evaluation criteria, is summarized in [Table 1](#). The Annual Assessment procedure and timeline, along with how it integrates with the annual assessment that will be conducted on a regional basis in parallel, is shown graphically in [Figure 1](#).

**Table 1. Annual Assessment Procedure**

<b>TIMING</b>	<b>ASSESSMENT ACTIVITIES</b>	<b>PROCEDURE, KEY DATA INPUTS, EVALUATION CRITERIA AND OTHER CONSIDERATIONS</b>	<b>STAFF RESPONSIBLE</b>
<b>JAN - FEB</b>	Estimate unconstrained demands for coming year	Demands will be estimated based on water sales forecasts from annual budget or prior year demands plus any anticipated changes	Engineering Services Manager, Director of Finance
<b>JAN - FEB</b>	Estimate available supplies for the year, considering the following year will be dry	<p>Each December, WVWD submits an order to Valley District for the volume of SWP water that is planned for use the following year. If the requested volume is not available due to reduced SWP supplies, WVWD will meet with Valley District and other SWP users to discuss reducing SWP orders and may update the Annual Assessment to reflect a shift from SWP to groundwater production, if needed.</p> <p>Estimates of available surface water supplies from the Lytle Creek will be based on annual precipitation and local mountain snowpack.</p> <p>The remainder of supply needs not met from SWP and surface water will be pumped from groundwater basins. The groundwater basins are sustainably managed to provide long term supply reliability and is not anticipated to be impacted in dry years. In the unlikely event that local supplies are reduced, WVWD will coordinate with the BTAC to identify available supplies for the coming year.</p>	Operations Manager, Chief Water Treatment Plant Operator
<b>JAN - FEB</b>	Consider potential constraints that may impact supply delivery	<p>Identify any known regional or WVWD infrastructure issues that may pertain to near-term water supply reliability, including repairs, construction, and environmental mitigation measures that may temporarily constrain capabilities, as well as any new projects that may add to system capacity.</p> <p>Identify any facilities out of service due to water quality problems, equipment failure, etc. that may impact normal water deliveries.</p> <p>Identify any potential or emerging impacts to groundwater quality, such as emerging regulatory constraints that may limit use of available supplies for potable needs.</p>	Operations Manager, Chief Water Treatment Plant Operator, Production Supervisor, Engineering Services Manager

TIMING	ASSESSMENT ACTIVITIES	PROCEDURE, KEY DATA INPUTS, EVALUATION CRITERIA AND OTHER CONSIDERATIONS	STAFF RESPONSIBLE
<b>FEB</b>	Convene WSCP Team to conduct Annual Assessment	<p>Compare supplies and demands and discuss any constraints that may impact supply delivery. If the potential for a shortage exists, determine which shortage response stage and actions are recommended to reduce/eliminate the shortage.</p> <p>Additionally, if the State declares a drought state of emergency and requires demand reductions, the WSCP Team will determine which water shortage stage and response actions are needed to comply with the State mandate.</p>	WSCP Team
<b>JUNE</b>	Board of Directors	<p>If the potential for a shortage exists or the State has mandated demand reductions, the results of the Annual Assessment will be presented to the WVWD Board of Directors, including the recommended shortage stage and response actions. The Board of Directors may order the implementation of a shortage stage and will adopt a resolution declaring the applicable water shortage stage.</p>	<p>General Manager</p> <p>Board of Directors</p>
<b>ON-GOING</b>	Implement WSCP actions, if needed	<p>Relevant members of WVWD staff will implement shortage response actions associated with the declared water shortage stage</p>	WSCP Team
<b>BY JULY 1</b>	Submit Retail Annual Assessment	<p>Send Final Retail Annual Assessment to DWR</p>	<p>Engineering Services Manager</p>

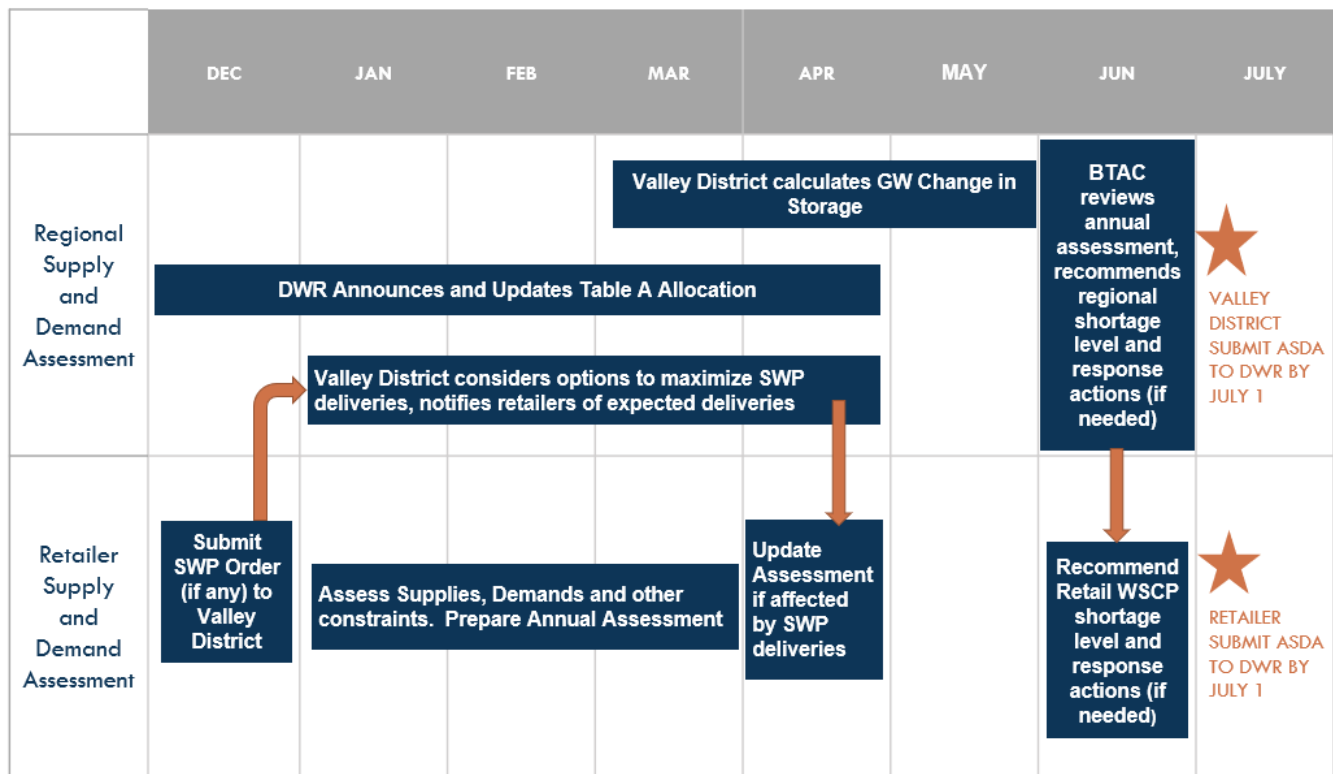

Figure 1. Regional and Retail Agency Annual Assessment Process and Timeline

### 3.0 Water Shortage Stages

With the exception of a catastrophic failure of infrastructure, WVWD does not foresee imposing a water shortage stage except under the State’s direction, as occurred in 2014 or in the event of catastrophic infrastructure failure. If a potential water supply shortage is identified in the Annual Assessment, this section provides information on the water shortage stages and response actions that WVWD may implement.

WVWD uses four (4) shortage stages to identify and respond to water shortage emergencies. At a minimum, WVWD encourages baseline conservation efforts year-round, regardless of a shortage emergency.

**Stage I – Normal Conditions:**

Normal supply and distribution capacity is available. All policies shown in Section 2403 and the following water conservation measures shall apply.

**Stage II – Water Alert:**

The District may not be able to meet all water demands of all customers, unless the following water conservation measures are applied.

**Stage III – Water Warning (includes sub-stages A, B, and C):**

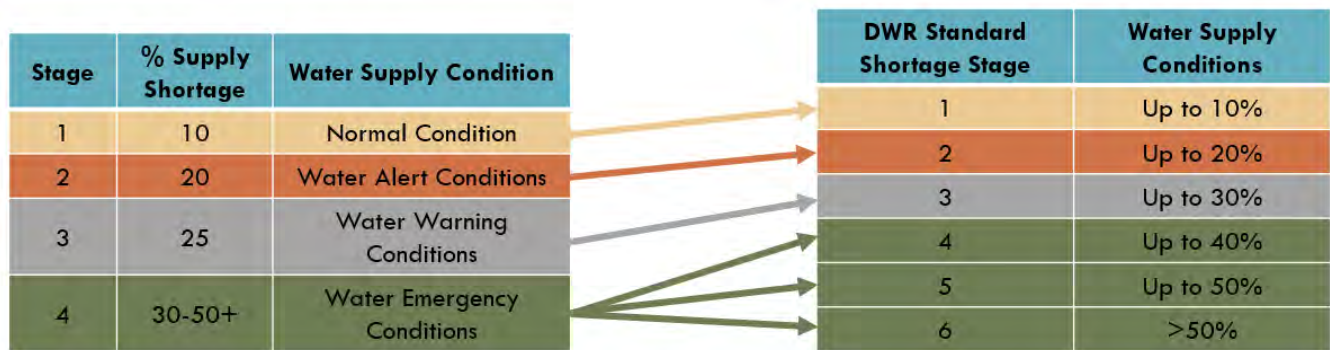

District is not able to meet all water demands of all customers; therefore, the following water conservation measures listed in [Table 4](#) shall apply.

**Stage IV: Water Emergency**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures listed in **Table 4** shall apply.

The CWC outlines six standard water shortage stages that correspond to a gap in supply compared to normal year availability. The six standard water shortage stages correspond to progressively increasing estimated shortage conditions (up to 10-, 20-, 30-, 40-, 50-percent, and greater than 50-percent shortage compared to the normal reliability condition) and align with the response actions that a water supplier would implement to meet the severity of the impending shortages.

The CWC allows suppliers with an existing WSCP that uses different water shortage stages to comply with the six standard stages by developing and including a cross-reference relating its existing shortage categories to the six standard water shortage stages. WVWD is maintaining the current four shortage stages for this WSCP. A crosswalk defines how WVWD’s current water shortage stages will align with the DWR’s standardized 6 stages of shortage. A visual representation of this alignment is shown in **Figure 2**.

**Figure 2. Crosswalk to DWR Six Standard Stages**

**Table 2: DWR 8-1 Water Shortage Contingency Plan Stages**

SHORTAGE STAGE	PERCENT SHORTAGE RANGE <sup>1</sup> (NUMERICAL VALUE AS A PERCENT)	WATER SHORTAGE CONDITION
1	Up to 10%	Normal Conditions (WVWD Stage 1)
2	Up to 20%	Water Alert Condition (WVWD Stage 2)
3	Up to 30%	Water Warning Condition (WVWD Stage 3, 3A, 3B, and 3C)
4	Up to 40%	Water Emergency Condition (WVWD Stage 4)
5	Up to 50%	Water Emergency Condition (WVWD Stage 4)
6	>50%	Water Emergency Condition (WVWD Stage 4)

<sup>1</sup> One stage in the Water Shortage Contingency Plan must address a water shortage of 50%.

## 4.0 Shortage Response Actions

This section was completed pursuant to CWC Section 10632(a)(4) and 10632.5(a) and describes the response actions that must be implemented or considered for each stage to minimize social and economic impacts to the community.

In accordance with CWC 10632(b) WVWD analyzes and defines water features that are artificially supplied with water, including ponds, lakes, waterfalls, and fountains, separately from swimming pools and spas.

### 4.1 Supply Augmentation

**Table 3** identifies the supply augmentation actions WVWD can take in the event of a water shortage condition. WVWD currently maintains interconnections with the Cities of Rialto, Colton and San Bernardino, the Fontana Water Company, Marygold Mutual Water Company. During water shortage emergencies, WVWD may be able to obtain supplemental water supply through these connections, if available.

**Table 3: DWR 8-3R Supply Augmentation & Other Actions**

SHORTAGE STAGE	SUPPLY AUGMENTATION METHODS AND OTHER ACTIONS BY WATER SUPPLIER	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE
4	Other purchases	0-100%	WVWD currently has interconnections with the Cities of Rialto, Colton and San Bernardino, the Fontana Water Company, Marygold Mutual Water Company, and Valley District

### 4.2 Demand Reduction

In addition to prohibitions on end uses, WVWD offers various rebates to encourage conservation (i.e. ultra-low flush toilet replacements, high efficiency washing machines, etc.). WVWD has a water rate structure that promotes water efficiency. The reduction goal is to balance supply and demand. **Table 4** summarizes these efforts and end use prohibitions.

**Table 4: DWR 8-2 Demand Reduction Actions**

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
All	Expand Public Information Campaign	0-20%	Provide reminder notices regarding noted water waste and offer community outreach programs	No
1	Landscape - Other landscape restriction or prohibition	0-5%	The use of sprinklers for any type of irrigation during high winds is prohibited.	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
1	Landscape - Limit landscape irrigation to specific times	0-5%	Limit all landscape irrigation to between the hours of 8:00 p.m. and 6:00 a.m. Hand watering should be done between 6:00 p.m. and 8:00 a.m. Drip irrigation and hand watering while gardening is exempt from this recommendation. Water being used during repair or maintenance of watering system is exempt from this section.	Yes
1	Landscape - Restrict or prohibit runoff from landscape irrigation	0-5%	Use of water for outdoor landscapes in a manner that causes runoff such that water flows onto adjacent property, non-irrigated areas, private and public walkways, roadways, parking lots, or structures is prohibited.	Yes
1	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	0-1%	No person shall permit water to leak from any facility, improvement or plumbing fixture on his/her/its premises; said leak shall be repaired in a timely manner.	Yes
1	Other - Require automatic shut of hoses	0-1%	Washing of automobiles, trucks, trailer, boats, and other mobile equipment is prohibited unless done with a hand held device equipped with an automatic shut off trigger nozzle. This does not apply to commercial car washes utilizing a recycling system or when the health and safety of the public would necessitate.	Yes
1	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	No water shall be used to clean, fill, operate or maintain levels in decorative fountains unless the water is part of a recycling system.	Yes
1	Other - Prohibit use of potable water for washing hard surfaces	0-1%	There shall be no application of water to sidewalks, walkways, driveways, parking areas, patios, porches, verandas, tennis courts, or other paved, concrete, or other hard surface areas, except that flammable or other similarly dangerous or unhealthy substances may be washed from said areas by direct hose flushing for the benefit of public health or safety.	Yes
1	Landscape - Prohibit certain types of	0-5%	The irrigation of potable water of ornamental turf on public street medians is prohibited. The	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
	landscape irrigation		term "median" shall mean the strip of land between street lanes.	
2	Decrease Line Flushing	0-1%		No
2	Other	0-1%	Use historical data instead of performing fire flow tests for new developments	No
2	Other	0-1%	Screen all new applications for water service installations and limit water use before occupancy	No
2	Reduce System Water Loss	0-1%	Repair all leaks within 72 hours	No
2	CII - Restaurants may only serve water upon request	0-1%	All restaurants prohibited from serving water to their customers except when requested by customer.	Yes
2	CII - Lodging establishment must offer opt out of linen service	0-1%	Operators of hotels and motels must provide guests with the option of choosing not to have towels and linens laundered daily. The hotels and motels shall prominently display notice of this option in each guestroom using clear and easily understood language.	Yes
2	Landscape - Limit landscape irrigation to specific days	0-5%	Limit all landscape irrigation to four (4) days per week for no more than ten (10) minutes per station per day. This provision does not apply to any landscape that has waterefficient devices that are operated properly. Waterefficient devices are drip irrigation systems and operational weather-based irrigation controllers. The term "week" is defined as Sunday through Saturday.	Yes
2	Other - Prohibit use of potable water for construction and dust control	0-1%	District will screen all new applications for water service installations and will limit water use before occupancy to that essential use for construction and testing of landscape plumbing. Limited landscaping for new development shall be allowed as approved by the District. Water use for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager or his/her designee.	Yes
2	Other - Customers must	0-1%	Repair all leaks within seventy-two (72) hours of notification by the District unless other	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
	repair leaks, breaks, and malfunctions in a timely manner		arrangements are made with the general manager of the District ("General Manager").	
2	Landscape - Other landscape restriction or prohibition	0-5%	Irrigating landscaping, including, but not limited to, turf and ornamental landscapes during and within forty-eight (48) hours following measurable precipitation is prohibited.	Yes
2	Other water feature or swimming pool restriction	0-1%	Swimming pools, hot tubs, and spas shall not be filled or refilled after being drained.	Yes
2	Other water feature or swimming pool restriction	0-1%	Ornamental pools, fountains, water displays, and artificial lakes shall not be filled or refilled after being drained.	Yes
2	Other - Prohibit use of potable water for construction and dust control	0-1%	Water used for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager, or his/her designee.	Yes
3	Reduce System Water Loss	0-1%	Repair all leaks within 48 hours	No
3A	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water	0-1%	Washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment are prohibited. Washing of the above-listed vehicles or mobile equipment shall be allowed only at a commercial car wash where recirculating water is being utilized.	Yes
3A	Landscape - Limit landscape irrigation to specific times	0-5%	All agricultural water users shall irrigate only at times approved by the District.	Yes
3A	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	Swimming pools, hot tubs, and spas shall not be refilled or filled after being drained.	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
3A	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	Ornamental pools, fountains, water displays, and artificial lakes shall not be refilled or filled after being drained.	Yes
3A	Landscape - Limit landscape irrigation to specific days	0-5%	Limit all landscape irrigation to three (3) days per week for no more than ten (10) minutes per station per day. Drip systems that are operated efficiently are exempt from these regulations.	Yes
3A	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	0-1%	Repair all leaks within forty-eight (48) hours of notification by the District unless other arrangements are made with the General Manager.	Yes
3B	Landscape - Limit landscape irrigation to specific days	5-20%	Limit all landscape irrigation to two (2) days per week for no more than ten (10) minutes per station per day.	Yes
3C	Landscape - Limit landscape irrigation to specific days	10-30%	Limit all landscape irrigation to one (1) day per week for no more than ten (10) minutes per station per day.	Yes
4	Landscape - Prohibit all landscape irrigation	10-30%	No lawn or landscape water will be allowed	Yes
4	Other - Prohibit use of potable water for construction and dust control	0-5%	No construction water use to be allowed, construction meters to be locked off or removed.	Yes
4	CII - Other CII restriction or prohibition	0-5%	Commercial nurseries shall water only between the hours of 11:00 p.m. and 6:00 a.m. and only with hand-held devices or with drip irrigation systems.	Yes
4	Landscape - Prohibit all landscape irrigation	10-30%	The use of water shall be limited to essential household, commercial, manufacturing, or processing uses only, except where other uses may be allowed by permit	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
4	Landscape - Limit landscape irrigation to specific times	0-5%	All agricultural water users shall irrigate only at times approved by the District.	Yes

### 4.3 Operational Changes and Additional Mandatory Restrictions

During shortage conditions, operations may be affected by supply augmentation or demand reduction responses. WVWD will consider their operational procedures when it completes its Annual Assessment. Any additional mandatory restrictions implemented in response to the declaration of a shortage response stage, beyond the actions listed in [Table 3](#) and [Table 4](#) are listed in WVWD’s Ordinance Number 80 Article No. 24 provided as [Attachment 1](#).

### 4.4 Emergency Response Plan

In 2021, WVWD completed a Risk and Resilience Assessment (RRA) and Emergency Response Plan (ERP) in accordance with America’s Water Infrastructure Act (AWIA) of 2018. The purpose of the RRA and ERP is to meet the AWIA compliance requirements and plan for long-term resilience of WVWD’s infrastructure. The RRA assessed WVWD’s water system to identify critical assets and processes that may be vulnerable to human and natural hazards, and to identify measures that can be taken to reduce risk and enhance resilience from service disruption for the benefit of customers. The RRA identifies and characterizes both infrastructure-specific and system-wide vulnerabilities and threats and quantifies the consequences of disruption. The RRA also identifies various options (and constraints) in addressing and mitigating risk. The RRA, in conjunction with the Emergency Response Plan (ERP), charts a course for water system resilience. The RRA also provided various recommendations to increase reliability of WVWD’s system. Since critical pieces of infrastructure and specific vulnerabilities are detailed in the RRA and ERP, the contents of the document are confidential and for use by WVWD’s staff only. However, WVWD can confirm that these plans meet the requirements set forth by AWIA and evaluate seismic risks and mitigation actions to WVWD’s infrastructure.

In the event of a water shortage emergency resulting from equipment failure, power outage, or other catastrophe, WVWD is prepared to purchase emergency water supplies from nearby agencies while repairs or other remedial actions are underway. WVWD may also implement its four-stage plan for conservation, as described above, with either voluntary or mandatory reductions depending on the severity of the shortage. For severe disasters (Stage 4), mandatory water use reductions are specified.

### 4.5 Seismic Risk Assessment and Mitigation Plan

Disasters, such as earthquakes, can and will occur without notice. In order to respond to disasters WVWD has assessed the seismic risk and reliance of WVWD’s water facilities in the RRA mentioned in the section above.

In the event of an extended multi-week supply shortages due to natural disasters or accidents which damage all water source, WVWD’s 25 storage reservoirs have a combined capacity of over 72 million gallons, which is sufficient water to meet the health and safety requirements of 50 gallons per day per capita for approximately

80,000 residents for 18 days. This assumes zero non-residential use. Under emergency power outages or catastrophic earthquake conditions, the existing storage is expected to provide a supply of four days of average day demand or 2.5 days under maximum summer demand. WVWD also has interconnections with other agencies for emergency supplies.

WVWD has portable back-up generators that can be used in the event of an area-wide power outage. These generators can be located on both wells and booster stations to continue water production. These generators will be located in the northern part of the distribution system. Water can then be boosted to higher zones or gravity fed to the lower zones. In addition to the portable generators, WVWD will be installing back-up generators at the Zone 5 and 6 booster stations.

#### 4.6 Shortage Response Action Effectiveness

WVWD has estimated the effectiveness of shortage response actions in [Table 3](#) and [Table 4](#) when data pertaining to such actions is available. It is expected that response actions effectiveness is also a result of successful communication and outreach efforts.

### 5.0 Communication Protocols

The West Valley Water District prioritizes effective communication, especially in times of a water shortage emergency. WVWD routinely communicates to customers about details on when a stage is announced. Communication actions may include bill inserts, handouts, informative flyers, and direct mail pieces to newspaper and bus shelter advertisements, news releases, social media outreach, and website content. WVWD continues to provide reminders about shortage stages and encourages conservation at all times.

### 6.0 Compliance and Enforcement

Consumption limits in the progressively restrictive stages are imposed on different uses. These are based on percentage reductions in water allotments, and restrictions on specific uses. The specific percentage reductions at each stage and for each user class are detailed in the ordinance. The individual customer allotments will be based on the previous year's use. This provides WVWD a basis for reviewing appeals.

Mandatory provisions to reduce water use during the different stages of water shortage are also summarized in the ordinance. Provisions of Article 24 - Water Conservation, adopted August 6, 2015, were adopted pursuant to Sections 375 and 376 of the CWC. Any second or subsequent violation of this policy after notice as specified in Section 2411 1(a) is a misdemeanor (CWC Section 377).

In addition to the remedy of criminal prosecution available to the District, violation of the Ordinance may result in the imposition of surcharges and restriction and/or termination of water service as set forth below:

1. **First Violation** – Notice of Non-Compliance – a written warning accompanied by a copy of this Ordinance, delivered by U.S. Mail and/or hung on customer's door.
2. **Second Violation – Warning of Penalties** – a written warning notice of future imposition of penalties that could be placed on the customer's water bill.

3. **Third Violation (within one (1) year)** - a surcharge of \$100.00.
4. **Fourth Violation (within one (1) year of the first violation)** – a surcharge of \$300.00, and installation of flow restricting device in the meter for a minimum of ninety-six (96) hours. Said restricted flow shall meet minimum County Health Department’s standards, if any have been established. If said ninety-six (96) hour period ends on a weekend or holiday, full service will be restored during the next business day.
5. **Fifth Violation (within one (1) year of the first violation)** – a surcharge of \$500.00, and termination of service for such period as the Board determines to be appropriate under the circumstances, following a hearing regarding said issue. Written notice of the hearing shall be mailed to the customer at least ten (10) days before the hearing.

Any surcharge hereunder shall be in addition to the basic water rates and other charges of the District for the account and shall appear on and be payable with the billing statement for the period during which the violation occurred; non-payment shall be subject to the same remedies available to the District as for non-payment of basic water rates.

In addition to any surcharge, a customer violating this Ordinance shall be responsible for payment of the District's charges for installing and/or removing any flow restricting device and for disconnecting and/or reconnecting service per the District's Schedule of Charges then in effect. Such charges shall be paid prior to the removal of the flow restrictor or reconnection of service, whichever the case may be.

## 7.0 Legal Authorities

To offset the prolonged effects of the drought periods, the Board of Directors adopted a Water Conservation Plan with Ordinance No. 68 on July 5, 1990 by adding Article No. 24 entitled “Water Conservation” to its water service regulations and a WSCP with Ordinance No. 69 on February 6, 1992 which amended portions of the Water Conservation Plan. On August 6, 2015, the Board of Directors amended Resolution No. 387 through Ordinance Number 80, included as **Attachment 1**, which established water service regulations, schedules of rates, and charges. Article No. 24 describes Water Conservation objectives and outlines four stages of action to be implemented during a water shortage. WVWD’s Plan includes voluntary and mandatory stages.

The purpose of Article 24 is to provide water conservation measures in order to minimize the effect of a water shortage on the citizens of, and the economic well-being of, the communities WVWD serves. This Article adopts provisions that will significantly reduce the wasteful and inefficient consumption of water, thereby extending the available water resources required for the domestic, sanitation, and fire protection needs of the citizens of the communities they serve while reducing the hardship on WVWD and the general public to the greatest extent possible.

### 7.1 Water Shortage Emergency Declaration

In accordance with CWC Section Division 1, Section 350 – WVWD shall declare a water shortage emergency condition to prevail within the area served by such distributor whenever it finds and determines that the ordinary demands and requirements of water consumers cannot be satisfied without depleting the water supply of the distributor to the extent that there would be insufficient water for human consumption, sanitation, and fire protection.

## 7.2 Local/Regional Emergency Declaration

If a water shortage is approaching, WVWD shall coordinate with any the cities and counties in its service area for the possible proclamation of a local emergency.

## 8.0 Financial Consequences of WSCP

To ensure WVWD's customers comply with Article 24 and CWC Chapter 3.3 (Excessive Residential Water Use During Drought), additional costs may be incurred to monitor and enforce response actions. The financial consequences a water shortage can have on WVWD and the local community will depend on the duration and level of severity. During Stages 2 through 4 of the District's WSCP, water consumption will decrease based upon each individual stage and the amount of reduction goal achieved. The impacts of these reductions will result in a reduction in water sales revenues and a reduction of water production expenditures. To mitigate the financial impacts of a water shortage, WVWD maintains sufficient funds within a Rate Stabilization Account. These funds could be used to stabilize water rates during periods of water shortage or disasters affecting the water supply.

## 9.0 Monitoring and Reporting

The water savings from implementation of the WSCP will be determined based on monthly production reports which are reviewed and compared to production reports and pumping statistics from prior months and the same period of the prior year. Under shortage conditions, these production reports could be prepared as often as daily. At first, the cumulative consumption for the various sectors (e.g., residential, commercial, etc.) will be evaluated for reaching the target level. Then if needed, individual accounts will be monitored. Weather and other possible influences may be accounted for in the evaluation.

## 10.0 WSCP Refinement Procedures

The WSCP is best prepared and implemented as an adaptive management plan. WVWD will use results obtained from their monitoring and reporting program to evaluate any needs for revisions. Potential changes to the WSCP that would warrant an update include, but are not limited to, any changes to trigger conditions, changes to the shortage stage structure, and/or changes to customer reduction actions.

Any prospective changes to the WSCP would need to be presented to WVWD's Board for discretionary approval. Once discretionary approval has been granted, WVWD will hold a public hearing, obtain any comments and adopt the updated WSCP. Notices for refinement and the public hearing date will be published in the local newspaper in advance of any public meetings.

## 11.0 Plan Adoption, Submittal and Availability

WVWD adopted this WSCP with the 2020 IRUWMP. The 2020 IRUWMP and WSCP were made available for public review in June 2021 and a public hearing was held on **June 17, 2021** to receive public input on the draft 2020 IRUWMP and the WSCP.

The WVWD Board of Directors adopted the 2020 IRUWMP and the WSCP at a public meeting on **June 17, 2021**. The resolution of adoption is included as an attachment.

This WSCP was submitted to DWR through the WUData portal before the deadline of **July 1, 2021**.

This WSCP will be available to the public on West Valley Water District web site.

If WVWD identifies the need to amend this WSCP, it will follow the same procedures for notification to cities, counties and the public as used for the 2020 IRUWMP and for initial adoption of the WSCP.

NO. 387, WATER SERVICE REGULATIONS, BY AMENDING  
ARTICLE NO. 24 - WATER CONSERVATION

WHEREAS, Article 10, Section 2 of the California Constitution declares that waters of the State are to be put to beneficial use, that waste, unreasonable use, or unreasonable method of use of water be prevented, and that water be conserved for the public welfare; and

WHEREAS, the water resources of West Valley Water District (“District”) are limited and finite; and

WHEREAS, conservation of certain water supplies and minimization of the effects of water supply shortages that are the result of drought are essential to the public health, safety and welfare; and

WHEREAS, regulation of the time of certain water use and manner of use provide an effective and immediately available means of conserving water; and

WHEREAS, California Water Code Sections 375 et seq. authorize water suppliers to adopt and enforce a comprehensive water conservation program; and

WHEREAS, pursuant to such authority the Board of Directors (“Board”) of District adopted Ordinance No. 68 amending Resolution No. 387, to add Article 24 to the District’s Service Regulations (“Article 24”); and

WHEREAS, the Board adopted Ordinance No. 78, rescinding Ordinance No. 68, and amending Resolution No. 387, by amending Article 24; and

WHEREAS, the Board adopted Ordinance No. 79, rescinding Ordinance No. 78, and amending Resolution No. 387, by amending Article 24; and

WHEREAS, the adoption of this Ordinance will allow the District to delay or avoid the implementation of more restrictive water use regulations provided that nothing in this Ordinance will prevent the District from implementing more restrictive regulations as authorized by California Water Code Section 350 et. seq; and

WHEREAS, the District has adopted an Urban Water Management Plan (“Plan”) that includes water conservation as a necessary and effective component to provide a reliable source of water to meet the needs of the District’s customers. The Plan also includes an analysis of actions to be taken in response to water supply shortages. This Ordinance is consistent with the District’s

Plan; and

WHEREAS, the State Water Resources Control Board adopted Resolution No. 2014-0038, No. 2014-0718-01E and 2015-0032 to adopt an emergency regulation for statewide urban water conservation (“State Board Regulations”). The State Board Regulations set forth certain prohibited activities and certain actions to be taken by water suppliers, such as the District; and

WHEREAS, the water conservation measures and progressive restrictions on water use identified by this Ordinance provide certainty to water users and enable District to control water use and plan and implement water measures in a fair and orderly manner for the benefit of the public. This Ordinance is further intended to comply with the mandates of the State Board Regulations as such applies to the District.

NOW, THEREFORE, THE BOARD OF DIRECTORS OF WEST VALLEY WATER DISTRICT does ordain that Resolution 387 is hereby amended to amend Article 24 to read as follows:

#### ARTICLE 24 WATER CONSERVATION

**1. Purpose.** The purpose of this Article is to provide water conservation measures in order to minimize the effect(s) of a water shortage on the citizens of, visitors to, and the economic well-being of the communities we serve and, by means of this Article, to adopt provisions that will significantly reduce the wasteful and inefficient consumption of water, thereby extending the available water resources required for the domestic, sanitation, and fire protection needs of the citizens of, and visitors to, the communities we serve while reducing the hardship on the District and the general public to the greatest extent possible.

**2. Application.** The provisions of this Article shall apply to all customers and property within the service area of the District and shall also apply to all property and facilities owned, maintained, operated, or otherwise under the jurisdiction of the District.

a) **Exception.** The prohibited uses of water provided for by this Ordinance are not applicable to that use of water necessary for public health and safety or for essential government services such as police, fire, and similar emergency services.

**3. Policy.** Due to the fact that we are located in a semi-arid region and our groundwater is of limited supply and in an overdraft condition and because of these conditions prevailing in the District and areas elsewhere from which the District obtains its water supplies, the general welfare requires that the water resources available to the District be put to the maximum beneficial use to the extent to which they are capable and that the wasteful, inefficient, or unreasonable use, or method of use of our previous, limited, and finite water resources be prevented.

As such, the conservation of such waters is to be exercised with a view to the reasonable and

beneficial and efficient use thereof in the interests of the people of the District and for the public welfare.

Therefore, the District establishes the following goals, objectives, policies, and four-stage water conservation plan pertaining to the conservation and use of water:

**2401. GOALS**

- < The conservation of water.
- < The efficient use and distribution of available water supplies.
- < Adequate and sufficient potable water supply and availability for the greatest public benefit, with particular regard to human consumption, sanitation, and fire protection.
- < Maintain high quality customer service.
- < Ensure fiscal soundness.
- < Protect environmental quality.
- < Meet growing water quality regulations.
- < To reduce water consumption in accordance with State law, including, but not limited to the State Board Regulations.

**2402. OBJECTIVES**

- < To conserve all available water supplies.
- < To achieve an overall water use reduction.
- < To reduce the volume of wastewater.
- < To continuously increase consumer awareness about the need for and benefits of water conservation.
- < To reduce or eliminate wasteful and inefficient uses of water.
- < To assure an adequate supply of potable water sufficient to meet the essential private and public needs of the District's growing population and economy of those communities in which we serve.
- < To assure that all new developments and existing dwellings which are remodeled or

added to are equipped with water-conserving devices, fixtures, and appliances.

< To increase the use of native or water-conserving plant species for landscaping purposes.

< The term “base year” shall have the following meaning:

- a) The year 2013, if the customer occupied the subject real property for the entire year.
- b) If the customer did not occupy the subject real property for the entire year of 2013, the base year for that customer would be the first twelve (12) months the customer occupied the subject real property in or after 2013.
- c) If the customer has not occupied the subject real property for a twelve (12) month period on the adoption of this Ordinance, then the District will use the consumption history for the period of time the customer has occupied the subject real property. If the customer has no consumption history for the subject real property then the District will determine goals for that customer based on the averaging of other real properties with similar service types and meter sizes within the same meter reading route (as determined by the District) for the months without consumption history. The customer shall have a ten (10) day period after the customer receives the goals to appeal that determination to the General Manager (as defined herein), in writing. If the customer fails to appeal the determination within the ten (10) day period the goals shall be final. Upon receipt of a timely appeal, the General Manager shall schedule a hearing at which the General Manager or his/her designated representative shall act as the hearing officer. The hearing shall be at least ten (10) days following receipt of the appeal, and the District shall mail written notice of the hearing to the customer at least ten (10) days before the date of said hearing. The determination of the hearing officer with respect to the goals shall be final.

### **2403. POLICIES**

< As a condition of water service, all new structures shall be equipped with high efficiency toilets (1.28 gallons per flush max) as per Section 17921.3 of the California Health and Safety Code, and with low-flow showers and faucets as per Title 24, Part 6, Article 1, T20-1406F of the California Administrative Code, in addition to the insulating of all hot water lines according to California Energy Commission Rules. “New Structures” shall mean buildings obtaining occupancy permits after the effective date of this Ordinance.

As a condition of continued water service, existing structures not so equipped, which require building permits to remodel or expand, shall be retrofitted with toilet tank dams

resulting in 1.28 gallon flushes unless the toilets are to be replaced, in which case the new toilets shall be ultra low-flush (1.28gpf), as stated above, and low-flow showers and faucets. Certification of compliance with this Ordinance shall be forwarded to the District.

- < The use of lawns shall be minimized in new commercial, hotel, condominium, and high-density housing and shall be subject to District review and conditioning of projects. The use of native or water-conserving trees, shrubs, lawns, grass, ground cover, vines, and other plant species for landscape planting or replanting purposes is required and shall be approved by the District. (A list of such plants can be obtained at the District office.)
- < Large water users, as determined by the District, shall submit a water conservation plan to the District and promote implementation of same as a condition to continued service.
- < Water demand, use, and mitigation shall be address in every Environmental Impact Report.
- < The District shall:
  - a) Cooperate with other local water purveyors, appropriate state and other responsible agencies in facilitating a continuous program to increase consumer awareness about the need for and benefits of water conservation.
  - b) Encourage large water users to implement water recycling and reuse processes.
  - c) Make water conservation as reliable a method of reducing water demands as water supply projects are in meeting such demands.

**2404. STAGE I - NORMAL CONDITION**

Normal supply and distribution capacity is available. All policies shown in Section 2403 and the following water conservation measures shall apply.

- 1. Recommendations for use of water.
  - a) Limit all landscape irrigation to between the hours of 8:00 p.m. and 6:00 a.m. Hand watering should be done between 6:00 p.m. and 8:00 a.m. Drip irrigation and hand watering while gardening is exempt from this recommendation. Water being used during repair or maintenance of watering system is exempt from this section.
  - b) Water conservation should be practiced within the home or business.
  - c) All restaurants and food establishments are requested not to serve water to their customers unless specifically requested by the customer.

2. The following uses of water are hereafter considered non-essential to the public health, safety and welfare and, if allowed, would constitute the wasting of water and is hereby prohibited, pursuant to Water Code Section 350 et seq., Water Code Section 71640 et. Seq. and the common law:
- a) There shall be no application of water to sidewalks, walkways, driveways, parking areas, patios, porches, verandas, tennis courts, or other paved, concrete, or other hard surface areas, except that flammable or other similarly dangerous or unhealthy substances may be washed from said areas by direct hose flushing for the benefit of public health or safety.
  - b) No water shall be used to clean, fill, operate, or maintain levels in decorative fountains unless such water is part of a recirculating system.
  - c) No person shall permit water to leak from any facility, improvement or plumbing fixture on his/her/its premises; said leak shall be repaired in a timely manner.
  - d) Washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment are prohibited unless done with a hand-held bucket or hand-held hose equipped with a shut-off nozzle or device attached to it that causes it to cease dispensing water immediately when not in use. This section does not apply to the washing of the above-listed vehicles or mobile equipment when conducted at a commercial car wash utilizing recirculating systems.
    - 1. Such washings are exempted from these regulations when the health, safety, and welfare of the public is contingent upon frequent vehicle cleaning such as garbage trucks and vehicles used to transport food and perishables.
  - e) Use of water for outdoor landscapes in a manner that causes runoff such that water flows onto adjacent property, non-irrigated areas, private and public walkways, roadways, parking lots, or structures is prohibited .
  - f) The use of sprinklers for any type of irrigation during high winds, which divert a significant amount of water from the intended landscaping, is prohibited.
  - g) The irrigation of potable water of ornamental turf on public street medians is prohibited. The term “median” shall mean the strip of land between street lanes.
  - h) The irrigation with potable water of landscape outside of newly constructed homes and buildings shall be consistent with regulations or other requirements establishments by the California Buildings Standards Commission, as those regulations may be modified from time to time.

**2405. STAGE II - WATER ALERT**

The District may not be able to meet all water demands of all customers, unless the following water conservation measures are applied:

- a) All policies and prohibitions listed in Sections 2403 and 2404.
- b) All customers are asked for a minimum twenty percent (20%) reduction of their water consumption over the base year consumption, unless otherwise stated.
- c) Operators of hotels and motels must provide guests with the option of choosing not to have towels and linens laundered daily. The hotels and motels shall prominently display notice of this option in each guestroom using clear and easily understood language.
- d) All eating establishments, including, but not limited to, restaurants, hotels, cafes, cafeterias, bars or other public places where food or drink are served and/or purchased are prohibited from serving water to their customers except when specifically requested by the customer.
- e) District will screen all new applications for water service installations and will limit water use before occupancy to that essential use for construction and testing of landscape plumbing. Limited landscaping for new development shall be allowed as approved by the District.
- f) Limit all landscape irrigation to four (4) days per week for no more than ten (10) minutes per station per day. This provision does not apply to any landscape that has water-efficient devices that are operated properly. Water-efficient devices are drip irrigation systems and operational weather-based irrigation controllers. The term “week” is defined as Sunday through Saturday.
- g) Repair all leaks within seventy-two (72) hours of notification by the District unless other arrangements are made with the general manager of the District (“General Manager”).
- h) Water use for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager or his/her designee.
- i) Irrigating landscaping, including, but not limited to, turf and ornamental landscapes during and within forty-eight (48) hours following measurable precipitation is prohibited.

**2406. STAGE III A - WATER WARNING**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures shall apply.

- a) All policies and prohibitions listed in Sections 2403, 2404 and 2405.

- b) All customers are required to reduce potable water consumption by a minimum of twenty-five (25%) reduction in their water consumption over the base year consumption.
- c) Washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment are prohibited. Washing of the above-listed vehicles or mobile equipment shall be allowed only at a commercial car wash where recirculating water is being utilized.
  - 1. Such washings are exempt from these regulations when the health, safety, and welfare of the public is contingent upon frequent vehicle cleaning such as garbage trucks and vehicles used to transport food and perishables.
- d) New water services shall be installed but water shall be used before occupancy for essential construction only and for testing of landscape irrigation systems. The installation of new landscaping for all new development/projects must be approved by the District.
- e) Limit all landscape irrigation to three (3) days per week for no more than ten (10) minutes per station per day. Drip systems that are operated efficiently are exempt from these regulations.
- f) Repair all leaks within forty-eight (48) hours of notification by the District unless other arrangements are made with the General Manager.
- g) All agricultural water users shall irrigate only at times approved by the District.
- h) Swimming pools, ornamental pools, fountains, water displays, hot tubs, spas and artificial lakes shall not be filled or refilled after being drained.
- i) Water used for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager, or his/her designee.

#### **2407. STAGE III B- WATER WARNING**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures shall apply.

- a) All policies and prohibitions listed in Sections 2403, 2404, 2405 and 2406 (except 2406 (e)).
- b) Limit all landscape irrigation to two (2) days per week for no more than ten (10) minutes per station per day.

**2408. STAGE III C- WATER WARNING**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures shall apply.

- a) All policies and prohibitions listed in Sections 2403, 2404, 2405 and 2406 (except 2406 (e)).
- b) Limit all landscape irrigation to one (1) day per week for no more than ten (10) minutes per station per day.

**2409. STAGE IV - WATER EMERGENCY**

District is experiencing a major failure of supply or distribution; therefore, the following water conservation measures shall apply:

- a) All policies and prohibitions shown in Sections 2403, 2404, 2405 and 2406.
- b) All customers are required to reduce potable water consumption by a minimum of thirty percent (30%) reduction in their water consumption over the base year consumption.
- c) No water shall be used for construction purposes. All construction meters shall be locked off or removed.
- d) Commercial nurseries shall water only between the hours of 11:00 p.m. and 6:00 a.m. and only with hand-held devices or with drip irrigation systems.
- e) There shall be no watering of any lawn or landscaped area.
- f) The use of water shall be limited to essential household, commercial, manufacturing, or processing uses only, except where other uses may be allowed by permit.
- g) All agricultural water users shall irrigate only at times approved by the District.

**2410. DETERMINATION AND DECLARATION OF WATER CONDITIONS**

The General Manager, or his/her designee, shall access all available water supply data and shall make a report of his/her findings to the Board at the next Regular meeting or at a Special meeting called for that purpose. The Board may at that time determine and declare which of the four (4) previously discussed conditions the District's water supply is in and the extent of water conservation required to prudently plan for and supply water to the District's customers.

Thereafter, the Board may order that the appropriate stage of water conservation be implemented or terminated in accordance with the applicable provision of this Ordinance. The declaration of any stage shall be made by public announcement and notice shall be published once in a local

newspaper of general circulation. The stage designated shall become effective immediately upon announcement.

#### **2411. DURATION OF DECLARATION**

The declaration of any stage of water supply conditions shall remain in effect until such time as another stage is declared.

#### **2412. AUTHORITY - MISDEMEANOR**

This Article is adopted pursuant to Sections 375 and 376 of the California Water Code. Any second or subsequent violation of this policy after notice as specified in Section 2411 1(a) is a misdemeanor. (California Water Code Section 377).

#### **2413. ENFORCEMENT**

1. **Violations.** In addition to the remedy of criminal prosecution available to the District as described above, violation of this Ordinance may result in the imposition of surcharges and restriction and/or termination of water service as set forth below:

- a) First Violation – Notice of Non-Compliance – a written warning accompanied by a copy of this Ordinance, delivered by U.S. Mail and/or hung on customer's door.
- b) Second Violation – Warning of Penalties – a written warning notice of future imposition of penalties that could be placed on the customer's water bill.
- c) Third Violation (within one (1) year) - a surcharge of \$100.00.
- d) Fourth Violation (within one (1) year of the first violation) – a surcharge of \$300.00, and installation of flow restricting device in the meter for a minimum of ninety-six (96) hours. Said restricted flow shall meet minimum County Health Department's standards, if any have been established. If said ninety-six (96) hour period ends on a weekend or holiday, full service will be restored during the next business day.
- e) Fifth Violation (within one (1) year of the first violation) – a surcharge of \$500.00, and termination of service for such period as the Board determines to be appropriate under the circumstances, following a hearing regarding said issue. Written notice of the hearing shall be mailed to the customer at least ten (10) days before the hearing.

2. **Surcharges, Additional Charges.** Any surcharge hereunder shall be in addition to the basic water rates and other charges of the District for the account and shall appear on and be payable with the billing statement for the period during which the violation occurred; non-payment shall be subject to the same remedies available to the District as for non-payment of basic water rates.

In addition to any surcharge, a customer violating this Ordinance shall be responsible for payment of the District's charges for installing and/or removing any flow restricting device and for disconnecting and/or reconnecting service per the District's Schedule of Charges then in effect. Such charges shall be paid prior to the removal of the flow restrictor or reconnection of service, whichever the case may be.

3. **Non-liability for Damage.** The customer or resident who violates this Ordinance thereby assumes responsibility for injury to the customer and/or other residents/occupants receiving service, including emotional distress and/or damage to the customer's private water system and/or to other real or personal property owned by the customer or by a third party resulting from the installation and operation of a flow restricting device or from termination of service; said customer shall thereby be deemed to have: (a) waived any claim for injury or for damage to the customer's property which the customer may otherwise have against the District; and (b) agreed to indemnify, defend, and hold the District harmless from claims by third parties for injury or property damage arising or claimed to arise out of the District's installation and/or operation of a flow restricting device or termination of water service.

4. **Exemptions.** No exemption shall be granted to any person for any reason in the absence of a showing by said person that he/she/it has achieved the maximum practical reduction in water consumption in his/her residential, commercial, industrial, or governmental water consumption as the case may be.

The General Manager, or his/her designee, may grant exemptions ("exceptions" to this Ordinance) for uses of water otherwise prohibited by the regulations. Water customers who feel that they need an adjustment in the prohibitions as they relate to him/her will fill out a simple application form for an exemption stating the justification and circumstances. If the exemption is not granted, customer may appeal in writing as stated in Section 2414.1.

a) Inconvenience or the potential for damage to landscaping shall not be considered for exemption from any section of this Ordinance.

## **2414. APPEALS**

1. **Procedures.** The General Manager, or his/her designated enforcement officer, shall determine when violations have occurred and shall issue to the customer a notice of violation ("Notice of Violation") by mailing same and/or hanging same on the customer's door at least ten (10) days before taking enforcement action. Said notice shall describe the action to be taken (notice of first violation shall simply be accompanied by a copy of this Ordinance) and shall be mailed or delivered at least ten (10) days before the proposed action is scheduled to be taken.

A customer may appeal the Notice of Violation by filing a written notice of appeal with the District no later than the close of business on the day before the date scheduled for enforcement action. Any Notice of Violation not timely appealed shall be final. Upon receipt of a timely appeal, a hearing on the appeal by the Board shall be scheduled at the Board's next Regular meeting or at a Special meeting scheduled for that hearing; in either, the hearing shall be at least

ten (10) days following receipt of the appeal, and the District shall mail written notice of the hearing to the customer at least ten (10) days before the date of said hearing.

2. **Interim Measures.** Pending receipt of a written appeal or pending a hearing pursuant to an appeal, the General Manager or the enforcement officer, if one has been designated, may take appropriate steps to prevent the unauthorized use of water as appropriate to the nature and extent of the violation and the current declared water condition.

**2415. IMPLEMENTATION BY GENERAL MANAGER**

The General Manager or designated representative is hereby authorized and directed to implement the provisions of this Ordinance. Guidelines regarding implementation procedures may be approved and/or modified from time to time by resolution by the Board.

**2416. CEQA EXEMPTION**

The adoption of this Ordinance, and the actions taken hereunder, are exempt from the provisions of the California Environmental Quality Act of 1970 in that they constitute a project undertaken as immediate action necessary to prevent or mitigate an emergency pursuant to Section 15071 of the State EIR Guidelines.

**2417. DURATION OF ORDINANCE**

This Ordinance shall remain in effect until the Board finds that the threatened emergency and threatened water shortage no longer exists. The provisions of this Ordinance shall prevail and control in the event of any inconsistency with any other rules and regulations of the District.

**2418. SEVERABILITY**

If any section, subsection, sentence, clause, or phrase of this Ordinance is for any reason held to be unconstitutional or invalid, such decision shall not affect the validity of the remaining portions of this Ordinance. The Board hereby declares that it would have passed this Ordinance and each section, subsection, sentence, clause, or phrase thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses or phrases may be unconstitutional or invalid.

**2419. EFFECTIVE DATE, PUBLISHING, AND POSTING**

This Ordinance shall be effective immediately upon adoption. Within ten (10) days of adoption, a copy of this Ordinance shall be published one time in a local newspaper and posted in the lobby of the District Office.

ADOPTED, SIGNED AND APPROVED THIS 6<sup>th</sup> DAY OF AUGUST, 2015.

  
Betty Gosney, President of  
the Board of Directors

ATTEST:

  
Peggy Asche, Secretary of the Board of  
Directors

WATER SHORTAGE CONTINGENCY PLAN

# West Valley Water District

This Water Shortage Contingency Plan is a strategic plan that the West Valley Water District uses to prepare for and respond to water shortages.

The Water Shortage Contingency Plan (WSCP) is a strategic plan that West Valley Water District (WVWD) uses to prepare for and respond to foreseeable and unforeseeable water shortages. A water shortage occurs when water supply available is insufficient to meet the normally expected customer water use at a given point in time. A shortage may occur due to a number of reasons, such as water supply quality changes, climate change, drought, regional power outage, and catastrophic events (e.g., earthquake). Additionally, the State may declare a statewide drought emergency and mandate that water suppliers reduce demands, as occurred in 2014. The WSCP serves as the operating manual that WVWD will use to prevent catastrophic service disruptions through proactive, rather than reactive, mitigation of water shortages. This WSCP provides a process for an annual water supply and demand assessment and structured steps designed to respond to actual conditions. This level of detailed planning and preparation provide accountability and predictability and will help WVWD maintain reliable supplies and reduce the impacts of any supply shortages and/or interruptions.

IN THIS SECTION

- Water Service Reliability
- Annual Water Supply and Demand Assessment
- Supply Shortage Stages and Response Actions

This WSCP was prepared in conjunction with WVWD’s 2020 UWMP, which is included in the 2020 Upper Santa Ana River Watershed Integrated Urban Water Management Plan (2020 IRUWMP) and is a standalone document that can be modified as needed. This document is compliant with the California Water Code (CWC) Section 10632 and incorporated guidance from the State of California Department of Water Resources (DWR) UWMP Guidebook.

The WSCP describes the following:

1. **Water Service Reliability Analysis:** Summarizes WVWD's water supply analysis and reliability and identifies any key issues that may trigger a shortage condition.
2. **Annual Water Supply and Demand Assessment Procedures:** Describes the key data inputs, evaluation criteria, and methodology for assessing the system's reliability for the coming year and the steps to formally declare any water shortage stages and response actions.
3. **Water Shortage Stages:** Establishes water shortage stages to clearly identify and prepare for shortages.
4. **Shortage Response Actions:** Describes the response actions that may be implemented or considered for each stage to reduce gaps between supply and demand.
5. **Communication Protocols:** Describes communication protocols under each stage to ensure customers, the public, and government agencies are informed of shortage conditions and requirements.
6. **Compliance and Enforcement:** Defines compliance and enforcement actions available to administer demand reductions.
7. **Legal Authority:** Lists the legal documents that grant WVWD the authority to declare a water shortage and implement and enforce response actions.
8. **Financial Consequences of WSCP Implementation:** Describes the anticipated financial impact of implementing water shortage stages and identifies mitigation strategies to offset financial burdens.
9. **Monitoring and Reporting:** Summarizes the monitoring and reporting techniques to evaluate the effectiveness of shortage response actions and overall WSCP implementation. Results are used to determine if additional shortage response actions should be adjusted.
10. **WSCP Refinement Procedures:** Describes the factors that may trigger updates to the WSCP and outlines how to complete an update.
11. **Plan Adoption, Submittal, and Availability:** Describes the process for the WSCP adoption, submittal, and availability after each revision.

## 1.0 Water Service Reliability Analysis

As part of the 2020 IRUWMP, WVWD completed a water supply reliability analysis for normal, single-dry, and five-year consecutive dry year periods from 2025-2045. A Drought Risk Assessment (DRA) was also performed to analyze supply reliability under five consecutive years of drought from 2021-2025. As described in [Chapter 3](#) of the 2020 IRUWMP, the effects of a local drought are not immediately recognized since the region uses the local groundwater basins to simulate a large reservoir for long term storage. WVWD is able to pump additional groundwater to meet increased demands in dry years and participates in efforts to replenish the basins with imported and local water through regional recharge programs. Additionally, WVWD implements several ongoing water conservation measures. Regional recharge programs and conservation help to optimize and enhance the use of regional water resources. **Based on the 2020 IRUWMP analysis, WVWD's water supply is reliable and not expected to see impactful change under drought conditions.**

Even though localized drought conditions should not affect supply, other shortages may occur due to a number of reasons, such as water supply quality changes, regional power outage, State mandates for water use efficiency standards, and catastrophic events (e.g., earthquake). Therefore, WVWD will use this WSCP as appropriate to address shortages and other supply emergencies.

## 2.0 Annual Water Supply and Demand Assessment

As an urban water supplier, WVWD must prepare and submit an Annual Water Supply and Demand Assessment (Annual Assessment). Starting in 2022, the Annual Assessment will be due by July 1 of every year, as indicated by CWC Section 10632.1. The Annual Assessment is an evaluation of the near-term outlook for supplies and demands to determine whether the potential for a supply shortage exists and whether there is a need to trigger a WSCP shortage stage and response actions in the current calendar year to maintain supply reliability. This process will take place at the same time each year based on known circumstances and information available to WVWD at the time of analysis and can be update or revised at any time if circumstances change.

WVWD will establish and convene an internal WSCP Team to conduct the Annual Assessment each year. The WSCP may include the following staff:

- **Assistant General Manager**
- **Engineering Services Manager**
- **Operations Manager**
- **Production Supervisor**
- **Chief Water Treatment Plant Operator**
- **Director of Finance**

The Annual Assessment procedure, including key data inputs and evaluation criteria, is summarized in [Table 1](#). The Annual Assessment procedure and timeline, along with how it integrates with the annual assessment that will be conducted on a regional basis in parallel, is shown graphically in [Figure 1](#).

**Table 1. Annual Assessment Procedure**

<b>TIMING</b>	<b>ASSESSMENT ACTIVITIES</b>	<b>PROCEDURE, KEY DATA INPUTS, EVALUATION CRITERIA AND OTHER CONSIDERATIONS</b>	<b>STAFF RESPONSIBLE</b>
<b>JAN - FEB</b>	Estimate unconstrained demands for coming year	Demands will be estimated based on water sales forecasts from annual budget or prior year demands plus any anticipated changes	Engineering Services Manager, Director of Finance
<b>JAN - FEB</b>	Estimate available supplies for the year, considering the following year will be dry	<p>Each December, WVWD submits an order to Valley District for the volume of SWP water that is planned for use the following year. If the requested volume is not available due to reduced SWP supplies, WVWD will meet with Valley District and other SWP users to discuss reducing SWP orders and may update the Annual Assessment to reflect a shift from SWP to groundwater production, if needed.</p> <p>Estimates of available surface water supplies from the Lytle Creek will be based on annual precipitation and local mountain snowpack.</p> <p>The remainder of supply needs not met from SWP and surface water will be pumped from groundwater basins. The groundwater basins are sustainably managed to provide long term supply reliability and is not anticipated to be impacted in dry years. In the unlikely event that local supplies are reduced, WVWD will coordinate with the BTAC to identify available supplies for the coming year.</p>	Operations Manager, Chief Water Treatment Plant Operator
<b>JAN - FEB</b>	Consider potential constraints that may impact supply delivery	<p>Identify any known regional or WVWD infrastructure issues that may pertain to near-term water supply reliability, including repairs, construction, and environmental mitigation measures that may temporarily constrain capabilities, as well as any new projects that may add to system capacity.</p> <p>Identify any facilities out of service due to water quality problems, equipment failure, etc. that may impact normal water deliveries.</p> <p>Identify any potential or emerging impacts to groundwater quality, such as emerging regulatory constraints that may limit use of available supplies for potable needs.</p>	Operations Manager, Chief Water Treatment Plant Operator, Production Supervisor, Engineering Services Manager

<b>TIMING</b>	<b>ASSESSMENT ACTIVITIES</b>	<b>PROCEDURE, KEY DATA INPUTS, EVALUATION CRITERIA AND OTHER CONSIDERATIONS</b>	<b>STAFF RESPONSIBLE</b>
<b>FEB</b>	Convene WSCP Team to conduct Annual Assessment	<p>Compare supplies and demands and discuss any constraints that may impact supply delivery. If the potential for a shortage exists, determine which shortage response stage and actions are recommended to reduce/eliminate the shortage.</p> <p>Additionally, if the State declares a drought state of emergency and requires demand reductions, the WSCP Team will determine which water shortage stage and response actions are needed to comply with the State mandate.</p>	WSCP Team
<b>JUNE</b>	Board of Directors	If the potential for a shortage exists or the State has mandated demand reductions, the results of the Annual Assessment will be presented to the WVWD Board of Directors, including the recommended shortage stage and response actions. The Board of Directors may order the implementation of a shortage stage and will adopt a resolution declaring the applicable water shortage stage.	General Manager Board of Directors
<b>ON-GOING</b>	Implement WSCP actions, if needed	Relevant members of WVWD staff will implement shortage response actions associated with the declared water shortage stage	WSCP Team
<b>BY JULY 1</b>	Submit Retail Annual Assessment	Send Final Retail Annual Assessment to DWR	Engineering Services Manager

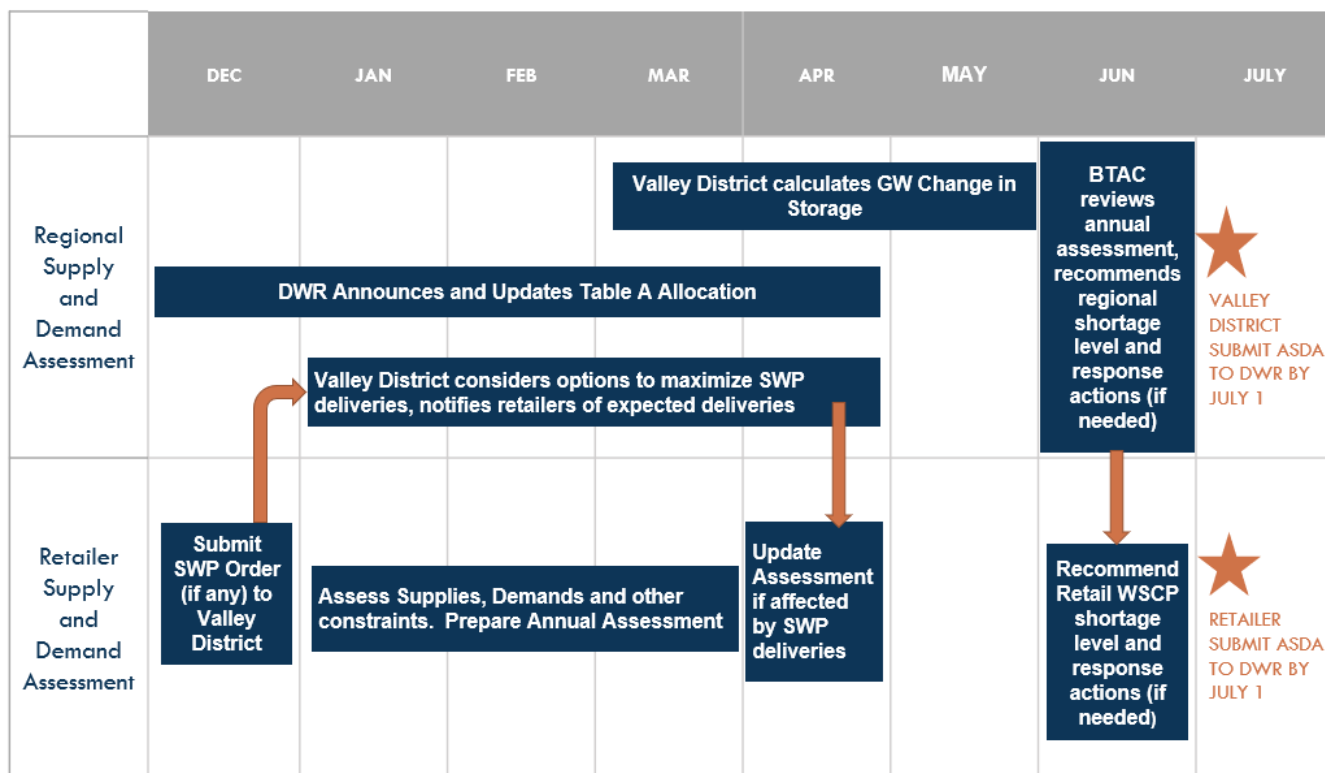

Figure 1. Regional and Retail Agency Annual Assessment Process and Timeline

### 3.0 Water Shortage Stages

With the exception of a catastrophic failure of infrastructure, WVWD does not foresee imposing a water shortage stage except under the State’s direction, as occurred in 2014 or in the event of catastrophic infrastructure failure. If a potential water supply shortage is identified in the Annual Assessment, this section provides information on the water shortage stages and response actions that WVWD may implement.

WVWD uses four (4) shortage stages to identify and respond to water shortage emergencies. At a minimum, WVWD encourages baseline conservation efforts year-round, regardless of a shortage emergency.

#### Stage I – Normal Conditions:

Normal supply and distribution capacity is available. All policies shown in Section 2403 and the following water conservation measures shall apply.

#### Stage II – Water Alert:

The District may not be able to meet all water demands of all customers, unless the following water conservation measures are applied.

#### Stage III – Water Warning (includes sub-stages A, B, and C):

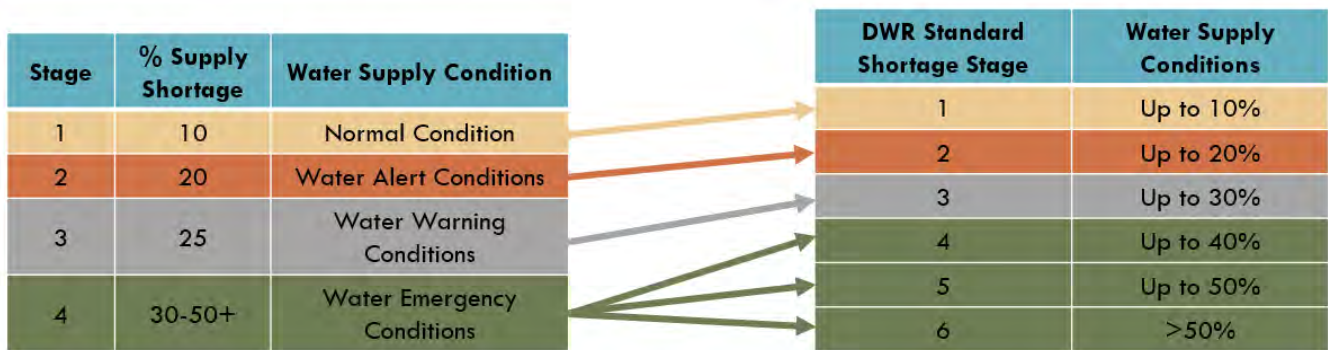

District is not able to meet all water demands of all customers; therefore, the following water conservation measures listed in [Table 4](#) shall apply.

**Stage IV: Water Emergency**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures listed in **Table 4** shall apply.

The CWC outlines six standard water shortage stages that correspond to a gap in supply compared to normal year availability. The six standard water shortage stages correspond to progressively increasing estimated shortage conditions (up to 10-, 20-, 30-, 40-, 50-percent, and greater than 50-percent shortage compared to the normal reliability condition) and align with the response actions that a water supplier would implement to meet the severity of the impending shortages.

The CWC allows suppliers with an existing WSCP that uses different water shortage stages to comply with the six standard stages by developing and including a cross-reference relating its existing shortage categories to the six standard water shortage stages. WVWD is maintaining the current four shortage stages for this WSCP. A crosswalk defines how WVWD’s current water shortage stages will align with the DWR’s standardized 6 stages of shortage. A visual representation of this alignment is shown in **Figure 2**.

**Figure 2. Crosswalk to DWR Six Standard Stages**

**Table 2: DWR 8-1 Water Shortage Contingency Plan Stages**

SHORTAGE STAGE	PERCENT SHORTAGE RANGE <sup>1</sup> (NUMERICAL VALUE AS A PERCENT)	WATER SHORTAGE CONDITION
1	Up to 10%	Normal Conditions (WVWD Stage 1)
2	Up to 20%	Water Alert Condition (WVWD Stage 2)
3	Up to 30%	Water Warning Condition (WVWD Stage 3, 3A, 3B, and 3C)
4	Up to 40%	Water Emergency Condition (WVWD Stage 4)
5	Up to 50%	Water Emergency Condition (WVWD Stage 4)
6	>50%	Water Emergency Condition (WVWD Stage 4)

<sup>1</sup> One stage in the Water Shortage Contingency Plan must address a water shortage of 50%.

## 4.0 Shortage Response Actions

This section was completed pursuant to CWC Section 10632(a)(4) and 10632.5(a) and describes the response actions that must be implemented or considered for each stage to minimize social and economic impacts to the community.

In accordance with CWC 10632(b) WVWD analyzes and defines water features that are artificially supplied with water, including ponds, lakes, waterfalls, and fountains, separately from swimming pools and spas.

### 4.1 Supply Augmentation

**Table 3** identifies the supply augmentation actions WVWD can take in the event of a water shortage condition. WVWD currently maintains interconnections with the Cities of Rialto, Colton and San Bernardino, the Fontana Water Company, Marygold Mutual Water Company. During water shortage emergencies, WVWD may be able to obtain supplemental water supply through these connections, if available.

**Table 3: DWR 8-3R Supply Augmentation & Other Actions**

SHORTAGE STAGE	SUPPLY AUGMENTATION METHODS AND OTHER ACTIONS BY WATER SUPPLIER	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE
4	Other purchases	0-100%	WVWD currently has interconnections with the Cities of Rialto, Colton and San Bernardino, the Fontana Water Company, Marygold Mutual Water Company, and Valley District

### 4.2 Demand Reduction

In addition to prohibitions on end uses, WVWD offers various rebates to encourage conservation (i.e. ultra-low flush toilet replacements, high efficiency washing machines, etc.). WVWD has a water rate structure that promotes water efficiency. The reduction goal is to balance supply and demand. **Table 4** summarizes these efforts and end use prohibitions.

**Table 4: DWR 8-2 Demand Reduction Actions**

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
All	Expand Public Information Campaign	0-20%	Provide reminder notices regarding noted water waste and offer community outreach programs	No
1	Landscape - Other landscape restriction or prohibition	0-5%	The use of sprinklers for any type of irrigation during high winds is prohibited.	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
1	Landscape - Limit landscape irrigation to specific times	0-5%	Limit all landscape irrigation to between the hours of 8:00 p.m. and 6:00 a.m. Hand watering should be done between 6:00 p.m. and 8:00 a.m. Drip irrigation and hand watering while gardening is exempt from this recommendation. Water being used during repair or maintenance of watering system is exempt from this section.	Yes
1	Landscape - Restrict or prohibit runoff from landscape irrigation	0-5%	Use of water for outdoor landscapes in a manner that causes runoff such that water flows onto adjacent property, non-irrigated areas, private and public walkways, roadways, parking lots, or structures is prohibited.	Yes
1	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	0-1%	No person shall permit water to leak from any facility, improvement or plumbing fixture on his/her/its premises; said leak shall be repaired in a timely manner.	Yes
1	Other - Require automatic shut of hoses	0-1%	Washing of automobiles, trucks, trailer, boats, and other mobile equipment is prohibited unless done with a hand held device equipped with an automatic shut off trigger nozzle. This does not apply to commercial car washes utilizing a recycling system or when the health and safety of the public would necessitate.	Yes
1	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	No water shall be used to clean, fill, operate or maintain levels in decorative fountains unless the water is part of a recycling system.	Yes
1	Other - Prohibit use of potable water for washing hard surfaces	0-1%	There shall be no application of water to sidewalks, walkways, driveways, parking areas, patios, porches, verandas, tennis courts, or other paved, concrete, or other hard surface areas, except that flammable or other similarly dangerous or unhealthy substances may be washed from said areas by direct hose flushing for the benefit of public health or safety.	Yes
1	Landscape - Prohibit certain types of	0-5%	The irrigation of potable water of ornamental turf on public street medians is prohibited. The	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
	landscape irrigation		term "median" shall mean the strip of land between street lanes.	
2	Decrease Line Flushing	0-1%		No
2	Other	0-1%	Use historical data instead of performing fire flow tests for new developments	No
2	Other	0-1%	Screen all new applications for water service installations and limit water use before occupancy	No
2	Reduce System Water Loss	0-1%	Repair all leaks within 72 hours	No
2	CII - Restaurants may only serve water upon request	0-1%	All restaurants prohibited from serving water to their customers except when requested by customer.	Yes
2	CII - Lodging establishment must offer opt out of linen service	0-1%	Operators of hotels and motels must provide guests with the option of choosing not to have towels and linens laundered daily. The hotels and motels shall prominently display notice of this option in each guestroom using clear and easily understood language.	Yes
2	Landscape - Limit landscape irrigation to specific days	0-5%	Limit all landscape irrigation to four (4) days per week for no more than ten (10) minutes per station per day. This provision does not apply to any landscape that has waterefficient devices that are operated properly. Waterefficient devices are drip irrigation systems and operational weather-based irrigation controllers. The term "week" is defined as Sunday through Saturday.	Yes
2	Other - Prohibit use of potable water for construction and dust control	0-1%	District will screen all new applications for water service installations and will limit water use before occupancy to that essential use for construction and testing of landscape plumbing. Limited landscaping for new development shall be allowed as approved by the District. Water use for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager or his/her designee.	Yes
2	Other - Customers must	0-1%	Repair all leaks within seventy-two (72) hours of notification by the District unless other	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
	repair leaks, breaks, and malfunctions in a timely manner		arrangements are made with the general manager of the District ("General Manager").	
2	Landscape - Other landscape restriction or prohibition	0-5%	Irrigating landscaping, including, but not limited to, turf and ornamental landscapes during and within forty-eight (48) hours following measurable precipitation is prohibited.	Yes
2	Other water feature or swimming pool restriction	0-1%	Swimming pools, hot tubs, and spas shall not be filled or refilled after being drained.	Yes
2	Other water feature or swimming pool restriction	0-1%	Ornamental pools, fountains, water displays, and artificial lakes shall not be filled or refilled after being drained.	Yes
2	Other - Prohibit use of potable water for construction and dust control	0-1%	Water used for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager, or his/her designee.	Yes
3	Reduce System Water Loss	0-1%	Repair all leaks within 48 hours	No
3A	Other - Prohibit vehicle washing except at facilities using recycled or recirculating water	0-1%	Washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment are prohibited. Washing of the above-listed vehicles or mobile equipment shall be allowed only at a commercial car wash where recirculating water is being utilized.	Yes
3A	Landscape - Limit landscape irrigation to specific times	0-5%	All agricultural water users shall irrigate only at times approved by the District.	Yes
3A	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	Swimming pools, hot tubs, and spas shall not be refilled or filled after being drained.	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
3A	Water Features - Restrict water use for decorative water features, such as fountains	0-1%	Ornamental pools, fountains, water displays, and artificial lakes shall not be refilled or filled after being drained.	Yes
3A	Landscape - Limit landscape irrigation to specific days	0-5%	Limit all landscape irrigation to three (3) days per week for no more than ten (10) minutes per station per day. Drip systems that are operated efficiently are exempt from these regulations.	Yes
3A	Other - Customers must repair leaks, breaks, and malfunctions in a timely manner	0-1%	Repair all leaks within forty-eight (48) hours of notification by the District unless other arrangements are made with the General Manager.	Yes
3B	Landscape - Limit landscape irrigation to specific days	5-20%	Limit all landscape irrigation to two (2) days per week for no more than ten (10) minutes per station per day.	Yes
3C	Landscape - Limit landscape irrigation to specific days	10-30%	Limit all landscape irrigation to one (1) day per week for no more than ten (10) minutes per station per day.	Yes
4	Landscape - Prohibit all landscape irrigation	10-30%	No lawn or landscape water will be allowed	Yes
4	Other - Prohibit use of potable water for construction and dust control	0-5%	No construction water use to be allowed, construction meters to be locked off or removed.	Yes
4	CII - Other CII restriction or prohibition	0-5%	Commercial nurseries shall water only between the hours of 11:00 p.m. and 6:00 a.m. and only with hand-held devices or with drip irrigation systems.	Yes
4	Landscape - Prohibit all landscape irrigation	10-30%	The use of water shall be limited to essential household, commercial, manufacturing, or processing uses only, except where other uses may be allowed by permit	Yes

SHORTAGE STAGE	DEMAND REDUCTION ACTIONS	HOW MUCH IS THIS GOING TO REDUCE THE SHORTAGE GAP?	ADDITIONAL EXPLANATION OR REFERENCE	PENALTY, CHARGE, OR OTHER ENFORCEMENT
4	Landscape - Limit landscape irrigation to specific times	0-5%	All agricultural water users shall irrigate only at times approved by the District.	Yes

### 4.3 Operational Changes and Additional Mandatory Restrictions

During shortage conditions, operations may be affected by supply augmentation or demand reduction responses. WVWD will consider their operational procedures when it completes its Annual Assessment. Any additional mandatory restrictions implemented in response to the declaration of a shortage response stage, beyond the actions listed in [Table 3](#) and [Table 4](#) are listed in WVWD’s Ordinance Number 80 Article No. 24 provided as [Attachment 1](#).

### 4.4 Emergency Response Plan

In 2021, WVWD completed a Risk and Resilience Assessment (RRA) and Emergency Response Plan (ERP) in accordance with America’s Water Infrastructure Act (AWIA) of 2018. The purpose of the RRA and ERP is to meet the AWIA compliance requirements and plan for long-term resilience of WVWD’s infrastructure. The RRA assessed WVWD’s water system to identify critical assets and processes that may be vulnerable to human and natural hazards, and to identify measures that can be taken to reduce risk and enhance resilience from service disruption for the benefit of customers. The RRA identifies and characterizes both infrastructure-specific and system-wide vulnerabilities and threats and quantifies the consequences of disruption. The RRA also identifies various options (and constraints) in addressing and mitigating risk. The RRA, in conjunction with the Emergency Response Plan (ERP), charts a course for water system resilience. The RRA also provided various recommendations to increase reliability of WVWD’s system. Since critical pieces of infrastructure and specific vulnerabilities are detailed in the RRA and ERP, the contents of the document are confidential and for use by WVWD’s staff only. However, WVWD can confirm that these plans meet the requirements set forth by AWIA and evaluate seismic risks and mitigation actions to WVWD’s infrastructure.

In the event of a water shortage emergency resulting from equipment failure, power outage, or other catastrophe, WVWD is prepared to purchase emergency water supplies from nearby agencies while repairs or other remedial actions are underway. WVWD may also implement its four-stage plan for conservation, as described above, with either voluntary or mandatory reductions depending on the severity of the shortage. For severe disasters (Stage 4), mandatory water use reductions are specified.

### 4.5 Seismic Risk Assessment and Mitigation Plan

Disasters, such as earthquakes, can and will occur without notice. In order to respond to disasters WVWD has assessed the seismic risk and reliance of WVWD’s water facilities in the RRA mentioned in the section above.

In the event of an extended multi-week supply shortages due to natural disasters or accidents which damage all water source, WVWD’s 25 storage reservoirs have a combined capacity of over 72 million gallons, which is sufficient water to meet the health and safety requirements of 50 gallons per day per capita for approximately

80,000 residents for 18 days. This assumes zero non-residential use. Under emergency power outages or catastrophic earthquake conditions, the existing storage is expected to provide a supply of four days of average day demand or 2.5 days under maximum summer demand. WVWD also has interconnections with other agencies for emergency supplies.

WVWD has portable back-up generators that can be used in the event of an area-wide power outage. These generators can be located on both wells and booster stations to continue water production. These generators will be located in the northern part of the distribution system. Water can then be boosted to higher zones or gravity fed to the lower zones. In addition to the portable generators, WVWD will be installing back-up generators at the Zone 5 and 6 booster stations.

#### 4.6 Shortage Response Action Effectiveness

WVWD has estimated the effectiveness of shortage response actions in [Table 3](#) and [Table 4](#) when data pertaining to such actions is available. It is expected that response actions effectiveness is also a result of successful communication and outreach efforts.

### 5.0 Communication Protocols

The West Valley Water District prioritizes effective communication, especially in times of a water shortage emergency. WVWD routinely communicates to customers about details on when a stage is announced. Communication actions may include bill inserts, handouts, informative flyers, and direct mail pieces to newspaper and bus shelter advertisements, news releases, social media outreach, and website content. WVWD continues to provide reminders about shortage stages and encourages conservation at all times.

### 6.0 Compliance and Enforcement

Consumption limits in the progressively restrictive stages are imposed on different uses. These are based on percentage reductions in water allotments, and restrictions on specific uses. The specific percentage reductions at each stage and for each user class are detailed in the ordinance. The individual customer allotments will be based on the previous year's use. This provides WVWD a basis for reviewing appeals.

Mandatory provisions to reduce water use during the different stages of water shortage are also summarized in the ordinance. Provisions of Article 24 - Water Conservation, adopted August 6, 2015, were adopted pursuant to Sections 375 and 376 of the CWC. Any second or subsequent violation of this policy after notice as specified in Section 2411 1(a) is a misdemeanor (CWC Section 377).

In addition to the remedy of criminal prosecution available to the District, violation of the Ordinance may result in the imposition of surcharges and restriction and/or termination of water service as set forth below:

1. **First Violation** – Notice of Non-Compliance – a written warning accompanied by a copy of this Ordinance, delivered by U.S. Mail and/or hung on customer's door.
2. **Second Violation – Warning of Penalties** – a written warning notice of future imposition of penalties that could be placed on the customer's water bill.

3. **Third Violation (within one (1) year)** - a surcharge of \$100.00.
4. **Fourth Violation (within one (1) year of the first violation)** – a surcharge of \$300.00, and installation of flow restricting device in the meter for a minimum of ninety-six (96) hours. Said restricted flow shall meet minimum County Health Department’s standards, if any have been established. If said ninety-six (96) hour period ends on a weekend or holiday, full service will be restored during the next business day.
5. **Fifth Violation (within one (1) year of the first violation)** – a surcharge of \$500.00, and termination of service for such period as the Board determines to be appropriate under the circumstances, following a hearing regarding said issue. Written notice of the hearing shall be mailed to the customer at least ten (10) days before the hearing.

Any surcharge hereunder shall be in addition to the basic water rates and other charges of the District for the account and shall appear on and be payable with the billing statement for the period during which the violation occurred; non-payment shall be subject to the same remedies available to the District as for non-payment of basic water rates.

In addition to any surcharge, a customer violating this Ordinance shall be responsible for payment of the District's charges for installing and/or removing any flow restricting device and for disconnecting and/or reconnecting service per the District's Schedule of Charges then in effect. Such charges shall be paid prior to the removal of the flow restrictor or reconnection of service, whichever the case may be.

## 7.0 Legal Authorities

To offset the prolonged effects of the drought periods, the Board of Directors adopted a Water Conservation Plan with Ordinance No. 68 on July 5, 1990 by adding Article No. 24 entitled “Water Conservation” to its water service regulations and a WSCP with Ordinance No. 69 on February 6, 1992 which amended portions of the Water Conservation Plan. On August 6, 2015, the Board of Directors amended Resolution No. 387 through Ordinance Number 80, included as **Attachment 1**, which established water service regulations, schedules of rates, and charges. Article No. 24 describes Water Conservation objectives and outlines four stages of action to be implemented during a water shortage. WVWD’s Plan includes voluntary and mandatory stages.

The purpose of Article 24 is to provide water conservation measures in order to minimize the effect of a water shortage on the citizens of, and the economic well-being of, the communities WVWD serves. This Article adopts provisions that will significantly reduce the wasteful and inefficient consumption of water, thereby extending the available water resources required for the domestic, sanitation, and fire protection needs of the citizens of the communities they serve while reducing the hardship on WVWD and the general public to the greatest extent possible.

### 7.1 Water Shortage Emergency Declaration

In accordance with CWC Section Division 1, Section 350 – WVWD shall declare a water shortage emergency condition to prevail within the area served by such distributor whenever it finds and determines that the ordinary demands and requirements of water consumers cannot be satisfied without depleting the water supply of the distributor to the extent that there would be insufficient water for human consumption, sanitation, and fire protection.

## 7.2 Local/Regional Emergency Declaration

If a water shortage is approaching, WVWD shall coordinate with any the cities and counties in its service area for the possible proclamation of a local emergency.

## 8.0 Financial Consequences of WSCP

To ensure WVWD's customers comply with Article 24 and CWC Chapter 3.3 (Excessive Residential Water Use During Drought), additional costs may be incurred to monitor and enforce response actions. The financial consequences a water shortage can have on WVWD and the local community will depend on the duration and level of severity. During Stages 2 through 4 of the District's WSCP, water consumption will decrease based upon each individual stage and the amount of reduction goal achieved. The impacts of these reductions will result in a reduction in water sales revenues and a reduction of water production expenditures. To mitigate the financial impacts of a water shortage, WVWD maintains sufficient funds within a Rate Stabilization Account. These funds could be used to stabilize water rates during periods of water shortage or disasters affecting the water supply.

## 9.0 Monitoring and Reporting

The water savings from implementation of the WSCP will be determined based on monthly production reports which are reviewed and compared to production reports and pumping statistics from prior months and the same period of the prior year. Under shortage conditions, these production reports could be prepared as often as daily. At first, the cumulative consumption for the various sectors (e.g., residential, commercial, etc.) will be evaluated for reaching the target level. Then if needed, individual accounts will be monitored. Weather and other possible influences may be accounted for in the evaluation.

## 10.0 WSCP Refinement Procedures

The WSCP is best prepared and implemented as an adaptive management plan. WVWD will use results obtained from their monitoring and reporting program to evaluate any needs for revisions. Potential changes to the WSCP that would warrant an update include, but are not limited to, any changes to trigger conditions, changes to the shortage stage structure, and/or changes to customer reduction actions.

Any prospective changes to the WSCP would need to be presented to WVWD's Board for discretionary approval. Once discretionary approval has been granted, WVWD will hold a public hearing, obtain any comments and adopt the updated WSCP. Notices for refinement and the public hearing date will be published in the local newspaper in advance of any public meetings.

## 11.0 Plan Adoption, Submittal and Availability

WVWD adopted this WSCP with the 2020 IRUWMP. The 2020 IRUWMP and WSCP were made available for public review in June 2021 and a public hearing was held on **June 17, 2021** to receive public input on the draft 2020 IRUWMP and the WSCP.

The WVWD Board of Directors adopted the 2020 IRUWMP and the WSCP at a public meeting on **June 17, 2021**. The resolution of adoption is included as an attachment.

This WSCP was submitted to DWR through the WUData portal before the deadline of **July 1, 2021**.

This WSCP will be available to the public on West Valley Water District web site.

If WVWD identifies the need to amend this WSCP, it will follow the same procedures for notification to cities, counties and the public as used for the 2020 IRUWMP and for initial adoption of the WSCP.

# Attachment 1: WVWD'S Article No. 24 - Water Conservation

ORDINANCE NO. 80  
AN ORDINANCE OF THE BOARD OF DIRECTORS OF THE  
WEST VALLEY WATER DISTRICT  
RESCINDING ORDINANCE 79 AND AMENDING RESOLUTION  
NO. 387, WATER SERVICE REGULATIONS, BY AMENDING  
ARTICLE NO. 24 - WATER CONSERVATION

WHEREAS, Article 10, Section 2 of the California Constitution declares that waters of the State are to be put to beneficial use, that waste, unreasonable use, or unreasonable method of use of water be prevented, and that water be conserved for the public welfare; and

WHEREAS, the water resources of West Valley Water District (“District”) are limited and finite; and

WHEREAS, conservation of certain water supplies and minimization of the effects of water supply shortages that are the result of drought are essential to the public health, safety and welfare; and

WHEREAS, regulation of the time of certain water use and manner of use provide an effective and immediately available means of conserving water; and

WHEREAS, California Water Code Sections 375 et seq. authorize water suppliers to adopt and enforce a comprehensive water conservation program; and

WHEREAS, pursuant to such authority the Board of Directors (“Board”) of District adopted Ordinance No. 68 amending Resolution No. 387, to add Article 24 to the District’s Service Regulations (“Article 24”); and

WHEREAS, the Board adopted Ordinance No. 78, rescinding Ordinance No. 68, and amending Resolution No. 387, by amending Article 24; and

WHEREAS, the Board adopted Ordinance No. 79, rescinding Ordinance No. 78, and amending Resolution No. 387, by amending Article 24; and

WHEREAS, the adoption of this Ordinance will allow the District to delay or avoid the implementation of more restrictive water use regulations provided that nothing in this Ordinance will prevent the District from implementing more restrictive regulations as authorized by California Water Code Section 350 et. seq; and

WHEREAS, the District has adopted an Urban Water Management Plan (“Plan”) that includes water conservation as a necessary and effective component to provide a reliable source of water to meet the needs of the District’s customers. The Plan also includes an analysis of actions to be taken in response to water supply shortages. This Ordinance is consistent with the District’s

Plan; and

WHEREAS, the State Water Resources Control Board adopted Resolution No. 2014-0038, No. 2014-0718-01E and 2015-0032 to adopt an emergency regulation for statewide urban water conservation (“State Board Regulations”). The State Board Regulations set forth certain prohibited activities and certain actions to be taken by water suppliers, such as the District; and

WHEREAS, the water conservation measures and progressive restrictions on water use identified by this Ordinance provide certainty to water users and enable District to control water use and plan and implement water measures in a fair and orderly manner for the benefit of the public. This Ordinance is further intended to comply with the mandates of the State Board Regulations as such applies to the District.

NOW, THEREFORE, THE BOARD OF DIRECTORS OF WEST VALLEY WATER DISTRICT does ordain that Resolution 387 is hereby amended to amend Article 24 to read as follows:

#### ARTICLE 24 WATER CONSERVATION

**1. Purpose.** The purpose of this Article is to provide water conservation measures in order to minimize the effect(s) of a water shortage on the citizens of, visitors to, and the economic well-being of the communities we serve and, by means of this Article, to adopt provisions that will significantly reduce the wasteful and inefficient consumption of water, thereby extending the available water resources required for the domestic, sanitation, and fire protection needs of the citizens of, and visitors to, the communities we serve while reducing the hardship on the District and the general public to the greatest extent possible.

**2. Application.** The provisions of this Article shall apply to all customers and property within the service area of the District and shall also apply to all property and facilities owned, maintained, operated, or otherwise under the jurisdiction of the District.

a) **Exception.** The prohibited uses of water provided for by this Ordinance are not applicable to that use of water necessary for public health and safety or for essential government services such as police, fire, and similar emergency services.

**3. Policy.** Due to the fact that we are located in a semi-arid region and our groundwater is of limited supply and in an overdraft condition and because of these conditions prevailing in the District and areas elsewhere from which the District obtains its water supplies, the general welfare requires that the water resources available to the District be put to the maximum beneficial use to the extent to which they are capable and that the wasteful, inefficient, or unreasonable use, or method of use of our previous, limited, and finite water resources be prevented.

As such, the conservation of such waters is to be exercised with a view to the reasonable and

beneficial and efficient use thereof in the interests of the people of the District and for the public welfare.

Therefore, the District establishes the following goals, objectives, policies, and four-stage water conservation plan pertaining to the conservation and use of water:

**2401. GOALS**

- < The conservation of water.
- < The efficient use and distribution of available water supplies.
- < Adequate and sufficient potable water supply and availability for the greatest public benefit, with particular regard to human consumption, sanitation, and fire protection.
- < Maintain high quality customer service.
- < Ensure fiscal soundness.
- < Protect environmental quality.
- < Meet growing water quality regulations.
- < To reduce water consumption in accordance with State law, including, but not limited to the State Board Regulations.

**2402. OBJECTIVES**

- < To conserve all available water supplies.
- < To achieve an overall water use reduction.
- < To reduce the volume of wastewater.
- < To continuously increase consumer awareness about the need for and benefits of water conservation.
- < To reduce or eliminate wasteful and inefficient uses of water.
- < To assure an adequate supply of potable water sufficient to meet the essential private and public needs of the District's growing population and economy of those communities in which we serve.
- < To assure that all new developments and existing dwellings which are remodeled or

added to are equipped with water-conserving devices, fixtures, and appliances.

< To increase the use of native or water-conserving plant species for landscaping purposes.

< The term “base year” shall have the following meaning:

- a) The year 2013, if the customer occupied the subject real property for the entire year.
- b) If the customer did not occupy the subject real property for the entire year of 2013, the base year for that customer would be the first twelve (12) months the customer occupied the subject real property in or after 2013.
- c) If the customer has not occupied the subject real property for a twelve (12) month period on the adoption of this Ordinance, then the District will use the consumption history for the period of time the customer has occupied the subject real property. If the customer has no consumption history for the subject real property then the District will determine goals for that customer based on the averaging of other real properties with similar service types and meter sizes within the same meter reading route (as determined by the District) for the months without consumption history. The customer shall have a ten (10) day period after the customer receives the goals to appeal that determination to the General Manager (as defined herein), in writing. If the customer fails to appeal the determination within the ten (10) day period the goals shall be final. Upon receipt of a timely appeal, the General Manager shall schedule a hearing at which the General Manager or his/her designated representative shall act as the hearing officer. The hearing shall be at least ten (10) days following receipt of the appeal, and the District shall mail written notice of the hearing to the customer at least ten (10) days before the date of said hearing. The determination of the hearing officer with respect to the goals shall be final.

### **2403. POLICIES**

< As a condition of water service, all new structures shall be equipped with high efficiency toilets (1.28 gallons per flush max) as per Section 17921.3 of the California Health and Safety Code, and with low-flow showers and faucets as per Title 24, Part 6, Article 1, T20-1406F of the California Administrative Code, in addition to the insulating of all hot water lines according to California Energy Commission Rules. “New Structures” shall mean buildings obtaining occupancy permits after the effective date of this Ordinance.

As a condition of continued water service, existing structures not so equipped, which require building permits to remodel or expand, shall be retrofitted with toilet tank dams

resulting in 1.28 gallon flushes unless the toilets are to be replaced, in which case the new toilets shall be ultra low-flush (1.28gpf), as stated above, and low-flow showers and faucets. Certification of compliance with this Ordinance shall be forwarded to the District.

- < The use of lawns shall be minimized in new commercial, hotel, condominium, and high-density housing and shall be subject to District review and conditioning of projects. The use of native or water-conserving trees, shrubs, lawns, grass, ground cover, vines, and other plant species for landscape planting or replanting purposes is required and shall be approved by the District. (A list of such plants can be obtained at the District office.)
- < Large water users, as determined by the District, shall submit a water conservation plan to the District and promote implementation of same as a condition to continued service.
- < Water demand, use, and mitigation shall be address in every Environmental Impact Report.
- < The District shall:
  - a) Cooperate with other local water purveyors, appropriate state and other responsible agencies in facilitating a continuous program to increase consumer awareness about the need for and benefits of water conservation.
  - b) Encourage large water users to implement water recycling and reuse processes.
  - c) Make water conservation as reliable a method of reducing water demands as water supply projects are in meeting such demands.

#### **2404. STAGE I - NORMAL CONDITION**

Normal supply and distribution capacity is available. All policies shown in Section 2403 and the following water conservation measures shall apply.

1. Recommendations for use of water.
  - a) Limit all landscape irrigation to between the hours of 8:00 p.m. and 6:00 a.m. Hand watering should be done between 6:00 p.m. and 8:00 a.m. Drip irrigation and hand watering while gardening is exempt from this recommendation. Water being used during repair or maintenance of watering system is exempt from this section.
  - b) Water conservation should be practiced within the home or business.
  - c) All restaurants and food establishments are requested not to serve water to their customers unless specifically requested by the customer.

2. The following uses of water are hereafter considered non-essential to the public health, safety and welfare and, if allowed, would constitute the wasting of water and is hereby prohibited, pursuant to Water Code Section 350 et seq., Water Code Section 71640 et. Seq. and the common law:
- a) There shall be no application of water to sidewalks, walkways, driveways, parking areas, patios, porches, verandas, tennis courts, or other paved, concrete, or other hard surface areas, except that flammable or other similarly dangerous or unhealthy substances may be washed from said areas by direct hose flushing for the benefit of public health or safety.
  - b) No water shall be used to clean, fill, operate, or maintain levels in decorative fountains unless such water is part of a recirculating system.
  - c) No person shall permit water to leak from any facility, improvement or plumbing fixture on his/her/its premises; said leak shall be repaired in a timely manner.
  - d) Washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment are prohibited unless done with a hand-held bucket or hand-held hose equipped with a shut-off nozzle or device attached to it that causes it to cease dispensing water immediately when not in use. This section does not apply to the washing of the above-listed vehicles or mobile equipment when conducted at a commercial car wash utilizing recirculating systems.
    - 1. Such washings are exempted from these regulations when the health, safety, and welfare of the public is contingent upon frequent vehicle cleaning such as garbage trucks and vehicles used to transport food and perishables.
  - e) Use of water for outdoor landscapes in a manner that causes runoff such that water flows onto adjacent property, non-irrigated areas, private and public walkways, roadways, parking lots, or structures is prohibited .
  - f) The use of sprinklers for any type of irrigation during high winds, which divert a significant amount of water from the intended landscaping, is prohibited.
  - g) The irrigation of potable water of ornamental turf on public street medians is prohibited. The term “median” shall mean the strip of land between street lanes.
  - h) The irrigation with potable water of landscape outside of newly constructed homes and buildings shall be consistent with regulations or other requirements establishments by the California Buildings Standards Commission, as those regulations may be modified from time to time.

**2405. STAGE II - WATER ALERT**

The District may not be able to meet all water demands of all customers, unless the following water conservation measures are applied:

- a) All policies and prohibitions listed in Sections 2403 and 2404.
- b) All customers are asked for a minimum twenty percent (20%) reduction of their water consumption over the base year consumption, unless otherwise stated.
- c) Operators of hotels and motels must provide guests with the option of choosing not to have towels and linens laundered daily. The hotels and motels shall prominently display notice of this option in each guestroom using clear and easily understood language.
- d) All eating establishments, including, but not limited to, restaurants, hotels, cafes, cafeterias, bars or other public places where food or drink are served and/or purchased are prohibited from serving water to their customers except when specifically requested by the customer.
- e) District will screen all new applications for water service installations and will limit water use before occupancy to that essential use for construction and testing of landscape plumbing. Limited landscaping for new development shall be allowed as approved by the District.
- f) Limit all landscape irrigation to four (4) days per week for no more than ten (10) minutes per station per day. This provision does not apply to any landscape that has water-efficient devices that are operated properly. Water-efficient devices are drip irrigation systems and operational weather-based irrigation controllers. The term “week” is defined as Sunday through Saturday.
- g) Repair all leaks within seventy-two (72) hours of notification by the District unless other arrangements are made with the general manager of the District (“General Manager”).
- h) Water use for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager or his/her designee.
- i) Irrigating landscaping, including, but not limited to, turf and ornamental landscapes during and within forty-eight (48) hours following measurable precipitation is prohibited.

**2406. STAGE III A - WATER WARNING**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures shall apply.

- a) All policies and prohibitions listed in Sections 2403, 2404 and 2405.

- b) All customers are required to reduce potable water consumption by a minimum of twenty-five (25%) reduction in their water consumption over the base year consumption.
- c) Washing of automobiles, trucks, trailers, boats, airplanes, and other types of mobile equipment are prohibited. Washing of the above-listed vehicles or mobile equipment shall be allowed only at a commercial car wash where recirculating water is being utilized.
  - 1. Such washings are exempt from these regulations when the health, safety, and welfare of the public is contingent upon frequent vehicle cleaning such as garbage trucks and vehicles used to transport food and perishables.
- d) New water services shall be installed but water shall be used before occupancy for essential construction only and for testing of landscape irrigation systems. The installation of new landscaping for all new development/projects must be approved by the District.
- e) Limit all landscape irrigation to three (3) days per week for no more than ten (10) minutes per station per day. Drip systems that are operated efficiently are exempt from these regulations.
- f) Repair all leaks within forty-eight (48) hours of notification by the District unless other arrangements are made with the General Manager.
- g) All agricultural water users shall irrigate only at times approved by the District.
- h) Swimming pools, ornamental pools, fountains, water displays, hot tubs, spas and artificial lakes shall not be filled or refilled after being drained.
- i) Water used for compaction, dust control, and other types of construction shall be by permit only and will be limited to conditions of the permit or may be prohibited as determined by the General Manager, or his/her designee.

#### **2407. STAGE III B- WATER WARNING**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures shall apply.

- a) All policies and prohibitions listed in Sections 2403, 2404, 2405 and 2406 (except 2406 (e)).
- b) Limit all landscape irrigation to two (2) days per week for no more than ten (10) minutes per station per day.

**2408. STAGE III C- WATER WARNING**

District is not able to meet all water demands of all customers; therefore, the following water conservation measures shall apply.

- a) All policies and prohibitions listed in Sections 2403, 2404, 2405 and 2406 (except 2406 (e)).
- b) Limit all landscape irrigation to one (1) day per week for no more than ten (10) minutes per station per day.

**2409. STAGE IV - WATER EMERGENCY**

District is experiencing a major failure of supply or distribution; therefore, the following water conservation measures shall apply:

- a) All policies and prohibitions shown in Sections 2403, 2404, 2405 and 2406.
- b) All customers are required to reduce potable water consumption by a minimum of thirty percent (30%) reduction in their water consumption over the base year consumption.
- c) No water shall be used for construction purposes. All construction meters shall be locked off or removed.
- d) Commercial nurseries shall water only between the hours of 11:00 p.m. and 6:00 a.m. and only with hand-held devices or with drip irrigation systems.
- e) There shall be no watering of any lawn or landscaped area.
- f) The use of water shall be limited to essential household, commercial, manufacturing, or processing uses only, except where other uses may be allowed by permit.
- g) All agricultural water users shall irrigate only at times approved by the District.

**2410. DETERMINATION AND DECLARATION OF WATER CONDITIONS**

The General Manager, or his/her designee, shall access all available water supply data and shall make a report of his/her findings to the Board at the next Regular meeting or at a Special meeting called for that purpose. The Board may at that time determine and declare which of the four (4) previously discussed conditions the District's water supply is in and the extent of water conservation required to prudently plan for and supply water to the District's customers.

Thereafter, the Board may order that the appropriate stage of water conservation be implemented or terminated in accordance with the applicable provision of this Ordinance. The declaration of any stage shall be made by public announcement and notice shall be published once in a local

newspaper of general circulation. The stage designated shall become effective immediately upon announcement.

#### **2411. DURATION OF DECLARATION**

The declaration of any stage of water supply conditions shall remain in effect until such time as another stage is declared.

#### **2412. AUTHORITY - MISDEMEANOR**

This Article is adopted pursuant to Sections 375 and 376 of the California Water Code. Any second or subsequent violation of this policy after notice as specified in Section 2411 1(a) is a misdemeanor. (California Water Code Section 377).

#### **2413. ENFORCEMENT**

1. **Violations.** In addition to the remedy of criminal prosecution available to the District as described above, violation of this Ordinance may result in the imposition of surcharges and restriction and/or termination of water service as set forth below:

- a) First Violation – Notice of Non-Compliance – a written warning accompanied by a copy of this Ordinance, delivered by U.S. Mail and/or hung on customer's door.
- b) Second Violation – Warning of Penalties – a written warning notice of future imposition of penalties that could be placed on the customer's water bill.
- c) Third Violation (within one (1) year) - a surcharge of \$100.00.
- d) Fourth Violation (within one (1) year of the first violation) – a surcharge of \$300.00, and installation of flow restricting device in the meter for a minimum of ninety-six (96) hours. Said restricted flow shall meet minimum County Health Department's standards, if any have been established. If said ninety-six (96) hour period ends on a weekend or holiday, full service will be restored during the next business day.
- e) Fifth Violation (within one (1) year of the first violation) – a surcharge of \$500.00, and termination of service for such period as the Board determines to be appropriate under the circumstances, following a hearing regarding said issue. Written notice of the hearing shall be mailed to the customer at least ten (10) days before the hearing.

2. **Surcharges, Additional Charges.** Any surcharge hereunder shall be in addition to the basic water rates and other charges of the District for the account and shall appear on and be payable with the billing statement for the period during which the violation occurred; non-payment shall be subject to the same remedies available to the District as for non-payment of basic water rates.

In addition to any surcharge, a customer violating this Ordinance shall be responsible for payment of the District's charges for installing and/or removing any flow restricting device and for disconnecting and/or reconnecting service per the District's Schedule of Charges then in effect. Such charges shall be paid prior to the removal of the flow restrictor or reconnection of service, whichever the case may be.

3. **Non-liability for Damage.** The customer or resident who violates this Ordinance thereby assumes responsibility for injury to the customer and/or other residents/occupants receiving service, including emotional distress and/or damage to the customer's private water system and/or to other real or personal property owned by the customer or by a third party resulting from the installation and operation of a flow restricting device or from termination of service; said customer shall thereby be deemed to have: (a) waived any claim for injury or for damage to the customer's property which the customer may otherwise have against the District; and (b) agreed to indemnify, defend, and hold the District harmless from claims by third parties for injury or property damage arising or claimed to arise out of the District's installation and/or operation of a flow restricting device or termination of water service.

4. **Exemptions.** No exemption shall be granted to any person for any reason in the absence of a showing by said person that he/she/it has achieved the maximum practical reduction in water consumption in his/her residential, commercial, industrial, or governmental water consumption as the case may be.

The General Manager, or his/her designee, may grant exemptions ("exceptions" to this Ordinance) for uses of water otherwise prohibited by the regulations. Water customers who feel that they need an adjustment in the prohibitions as they relate to him/her will fill out a simple application form for an exemption stating the justification and circumstances. If the exemption is not granted, customer may appeal in writing as stated in Section 2414.1.

a) Inconvenience or the potential for damage to landscaping shall not be considered for exemption from any section of this Ordinance.

#### **2414. APPEALS**

1. **Procedures.** The General Manager, or his/her designated enforcement officer, shall determine when violations have occurred and shall issue to the customer a notice of violation ("Notice of Violation") by mailing same and/or hanging same on the customer's door at least ten (10) days before taking enforcement action. Said notice shall describe the action to be taken (notice of first violation shall simply be accompanied by a copy of this Ordinance) and shall be mailed or delivered at least ten (10) days before the proposed action is scheduled to be taken.

A customer may appeal the Notice of Violation by filing a written notice of appeal with the District no later than the close of business on the day before the date scheduled for enforcement action. Any Notice of Violation not timely appealed shall be final. Upon receipt of a timely appeal, a hearing on the appeal by the Board shall be scheduled at the Board's next Regular meeting or at a Special meeting scheduled for that hearing; in either, the hearing shall be at least

ten (10) days following receipt of the appeal, and the District shall mail written notice of the hearing to the customer at least ten (10) days before the date of said hearing.

2. **Interim Measures.** Pending receipt of a written appeal or pending a hearing pursuant to an appeal, the General Manager or the enforcement officer, if one has been designated, may take appropriate steps to prevent the unauthorized use of water as appropriate to the nature and extent of the violation and the current declared water condition.

#### **2415. IMPLEMENTATION BY GENERAL MANAGER**

The General Manager or designated representative is hereby authorized and directed to implement the provisions of this Ordinance. Guidelines regarding implementation procedures may be approved and/or modified from time to time by resolution by the Board.

#### **2416. CEQA EXEMPTION**

The adoption of this Ordinance, and the actions taken hereunder, are exempt from the provisions of the California Environmental Quality Act of 1970 in that they constitute a project undertaken as immediate action necessary to prevent or mitigate an emergency pursuant to Section 15071 of the State EIR Guidelines.

#### **2417. DURATION OF ORDINANCE**

This Ordinance shall remain in effect until the Board finds that the threatened emergency and threatened water shortage no longer exists. The provisions of this Ordinance shall prevail and control in the event of any inconsistency with any other rules and regulations of the District.

#### **2418. SEVERABILITY**

If any section, subsection, sentence, clause, or phrase of this Ordinance is for any reason held to be unconstitutional or invalid, such decision shall not affect the validity of the remaining portions of this Ordinance. The Board hereby declares that it would have passed this Ordinance and each section, subsection, sentence, clause, or phrase thereof irrespective of the fact that any one or more sections, subsections, sentences, clauses or phrases may be unconstitutional or invalid.

#### **2419. EFFECTIVE DATE, PUBLISHING, AND POSTING**

This Ordinance shall be effective immediately upon adoption. Within ten (10) days of adoption, a copy of this Ordinance shall be published one time in a local newspaper and posted in the lobby of the District Office.

ADOPTED, SIGNED AND APPROVED THIS 6<sup>th</sup> DAY OF AUGUST, 2015.

  
Betty Gosney, President of  
the Board of Directors

### OPENING CEREMONIES

Pledge of Allegiance - Led by Vice President Kyle Crowther.  
Opening Prayer - Led by Elder Vincent McDonald, Sunrise Church.  
Call to Order  
Roll Call of Board Members

### ADOPT AGENDA

Director Greg Young motioned to adopt the agenda as presented and Director Dr. Michael Taylor second the motion. Hearing no discussion, the following vote was taken:

WVWD

Minutes: 5/20/21

<b>RESULT:</b>	<b>ADOPTED [UNANIMOUS]</b>
<b>MOVER:</b>	Gregory Young, Director
<b>SECONDER:</b>	Michael Taylor, Director
<b>AYES:</b>	Channing Hawkins, Michael Taylor, Kyle Crowther, Clifford Young, Gregory Young

## PUBLIC PARTICIPATION

Ms. Peggy Asche, Board Secretary, reported that she received an email from Dr. Carl Christman requesting to speak to the Board. At this time, Dr. Christman addressed the Board with his concerns. Mr. Bill Perez also addressed the Board regarding Business Matters Item No. 15. There were no other comments via Zoom.

## PRESENTATION

- Oliver P. Roemer Water Filtration Facility Expansion Update.

Linda Jadeski, Engineering Services Manager, updated the Board on the SRF Loan funding stating that the general information package has been submitted and a Project Manager has been assigned. The technical package will be submitted next week followed by the financial package. The last package is the environmental package, a draft initial study and a mitigated declaration has been prepared. Once reviewed by Staff, a 30-day public review period will be held and then brought back to the Board for approval. An “Expression of Interest” was posted on PlanetBids for firms looking to participate in the project. The district received six (6) Design Build Team responses on April 30<sup>th</sup> and are currently under review. The district’s consultant is currently preparing a “Request for Qualifications” for a Design Build Team for a progressive design build method that has been chosen for this project. Currently they are working on the SCADA integration, landscape architect, City of Rialto Planning and Fire Departments. The next steps are the CEQA draft review in May, and in June the public review will be issued followed by a release for request of qualifications from the Design Build Teams and the submittal of Environmental package for SRF loan application and the CEQA adoption by the Board of Directors in July. This concluded her update. No questions were asked.

- Legislative Update and Funding Opportunities.

Naseem Farooqi, Public Affairs Manager, provided a brief update on Federal Funding opportunities. Mr. Farooqi stated that the district has been working with our Federal Lobbyist, David Turch and Associates in identifying some federal opportunities for some of the projects within our jurisdiction. Three projects were submitted for funding, to Congressman Pete Aguilar’s office and two resubmitted to Congresswoman Norma Torres’s office that are in her jurisdiction. Also, three projects were submitted to Senator Dianne Feinstein’s office. The district has been notified from Congresswoman Norma Torres’s office that out of one hundred projects her office received, the district has been selected as one of their top ten to submit to the Appropriations Committee. One of the projects submitted is the Bloomington Alley Way project and should know by July or August if the district will be awarded the \$2 million. It will be beneficial to the district as well as the residents in the unincorporated area of Bloomington. Other funding

WVWD

Minutes: 5/20/21

opportunities are being reviewed at the federal level for infrastructure money as well as at the State level. President Hawkins stated that the Public Affairs Department is doing a great job and hopes to have a report from the State Lobbyist soon.

## CONSENT CALENDAR

Director Greg Young motioned to adopt the Consent Calendar moving Item No. 3 for separate discussion and Vice President Kyle Crowther second the motion. Hearing no discussion, the following vote was taken:

<b>RESULT:</b>	<b>ADOPTED [UNANIMOUS]</b>
<b>MOVER:</b>	Gregory Young, Director
<b>SECONDER:</b>	Kyle Crowther, Vice President
<b>AYES:</b>	Channing Hawkins, Michael Taylor, Kyle Crowther, Clifford Young, Gregory Young

1. **APRIL 29, 2021 - SPECIAL BOARD MEETING MINUTES.**
2. **SENSUS WARRANTY SETTLEMENT.**
3. **IMMACULIGHT UV DISINFECTION SYSTEM AGREEMENT.**
4. **GIS/INCODE INTEGRATION PROJECT.**
5. **TASK ORDER NO. 1 WITH TOM DODSON & ASSOCIATES FOR BIOLOGICAL AND ENVIRONMENTAL CONSULTING SERVICES FOR THE 18-INCH TRANSMISSION MAIN CROSSING AT ONTARIO INTERSTATE 15 FREEWAY FROM CITRUS AVENUE TO LYTLE CREEK ROAD.**
6. **CONSIDER AWARD OF CONTRACT FOR CONSTRUCTION OF WELL 18A PIPE BLENDING PROJECT TO EL-CO CONTRACTORS, INC.**
7. **I-10 CEDAR AVENUE INTERCHANGE IMPROVEMENT PROJECT: UNION PACIFIC RAILROAD COMPANY AGREEMENT.**
8. **PEPPER AVENUE AT I-10 FREEWAY 24-INCH TRANSMISSION MAIN PROJECT: UNION PACIFIC RAILROAD COMPANY AGREEMENT.**
9. **WATER SYSTEM INFRASTRUCTURE INSTALLATION AND CONVEYANCE AGREEMENT WITH LENNAR HOMES OF CALIFORNIA, INC FOR ZONE 4 - 30" TRANSMISSION LINE IMPROVEMENTS.**
10. **WATER SYSTEM INFRASTRUCTURE INSTALLATION AND CONVEYANCE AGREEMENT WITH LENNAR HOMES OF CALIFORNIA, INC FOR WELL SUPPLY LINE REPLACEMENT PROJECT.**
11. **WATER SYSTEM INFRASTRUCTURE INSTALLATION AND CONVEYANCE AGREEMENT WITH LENNAR HOMES OF CALIFORNIA, INC FOR TRACT 20092 WATER IMPROVEMENT PLANS.**

WVWD

Minutes: 5/20/21

12. **ADOPT RESOLUTION 2021-6, ADOPTING THE 2021 DEVELOPMENT IMPACT FEE STUDY.**

13. **APPROVAL OF PAYMENT TO IVIE MCNEILL WYATT PURCELL & DIGGS, FOR PROFESSIONAL SERVICES RENDERED IN MARCH 2021, INVOICE NO'S 744444 AND 744445; TOTALING \$10,890.00.**

14. **APPROVAL OF PAYMENT TO LIEBERT CASSIDY WHITMORE, FOR PROFESSIONAL SERVICES RENDERED IN MARCH 2021, INVOICE NO. 1518522; \$639.00.**

**BUSINESS MATTERS**

3. **IMMACULIGHT UV DISINFECTION SYSTEM AGREEMENT.** (Moved from the Consent Calendar).

Director Dr. Michael Taylor motioned to approve this item and Vice President Kyle Crowther second the motion. Hearing no discussion, the following vote was taken:

<b>RESULT:</b>	<b>APPROVED [4 TO 1]</b>
<b>MOVER:</b>	Michael Taylor, Director
<b>SECONDER:</b>	Kyle Crowther, Vice President
<b>AYES:</b>	Channing Hawkins, Michael Taylor, Kyle Crowther, Clifford Young
<b>ABSTAIN:</b>	Gregory Young

15. **SEEKING DIRECTION TO NEGOTIATE A COMMUNITY WORKFORCE AGREEMENT.**

Mr. Shamindra Manbahal, Interim General Manager, reported that Item No. 15 is seeking direction from the Board to negotiate for a Community Workforce Agreement. This is an agreement to allow the Interim General Manager to seek assistance from other public water agencies to provide scheduled project completions and a readily available list of skilled crafted construction workers for the Roemer Water Filtration Expansion Project. This direction is not an agreement, but to proceed to negotiate with an agreement with Mr. Bill Perez and the various Unions. Once the agreement is finalized, it will be brought back to the Board for consideration. At this time, Director Dr. Michael Taylor motioned to approve as stated and Vice President Kyle Crowther second the motion. Hearing no further discussion, the following vote was taken:

<b>RESULT:</b>	<b>APPROVED [4 TO 1]</b>
<b>MOVER:</b>	Michael Taylor, Director
<b>SECONDER:</b>	Kyle Crowther, Vice President
<b>AYES:</b>	Channing Hawkins, Michael Taylor, Kyle Crowther, Clifford Young
<b>ABSTAIN:</b>	Gregory Young

WVWD

Minutes: 5/20/21

**16. CONSIDER ISSUING A NOTICE OF TERMINATION FOR CONVENIENCE TO CAROLLO ENGINEERS, INC. AND CONVERTING THE FIXED-BED BIOREACTOR WELLHEAD TREATMENT SYSTEM (FXB) TO A MORE EFFECTIVE SOURCE OF TREATMENT.**

Mr. Shamindra Manbahal, Interim General Manager, stated that this item was on the agenda at the last Board meeting; however, it was worded wrong and requested to be brought back with the proper wording at the next regularly scheduled Board meeting. Therefore, Director Dr. Clifford Young motioned to approve this item and Director Greg Young second the motion. Hearing no discussion, the following vote was taken:

<b>RESULT:</b>	<b>APPROVED [UNANIMOUS]</b>
<b>MOVER:</b>	Clifford Young, Director
<b>SECONDER:</b>	Gregory Young, Director
<b>AYES:</b>	Channing Hawkins, Michael Taylor, Kyle Crowther, Clifford Young, Gregory Young

**17. FISCAL YEAR 2021-22 PROPOSED OPERATING AND CAPITAL BUDGET**

Director Dr. Clifford Young motioned to approve the Fiscal Year 2021-22 Operating and Capital Budget. Director Dr. Michael Taylor second the motion. Director Greg Young asked that his colleagues delay this item as he has several questions, and he was under the impression there would be a workshop. Discussion ensued. The following vote was taken:

<b>RESULT:</b>	<b>APPROVED [4 TO 1]</b>
<b>MOVER:</b>	Clifford Young, Director
<b>SECONDER:</b>	Michael Taylor, Director
<b>AYES:</b>	Channing Hawkins, Michael Taylor, Kyle Crowther, Clifford Young
<b>NAYS:</b>	Greg Young

**REPORTS - LIMITED TO 5 MINUTES MAXIMUM (Presentations or handouts must be provided to Board Members in advance of the Board Meeting).**

**1. Board Members**

**2. General Manager**

- Mr. Shamindra Manbahal thanked the Board for their continued support in the budgetary process. Also, thanked all the departments who helped deliberate in an open format and come together as a team to present a balanced budget this year. At this time, he displayed some photos from the Mother’s Day luncheon that was prepared by the Human Resources Department and thanked them for making it happen.

**3. Legal Counsel**

- Mr. Robert Tafoya reported out of Closed Session stating that no reportable action was taken.

WVWD

Minutes: 5/20/21

## CLOSED SESSION

Mr. Robert Tafoya reported out of Closed Session stating that no reportable action was taken.

- PUBLIC EMPLOYEE PERFORMANCE EVALUATION – Pursuant to Government Code Section 54957 Title(s): General Counsel.
- CONFERENCE WITH LEGAL COUNSEL – ANTICIPATED LITIGATION – Significant exposure to litigation pursuant to paragraph (2) of subdivision (d) of Section 54956.9(b): Number of Cases: Three (3).
- CONFERENCE WITH LABOR NEGOTIATOR (54957.6) DISTRICT NEGOTIATORS; Shamindra Manbahal, Robert Tafoya, Union Negotiators; re: International Union of Operating Engineers, Local 12.

**PUBLIC PARTICIPATION**

There was no public participation.

WVWD

Minutes: 5/22/21

**BUSINESS MATTERS**

**1. ADOPT RESOLUTION NO. 2021-10 – DEVELOPMENT IMPACT FEE STUDY.**

Mr. Shamindra Manbahal, Interim General Manager, reported that there was an error in the last Resolution 2021-6; therefore, Staff is proposing Option 1A Replacement Cost for consideration and if the Board approves this new Resolution No. 2021-10, Legal Counsel will recommend that Staff update the Resolution to reflect the Board’s vote.

Director Dr. Michael Taylor motioned to adopt Option 1A Replacement Cost and Vice President Kyle Crowther second the motion. Hearing no further discussion, the following vote was taken:

<b>RESULT:</b>	<b>ADOPTED [3 to 1]</b>
<b>MOVER:</b>	Michael Taylor, Director
<b>SECONDER:</b>	Kyle Crowther, Vice President
<b>AYES:</b>	Channing Hawkins, Michael Taylor, Kyle Crowther
<b>NOES:</b>	Clifford Young
<b>ABSENT:</b>	Gregory Young

Mr. Robert Tafoya, Legal Counsel, reported that he would like to clarify the Resolution stating that Staff is working on updating this Resolution to reflect the Capacity Charges for Option 1A Replacement Cost, which has a 50% development fee increase and updating the Capacity Charges annually by 3.37% to keep pace with the construction cost inflation.

**ADJOURN**

There being no further business, the meeting adjourned at 9:11 a.m.

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** APRIL 2021 - PURCHASE ORDER REPORT

---

**BACKGROUND:**

The West Valley Water District (“District”) generated fifty-seven (57) Purchase Orders (“PO”) in the month of April 2021 to various vendors that provide supplies and services to the District. The total amount issued to PO’s for the month of April 2021 was **\$481,957.54**. A table listing all PO’s for April 2021 is shown in **Exhibit A**.

**FISCAL IMPACT:**

There is no fiscal impact for producing the April 2021 Purchase Order Report.

**STAFF RECOMMENDATION:**

Receive and file the April 2021 Purchase Order Report.

Respectfully Submitted,

*Shamindra Manbahal*

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** TREASURER'S REPORT - APRIL 2021

---

**DISCUSSION:**

West Valley Water District (“District”) engaged the Clifton Larson Allen LLP to prepare West Valley Water District’s (WVWD) Investment report on a monthly basis. The District’s investment policy is in uniformity with the State of California’s Local Agency Investment Guidelines (Government Code Section 53601(b)). Report for the Month of April 2021 is presented to the Finance Committee for discussion.

**FISCAL IMPACT:**

None. Monthly Cost of \$2,625 was included in the FY 20-21 annual budget.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

I hereby certify that the investment activity for this reporting period conforms with the investment policy adopted by the West Valley Water District Board of Directors and the California Government Code Section 53601

I also certify that there are adequate funds available to meet the District's Budget.

*Shamindra Manbahal*  
Interim General Manager/Chief Financial & Administrative Officer

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** CASH DISBURSEMENTS REPORT - APRIL 2021

---

**BACKGROUND:**

The Board of Directors requested the Monthly Cash Disbursements Report to be presented to the Finance Committee for review and discussion before presenting these reports to the Board of Directors. The reports are being produced from the District's Financial System (System of Records) and will be presented to the Finance Committee on a monthly basis.

**DISCUSSION:**

Each month, the Accounting Department provides a complete listing of all disbursements for the previous month in an effort to promote fiscal responsibility and accountability over the expenditure of public funds. This process includes providing the Finance Committee, Board of Directors and ratepayers the opportunity to review expenses for supplies, materials, services, and payroll Disbursements. Payroll is processed bi-weekly and accounts payable is processed weekly. Information to justify each payment is available through the Accounting Department. For reference, Customer Refunds are credits due as a result of closing a water account.

**FISCAL IMPACT:**

None.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

---

Shamindra Manbahal, Interim General Manager

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** MONTHLY REVENUE & EXPENDITURES REPORT - APRIL 2021

---

**BACKGROUND:**

The Board of Directors requested the Monthly Financial Status Report to be presented to the Finance Committee for review and discussion before presenting these reports to the Board of Directors. The reports are being produced from the District's Financial System (System of Records) and will be presented on a monthly basis.

**DISCUSSION:**

The Monthly Financial Status Reports summarizes the District's revenue categories as well as expenditures for all Departments. The original total budget includes the adopted budget. Current total budget includes the adopted budget plus any budget amendments or adjustments made during the year. Period activity column represents activity for the reporting periods. Fiscal activity column represents the year-to-date activity or transactions that have been recorded in the general ledger from the beginning of the fiscal year July 1 through April 30. The encumbrance column represents funds encumbered with a purchase order that's not spent but committed. The percent column represents the percentage of the current budget that has been received (Revenue) or utilized (Expenditure).

**FISCAL IMPACT:**

None.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** TREASURER'S REPORT - MAY 2021

---

**DISCUSSION:**

West Valley Water District ("District") engaged the Clifton Larson Allen LLP to prepare West Valley Water District's (WVWD) Investment report on a monthly basis. The District's investment policy is in uniformity with the State of California's Local Agency Investment Guidelines (Government Code Section 53601(b)). Report for the Month of May 2021 is presented to the Finance Committee for discussion.

**FISCAL IMPACT:**

None. Monthly Cost of \$2,625 was included in the FY 20-21 annual budget.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

*Shamindra Manbahal*  
Acting General Manager/Chief Financial & Administrative Officer

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** CASH DISBURSEMENTS REPORT - MAY 2021

---

**BACKGROUND:**

The Board of Directors requested the Monthly Cash Disbursements Report to be presented to the Finance Committee for review and discussion before presenting these reports to the Board of Directors. The reports are being produced from the District's Financial System (System of Records) and will be presented to the Finance Committee on a monthly basis.

**DISCUSSION:**

Each month, the Accounting Department provides a complete listing of all disbursements for the previous month in an effort to promote fiscal responsibility and accountability over the expenditure of public funds. This process includes providing the Finance Committee, Board of Directors and ratepayers the opportunity to review expenses for supplies, materials, services, and payroll Disbursements. Payroll is processed bi-weekly and accounts payable is processed weekly. Information to justify each payment is available through the Accounting Department. For reference, Customer Refunds are credits due as a result of closing a water account.

**FISCAL IMPACT:**

None.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** MONTHLY REVENUE & EXPENDITURES REPORT - MAY 2021

---

**BACKGROUND:**

The Board of Directors requested the Monthly Financial Status Report to be presented to the Finance Committee for review and discussion before presenting these reports to the Board of Directors. The reports are being produced from the District's Financial System (System of Records) and will be presented on a monthly basis.

**DISCUSSION:**

The Monthly Financial Status Reports summarizes the District's revenue categories as well as expenditures for all Departments. The original total budget includes the adopted budget. Current total budget includes the adopted budget plus any budget amendments or adjustments made during the year. Period activity column represents activity for the reporting periods. Fiscal activity column represents the year-to-date activity or transactions that have been recorded in the general ledger from the beginning of the fiscal year July 1 through May 31. The encumbrance column represents funds encumbered with a purchase order that's not spent but committed. The percent column represents the percentage of the current budget that has been received (Revenue) or utilized (Expenditure).

**FISCAL IMPACT:**

None.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Haydee Sainz, Human Resources & Risk Manager   
**SUBJECT:** APPROVAL TO RETAIN THE LAW OFFICES OF JULIA SYLVA, ALC TO PROVIDE PERSONNEL INVESTIGATIVE SERVICES

---

**BACKGROUND:**

As previously reported by the District's legal counsel, there is a personnel related matter that warrants retaining a firm to provide investigative services. The service will include investigating and assessing the matter at hand, making a report of findings, and, if appropriate, providing recommendations on a course of action.

**DISCUSSION:**

At the direction of the Board of Directors, Staff sought out a firm to conduct a personnel investigation. District staff received the attached Attorney-Client Fee Engagement Agreement from the Law Offices of Julia Sylva, ALC as a proposal to assist the District with the subject investigation. Ms. Julia Sylva, the proposed investigator, is a well experienced municipal law attorney who has years of experience handling a variety of public agency matters. She has served as Special Counsel and General Counsel for Metropolitan Water District of Southern California and the Valley County Water District, respectively, and also recently provided investigative services to the City of Glendale and City of Maywood. Ms. Sylva has not done work at the District before and is not affiliated to any Board member or staff member.

Both the Assistant General Manager and the Human Resources and Risk Manager reviewed the proposed engagement agreement, the resume (also attached) of Ms. Sylva, and also spoke to her by phone to personally assess her qualifications and experience to provide the desired service. District legal counsel also reviewed the proposed agreement and took no exception to the terms. As a result of this due diligence process, staff opines that Ms. Julia Sylva is competent to provide the said service and is being recommended to do so.

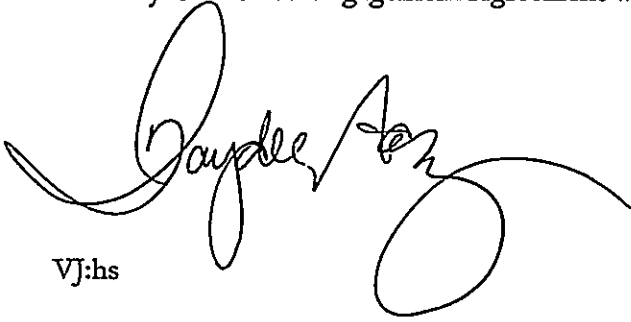

**FISCAL IMPACT:**

The fiscal impact associated with this item will be included in the FY 2021/22 Operating Budget.

**RECOMMENDATION:**

Authorize the Assistant General Manager to execute, on behalf of the District, the attached Attorney-Client Fee Engagement Agreement with the Law Offices of Julia Sylva, ALC.

A handwritten signature in black ink, appearing to read "Gayle Arz". The signature is fluid and cursive, with a large loop at the end.

**Re: Attorney-Client Fee Engagement Agreement**  
Professional Legal Services

Dear Mr. Jew:

This letter confirms the terms and conditions upon which the **Law Offices of Julia Sylva, A Law Corporation** (interchangeably, the "Firm" or "Attorneys") will provide legal services to the **West Valley Water District** ("Client"). A written agreement such as the one set forth in this letter is required by California Business and Professions Code section 6148 for most attorney engagements and is otherwise advisable to minimize the possibility of any misunderstanding between the Firm and its clients.

Please read with care the terms and conditions upon which the Firm is willing to accept acting as your attorneys and representing your interests. If the terms and conditions are acceptable to you, please execute this Engagement Letter. By executing this letter, you are entering into a contract that is binding on both the Firm and you. The purpose of this letter, is therefore, is to set forth the scope of our engagement as legal counsel to you, to confirm that we are in mutual agreement with respect to the same, to set forth the financial arrangements pursuant to our engagement and to verify your approval of such financial arrangements.

The terms and conditions of this Attorney Fee Engagement Agreement ("Agreement") are:

1. Conditions. This Agreement will take effect *immediately*.
2. Scope of Engagement and Services. The Client retains and employs the Firm to represent your interest with respect to those professional legal services, which you request that we perform"), as set forth herein, and in **Schedule A**.
3. Duties of Client. We will endeavor to represent you competently in accordance with reasonable legal and ethical standards. You agree to be truthful with us, to cooperate, to keep us informed of developments, to abide by this Agreement, to pay our bills on time and to keep us advised of Client's current address, telephone number and whereabouts.

West Valley Water District  
Engagement Letter  
June 9, 2021  
Page 2 of 5

4. Consideration and Retainer Deposit; Objection to Invoice. As consideration and compensation for the Firm's Services, the Firm shall receive a payment of legal fees and Retainer Deposit, as set forth in **Schedule A**, attached hereto. All fees shall be paid, in full, pursuant to an itemized invoice. Advance fees and retainers received by the Client shall be distributed within five (5) days of receipt. The Client always has the right to question or object to any portion of the invoice, prior to payment, but within sixty (60) days of invoice; otherwise, all rights to question or object to the invoice are deemed waived by the Client. At the Firm's sole and absolute discretion, it may continue to provide professional legal services to the Client, pending resolution of any dispute regarding the Firm's invoice.

5. Costs and Expenses. Proposed Charges, Costs and Expenses are set forth in **Schedule A**. Client shall advance or reimburse the Firm for all costs and expenses incurred by the Firm in the ordinary course of rendering the Services. The Firm shall obtain Client's consent before incurring any cost in excess of five hundred dollars (\$500.00), whether lump sum or cumulative.

6. Withdrawal/Termination. In the event of withdrawal by the Firm, for any cause, or termination of the Firm by the Client, for any cause, Firm shall be entitled to payment for services rendered as of the date of termination, which payment shall be made within thirty (30) days after delivery of all files in matters related to this Agreement. The Firm will provide timely invoice to Client upon termination, if any.

7. No Tax Advice. Client understands and acknowledges that the Firm is not licensed or otherwise qualified or authorized to act in the capacity of an accounting firm, certified public accountants, tax attorneys, investment advisors or financial advisors. The Firm is retained to provide the specific legal Services specified herein above and in the course of rendering such services does not offer any advice as to the wisdom or appropriateness of any investment, tax planning, tax strategy or tax ramifications, domestic or international in scope, which Client may have knowingly or unknowingly engaged in. Client is, by the terms of Engagement Letter, advised to seek independent professional advice from individuals or firms appropriately licensed and experienced in rendering such advice with regard to the wisdom and viability of Client's investments, tax strategies and planning.

8. Third Party Professionals, Specialists, Consultants and Experts. We may also from time to time while rendering the Services, suggest to Client that we retain certain consultants or other professionals, including, but not limited to, attorneys, certified public accountants, architects, financial advisors, and other specialist or experts to assist us in rendering the Services. No such specialist shall be retained without the prior written consent of the Client and further, not without a separate written engagement agreement with the specialist. A fully executed copy of all written agreements with third party professionals, specialist, consultants and experts shall be provided to the Client. The expense of those third parties approved by Client for engagement by the Firm will be billed to Client directly by the retained third party with a copy of their billing statement forwarded to the Firm.

West Valley Water District  
 Engagement Letter  
 June 9, 2021  
 Page 3 of 5

9. Disclaimer of Guarantee. The Client understands that the Firm has made no representation or guarantee concerning the favorable termination of this matter or the favorable outcome of any legal proceedings that may be filed or defended on behalf of the Client. Nothing in this Agreement and nothing in the Firm's statements to Client will be construed as a promise or guarantee about the outcome of the matter. The Firm makes no such promises or guarantees. The Firm's comments about the outcome of the matter are expressions of opinion only. Any estimate of fees given by the Firm shall not be a guarantee. Actual fees may vary from estimates given.

10. No Promises and Warranties. No promise, representation or warranty has been made by or for the Firm in respect of this Agreement, except as appears in this document. The Client acknowledges having had the opportunity to seek the advice of separate counsel with respect to this Agreement and you have availed yourself of that opportunity.

11. Modification in Writing Only. No variance, change, modification or augmentation of this Agreement shall be effective unless and until confirmed in a writing signed by the Firm and the Client making express reference to this Agreement.

12. Dispute Resolution. Any controversy dispute between the Firm and Client regarding the construction, application or performance of any services under this Agreement, and any claim arising out of or relating to this Agreement or its breach, including, without limitation, claims for breach of contract, professional negligence, breach of fiduciary duty, misrepresentation, fraud and disputes regarding attorney fees and/or costs charged under this Agreement, shall be submitted to binding arbitration upon the written request of any one party after the service of that request on the other party. The Parties shall submit to the Attorney-Client Mediation and Arbitration Service program (ACMAS) of the Los Angeles County Bar Association for binding arbitration. The Parties shall each have the right of discovery in connection with any arbitration proceeding in accordance with Code of Civil Procedure Section 1283.05. The cost of the arbitration, excluding legal fees and costs, shall be borne by the losing party or in such proportion as the arbitrator shall decide. The Parties shall bear their own legal fees and costs for all claims, or contract claims, or tort claims. Because each party is giving up a right, Client is encouraged to have an independent lawyer of Client's choice review these arbitration provisions before agreeing to them. By initialing below, Firm and Client confirm that they have read and understand this paragraph 11, and voluntarily agree to binding arbitration. In doing so, Firm and Client voluntarily give up important constitutional rights to trial by judge or jury, as well as rights to appeal. Client is advised that Client has the right to have an independent lawyer of Client's choice review these arbitration provisions, and this entire Agreement, prior to initialing this provision or signing this Agreement.

         (Client Initial Here)               (Firm Initial Here)

13. Attorney Fees Clause. Notwithstanding Firm's withdrawal or Client's notice of discharge, without regard to reasons for the withdrawal or discharge, the prevailing party in any action or proceeding to enforce any provision of this Agreement shall be awarded attorneys' fees and costs incurred in in that action or proceeding, including, without limitation, the value of the time spent by the Firm, or any attorneys associated with the Firm, to prosecute or defend such an action, calculated at the hourly rate(s) then normally charged by the Firm to clients which it represents on an hourly basis. Client remains obligated to pay Firm for all fees and costs incurred prior to termination any action to enforce payment for services from the date of discharge.

West Valley Water District  
 Engagement Letter

 Page 4 of 5

14. Integration. This Agreement represents the entire understanding of Attorneys and Client as to those matters contained herein. No prior verbal or written understanding shall be of any force or effect with respect to those matters covered by this Agreement.

15. Severability. The provisions of this Engagement Letter shall be deemed severable, and the invalidity or unenforceability of any provision herein will not and shall not be deemed to affect the validity or enforceability of any other provision hereof. In the event any provision of this Engagement Letter is held to be invalid or unenforceable, the parties hereto agree that the remaining provisions hereof shall be deemed to be in full force and effect as if they had been executed by each of the parties hereto subsequent to the expunging of the invalid or unenforceable provision.

16. Counterparts. This Agreement may be executed in any number of counterparts, each of which may be deemed an original and all of which together will constitute one and the same instrument.

17. Benefit and Non-Assignment. This Agreement is made solely for the benefit of the Firm and the Client, their respective managers and members and controlling persons, and no other person shall acquire or have any right under or by virtue of this Agreement. Notwithstanding the foregoing, this Agreement may not be assigned by any party hereto without the prior written consent of the parties hereto.

18. Rule 1.4.2 re Professional Liability Insurance. Pursuant to rule 1.4.2 of the California Rules of Professional Conduct, I am informing you in writing that I do not have professional liability insurance.

19. Association of Counsel. Client hereby consents to Association of Counsel by Firm with Of Counsel relationships of the Firm, as needed, in the discretion of the Firm.

Thank you for choosing the Law Offices of Julia Sylva, ALC, as your counsel with respect to the matters set forth herein. If you wish to seek the advice of other counsel in respect to this Agreement, please feel free to do so. If this letter correctly sets forth your understanding of the scope of the services to be rendered to you, please sign this Agreement. If the terms and conditions of this Agreement are not satisfactory to you, please let us know in writing. We look forward to working with you and thank you once again for the opportunity to serve you.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

**SECTION I: PURPOSE**

The purpose of this contracts management policy is to establish efficient and effective practices for all staff at the District to follow during the contract cycle to ensure the successful execution and implementation of contracts that will provide needed goods and services for District operations. The contract cycle consists of the purchasing process, contract award, contract term preparation, contract processing, notice to proceed, contract monitoring, and contract modification.

**SECTION 2: GENERAL POLICY & OBJECTIVES**

District staff must act ethically and honestly when participating in the contracts cycle. Further, District staff must provide clear communication to all internal and external parties which also participate in the contracts cycle for the effective and efficient use of District staff time when executing and monitoring contracts. All District staff is expected to adhere to all other District policies at all times, especially when implementing the provisions of the Contracts Management Policy.

**SECTION 3: AUTHORITY**

~~Unless a contract gets approved by the Board~~All contracts need to comply with the purchasing policy authorization table in order to be ~~it is not~~ a valid contract. The General Manager will have the authority to appoint one or more designees to act on his/her behalf, as required, subject to this policy and to the establishment of proper procedure and controls governing such designees' authority.

**SECTION 4: RESPONSIBILITIES**

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

A. Contracting/Division Manager or designee responsibilities include:

- Ensuring their contracts contain a clear scope of work that defines performance and deliverable requirements.
- Once a contract is executed, immediately communicate with the new contractor and confirm expectations.
  - Verify the obligations of the parties and timelines for performance
- Being familiar with all of the terms and conditions of the agreement
- Managing and documenting on-going and day-to-day contract issues and monitoring the progress of the work performed by a contractor.
- Being the contact and lead for their contract and being responsible for the timely initiation and execution of assigned contracts.
  - For each contract that is executed, participation and approval is required from the Contracting Division staff ~~(see Exhibit A)~~, the Department Head, General Counsel, CFO, and General Manager (as needed, based on delegation of signature authority)

B. The Purchasing Division responsibilities and objectives include:

- Providing physical custody and security over all District contractual documents with the exceptions of Legal and/or confidential agreements.
- Ensuring consistent and compliant coordination, tracking and administration of all contract activities.
- Providing guidance and training to District contracting and program managers.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Have a back-up protocol to ensure continuity and timeliness of operations during vacations and other leaves, including training of staff.
  - Must actively participate in and support the implementation of the internal controls contained in this policy, and immediately follow up if deviation is suspected, in order to avoid the appearance and existence of fraud, misappropriation of District assets, or of conflicts of interest.
  - Additional responsibilities are stated in the remaining sections within this policy.
- C. The primary responsibilities of the Purchasing Supervisor regarding contracts are:
- Must sign and date the Contract Initiation Form
  - The Purchasing Supervisor must verify that the contract is acceptable to the contractor and that the scope of work and budgets are acceptable.
  - Maintaining appropriate records while overseeing the contract routing process and supervising Purchasing Division staff.
  - Have a back-up protocol to ensure continuity and timeliness of operations during vacations and other leaves, including training of staff.
  - Must actively participate in and support the implementation of the internal controls contained in this policy, and immediately follow up if deviation is suspected, in order to avoid the appearance and existence of fraud, misappropriation of District assets, or of conflicts of interest.
  - Additional responsibilities are stated in the remaining sections within this policy.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

D. The General Manager or designee’s responsibilities include

- Must sign and date the Contract Initiation Form
- Must review reports on monitored activities
- Direct and manage the preparation, designing, implementation, monitoring, and evaluation of internal control policies and procedures
- Have a back-up protocol to ensure continuity and timeliness of operations during vacations and other leaves.
- Must actively participate in and support the implementation of the internal controls contained in this policy, and immediately follow up if deviation is suspected, in order to avoid the appearance and existence of fraud, misappropriation of District assets, or of conflicts of interest.
- Additional responsibilities are stated in the remaining sections within this policy.

**SECTION 5: CONFLICTS OF INTEREST**

District staff shall carry out any roles, responsibilities and activities related to contract administration in a manner that identifies and avoids real, apparent, or potential conflicts of interest. District staff involved in contract decision making shall report in writing, any real, apparent, or potential conflicts of interest that may come to their attention during any phase of the contract administration cycle.

**SECTION 6: WHEN ALLOWED TO CONTRACT**

Factors to be considered in determining the need to outsource a function include:

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Work which has historically been contracted for by the District;
- The contract is for consulting work;
- Expertise and equipment included in the contract is not normally employed or purchased by the District;
- Third party objectivity and credibility are essential to the service provided.
- Day-to-day activities are managed by the contractor; and responsibility/risk is assumed by the contractor.

**SECTION 7: PURCHASING PROCESS**

Please refer to the District’s Purchasing Policy for more information regarding the procurement cycle, including Purchasing authorization dollar limits, conflicts of interest and internal control implementation, competition requirements, RFP preparation, candidate evaluation, selection criteria and much more.

**SECTION 8: CONTRACT AWARD/CONTRACT INITIATION**

The Contract/Division Manager should collect and supply the expected cost for the contract and any supporting rationale. Specific costs should be known prior to submitting Contract Initiation Form (CIF) ~~(see exhibit A)~~ to the Purchasing Division.

Once the final contract has been prepared by legal counsel, the Contract Initiation form (CIF) ~~(see Exhibit A)~~ shall be routed for approvals with the contract and any necessary supporting documentation. The CIF must be signed and dated by the Purchasing Supervisor or designee, CFO, Department Head or designee, ~~General Counsel~~, and General Manager. ~~If the contract exceeds \$25,000, the CIF must also~~

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

~~be signed by the Board President.~~

Please note that the Contract Initiation Form states that “By signing this form, you are certifying that this contract packet and its contents meet with your approval.” All signers must ensure that they have examined the contents thoroughly prior to signing the packet.

**SECTION 9: EVALUATING CONTRACT RISKS**

The Purchasing Division shall identify contracts that require enhanced contract monitoring or the immediate attention of Contracting Division staff.

The Purchasing Division and the Contracting Division must collaborate to evaluate key elements of risk that may occur on a contract. The risk considered shall include the following:

- a. Contract Cost Revisions
- b. Contract Duration Limitations
- c. Transaction and Data Volume
- d. Monitoring and Quality Assurance
- e. Vendor Control Activities and Data Quality
- f. Communication and Customer Service
- g. Complexity of Vendor Operations and Processes
- h. Complexity of Contract Scope or Deliverables
- i. Close Out
- j. Extent of Government Regulations

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- k. Vendor Cooperation with Audits
- l. Potential for Public Disclosure
- m. Vendor Experience and Past Performance
- n. Physical and System Security
- o. Data Security
- p. Business Continuity/Disaster Recovery
- q. Training
- r. Financial Assurance and Credit Worthiness
- s. Fraud, Waste and Abuse
- t. Other

Enhanced Monitoring Reporting – Contract monitoring activities must be documented and reported to the GM or designee on a quarterly basis, which will be coordinated and presented by Contracting Division staff, with support from individual Purchasing Supervisors or designees.

Additionally, for vendors that perform on-going operational work, it shall be the decision of the CFAO or designee to obtain a SOC Report from the vendor. SOC stands for “System and Organization Controls”. A SOC Report (System and Organization Controls Report) is a report on Controls at a Service Organization which are relevant to user entities’ internal control over financial reporting.

A SOC 2 report is designed to provide assurances about the effectiveness of controls in place at a service organization that are relevant to the security, availability, or processing integrity of the system used to process clients’ information, or the confidentiality or privacy of that information.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

Companies that use cloud service providers, for example, use SOC 2 reports to assess and address the risks associated with third party technology services. These reports are issued by independent third-party auditors.

**SECTION 10: CONTRACT PROCESSING**

A contract routing package/folder is prepared by Purchasing Division staff. A draft contract is prepared by Purchasing Supervisor ~~contacting Department Head~~ or designee, typically using a boiler plate template developed in conjunction with the District’s legal Counsel.

- A copy of the District agenda item is included with the routing package (as needed).
- A memorandum or email is prepared to transmit the draft contract package to the Purchasing Supervisor. The memo/email should include relevant information about the contract and any necessary instructions and deadline requirements for the review of the package/folder.
- The Purchasing Supervisor must verify that the contract is acceptable to the contractor and that the scope of work and budgets are acceptable to both parties prior to Purchasing Division staff routing the final contract package. An electronic copy of the draft contract will be provided to the Contact/Division Manager to assist with any negotiations.
- At the time that the final contract package is prepared, the Purchasing Division staff shall determine if any information has not been received. It is the responsibility of the Purchasing Supervisor (with the assistance of Purchasing Division staff) to ensure that all documents, budgets, etc. have been included.

ADMINISTRATIVE PROCEDURES

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

**A. SUBCONTRACTOR TERMS**

If applicable, The District requires the review and confirmation of subcontracts as part of its routine contracting practices. Contracting Division staff will maintain provisions for the review of subcontracts and will assign staff to manage and monitor this process.

This review is limited to confirming that the subcontract is consistent with the District prime contract requirements.

The following steps are taken in the successful review and approval of subcontracts:

1. The Purchasing Supervisor is responsible for ensuring that contractors provide the District with a copy of every subcontract agreement. Subcontracts should be submitted to the District in a timely manner for review and written approval prior to execution by the contractor and the subcontractor.
2. Each subcontract must be consistent with the terms of the prime contract between the District and the contractor and include provisions that require subcontractor compliance with District rules as specified.
3. Each subcontract should include a scope of work, task and expense budgets, and a work schedule that are consistent with the prime contract between the District and the contractor. It is important to make the contractor aware that the terms of the District's prime contract with the prime contractor take precedence over all subcontracts.
4. The Purchasing Supervisor or designee should contact the contractor in the

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

early stages of the project to clarify the District subcontract requirements and should review each subcontract for compliance with all portions of the District's prime contract.

5. If there are any deficiencies in the subcontract, Purchasing Supervisor or designee shall immediately draft a letter to the contractor detailing these deficiencies.

**B. CONTRACT ROUTING PACKET**

The Purchasing Supervisor or designee should provide any additional information and assistance required by Purchasing Division in the final preparation of the contract and associated materials. The Purchasing Supervisor or designee should review the contract and any related materials to ensure the information is correct. The related materials may include:

- a. An information packet,
- b. Two (or more) original District contracts for execution,
- c. A contract initiation form
- d. A coordination memo which transmits the appropriate number of copies of the contract through internal staff reviewers to the GM or Board President for approval and signature, and,
- e. A letter from the District transmitting the copies of the contract to the contractor for signature, and
- f. A copy of the District agenda item (where applicable)

The Purchasing Division is responsible for putting the contract routing

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

package/folder together for the Purchasing Supervisor or designee. The package will include the grant application (if applicable), an executable contract, a CIF, routing memorandum, a transmission letter to the contractor, a copy of the District agenda item (if applicable) which includes the deadline for execution of contract and any special conditions, and any other related documentation deemed necessary by the Purchasing Division.

**C. ROUTING CHECKLIST**

Final contract packets are routed through the following: Purchasing Supervisor or designee, Legal Counsel, CFAO, the GM and Board President (where needed). Once the routing is complete and approved, the packet is returned to Purchasing Division for distribution, scanning and system updates.

**Purchasing Supervisor or designees**

When routing a contract or amendment for approvals at the District, the Purchasing Supervisor or designee should ensure the following criteria (at a minimum) have been met.

- Transmission letter and memorandum review:
  - Verify documents properly addressed and dated
  - Verify contract/grant numbers
  - Verify letter is from proper Department Head
- Contract Initiation Form
  - Verify start and end dates are correct
  - Verify contract numbers
  - Verify budgets

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Contract/Grant Documents
  - Verify contract numbering
  - Verify Contractor names
  - Verify any Task and Expense Budgets
  - Verify standard provisions - included but not limited to:
    - Termination clauses
    - Contact information
    - Scope of work
    - Reporting requirements
    - Deliverable requirements (*including number required*)
  - Verify sufficient time is given for reports and deliverables
  - Verify appropriate number of copies
  - Signatories and titles accurate

**CFAO Review**

When routing a contract or amendment for approvals at the District, the CFAO shall ensure the following criteria (at a minimum) have been met:

- Contract Initiation Form
  - Verify start and end dates are correct
  - Verify contract numbers

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Verify budgets
- Fiscal Year
- Receivable contract relationships (where applicable)
- Contract/Grant Documents
  - Payment Terms
  - Task and Expense Budgets reviewed and calculated
  - Terms for Travel and other Expenses
  - Whether SOC reports shall be obtained from the Vendor

**District Legal Counsel**

When routing a contract or amendment for approvals at the District, the contract attorney should ensure the following criteria have been met

- Contract/Grant Documents
  - Accurate contract numbering
  - Party/Contractor names verified
  - Terms and Conditions
  - Standard provisions are included and properly referenced –contact information for both parties, review for:
    - Termination clauses
    - Ownership (if needed)
    - Severance

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Force majeure
  - Verification of any required state and federal clauses
  - Signatories and titles accurate

**Executive Management**

The GM and/or Board President when applicable are encouraged to thoroughly review each contract or amendment that is presented for review and execution. It is expected that the executive reviewer will rely considerably upon the certification and signatures of subordinate staff as guidance to the acceptability of the contract or amendment.

**D. CIRCULATING CONTRACT FOR SIGNATURES**

1. After the contract originals are sent to the contractor for signature, the Purchasing Supervisor or designee may follow-up by contacting the contractor to ensure that the contractor signs and dates all copies of the contract.
2. After the contractor has executed (signed and dated) and returned the original contracts to Purchasing Division or the Contracting Division, the documents are routed to the GM for final execution by the District. Upon execution, one executed original will be returned to the contractor.

**E. DISTRICT STAFF RESPONSIBILITIES BEFORE DISTRICT BOARD MEETING**

- After the contract originals are sent to the contractor for signature, the

### ADMINISTRATIVE PROCEDURES

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

Purchasing Supervisor or designee may follow-up by contacting the contractor to ensure that the contractor signs and dates all copies of the contract ~~and provides evidence of local matching funds~~, if not already provided. Where applicable, the contractor must execute the contract originals ~~and provide sufficient evidence of local matching funds (if applicable)~~ before the deadline specified at District approval of the application.

- After the contractor has executed (signed and dated) and returned the original contracts to the Purchasing Division, the documents are routed to the GM or the Board President for final execution by the District. For all District initiated contracts, the District will sign last. Upon execution, one executed original will be returned to the contractor. District staff shall submit signed contract with a staff report item for board approval.

#### F. DISTRICT APPROVAL

Where applicable, if the contract is not executed prior to any District affirmed deadline, the contractor must request and receive a District approved extension to the deadline, or the contract cannot be executed.

~~Approved packets require certification and signature on the routing sheet and the contract initiation form. The packet should then be delivered to the next reviewer as indicated on the routing sheet on the cover of the folder. This applies to all contract reviewers.~~

#### G. REQUESTING BUDGET AMENDMENT WITH DISTRICT APPROVAL OF CONTRACT

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

All budgets must be approved during the annual Budget process or through mid-year budget requests made by the CFAO. If the completion of a contract requires a budget amendment, then the Purchasing Supervisor, Contracting Division Manager or designee must follow the mid-year budget request process outlined in the Budget policy.

**H. EXECUTING THE CONTRACT AMENDMENT**

The following steps are taken in the preparation, routing, and execution of a contract amendment:

1. A contract amendment request can be initiated by the Purchasing Supervisor or designee or by the District’s contractor. If a formal contract amendment is required, the Purchasing Supervisor or designee should require that the contractor submit a written request (or written acknowledgement if initiated by the District) for the amendment, with justification for the proposed revision. The Purchasing Supervisor or designee should review the revised budget or schedule and justification to ensure that the revisions are necessary and will still allow the approved contract scope of work to be performed.
2. If the requested revisions from the contractor are not satisfactory, the Purchasing Supervisor or designee should notify the contractor in writing and identify any problems or deficiencies.
3. Once a satisfactory request is provided to the District, the Purchasing Supervisor or designee should deliver the written request for the amendment to Contracting Division along with any other relevant documentation to support the request. The Purchasing Supervisor or designee should be prepared to provide additional information to assist with final preparation of the contract

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

amendment as needed by Contracting Division staff.

4. Once a draft amendment is completed by Purchasing Division staff or by the Purchasing Supervisor or designee, the Purchasing Supervisor or designee should review the amendment (routing package) to ensure the information is correct. The materials will include two (or more if multiple contractors/signatories) original District contract amendment copies for execution, a contract initiation form and a coordination memo outlining the changes that are being requested. The packet will be routed through the Purchasing Supervisor or designee, CFO, Legal, GM, and Board (as needed) for approval and signature. A letter transmitting the copies of the amendment to the contractor for signature is also included.
5. After the GM or Board has approved the contract amendment package, Contract Division staff will provide the Purchasing Supervisor or designee with a copy of the memo, transmittal letter and amendment. Once the amendment has been fully executed, the following distribution will be followed:
  - o Original contract amendment and copy of contract initiation form goes to official file (fireproof cabinet)
  - o Copy of amendment and all other routing package information goes to the official contract working files
  - o Notification of the amendment to the Purchasing Supervisor or designee
  - o Original contract initiation form routed to Contracting Division staff. An electronic copy of the executed amendment package is placed in the Contract tracking system, if applicable.

**I. RECORDING/SAFE-KEEPING OF THE CONTRACT**

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

A hard copy of the executed contract and a copy of the Contract Initiation Form should be filed in the Contract Working Files that are maintained by Purchasing Division. The executed contract with original signatures shall be filed in the Official Contract File which is located in fire-proof, lockable cabinets. Copies of the transmittal letter, and executed contracts are scanned and maintained in the contract management/tracking system. The Purchasing Supervisor or designee is notified of the execution and the original CIF is provided to Contracting Division staff for their records. Unless a contract gets approved by the Board it is not a valid contract

\* Please note that in some instances, contracts with the Federal Government are executed with electronic signatures.

In those instances, a hard copy of the award document and any associated correspondence will be included in the Contract Working Files and the Official Contract File.

After the contract has been executed and distributed, the contract tracking system is updated with agreement details. Further, the Purchasing Supervisor or designee must provide agreement expiration dates to the A/P division and Purchasing Agent to ensure that payments do not get made on expired agreements.

**SECTION 11: CONTRACT AND VENDOR MONITORING**

Please note that Memorandums of Understanding are exclusively reserved for consideration and execution by the Board. ~~Unless such a contract~~ All contracts need to comply with the purchasing policy authorization table in order to begets approved by the Board it is not a valid contract.

A. For contracts with a value that exceeds \$1 million, regular reporting must be

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

provided to the Board that includes information on:

- a. Compliance with financial provisions and delivery schedules under the contract;
  - b. Corrective action plans required under the contract and the status of any active corrective action plan; and
  - c. Any liquidated damages assessed or collected under the contract.
- B. For contracts with a value that exceeds \$5 million, the Purchasing Agent and the Contracting Department Head must:
- a. Verify in writing that the solicitation and purchasing methods and contractor selection process comply with state law and agency policy; and
  - b. Submit to the Board information on any potential issue that may arise in the solicitation, purchasing, or contractor selection process.

Additionally, for vendors that perform on-going operational work, it shall be the decision of the CFAO or designee to obtain a SOC Report from the vendor. If a SOC Report is obtained from the vendor, then a request must be made by the Contracting Division Manager for more up-to-date SOC Reports annually. Please see Section 9 for more information about SOC Reports

**SECTION 12: CONTRACT MODIFICATIONS**

The General Manager may extend the term of a District agreement so long as the Contract has not expired and there are no other material changes to the agreement, such as scope of work, consideration, method of payment, insurance, and indemnity

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

requirements. This provision applies to time extensions only. All contracts need to comply with the purchasing policy authorization table in order to be~~Unless a contract gets approved by the Board it is not~~ a valid contract.

**SECTION 13: PAYMENT HOLDS**

1. If an invoice is received while a contract amendment is pending execution, the contractor shall be notified by the Contracting Division that the payment will be denied. The contractor will need to re-submit the invoice after the approval of the contract amendment.
2. If an invoice is received where approval of a subcontractor agreement or internal budget memorandum are pending, the payment can be placed “on hold” for up to eight calendar days. If the agreement and/or memorandum are not approved by the District within the 8 days, the District shall deduct any expenses associated with the budget memorandum and/or affected subcontractor and will pay the remaining balance.

**SECTION 14: RETENTION PAYABLE**

The Purchasing Supervisor or designee should verify that their contract status is changed to Retainage Pending, as appropriate. The Contracting Division’s staff shall initiate the retention payment as appropriate by completing a Request for Payment Form as found in the A/P policy (see Exhibit G).

**SECTION 15: CONTRACT DELIVERABLES**

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

Some District contracts have deliverables in the form of planning, engineering and scientific reports. These contracts require contractors to produce an initial draft report to be followed by a final report. The Purchasing Division has assigned Engineering and/or Operation managers who are responsible for various tasks in the review and approval process of draft reports.

To ensure that the District gets deliverables of the highest caliber and that each step of the draft report review and approval process is properly handled, the following steps shall be taken in the successful review and approval of draft reports:

- a. The Contracting Division Manager~~Purchasing Supervisor~~ or designee shall transmit copies of any reviewer comments and prepare a transmission letter to the contractor-. It is important that the Contracting Division Manager~~Purchasing Supervisor~~ or designee review the comments for appropriateness before including them in the attachment. A reminder to the contractor to mail the Final Report to the Contracting Division Manager~~Purchasing Supervisor~~ or designee will be included in the letter.
- b. The letter transmitting review comments and suggested revisions to the final report will be routed through the Purchasing Supervisor or designee, Department Head, and the GM, if applicable. Copies of each reviewer's actual comments will be attached to the letter as it is being routed for approval and signature. Only the edited comments will be mailed with the review letter and not each individual reviewer's comments (if applicable or in the best interest of the District).
- c. Copies of all draft report related memos and letters are to be given to the

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

Purchasing Supervisor or designee and copies should be filed in the Purchasing Division’s contract working files. Purchasing Division staff will place the routing file in a “Final Reports Pending” queue until the Final Report is received

- d. If the Final Report is satisfactory, the Purchasing Supervisor or designee will notify Purchasing Division staff by email. A letter will be prepared for signature by the Department Head and/or GM, if applicable to notify the contractor that the Final Report is acceptable and in conformance with the terms of the contract. The letter will also note that the contractor may request payment of retainage that may have been held on the contract.
- e. An electronic version of the report shall be supplied by the contractor to the District. Any CDs or other media containing scientific data apart from the Final Report that are submitted to the District by the Contractor will be maintained in binders and made available to District staff as needed.
- f. The Purchasing Supervisor or designee shall verify that the contract status is changed to Retainage Pending, as appropriate.

**SECTION 16: CONTRACT CLOSE-OUT**

The District Purchasing Division shall retain records of each contract entered into and all solicitation documents related to the contract through the seventh anniversary of the date:

- The contracts are completed or expires; or
- All issues that arise from any litigation claim, negotiation, audit, open records request, administrative review, or other action involving the contract or

**ADMINISTRATIVE PROCEDURES**

APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

documents are resolved.

**Procedure**

1. Purchasing Division staff will obtain from the assigned Contracting Division Manager or designee a written confirmation that the contract is complete and that all deliverables and payment requirements have been satisfactorily completed.
2. All physical file documentation for the contract will be collected for archives and storage and the contract status in the Contract tracking software (if applicable) will be updated to 'complete' status.
3. Contract documentation will be retained in accordance with the District's Records Retention Schedule.
4. All contracts need to comply with the purchasing policy authorization table in order to be~~Unless a contract gets approved by the Board it is not~~ a valid contract.

Reviewed and ok'd by Legal 5/27/21

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

**SECTION I: PURPOSE**

The purpose of this contracts management policy is to establish efficient and effective practices for all staff at the District to follow during the contract cycle to ensure the successful execution and implementation of contracts that will provide needed goods and services for District operations. The contract cycle consists of the purchasing process, contract award, contract term preparation, contract processing, notice to proceed, contract monitoring, and contract modification.

**SECTION 2: GENERAL POLICY & OBJECTIVES**

District staff must act ethically and honestly when participating in the contracts cycle. Further, District staff must provide clear communication to all internal and external parties which also participate in the contracts cycle for the effective and efficient use of District staff time when executing and monitoring contracts. All District staff is expected to adhere to all other District policies at all times, especially when implementing the provisions of the Contracts Management Policy.

**SECTION 3: AUTHORITY**

All contracts need to comply with the purchasing policy authorization table in order to be a valid contract. The General Manager will have the authority to appoint one or more designees to act on his/her behalf, as required, subject to this policy and to the establishment of proper procedure and controls governing such designees' authority.

**SECTION 4: RESPONSIBILITIES**

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

A. Contracting/Division Manager or designee responsibilities include:

- Ensuring their contracts contain a clear scope of work that defines performance and deliverable requirements.
- Once a contract is executed, immediately communicate with the new contractor and confirm expectations.
  - Verify the obligations of the parties and timelines for performance
- Being familiar with all of the terms and conditions of the agreement
- Managing and documenting on-going and day-to-day contract issues and monitoring the progress of the work performed by a contractor.
- Being the contact and lead for their contract and being responsible for the timely initiation and execution of assigned contracts.
  - For each contract that is executed, participation and approval is required from the Contracting Division staff, the Department Head, General Counsel, CFAO, and General Manager (as needed, based on delegation of signature authority)

B. The Purchasing Division responsibilities and objectives include:

- Providing physical custody and security over all District contractual documents with the exceptions of Legal and/or confidential agreements.
- Ensuring consistent and compliant coordination, tracking and administration of all contract activities.
- Providing guidance and training to District contracting and program managers.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Have a back-up protocol to ensure continuity and timeliness of operations during vacations and other leaves, including training of staff.
  - Must actively participate in and support the implementation of the internal controls contained in this policy, and immediately follow up if deviation is suspected, in order to avoid the appearance and existence of fraud, misappropriation of District assets, or of conflicts of interest.
  - Additional responsibilities are stated in the remaining sections within this policy.
- C. The primary responsibilities of the Purchasing Supervisor regarding contracts are:
- Must sign and date the Contract Initiation Form
  - The Purchasing Supervisor must verify that the contract is acceptable to the contractor and that the scope of work and budgets are acceptable.
  - Maintaining appropriate records while overseeing the contract routing process and supervising Purchasing Division staff.
  - Have a back-up protocol to ensure continuity and timeliness of operations during vacations and other leaves, including training of staff.
  - Must actively participate in and support the implementation of the internal controls contained in this policy, and immediately follow up if deviation is suspected, in order to avoid the appearance and existence of fraud, misappropriation of District assets, or of conflicts of interest.
  - Additional responsibilities are stated in the remaining sections within this policy.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

D. The General Manager or designee’s responsibilities include

- Must sign and date the Contract Initiation Form
- Must review reports on monitored activities
- Direct and manage the preparation, designing, implementation, monitoring, and evaluation of internal control policies and procedures
- Have a back-up protocol to ensure continuity and timeliness of operations during vacations and other leaves.
- Must actively participate in and support the implementation of the internal controls contained in this policy, and immediately follow up if deviation is suspected, in order to avoid the appearance and existence of fraud, misappropriation of District assets, or of conflicts of interest.
- Additional responsibilities are stated in the remaining sections within this policy.

**SECTION 5: CONFLICTS OF INTEREST**

District staff shall carry out any roles, responsibilities and activities related to contract administration in a manner that identifies and avoids real, apparent, or potential conflicts of interest. District staff involved in contract decision making shall report in writing, any real, apparent, or potential conflicts of interest that may come to their attention during any phase of the contract administration cycle.

**SECTION 6: WHEN ALLOWED TO CONTRACT**

Factors to be considered in determining the need to outsource a function include:

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Work which has historically been contracted for by the District;
- The contract is for consulting work;
- Expertise and equipment included in the contract is not normally employed or purchased by the District;
- Third party objectivity and credibility are essential to the service provided.
- Day-to-day activities are managed by the contractor; and responsibility/risk is assumed by the contractor.

**SECTION 7: PURCHASING PROCESS**

Please refer to the District’s Purchasing Policy for more information regarding the procurement cycle, including Purchasing authorization dollar limits, conflicts of interest and internal control implementation, competition requirements, RFP preparation, candidate evaluation, selection criteria and much more.

**SECTION 8: CONTRACT AWARD/CONTRACT INITIATION**

The Contract/Division Manager should collect and supply the expected cost for the contract and any supporting rationale. Specific costs should be known prior to submitting Contract Initiation Form (CIF) to the Purchasing Division.

Once the final contract has been prepared by legal counsel, the Contract Initiation form (CIF) shall be routed for approvals with the contract and any necessary supporting documentation. The CIF must be signed and dated by the Purchasing Supervisor or designee, CFAO, Department Head or designee, and General Manager.

Please note that the Contract Initiation Form states that “By signing this form, you are

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

certifying that this contract packet and its contents meet with your approval.” All signers must ensure that they have examined the contents thoroughly prior to signing the packet.

**SECTION 9: EVALUATING CONTRACT RISKS**

The Purchasing Division shall identify contracts that require enhanced contract monitoring or the immediate attention of Contracting Division staff.

The Purchasing Division and the Contracting Division must collaborate to evaluate key elements of risk that may occur on a contract. The risk considered shall include the following:

- a. Contract Cost Revisions
- b. Contract Duration Limitations
- c. Transaction and Data Volume
- d. Monitoring and Quality Assurance
- e. Vendor Control Activities and Data Quality
- f. Communication and Customer Service
- g. Complexity of Vendor Operations and Processes
- h. Complexity of Contract Scope or Deliverables
- i. Close Out
- j. Extent of Government Regulations
- k. Vendor Cooperation with Audits

- t. Other

Enhanced Monitoring Reporting – Contract monitoring activities must be documented and reported to the GM or designee on a quarterly basis, which will be coordinated and presented by Contracting Division staff, with support from individual Purchasing Supervisors or designees.

Additionally, for vendors that perform on-going operational work, it shall be the decision of the CFAO or designee to obtain a SOC Report from the vendor. SOC stands for “System and Organization Controls”. A SOC Report (System and Organization Controls Report) is a report on Controls at a Service Organization which are relevant to user entities’ internal control over financial reporting.

A SOC 2 report is designed to provide assurances about the effectiveness of controls in place at a service organization that are relevant to the security, availability, or processing integrity of the system used to process clients’ information, or the confidentiality or privacy of that information.

Companies that use cloud service providers, for example, use SOC 2 reports to

**ADMINISTRATIVE PROCEDURES**

assess and address the risks associated with third party technology services. These reports are issued by independent third-party auditors.

**SECTION 10: CONTRACT PROCESSING**

A contract routing package/folder is prepared by Purchasing Division staff. A draft contract is prepared by Purchasing Supervisor or designee, typically using a boiler plate template developed in conjunction with the District’s legal Counsel.

- A copy of the District agenda item is included with the routing package (as needed).
- A memorandum or email is prepared to transmit the draft contract package to the Purchasing Supervisor. The memo/email should include relevant information about the contract and any necessary instructions and deadline requirements for the review of the package/folder.
- The Purchasing Supervisor must verify that the contract is acceptable to the contractor and that the scope of work and budgets are acceptable to both parties prior to Purchasing Division staff routing the final contract package. An electronic copy of the draft contract will be provided to the Contact/Division Manager to assist with any negotiations.
- At the time that the final contract package is prepared, the Purchasing Division staff shall determine if any information has not been received. It is the responsibility of the Purchasing Supervisor (with the assistance of Purchasing Division staff) to ensure that all documents, budgets, etc. have been included.

**A. SUBCONTRACT TERMS**

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

If applicable, the District requires the review and confirmation of subcontracts as part of its routine contracting practices. Contracting Division staff will maintain provisions for the review of subcontracts and will assign staff to manage and monitor this process.

This review is limited to confirming that the subcontract is consistent with the District prime contract requirements.

The following steps are taken in the successful review and approval of subcontracts:

1. The Purchasing Supervisor is responsible for ensuring that contractors provide the District with a copy of every subcontract agreement. Subcontracts should be submitted to the District in a timely manner for review and written approval prior to execution by the contractor and the subcontractor.
2. Each subcontract must be consistent with the terms of the prime contract between the District and the contractor and include provisions that require subcontractor compliance with District rules as specified.
3. Each subcontract should include a scope of work, task and expense budgets, and a work schedule that are consistent with the prime contract between the District and the contractor. It is important to make the contractor aware that the terms of the District's prime contract with the prime contractor takes precedence over all subcontracts.
4. The Purchasing Supervisor or designee should contact the contractor in the early stages of the project to clarify the District subcontract requirements and should review each subcontract for compliance with all portions of the District's prime contract.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

5. If there are any deficiencies in the subcontract, Purchasing Supervisor or designee shall immediately draft a letter to the contractor detailing these deficiencies.

**B. CONTRACT ROUTING PACKET**

The Purchasing Supervisor or designee should provide any additional information and assistance required by Purchasing Division in the final preparation of the contract and associated materials. The Purchasing Supervisor or designee should review the contract and any related materials to ensure the information is correct. The related materials may include:

- a. An information packet,
- b. Two (or more) original District contracts for execution,
- c. A contract initiation form
- d. A coordination memo which transmits the appropriate number of copies of the contract through internal staff reviewers to the GM or Board President for approval and signature, and,
- e. A letter from the District transmitting the copies of the contract to the contractor for signature, and
- f. A copy of the District agenda item (where applicable)

The Purchasing Division is responsible for putting the contract routing package/folder together for the Purchasing Supervisor or designee. The package will include the grant application (if applicable), an executable contract, a CIF, routing memorandum, a transmission letter to the contractor, a copy of the District agenda item (if applicable) which includes the deadline for execution of contract

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

and any special conditions, and any other related documentation deemed necessary by the Purchasing Division.

**C. ROUTING CHECKLIST**

Final contract packets are routed through the following: Purchasing Supervisor or designee, Legal Counsel, CFAO, the GM and Board President (where needed). Once the routing is complete and approved, the packet is returned to Purchasing Division for distribution, scanning and system updates.

**Purchasing Supervisor or designees**

When routing a contract or amendment for approvals at the District, the Purchasing Supervisor or designee should ensure the following criteria (at a minimum) have been met.

- Transmission letter and memorandum review:
  - Verify documents properly addressed and dated
  - Verify contract/grant numbers
  - Verify letter is from proper Department Head
- Contract Initiation Form
  - Verify start and end dates are correct
  - Verify contract numbers
  - Verify budgets
- Contract/Grant Documents
  - Verify contract numbering
  - Verify Contractor names

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Verify any Task and Expense Budgets
- Verify standard provisions - included but not limited to:
  - Termination clauses
  - Contact information
  - Scope of work
  - Reporting requirements
  - Deliverable requirements (*including number required*)
- Verify sufficient time is given for reports and deliverables
- Verify appropriate number of copies
- Signatories and titles accurate

**CFAO Review**

When routing a contract or amendment for approvals at the District, the CFAO shall ensure the following criteria (at a minimum) have been met:

- Contract Initiation Form
  - Verify start and end dates are correct
  - Verify contract numbers
  - Verify budgets
  - Fiscal Year
  - Receivable contract relationships (where applicable)

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- Contract/Grant Documents
  - Payment Terms
  - Task and Expense Budgets reviewed and calculated
  - Terms for Travel and other Expenses
  - Whether SOC reports shall be obtained from the Vendor

**District Legal Counsel**

When routing a contract or amendment for approvals at the District, the contract attorney should ensure the following criteria have been met

- Contract/Grant Documents
  - Accurate contract numbering
  - Party/Contractor names verified
  - Terms and Conditions
  - Standard provisions are included and properly referenced –contact information for both parties, review for:
    - Termination clauses
    - Ownership (if needed)
    - Severance
    - Force majeure
  - Verification of any required state and federal clauses
  - Signatories and titles accurate

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

**Executive Management**

The GM and/or Board President when applicable are encouraged to thoroughly review each contract or amendment that is presented for review and execution. It is expected that the executive reviewer will rely considerably upon the certification and signatures of subordinate staff as guidance to the acceptability of the contract or amendment.

**D. CIRCULATING CONTRACT FOR SIGNATURES**

1. After the contract originals are sent to the contractor for signature, the Purchasing Supervisor or designee may follow-up by contacting the contractor to ensure that the contractor signs and dates all copies of the contract.
2. After the contractor has executed (signed and dated) and returned the original contracts to Purchasing Division or the Contracting Division, the documents are routed to the GM for final execution by the District. Upon execution, one executed original will be returned to the contractor.

**E. DISTRICT STAFF RESPONSIBILITIES BEFORE DISTRICT BOARD MEETING**

- After the contract originals are sent to the contractor for signature, the Purchasing Supervisor or designee may follow-up by contacting the contractor to ensure that the contractor signs and dates all copies of the contract, if not already provided. Where applicable, the contractor must execute the contract originals before the deadline specified at District

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

approval of the application.

- After the contractor has executed (signed and dated) and returned the original contracts to the Purchasing Division, the documents are routed to the GM or the Board President for final execution by the District. For all District initiated contracts, the District will sign last. Upon execution, one executed original will be returned to the contractor. District staff shall submit signed contract with a staff report item for board approval.

**F. DISTRICT APPROVAL**

Where applicable, if the contract is not executed prior to any District affirmed deadline, the contractor must request and receive a District approved extension to the deadline, or the contract cannot be executed.

**G. REQUESTING BUDGET AMENDMENT WITH DISTRICT APPROVAL OF CONTRACT**

All budgets must be approved during the annual Budget process or through mid-year budget requests made by the CFAO. If the completion of a contract requires a budget amendment, then the Purchasing Supervisor, Contracting Division Manager or designee must follow the mid-year budget request process outlined in the Budget policy.

**H. EXECUTING THE CONTRACT AMENDMENT**

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

The following steps are taken in the preparation, routing, and execution of a contract amendment:

1. A contract amendment request can be initiated by the Purchasing Supervisor or designee or by the District’s contractor. If a formal contract amendment is required, the Purchasing Supervisor or designee should require that the contractor submit a written request (or written acknowledgement if initiated by the District) for the amendment, with justification for the proposed revision. The Purchasing Supervisor or designee should review the revised budget or schedule and justification to ensure that the revisions are necessary and will still allow the approved contract scope of work to be performed.
2. If the requested revisions from the contractor are not satisfactory, the Purchasing Supervisor or designee should notify the contractor in writing and identify any problems or deficiencies.
3. Once a satisfactory request is provided to the District, the Purchasing Supervisor or designee should deliver the written request for the amendment to Contracting Division along with any other relevant documentation to support the request. The Purchasing Supervisor or designee should be prepared to provide additional information to assist with final preparation of the contract amendment as needed by Contracting Division staff.
4. Once a draft amendment is completed by Purchasing Division staff or by the Purchasing Supervisor or designee, the Purchasing Supervisor or designee should review the amendment (routing package) to ensure the information is correct. The materials will include two (or more if multiple contractors/signatories) original District contract amendment copies for execution, a contract initiation form and a coordination memo outlining the changes that are being requested. The packet will be routed through the

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

Purchasing Supervisor or designee, CFAO, Legal, GM, and Board (as needed) for approval and signature. A letter transmitting the copies of the amendment to the contractor for signature is also included.

5. After the GM or Board has approved the contract amendment package, Contract Division staff will provide the Purchasing Supervisor or designee with a copy of the memo, transmittal letter and amendment. Once the amendment has been fully executed, the following distribution will be followed:
  - o Original contract amendment and copy of contract initiation form goes to official file (fireproof cabinet)
  - o Copy of amendment and all other routing package information goes to the official contract working files
  - o Notification of the amendment to the Purchasing Supervisor or designee
  - o Original contract initiation form routed to Contracting Division staff. An electronic copy of the executed amendment package is placed in the Contract tracking system, if applicable.

**I. RECORDING/SAFE-KEEPING OF THE CONTRACT**

A hard copy of the executed contract and a copy of the Contract Initiation Form should be filed in the Contract Working Files that are maintained by Purchasing Division. The executed contract with original signatures shall be filed in the Official Contract File which is located in fire-proof, lockable cabinets. Copies of the transmittal letter, and executed contracts are scanned and maintained in the contract management/tracking system. The Purchasing Supervisor or designee is notified of the execution and the original CIF is provided to Contracting Division staff for their records. Unless a contract gets approved by the Board it is not a valid contract

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

\* Please note that in some instances, contracts with the Federal Government are executed with electronic signatures.

In those instances, a hard copy of the award document and any associated correspondence will be included in the Contract Working Files and the Official Contract File.

After the contract has been executed and distributed, the contract tracking system is updated with agreement details. Further, the Purchasing Supervisor or designee must provide agreement expiration dates to the A/P division and Purchasing Agent to ensure that payments do not get made on expired agreements.

**SECTION 11: CONTRACT AND VENDOR MONITORING**

Please note that Memorandums of Understanding are exclusively reserved for consideration and execution by the Board. All contracts need to comply with the purchasing policy authorization table in order to be a valid contract.

- A. For contracts with a value that exceeds \$1 million, regular reporting must be provided to the Board that includes information on:
  - a. Compliance with financial provisions and delivery schedules under the contract;
  - b. Corrective action plans required under the contract and the status of any active corrective action plan; and
  - c. Any liquidated damages assessed or collected under the contract.
- B. For contracts with a value that exceeds \$5 million, the Purchasing Agent and the Contracting Department Head must:

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- a. Verify in writing that the solicitation and purchasing methods and contractor selection process comply with state law and agency policy; and
- b. Submit to the Board information on any potential issue that may arise in the solicitation, purchasing, or contractor selection process.

Additionally, for vendors that perform on-going operational work, it shall be the decision of the CFAO or designee to obtain a SOC Report from the vendor. If a SOC Report is obtained from the vendor, then a request must be made by the Contracting Division Manager for more up-to-date SOC Reports annually. Please see Section 9 for more information about SOC Reports

**SECTION 12: CONTRACT MODIFICATIONS**

The General Manager may extend the term of a District agreement so long as the Contract has not expired and there are no other material changes to the agreement, such as scope of work, consideration, method of payment, insurance, and indemnity requirements. This provision applies to time extensions only. All contracts need to comply with the purchasing policy authorization table in order to be a valid contract.

**SECTION 13: PAYMENT HOLDS**

- 1. If an invoice is received while a contract amendment is pending execution, the contractor shall be notified by the Contracting Division that the payment will be denied. The contractor will need to re-submit the invoice after the approval of the

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

contract amendment.

2. If an invoice is received where approval of a subcontractor agreement or internal budget memorandum are pending, the payment can be placed “on hold” for up to eight calendar days. If the agreement and/or memorandum are not approved by the District within the 8 days, the District shall deduct any expenses associated with the budget memorandum and/or affected subcontractor and will pay the remaining balance.

**SECTION 14: RETENTION PAYABLE**

The Purchasing Supervisor or designee should verify that their contract status is changed to Retainage Pending, as appropriate. The Contracting Division’s staff shall initiate the retention payment as appropriate by completing a Request for Payment Form as found in the A/P policy (see Exhibit G).

**SECTION 15: CONTRACT DELIVERABLES**

Some District contracts have deliverables in the form of planning, engineering and scientific reports. These contracts require contractors to produce an initial draft report to be followed by a final report. The Purchasing Division has assigned Engineering and/or Operation managers who are responsible for various tasks in the review and approval process of draft reports.

To ensure that the District gets deliverables of the highest caliber and that each step of the draft report review and approval process is properly handled, the following steps shall be taken in the successful review and approval of draft reports:

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- a. The Contracting Division Manager or designee shall transmit copies of any reviewer comments and prepare a transmission letter to the contractor. It is important that the Contracting Division Manager or designee review the comments for appropriateness before including them in the attachment. A reminder to the contractor to mail the Final Report to the Contracting Division Manager or designee will be included in the letter.
- b. The letter transmitting review comments and suggested revisions to the final report will be routed through the Purchasing Supervisor or designee, Department Head, and the GM, if applicable. Copies of each reviewer's actual comments will be attached to the letter as it is being routed for approval and signature. Only the edited comments will be mailed with the review letter and not each individual reviewer's comments (if applicable or in the best interest of the District).
- c. Copies of all draft report related memos and letters are to be given to the Purchasing Supervisor or designee and copies should be filed in the Purchasing Division's contract working files. Purchasing Division staff will place the routing file in a "Final Reports Pending" queue until the Final Report is received
- d. If the Final Report is satisfactory, the Purchasing Supervisor or designee will notify Purchasing Division staff by email. A letter will be prepared for signature by the Department Head and/or GM, if applicable to notify the contractor that the Final Report is acceptable and in conformance with the terms of the contract. The letter will also note that the contractor may request payment of retainage that may have been held on the contract.
- e. An electronic version of the report shall be supplied by the contractor to

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

the District. Any CDs or other media containing scientific data apart from the Final Report that are submitted to the District by the Contractor will be maintained in binders and made available to District staff as needed.

- f. The Purchasing Supervisor or designee shall verify that the contract status is changed to Retainage Pending, as appropriate.

**SECTION 16: CONTRACT CLOSE-OUT**

The District Purchasing Division shall retain records of each contract entered into and all solicitation documents related to the contract through the seventh anniversary of the date:

- The contracts are completed or expires; or
- All issues that arise from any litigation claim, negotiation, audit, open records request, administrative review, or other action involving the contract or documents are resolved.

**Procedure**

1. Purchasing Division staff will obtain from the assigned Contracting Division Manager or designee a written confirmation that the contract is complete and that all deliverables and payment requirements have been satisfactorily completed.
2. All physical file documentation for the contract will be collected for archives and storage and the contract status in the Contract tracking software (if applicable) will be updated to 'complete' status.

**ADMINISTRATIVE PROCEDURES**

APPROVAL DATE	FINANCE POLICIES	POLICY NO.
APPROVED BY: Board of Directors	POLICY TITLE <b>CONTRACT MANAGEMENT POLICY</b>	EFFECTIVE DATE

- 3. Contract documentation will be retained in accordance with the District's Records Retention Schedule.
- 4. All contracts need to comply with the purchasing policy authorization table in order to be a valid contract.

**RESOLUTION NO. ~~2021-16748~~**  
**A RESOLUTION OF THE BOARD OF DIRECTORS OF**  
**THE WEST VALLEY WATER DISTRICT AMENDING**  
**~~ADOPTING A~~ SURPLUS PERSONAL PROPERTY POLICY,**  
**RESOLUTION NO. 748**

Formatted: Indent: Left: 1.39", Right: 1.16", Space  
 Before: 0.25 pt, Line spacing: Multiple 1.02 li

**WHEREAS**, during the normal course of operations, personal property owned by the West Valley Water District ("District") becomes surplus, unusable or no longer needed; and

**WHEREAS**, The Board of Directors ("Board") of the District has determined that there is a need to promote uniformity in the procedures for the sale or transfer of surplus personal property owned by the District;

**NOW, THEREFORE**, the Board of the District does hereby resolve and determine as follows:

**Section 1.** A detailed list clearly identifying the surplus personal property of the District shall be approved by the Board in advance of any sale thereof. Such list shall identify items thereon that are fixed assets of the District.

**Section 2.** Each item on a list of surplus personal property shall include: (a) the estimated value of such item, and (b) the basis used for determining the value thereof. ~~Any item on such list with an estimated value of at less than ten (\$10.00) shall be identified with the phrase "no inherent value."~~

**Section 3.** Any item on a list of surplus personal property ~~with a value in excess of ten dollars (\$10.00)~~ shall be sold by the District through a publicly noticed sale, with the highest bid taking title and possession of such personal property. Bids shall not be accepted for less than the value approved by the Board.

**Section 4.** Notice of a sale of surplus personal property shall be: (a) posted at least seventy-two (72) hours prior to the sale; and (b) advertised in a newspaper of general circulation at least once prior to the sale. Sale notices may include any number of items approved for sale by the Board but do not have to include every item. In addition to publication in a newspaper of general circulation, if the surplus personal property is determined to have value in a particular restricted market, the sale may be advertised in a trade publication specific to that market.

**Section 5.** All surplus personal property shall be sold "as is" and "where is", with no warranty, guarantee, or representation of any kind, expressed or implied, as to the condition, utility or usability of the personal property offered for sale.

**Section 6.** All interested parties may review the personal property the day of the sale. No inspection of the personal property for sale may be made prior to the day of the sale.

**Section 7.** Prospective purchasers may submit bids for any items of personal property beginning at 9:00 a.m. (or such other time set forth in the notice of sale) and ending at 2:00 p.m. (or such other time as set forth in the notice of sale) on the day noticed for the sale of the personal property. The General Manager or his or her designee will open the bids. All final bids will be posted. The General Manager or his or her designee shall determine the highest bidder for each item. The final bid list and determination of highest bidder for each item will be kept by the ~~Chief Financial & Administrative Officer or designee, Treasurer.~~

**Section 8.** As per Government Code Section 1090, members of the Board, officers, ~~and employees, and immediate family members of board officers and employees~~ of the District may not be purchasers of surplus personal property of the District ~~if such persons used, had control over, or were involved in purchasing such personal property items.~~

**Section 9.** Payment for the personal property is due at the time of the sale. Payment shall be collected by the ~~CFAO/Treasurer~~ or his or her designee. All sales will be recorded with a receipt from the District. The issuance of a receipt shall follow the District's standard payment receipt practices. Payment shall be in the form of cash, cashier's check, or credit/debit card. The receipt will include the name and mailing address of the purchaser of the item of personal property. The ~~CFAO/Treasurer~~ or his or her designee, shall ensure that the payment is the same amount as the highest bid. Payments will be deposited no later than the next business day.

**Section 10.** The personal property shall be removed by the purchaser immediately following the sale. Personal property not picked up after five (5) days will be held for future sale or disposed of as described in this resolution. In the event such personal property is sold at a later sale, a refund of the payment, less administrative costs and storage, will be mailed to the purchaser of such item of personal property within thirty (30) days after the subsequent sale thereof.

**Section 11.** Personal property with no inherent value and personal property which was has not been purchased during the sale may be held for a future sale or may be deemed unwanted surplus and may be given to a public agency which is a customer of the District. If no such public agency expresses an interest in acquiring the personal property, it may be given to a local, nonprofit organization which is a customer of the District, or may be disposed of in an appropriate disposal or recycling site, all as shall be determined by the General Manager of District (or his or her designee).

~~**Section 12. Computer equipment.** Recognizing that employees who are skilled in technology are an asset to the District, before presenting recommendations to the Board to declare computer equipment as surplus, it will first be offered to purchase to District employees~~

~~— subject to the following conditions:~~

- ~~a. \_\_\_\_\_ The employee must demonstrate that he/she legally owns licensed copies of the District's standard desktop operating system and word processing software for his/her personal use.~~
- ~~b. \_\_\_\_\_ The employee is currently enrolled in college or trade school.~~
- ~~e. \_\_\_\_\_ The employee did not use, have control over, and was not involved in the~~

Peggy Asche  
Board Secretary

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** ADOPT RESOLUTION 2021-15 AMENDING SCHEDULE OF CHARGES FOR THE HOURLY LABOR AND VEHICLE/EQUIPMENT HOURLY RATES FOR WATER SERVICE REGULATIONS

---

**BACKGROUND:**

Each fiscal year, the West Valley Water District (“District”) reviews the labor and equipment average hourly rate and makes adjustments for inflation. The hourly rates are used if and when the District has to charge for damages to District property and for general cost recovery purposes.

**DISCUSSION:**

The District must amend the Hourly Labor Rate and the Vehicle and Equipment Hourly Rate, attached as Exhibit A and Exhibit B, respectively, as stated in the District Water Service Regulations Schedules of Rates and Charges, Article 20, Sections 2023 and 2024:

2023. HOURLY LABOR RATE. Hourly labor rates are adjusted on an annual basis by averaging Employee’s salaries and benefit. (Exhibit A).
2024. VEHICLE/EQUIPMENT HOURLY RATE. The hourly rate is established utilizing the State of California Surcharge and Equipment Rental Rate on an annual basis. (Exhibit B)

**FISCAL IMPACT:**

There is no fiscal impact to this action.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**RESOLUTION NO. 2021-15  
A RESOLUTION OF THE BOARD OF DIRECTORS OF  
THE WEST VALLEY WATER DISTRICT AMENDING ARTICLE 20, SCHEDULE OF  
CHARGES OF RESOLUTION NO. 2020-15**

**WHEREAS**, West Valley Water District (District) Water Service Regulations, Article 8, Section 804, “Damages to Water System Facilities, “requires that anyone creating damage to any portion of the District’s facilities shall be liable for the repair and or replacement of the damaged facilities, plus any and all administration charges and overhead, and

**WHEREAS**, the District has agreements, unrelated to damage liability, that include the District’s labor, material, administrative and/or overhead costs; and

**WHEREAS**, the District uses an average hourly rate of salary and benefits for cost recover purposes; and

**WHEREAS**, the District uses the hourly cost of vehicles and equipment per the State of California, Labor Surcharge and Equipment Rental Rates for cost recovery purposes; and

**WHEREAS**, the Board of Directors recently approved the budget which included salaries and benefits; and

**WHEREAS**, the Board of Directors of the West Valley Water District deem it proper and necessary to amend Article 20, Schedule of Charges, of the Water Service Regulations in order to update and use the most current hourly rates for cost recovery purposes.

**NOW, THEREFORE, BE IT RESOLVED** that the Board of Directors of the West Valley Water District does hereby amend Article 20, Schedule of Charges of the Water Service Regulations as indicated in Exhibit A and B attached.

**BE IT RESOLVED** that said Resolution shall be effective July 1, 2021.

\* The Hourly Rate includes both fixed and variable costs. Variable costs change relative to the level of activity, (for example electric costs). Fixed costs do not change relative to the level of activity, (for example monthly rent). The O.T. Factor reflects only the variable cost portion of the hourly rate. In order to avoid duplication of charges for the fixed cost portion, the O.T. Factor is multiplied by the Hourly Rate to calculate the O.T. Rate.

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** **CONSIDER THE BULK PURCHASE OF METERS, METER BOXES, LIDS, & BALL VALVES TO SUPPORT DEVELOPMENT PROJECTS IN PROGRESS**

---

**BACKGROUND:**

The West Valley Water District's, ("District"), Purchasing Department maintains an inventory of various parts and supplies as needed to support the ongoing maintenance and development activities. Inventory items are generally ordered in the lowest quantity that will support ongoing activities, but also keep the amount of inventory space required to a minimum. This practice generally results in inventory purchase orders that fall under the Purchasing Policy limit of \$25,000 for the General Manger.

**DISCUSSION:**

Among the inventory items maintained are meters, meter boxes, meter box lids, and ball valves. These are informally referred to as "New development meter installation kits". Due to semiconductor chip shortages, materials shortages, and other COVID-19 related issues, recent orders for these items have taken longer than usual to fill, (in some cases, items are on back order), and prices are increasing.

In order to ensure that there is no disruption in the District's ability to meet the demands of the development projects in progress, staff is proposing a larger than usual order of the items that make up the "New development meter installation kits".

**New Development 1" Meter Install Kit**

<b>Qty</b>	<b>Item</b>	<b>Vendor</b>	<b>Price EA</b>	<b>Subtotal</b>	<b>Tax</b>	<b>Total</b>
300	Meter Box	Old Castle	\$ 57.65	\$ 17,295.00	\$ 1,340.36	\$ 18,635.36
300	Meter Box Lid	Old Castle	\$ 35.25	\$ 10,575.00	\$ 819.56	\$ 11,394.56
300	1" Meter	Aqua Metric	\$ 156.98	\$ 47,094.00	\$ 3,649.79	\$ 50,743.79
300	1" Ball Valve	Yo Fire	\$ 101.00	\$ 30,300.00	\$ 2,348.25	\$ 32,648.25
				<b>\$ 105,264.00</b>	<b>\$ 8,157.96</b>	<b>\$ 113,421.96</b>

**FISCAL IMPACT:**

Inventory items do not directly impact the District's Operating Budget at the time of purchase. They are recorded on the balance sheet and expensed as they are issued out for use. The FY 2022 Operating Budget includes funding for the installation of new meters for development.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** APPROVAL OF PURCHASE ORDERS FOR FY 2021-22

---

**BACKGROUND:**

At the beginning of every Fiscal Year, the District issues various Purchase Orders (POs) to vendors for recurring services used throughout the year. Some of these POs are over \$25,000 for the Fiscal Year which require Board Approval. To be transparent, fiscally responsible and efficient, staff has created a list, shown in Exhibit A, of services that require a PO over \$25,000. While staff recognizes that some agreements are expired or on a month-to-month basis, the Finance Department is committed to a better process in administering contracts and ensuring all those that have expired are formally solicited through an RFP or RFB process during the Fiscal Year 21-22. Additionally, because of the COVID-19 pandemic, there were several services that were unable to be stopped or changed without creating additional COVID-19 exposure to staff and vendors. This report is planned to be released annually at the beginning of each Fiscal Year.

This Finance Committee has referred this item to the full board for approval.

**FISCAL IMPACT:**

There is no fiscal impact for producing this report. All PO amounts that will be issued are included in the Fiscal Year 21-22 budget that was approved and adopted by WVWD Board on May 20, 2021.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** CONSIDER AN AGREEMENT WITH GOLDEN STAR TECHNOLOGIES TO UPGRADE THE BOARD ROOM AUDIO VISUAL SYSTEM

---

**BACKGROUND:**

The West Valley Water District's, ("District"), Board room is equipped with an audio-visual system that allows for presentation materials to be displayed on monitors at the dais and on a projector screen. The system also allows for audio recordings of the meetings. The current system was installed in 2007, so it is now 14 years old and out-of-date.

Due to the system's age, a project was considered to upgrade it. Staff worked closely with the Safety and Technology Committee to develop the parameters for the upgrade. Staff reached out to several vendors and received preliminary quotes. Due to budgetary considerations, the project was delayed. Since then, the system has experienced failures of multiple control components, which are no longer manufactured. In a couple of cases, staff has been able to locate used components on the secondary market, (eBay). However, efforts to repair the system have been unsuccessful.

Due to those failures and the District's changing need to expand livestreaming and videoconferencing capabilities, the Safety and Technology Committee authorized staff to release a Request for Proposal (RFP) to upgrade the system.

**DISCUSSION:**

The RFP was posted to PlanetBids.com on Monday, October 19,2020. A total of 18 agencies downloaded the RFP document. On Monday, October 26, 2020, representatives from 9 of those agencies attended a mandatory job walk. District staff explained the project, responded to questions, and provided access to the Board room and existing system layout.

Proposals were received from 6 vendors. Each vendor provided pricing for a system that they believed would meet the District's minimum requirements and in certain cases, pricing for optional add-ons were included. Staff evaluated the proposals to ensure that the stated objectives and system capabilities were met. Additionally, staff conducted a review of the proposed hardware components to ensure that the pricing was not reflective of lower quality equipment and materials. A summary of the vendors and the proposed pricing is included in the table below.

	<b>Minimum Scope</b>	<b>Optional Add-ons</b>	<b>Total</b>
Golden Star Technologies	81,241.08	868.88	82,109.96
Digital Network Group	92,407.00	-	92,407.00
Verrex	94,182.00	-	94,182.00
Western Audio	96,447.66	-	96,447.66
Audio Visual Innovations	120,735.18	30,706.90	151,442.08
IPTV International	179,880.00	-	179,880.00 <sup>A</sup>

**Note A: Price EXCLUDES tax.**

The systems proposed by each vendor met the minimum requirements as described in the RFP, with Golden Star Technologies, (“GST”), being the lowest bidder. Staff recognizes that the lowest price does not necessarily represent the best option. Therefore, staff scrutinized the GST’s proposal to ensure that there were no technological, service, or other deficiencies compared to the other higher priced proposals. There were none. It is worth noting that GST has previously worked on other A/V projects, (conference room upgrade), for the District.

The scope of the RFP did not include an upgrade for the existing Assistive Listening System. However, staff recommended that such an upgrade be added to the project and requested an updated quote from GST, (included as Attachment A – GST Quote v2), which reflects the removal of the optional equipment and the addition of an Assistive Listening System. The total of the updated quote is \$82,290.17. The second quote was dated 02/11/2021 and it has since expired.

Staff reached out to GST to confirm their pricing and availability for the project. GST has confirmed their availability. However, there have been some price increases on some of the hardware. The revised quote, (included as Attachment B – GST Quote v3), reflects a total price of \$85,845.92. The Purchasing Department prepared the District’s standard public works agreement, (included as Attachment C – GST Public Works Agreement), which has been reviewed by legal counsel.

**FISCAL IMPACT:**

The FY 2022 CIP Budget includes funding of \$90,000 for Project W20016: Board Room Audio Visual Upgrade with Video Recording.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

## ▶ Statement of Work

### SUMMARY

GST is responding to the Request for Proposal from the West Valley Water District for the Board Room Audio Visual Systems installation. This scope of work serves the purpose of confirming our understanding of the Water District's needs, requests and requirements.

GST has attended the required walk through and understands the intended as described during the course of this walk through. GST has experience in the design, installation and programming of rooms such as this, and will leverage that knowledge and experience, along with strong relationships with manufacturers that support these installations. The AV industry recognizes the CTS (Certified Technology Specialist) certification as the baseline in AV related skills. GST has in house, and assigned to this project 2 individuals who have obtained the baseline CTS certification, as well as the advanced levels including the I (INSTALLATION) and D (DESIGN) endorsements. These endorsements play a critical role in all phases of the project.

GST is a preferred partner with the key manufacturers that are part of this proposal. As such, we have engaged with them on the design and suitability, and with that confirmation, we are proud to represent the various manufacturers.

GST understands that WVWD has requested that all 13 monitors that are positioned on the dais be removed and delivered back to district staff. GST shall provide and install 13 new 22" LCD monitors that are "kickstand" mounted. This will allow them to be reclined on an angle, and maintain visibility to the person sitting in front of it from the audience. Each of the 13 displays shall be set up to show the same image as the main projector in the room.

GST understands that WVWD has requested that all currently installed microphones (gooseneck and wireless) be removed and delivered back to district staff. GST shall provide and install 14 new wired 18" gooseneck microphones and 2 wireless microphones. The gooseneck mics shall have individual mute/unmute buttons on the base. The 2 wireless mics shall consist of 1 hand held microphone and one lapel style microphone with body pack.

GST understands that WVWD has requested that all existing ceiling recessed loudspeakers be removed and replaced with new ceiling recessed loudspeakers. GST understands the challenges of feedback and audibility that the district has experienced, and will address this using the newest technology, including digital signal processing, multiple audio zones and specific audio zone routing to achieve optimal audio quality for the entire room.

GST understands that WVWD has requested 5 HDMI inputs at the dais for digital video inputs. GST understands that the existing cable cubbies shall be reused and the HDMI connections shall be routed thru the cable cubbies. GST assumes that cubbies are currently installed in each of the 5 locations where input is desired. GST further understands that a connection for HDMI input shall be provided in the equipment rack for a resident desktop (house) PC.

GST understands that WVWD has an existing cable TV tuner mounted in the equipment rack and that its signal shall be integrated into the new system. GST assumes that the output of this cable TV tuner is digital (HDMI) and that no analog

equipment is to be reinstalled.

GST understands that WVWD has requested that the existing equipment rack be reused in its current location, and that all equipment be removed and delivered to district staff. GST concurs with this and will repurpose the existing rack(s) in their current locations. GST assumes that power is adequate and sufficient for the new system.

GST understands that the existing assisted listening system is to be repurposed and reconnected to the new AV system.

GST understands that WVWD has requested 2 strategically positioned pan-tilt-zoom (PTZ) HD cameras. The subjects of these cameras shall be, generally, the podium location as well as the entire dais and seated areas of the board room. GST shall provide and install these 2 new cameras in locations that optimize these viewing angles, and provide control of the cameras thru the control system described below.

GST understands that that WVWD desires to continue use of the existing Epson projector. GST has no objection to this.

GST understands that WVWD desires to have the projection screen removed and replaced. GST shall remove the existing projection screen and reinstall a new 16:10 format 164" diagonal ceiling recessed projection screen. GST assumes the screen will be placed in the same location as the current screen.

GST understands that WVWD has requested integration of the audio system into the existing VOIP system. GST shall work with WVWD IT department to provide this functionality. GST assumes that the VOIP system can accommodate this addition.

GST understands that the existing Denon audio recorder is to be repurposed. GST shall reintegrate this recorder into the system and have customary controls (play, pause, stop, record) functions in the control system.

GST shall provide, program and install a control system that provides customary controls as requested. These controls shall include system on/off, video preview window, camera PTZ controls, video source selection and routing, volume level control and muting, microphone level control and muting, audio recording control, and VOIP dialer control. A 12" wired touchpanel shall be provided and installed into the rack where the AV equipment is housed and all control can be done with this touchpanel. This touchpanel shall have video preview as requested. A second 12" tabletop touchpanel shall be provided and installed at the back of the room where the operators are typically seated. This second touchpanel shall plug into the wall and be able to unplug from the wall and secured at WVWD staff discretion. This second touchpanel shall have identical function as the rack mounted touchpanel. Both panels shall track each other, and mirror.

**OPTION:** ~~GST shall provide, as an option, an additional wireless Ipad/Touchpanel that can be used anywhere within the room. This Ipad touchpanel will have all the same functions as the 2 wired touchpanels, with the exception of the video preview.~~

~~GST understands that many incidental cables, interconnects, termination and supplies will be needed in the course of this installation. GST has included all of these in our cost proposal.~~

## **ADDED on 2-10-2021 Assisted Listening System**

GST shall provide and install an assisted listening system with 4 receivers. The assisted listening system shall be programmed to replicate any audio that is presented through the loudspeakers in the room. GST shall provide a charging carry case, 4 receivers, 4 ear pieces and 2 neck loops. The quantities are based on seated capacity of 100, per WVWD provided information. See the calculations below:

## EXCLUSIONS

### PROJECT SPECIFIC EXCLUSIONS

- MVWD has informed GST that the projector is to be repurposed. No new projector is included.
- No extended warranty is implied on any owner furnished equipment.

### GENERAL EXCLUSIONS

- Any item not specifically stated in the above RESULTS or TASKS section.

## ASSUMPTIONS

### PROJECT SPECIFIC ASSUMPTIONS

- Power and data provided by WVWD

### GENERAL PROVISIONS

- GST reserves the right to charge, time and materials basis for any additional work over and above this service package pricing that may result from work required address service prerequisites or other requirements not met by the Customer.
- Should the customer not, within 30 days of having purchased the service, contact GST schedule its subsequent delivery, GST reserves the right re-evaluate the charges for this service.

- The ability of GST deliver this service is dependent upon the Customer's full and timely cooperation with GST, as well as the accuracy and completeness of any information and data the Customer may provide GST.
- The following items are excluded unless specified in the Scope of Services
  - Electrical infrastructure (outlets, conduits, breaker boxes, panels, etc.)
  - Concrete saw cutting and/or core drilling
  - Fire wall, ceiling, roof and floor penetration
  - Drywall replacement and/or repair
  - Ceiling tile or T-bar modification, replacement and/or repair
  - Millwork (moldings, trim, etc.)
  - Painting and patching
  - Permits (unless specifically provided for elsewhere in the contract)
  - HVAC and plumbing relocation
  - Cutting of Granite or Glass table tops
  - Repositioning of existing lighting
  - Moving or displacing existing equipment
  - Disposal if existing equipment

## CUSTOMER REQUIREMENTS

### PROJECT SPECIFIC REQUIREMENTS

### GENERAL RESPONSIBILITIES

- Coordinate the preparation of any hardware and/or software that is not included for this project. Ensure that existing hardware is fully functional and software/firmware is updated.
- Assure that the environment is 100% ready. If the environment is not 100% ready the scheduling of the implementation will not be finalized until it is.
- Customer is responsible for providing 24 hours or greater advanced notice for the rescheduling or cancellation of GST's onsite engineering services. If less than 24 hours is given the customer will be charged a half day of GST's engineers time at \$175/hr.
- Coordinate service deployment on third-party maintained hardware/software (if applicable).
- Assign a designated person from the Customer's staff who, on behalf of the Customer will grant all approvals, provide information, and otherwise be available to assist GST to facilitate the delivery of this service.
- Ensure that all hardware, firmware, and software that the GST engineer will need in order to deliver this service are available.
- Allow GST full and unrestricted access to all locations where the service is to be delivered.
- Provide a suitable work area for delivery of the service, including access to an outside telephone line, power, any network connections, etc. that is required.
- Be responsible for all data backup and restore operations
- Provide one point-of-contact that will finalize decisions during the project.
- Provide necessary documentations, paperwork, schematics, line drawings, and information for GST to complete the project. Any delays in providing the necessary project documentation will delay the project.

## SERVICES TERMS AND CONDITIONS

### NON-COMPETE CLAUSE

GST assigns service professionals with qualifications commensurate with tasks listed in this scope of work. If the customer, directly or indirectly, contracts with or hires any GST employee engaged in providing services to the customer under this agreement or any other agreement, written or oral, GST will have the option of negotiating a change in the cost and/or time to deliver or charge the customer the equivalent of 30% of the employees' annual salary as a finder's fee. This clause is

applicable for a period of up to ninety days from the last date of services rendered by a GST employee to the customer.

#### **TIME RECORDS**

Each employee, either directly employed by GST or a subcontractor (hereinafter called "GST employee") will present a time record to the customer setting forth the hours worked. An authorized representative of the customer must countersign the record and will thereby certify that such time is correct and that the work was performed in a satisfactory manner.

#### **NORMAL BUSINESS HOURS**

GST service hours are 8:00 am to 5:00 pm Monday through Friday. Overtime (over 8 hours in one day), scheduled after hours and weekends are charged at time and one-half of contracted service rate. Emergency after hours, weekends and holidays are charged at two times contracted service rate. Customer is responsible for providing 24 hours or greater advanced notice for the re-scheduling or cancellation of GST onsite engineering services. If less than 24 hours is given the customer will be charged a half day of GST engineering time at \$175/hr.

#### **TERMINATION TERMS**

Client may terminate work under this Statement of Work, in whole or in part, at any time by 30 day written notice. Such notice shall state the extent and effective date of such termination. Upon receipt thereof, GST shall, to the extent directed by the Client or its designees, stop work under this agreement. If the agreement is so terminated for convenience, GST shall be paid in accordance with the terms of the order for only those materials or supplies delivered and accepted.

#### **COMMENCEMENT OF WORK**

Work shall not commence under the Contract until a fully executed agreement has been received by GST and GST has been given approval to proceed by customer.

#### **DATA LOSS**

GST make no guarantee against data loss during services engagements. It is the customers responsibility to ensure data is properly protected (backed up) before the engagement begins.

#### **PRODUCT RETURNS**

Standard stock items purchased from GST may be returned for any reason within (14) fourteen days. Custom orders are non-returnable and non-refundable. All original packaging, accessories and documentation must accompany the item and be in unmarked condition. Items must be shipped via at least 2nd day freight with insurance for the full value of the item. Returned items are subject to a 25% restocking fee. Though rare, a customer may need to return a defective product. Defective product returns are not subject to the 25% restocking fee and will be exchanged in accordance with the manufacturer's policy within 30 days of purchase.

#### **PROJECT DELAYS**

Delays due to client configuration specifications, hardware delivery, carrier availability, and facility access, physical or environmental delays are subject to change orders as billable delays. These delays can also impact project timeline and deadlines.

#### **PREVAILING WAGE CLAUSE**

GST holds the right to charge the customer additional services fees if the project is deemed to have prevailing rates of wages requirements prior, during, or after project completion. GST adheres and complies with the provisions of the California Labor Code. All workers employed on public works projects must be paid the prevailing wage determined by the Director of the Department of Industrial Relations, according to the type of work and location of the project. The prevailing wage rate is the basic hourly rate paid on public works projects to a majority of workers engaged in a particular craft, classification or type of work within the locality and in the nearest labor market area (if a majority of such workers are paid at a single rate). If there is no single rate paid to a majority, then the single or modal rate being paid to the greater number of workers is prevailing.

## GST SERVICES WARRANTY

### QUALITY OF SERVICES

GST warrants that its Services will be of professional quality (performed in a good and workmanlike manner) and will conform to generally accepted industry standards for such Services and to the requirements specified in this SOW. GST's personnel shall be competent and qualified to perform the tasks to which they are assigned. In the event of any breach of this warranty, GST, at its sole expense and without delay, shall re-perform the non-conforming Services to the applicable standard.

### WORKMANSHIP WARRANTY

GST certifies that all equipment and materials furnished shall carry a ninety (90) day warranty on parts. GST guarantees to furnish any qualified personnel (during normal business hours, Monday to Friday, 8:00 am to 5:00 pm) to the installation site for the period of one (1) year from the date of installation to repair or replace defective items installed or provided by GST exclusively. If the item is determined to not be defective, GST will charge the customer for all time spent on the incident at a rate of \$175/hour. Determination if item is defective or was changed, damaged, reconfigured, or altered by non GST personnel is under sole authority of GST. Any change, alteration, damage, or reconfiguration by non GST personnel voids one (1) year warranty. No response timeframe SLA guaranteed for warranty work. Further, all equipment purchased from GST in our installed system is subject to a manufactures warranty. Further, all equipment purchased from GST in our installed system is subject to a manufacture warranty. GST will not honor any other warranty, implied or otherwise. In no event shall GST be liable, or in any way responsible for damages, or defect in the system, which were caused by neglect, vandalism, misuse, environmental damage or by repairs or attempted repairs performed by anyone other than a GST service technician. Nor shall GST be liable or in any way responsible for any incidental or consequential economic or property damage.

## CHANGE MANAGEMENT

GST establishes change management procedures to document changes that are made to the baseline project identified in the Statement of Work. These procedures are in place to reduce the potential for cost and schedule variances.

**Customer is responsible for providing 24 hours or greater advanced notice for the re-scheduling or cancellation of GST engineering services. If less than 24 hours is given the customer will be charged a half day of GST engineering time at \$175/hr.**

If a change needs to be made to the project, which is not included in the SOW or differs from the SOW, GST or the client must complete the Change Management Request form. GST will review the completed form and provide an estimate to complete the request. Client must approve the additional hours/costs in order to complete the request.

In the event a change requested by the customer reduces the amount of work and the project is a firm fixed priced project, the full amount of the project will be invoiced.

A change occurs when GST encounters any of the following situations during project delivery:

1. Either party identifies new requirements not included in the original project's scope
2. Either party makes suggestions that would improve the proposed system but are not necessarily required to address the project requirements; such suggestions are incorporated into a subsequent project phase
3. Either party changes the direction and intent of this project, which requires GST to rework the solution design or services

12881 166th Street  
Cerritos, CA 90703  
www.gstes.com  
(562) 345-8700

Changes in the scope of work defined in this Statement of Work are only effective if both the customer and GST agree to them in a written document setting forth the modifications and any changes to the delivery schedule and payment terms.

### TERMS AND CONDITIONS

All prices and descriptions are subject to change without notice.

THIS PRICE LIST IS A QUOTATION ONLY AND IS NOT AN ORDER OR OFFER TO SELL. No contract for sale will exist unless and until a purchase order has been issued by you and accepted by Golden Star Technology Inc. ("GST"). Acceptance by GST of any offer is expressly conditioned upon your assent to the Terms and Conditions of Sale set forth in GST's invoices.

The prices contained in this list may not be relied upon as the price at which GST will accept an offer to purchase products unless expressly agreed to by GST in writing. Products quoted were selected by GST based on specifications available at the time of the quotation, and are not guaranteed to meet bid specifications. Product specifications may be changed by the manufacturer without notice. It is your responsibility to verify product conformance to specifications of any subsequent contract. All products are subject to availability from the manufacturer. The freight costs listed are estimates. Shipping costs may vary based on time of purchase, quantity ordered, shipment carrier and warehouse sourced. Actual shipping costs will be calculated during shipment and will be reflected on your invoice. For hardware product(s), manufacturer warranty will begin upon physical delivery of the hardware products(by) by the customer or GST warehouse. For software

Cerritos, CA 90703  
www.gstes.com  
(562) 345-8700

product(s), the manufacturer warranty will begin upon electronic or physical receipt of the software product(s) by you or GST. Any returns must be approved by GST based on manufacturer approval. More details at [gstes.com/RMA](http://gstes.com/RMA).

GST is not responsible for compliance with regulations, requirements or obligations associated with any contract resulting from this quotation unless said regulations, requirements or obligations have been passed to GST and approved in writing by an authorized representative of GST.

WE DO EVERYTHING WE CAN TO ENSURE THAT THE PRICES WE HAVE QUOTED ARE CORRECT AND CURRENT, AND WE TRY TO KEEP OUR PRICES CONSTANT. HOWEVER, DUE TO IMPENDING TARIFFS, PRICES MAY INCREASE AT ANY TIME FROM OUR OEM AND VENDORS THAT IS OUT OF OUR CONTROL.

 Statement of Work Authorization

I agree with the tasks described in the aforementioned statement of work for the project. I understand that if there are any changes to the Statement of Work that GST will provide a revised statement of work and a quote for any additional charges. By signing below, each party agrees to the terms of this Agreement and GST will begin in executing this statement of work.

## ▶ Statement of Work

### SUMMARY

GST is responding to the Request for Proposal from the West Valley Water District for the Board Room Audio Visual Systems installation. This scope of work serves the purpose of confirming our understanding of the Water Districts needs, requests and requirements.

GST has attended the required walk through and understands the intended as described during the course of this walk through. GST has experience in the design, installation and programming of rooms such as this, and will leverage that knowledge and experience, along with strong relationships with manufacturers that support these installations. The AV industry recognizes the CTS (Certified Technology Specialist) certification as the baseline in AV related skills. GST has in house, and assigned to this project 2 individuals who have obtained the baseline CTS certification, as well as the advanced levels including the I (INSTALLATION) and D (DESIGN) endorsements. These endorsements play a critical role in all phases of the project.

GST is a preferred partner with the key manufacturers that are part of this proposal. As such, we have engaged with them on the design and suitability, and with that confirmation, we are proud to represent the various manufacturers.

GST understands that WVWD has requested that all 13 monitors that are positioned on the dais be removed and delivered back to district staff. GST shall provide and install 13 new 22" LCD monitors that are "kickstand" mounted. This will allow them to be reclined on an angle, and maintain visibility to the person sitting in front of it from the audience. Each of the 13 displays shall be set up to show the same image as the main projector in the room.

GST understands that WVWD has requested that all currently installed microphones (gooseneck and wireless) be removed and delivered back to district staff. GST shall provide and install 14 new wired 18" gooseneck microphones and 2 wireless microphones. The gooseneck mics shall have individual mute/unmute buttons on the base. The 2 wireless mics shall consist of 1 hand held microphone and one lapel style microphone with body back.

GST understands that WVWD has requested that all existing ceiling recessed loudspeakers be removed and replaced with new ceiling recessed loudspeakers. GST understands the challenges of feedback and audibility that the district has experienced, and will address this using the newest technology, including digital signal processing, multiple audio zones and specific audio zone routing to achieve optimal audio quality for the entire room.

GST understands that WVWD has requested 5 HDMI inputs at the dais for digital video inputs. GST understands that the existing cable cubbies shall be reused and the HDMI connections shall be routed thru the cable cubbies. GST assumes that cubbies are currently installed in each of the 5 locations where input is desired. GST further understands that a connection for HDMI input shall be provided in the equipment rack for a resident desktop (house) PC.

GST understands that WVWD has an existing cable TV tuner mounted in the equipment rack and that its signal shall be integrated into the new system. GST assumes that the output of this cable TV tuner is digital (HDMI) and that no analog

equipment is to be reinstalled.

GST understands that WVWD has requested that the existing equipment rack be reused in its current location, and that all equipment be removed and delivered to district staff. GST concurs with this and will repurpose the existing rack(s) in their current locations. GST assumes that power is adequate and sufficient for the new system.

GST understands that the existing assisted listening system is to be repurposed and reconnected to the new AV system.

GST understands that WVWD has requested 2 strategically positioned pan-tilt-zoom (PTZ) HD cameras. The subjects of these cameras shall be, generally, the podium location as well as the entire dais and seated areas of the board room. GST shall provide and install these 2 new cameras in locations that optimize these viewing angles, and provide control of the cameras thru the control system described below.

GST understands that that WVWD desires to continue use of the existing Epson projector. GST has no objection to this.

GST understands that WVWD desires to have the projection screen removed and replaced. GST shall remove the existing projection screen and reinstall a new 16:10 format 164" diagonal ceiling recessed projection screen. GST assumes the screen will be placed in the same location as the current screen.

GST understands that WVWD has requested integration of the audio system into the existing VOIP system. GST shall work with WVWD IT department to provide this functionality. GST assumes that the VOIP system can accommodate this addition.

GST understands that the existing Denon audio recorder is to be repurposed. GST shall reintegrate this recorder into the system and have customary controls (play, pause, stop, record) functions in the control system.

GST shall provide, program and install a control system that provides customary controls as requested. These controls shall include system on/off, video preview window, camera PTZ controls, video source selection and routing, volume level control and muting, microphone level control and muting, audio recording control, and VOIP dialer control. A 12" wired touchpanel shall be provided and installed into the rack where the AV equipment is housed and all control can be done with this touchpanel. This touchpanel shall have video preview as requested. A second 12" tabletop touchpanel shall be provided and installed at the back of the room where the operators are typically seated. This second touchpanel shall plug into the wall and be able to unplug from the wall and secured at WVWD staff discretion. This second touchpanel shall have identical function as the rack mounted touchpanel. Both panels shall track each other, and mirror.

**OPTION:** ~~GST shall provide, as an option, an additional wireless Ipad/Touchpanel that can be used anywhere within the room. This Ipad touchpanel will have all the same functions as the 2 wired touchpanels, with the exception of the video preview.~~

~~GST understands that many incidental cables, interconnects, termination and supplies will be needed in the course of this installation. GST has included all of these in our cost proposal.~~

## **ADDED on 2-10-2021 Assisted Listening System**

GST shall provide and install an assisted listening system with 4 receivers. The assisted listening system shall be programmed to replicate any audio that is presented through the loudspeakers in the room. GST shall provide a charging carry case, 4 receivers, 4 ear pieces and 2 neck loops. The quantities are based on seated capacity of 100, per WVWD provided information. See the calculations below:

[Products](#) [Support](#) [About](#) [Shop](#) [Contact](#) [Consultant](#)

## California ADA Compliance Calculator

The calculator allows you to enter the number of seats in a venue and calculate the minimum number of assistive listening devices and neck loops needed to meet new 2014 ADA requirements.

#### EXCLUSIONS

##### PROJECT SPECIFIC EXCLUSIONS

- MVWD has informed GST that the projector is to be repurposed. No new projector is included.
- No extended warranty is implied on any owner furnished equipment.

##### GENERAL EXCLUSIONS

- Any item not specifically stated in the above RESULTS or TASKS section.

#### ASSUMPTIONS

##### PROJECT SPECIFIC ASSUMPTIONS

- Power and data provided by WVWD

##### GENERAL PROVISIONS

- GST reserves the right to charge, time and materials basis for any additional work over and above this service package pricing that may result from work required address service prerequisites or other requirements not met by the Customer.
- Should the customer not, within 30 days of having purchased the service, contact GST schedule its subsequent

delivery, GST reserves the right re-evaluate the charges for this service.

- The ability of GST deliver this service is dependent upon the Customer's full and timely cooperation with GST, as well as the accuracy and completeness of any information and data the Customer may provide GST.
- The following items are excluded unless specified in the Scope of Services
  - Electrical infrastructure (outlets, conduits, breaker boxes, panels, etc.)
  - Concrete saw cutting and/or core drilling
  - Fire wall, ceiling, roof and floor penetration
  - Drywall replacement and/or repair
  - Ceiling tile or T-bar modification, replacement and/or repair
  - Millwork (moldings, trim, etc.)
  - Painting and patching
  - Permits (unless specifically provided for elsewhere in the contract)
  - HVAC and plumbing relocation
  - Cutting of Granite or Glass table tops
  - Repositioning of existing lighting
  - Moving or displacing existing equipment
  - Disposal if existing equipment

## CUSTOMER REQUIREMENTS

### PROJECT SPECIFIC REQUIREMENTS

### GENERAL RESPONSIBILITIES

- Coordinate the preparation of any hardware and/or software that is not included for this project. Ensure that existing hardware is fully functional and software/firmware is updated.
- Assure that the environment is 100% ready. If the environment is not 100% ready the scheduling of the implementation will not be finalized until it is.
- Customer is responsible for providing 24 hours or greater advanced notice for the rescheduling or cancellation of GST's onsite engineering services. If less than 24 hours is given the customer will be charged a half day of GST's engineers time at \$175/hr.
- Coordinate service deployment on third-party maintained hardware/software (if applicable).
- Assign a designated person from the Customer's staff who, on behalf of the Customer will grant all approvals, provide information, and otherwise be available to assist GST to facilitate the delivery of this service.
- Ensure that all hardware, firmware, and software that the GST engineer will need in order to deliver this service are available.
- Allow GST full and unrestricted access to all locations where the service is to be delivered.
- Provide a suitable work area for delivery of the service, including access to an outside telephone line, power, any network connections, etc. that is required.
- Be responsible for all data backup and restore operations
- Provide one point-of-contact that will finalize decisions during the project.
- Provide necessary documentations, paperwork, schematics, line drawings, and information for GST to complete the project. Any delays in providing the necessary project documentation will delay the project.

## SERVICES TERMS AND CONDITIONS

### NON-COMPETE CLAUSE

GST assigns service professionals with qualifications commensurate with tasks listed in this scope of work. If the

customer, directly or indirectly, contracts with or hires any GST employee engaged in providing services to the customer under this agreement or any other agreement, written or oral, GST will have the option of negotiating a change in the cost and/or time to deliver or charge the customer the equivalent of 30% of the employees' annual salary as a finder's fee. This clause is applicable for a period of up to ninety days from the last date of services rendered by a GST employee to the customer.

#### **TIME RECORDS**

Each employee, either directly employed by GST or a subcontractor (hereinafter called "GST employee") will present a time record to the customer setting forth the hours worked. An authorized representative of the customer must countersign the record and will thereby certify that such time is correct and that the work was performed in a satisfactory manner.

#### **NORMAL BUSINESS HOURS**

GST service hours are 8:00 am to 5:00 pm Monday through Friday. Overtime (over 8 hours in one day), scheduled after hours and weekends are charged at time and one-half of contracted service rate. Emergency after hours, weekends and holidays are charged at two times contracted service rate. Customer is responsible for providing 24 hours or greater advanced notice for the re-scheduling or cancellation of GST onsite engineering services. If less than 24 hours is given the customer will be charged a half day of GST engineering time at \$175/hr.

#### **TERMINATION TERMS**

Client may terminate work under this Statement of Work, in whole or in part, at any time by 30 day written notice. Such notice shall state the extent and effective date of such termination. Upon receipt thereof, GST shall, to the extent directed by the Client or its designees, stop work under this agreement. If the agreement is so terminated for convenience, GST shall be paid in accordance with the terms of the order for only those materials or supplies delivered and accepted.

#### **COMMENCEMENT OF WORK**

Work shall not commence under the Contract until a fully executed agreement has been received by GST and GST has been given approval to proceed by customer.

#### **DATA LOSS**

GST make no guarantee against data loss during services engagements. It is the customers responsibility to ensure data is properly protected (backed up) before the engagement begins.

#### **PRODUCT RETURNS**

Standard stock items purchased from GST may be returned for any reason within (14) fourteen days. Custom orders are non-returnable and non-refundable. All original packaging, accessories and documentation must accompany the item and be in unmarked condition. Items must be shipped via at least 2nd day freight with insurance for the full value of the item. Returned items are subject to a 25% restocking fee. Though rare, a customer may need to return a defective product. Defective product returns are not subject to the 25% restocking fee and will be exchanged in accordance with the manufacturer's policy within 30 days of purchase.

#### **PROJECT DELAYS**

Delays due to client configuration specifications, hardware delivery, carrier availability, and facility access, physical or environmental delays are subject to change orders as billable delays. These delays can also impact project timeline and deadlines.

#### **PREVAILING WAGE CLAUSE**

GST holds the right to charge the customer additional services fees if the project is deemed to have prevailing rates of wages requirements prior, during, or after project completion. GST adheres and complies with the provisions of the California Labor Code. All workers employed on public works projects must be paid the prevailing wage determined by the Director of the Department of Industrial Relations, according to the type of work and location of the project. The prevailing

wage rate is the basic hourly rate paid on public works projects to a majority of workers engaged in a particular craft, classification or type of work within the locality and in the nearest labor market area (if a majority of such workers are paid at a single rate). If there is no single rate paid to a majority, then the single or modal rate being paid to the greater number of workers is prevailing.

## GST SERVICES WARRANTY

### QUALITY OF SERVICES

GST warrants that its Services will be of professional quality (performed in a good and workmanlike manner) and will conform to generally accepted industry standards for such Services and to the requirements specified in this SOW. GST's personnel shall be competent and qualified to perform the tasks to which they are assigned. In the event of any breach of this warranty, GST, at its sole expense and without delay, shall re-perform the non-conforming Services to the applicable standard.

### WORKMANSHIP WARRANTY

GST certifies that all equipment and materials furnished shall carry a ninety (90) day warranty on parts. GST guarantees to furnish any qualified personnel (during normal business hours, Monday to Friday, 8:00 am to 5:00 pm) to the installation site for the period of one (1) year from the date of installation to repair or replace defective items installed or provided by GST exclusively. If the item is determined to not be defective, GST will charge the customer for all time spent on the incident at a rate of \$175/hour. Determination if item is defective or was changed, damaged, reconfigured, or altered by non GST personnel is under sole authority of GST. Any change, alteration, damage, or reconfiguration by non GST personnel voids one (1) year warranty. No response timeframe SLA guaranteed for warranty work. Further, all equipment purchased from GST in our installed system is subject to a manufactures warranty. Further, all equipment purchased from GST in our installed system is subject to a manufacture warranty. GST will not honor any other warranty, implied or otherwise. In no event shall GST be liable, or in any way responsible for damages, or defect in the system, which were caused by neglect, vandalism, misuse, environmental damage or by repairs or attempted repairs performed by anyone other than a GST service technician. Nor shall GST be liable or in any way responsible for any incidental or consequential economic or property damage.

## CHANGE MANAGEMENT

GST establishes change management procedures to document changes that are made to the baseline project identified in the Statement of Work. These procedures are in place to reduce the potential for cost and schedule variances.

**Customer is responsible for providing 24 hours or greater advanced notice for the re-scheduling or cancellation of GST engineering services. If less than 24 hours is given the customer will be charged a half day of GST engineering time at \$175/hr.**

If a change needs to be made to the project, which is not included in the SOW or differs from the SOW, GST or the client must complete the Change Management Request form. GST will review the completed form and provide an estimate to complete the request. Client must approve the additional hours/costs in order to complete the request.

In the event a change requested by the customer reduces the amount of work and the project is a firm fixed priced project, the full amount of the project will be invoiced.

A change occurs when GST encounters any of the following situations during project delivery:

1. Either party identifies new requirements not included in the original project's scope

2. Either party makes suggestions that would improve the proposed system but are not necessarily required to address the project requirements; such suggestions are incorporated into a subsequent project phase
3. Either party changes the direction and intent of this project, which requires GST to rework the solution design or services

Changes in the scope of work defined in this Statement of Work are only effective if both the customer and GST agree to them in a written document setting forth the modifications and any changes to the delivery schedule and payment terms.

### TERMS AND CONDITIONS

All prices and descriptions are subject to change without notice.

THIS PRICE LIST IS A QUOTATION ONLY AND IS NOT AN ORDER OR OFFER TO SELL. No contract for sale will exist unless and until a purchase order has been issued by you and accepted by Golden Star Technology Inc. ("GST"). Acceptance by GST of any offer is expressly conditioned upon your assent to the Terms and Conditions of Sale set forth in GST's invoices.

The prices contained in this list may not be relied upon as the price at which GST will accept an offer to purchase products unless expressly agreed to by GST in writing. Products quoted were selected by GST based on specifications available at the time of the quotation, and are not guaranteed to meet bid specifications. Product specifications may be changed by the manufacturer without notice. It is your responsibility to verify product conformance to specifications of any subsequent contract. All products are subject to availability from the manufacturer. The freight costs listed are estimates. Shipping costs may vary based on time of purchase, quantity ordered, shipment carrier and warehouse sourced. Actual shipping costs will be calculated during shipment and will be reflected on your invoice. For hardware product(s), manufacturer warranty will begin upon physical delivery of the hardware products(by) by the customer or GST warehouse. For software

 Statement of Work Authorization

I agree with the tasks described in the aforementioned statement of work for the project. I understand that if there are any changes to the Statement of Work that GST will provide a revised statement of work and a quote for any additional charges. By signing below, each party agrees to the terms of this Agreement and GST will begin in executing this statement of work.

GST - Public Works Agreement

## WEST VALLEY WATER DISTRICT

### AGREEMENT

#### Board Room A/V Renovation

This Contract is made this 17th day of June, 2021 between the West Valley Water District (“WVWD”) and Golden Star Technology, Inc (“Contractor”). WVWD and Contractor may be collectively referred to as “Parties” and individually as a “Party.”

### RECITALS

- A. WVWD is a public agency organized under the laws of the State of California, with power to contract for services necessary to achieve its purpose.
- B. WVWD desires to engage Contractor for performance of the following public work of improvement of the Board Room A/V Renovation Project (the “Project or the Work”).
- C. Contractor represents that it is a licensed contractor pursuant to Section 7000 et seq. of the Business and Professions Code in the classification 724233 which it shall maintain for the duration of the Contract.
- D. Contractor further represents that it has examined and is fully familiar with all of the provisions of the Contract Documents; that it has satisfied itself as to the nature and location of all Work, the general and local conditions to be encountered in the performance of any Work, and all other matters which can in any way affect the Work or the cost thereof.
- E. Contractor has submitted a proposal to WVWD, incorporated herein by this reference, to perform all work and furnish the labor, supervision, materials and equipment, and operations necessary and required to complete the Project in strict accordance with the provisions of the Contract Documents, and at the prices stated.
- F. The Parties desire to enter into this Agreement for the purpose of setting forth the terms and conditions upon which the Contractor shall complete the Project.

### SECTION 1 - SCOPE

- A. Contractor shall furnish all necessary management, supervision, labor, materials, tools, supplies, equipment, plant, services, engineering, testing and/or any other act or thing required to diligently and fully perform and complete the Project in accordance with the Contract Documents, which is generally described as follows:

#### **SUMMARY OF SCOPE.**

Without limiting the foregoing description, Contractor’s scope of work includes, but is not limited to, the following:

1. Submit any required samples, product data, certificates, operations and maintenance instructions, guarantees, and other submittals no later than 60 working days after the date WVWD issues a Notice to Proceed and before the preconstruction meeting.
2. Submit a list of any permits and licenses the Contractor shall obtain indicating the agency granting the permit, the expected date to submit the application, and the required date for the receipt of the permit.
3. Protect all materials to be used in the Work in accordance with the specifications.

4. Protect existing facilities and personal property.
  5. Attend a preconstruction conference with WVWD to discuss schedule, access, sequence of work, and other issues.
  6. If requested by WVWD, prepare and submit a written daily activity report to WVWD for each day on which work is performed, including weekends and holidays when worked, and submit reports to WVWD no later than the next business day. The daily reports shall, at a minimum, include the following information: construction activities and locations, construction crew sizes of general and subcontractors, start or completion of activities, progress on construction activities (including units or portions of work completed), tests or inspections performed, deliveries of material or equipment, delays or potential delays, visitors to the site, weather conditions, construction equipment used, and personal injuries or damage to property.
  7. The Contractor shall be responsible for unloading, hoisting and otherwise handling its own materials, supplies and equipment.
  8. Coordinate with owner-scheduled events.
  9. The Contractor is responsible for researching and complying with all local codes, agencies and jurisdictions that regulate and govern the Work.
  10. Contractor shall set up, identify, coordinate, provide safe access, and obtain all inspections for its work, as required by any authorized agency or applicable code, prior to covering up work.
- B. The following documents are incorporated into and made part of this Contract by this reference:
1. Insurance Requirements (Attachment A)
  2. Designation of Subcontractors Form (Attachment B)
  3. Public Works Contractor Registration Certification Payment and Performance Bonds (Attachment C)
  4. Contractor's Proposal (Attachment D)
  5. Change orders issued in accordance with the Contract Documents
- C. These documents shall be referred to collectively as the "Contract Documents." The Contract Documents are intended to be complementary, and a requirement in one document is as effective as if it appeared in all of the Contract Documents. In the event of a conflict between any of the Contract Documents, the documents shall be given effect in the following order: Change Orders (most recent first), Addenda (most recent first), Contract, Insurance Requirements, and Contractor's Proposal/Schedule of Pay Items.
- D. Contractor shall comply with all requirements of the Contract Documents. Where there is a conflict between the requirements of the Contract Documents, the more stringent requirements shall govern.

## SECTION 2 - PRICE

- A. WVWD agrees to pay, and Contractor agrees to accept, the sum of **PRICE (\$85,845.92)** (the "Contract Price") subject to adjustments for changes in the work as may be directed in writing by WVWD, as payment in full for the Work. Work to be done at unit prices will be paid based on actual quantities of work performed and accepted.
- B. Contractor shall submit a payment application for the total work completed once each month and upon completion of the Project and satisfaction of all conditions of the Contract Documents. WVWD shall make payment within thirty (30) days of receipt of an undisputed payment application, less five percent retention. WVWD shall release the retained funds (less any amounts in dispute, deducted for liquidated damages or as required by law, or other offsets) no less than thirty-five (35) days after the date WVWD accepts the Work. Pursuant to Public Contract Code section 22300, for monies earned by the Contractor and withheld by WVWD to ensure the performance of the Contract, the Contractor may, at its option, choose to substitute securities meeting the requirements of Public Contract Code section 22300.

If any of the Work is to be paid based on unit prices, Contractor shall submit a monthly itemized estimate of Work done for the purpose of making progress payments. Contractor shall submit, with each of its payment requests, an adjusted list of actual quantities, verified by WVWD, for unit price items listed, if any, in the Schedule of Pay Items. Following WVWD's acceptance of the Work, the Contractor shall submit to WVWD a written statement of the final quantities of unit price items for inclusion in the final payment request. WVWD shall have the right to adjust any estimate of quantity and to subsequently correct any error made in any estimate for payment. WVWD makes no representation that the actual quantities of work performed will not vary from the estimates

- C. Contractor agrees to furnish, as a condition of payment, payroll affidavits, receipts, vouchers, certified payroll reports, and other documents, in form satisfactory to WVWD, prior to receipt of any payment. Contractor shall submit Conditional and Unconditional waivers and release of lien upon (as provided in Civil Code sections 8132, 8134, 8136, and 8138) on behalf of itself, subcontractors and suppliers that furnished labor, material, equipment or services to the Project.
- D. In accordance with California Public Contract Code Section 22300, WVWD will permit the substitution of securities for any monies withheld by WVWD to ensure performance under the Contract. At the request and expense of the Contractor, securities equivalent to the amount withheld shall be deposited with WVWD, or with a state or federally chartered bank in California as the escrow agent, and thereafter WVWD shall then pay such monies to the Contractor as they come due. Upon satisfactory completion of the Contract, the securities shall be returned to the Contractor. For purposes of this Section and Section 22300 of the Public Contract Code, the term "satisfactory completion of the contract" shall mean the time WVWD has issued written final acceptance of the Work and filed a Notice of Completion as required by law and provisions of this Contract. The escrow agreement used for the purposes of this Section shall be in the form provided by WVWD.

## SECTION 3 - ENTIRE AGREEMENT

This Contract represents the entire agreement between WVWD and Contractor and supersedes any prior written or oral representations. No oral order, objection, direction, claim or notice by any party or person shall affect or modify any of the terms or obligations contained in the Contract Documents.

## SECTION 4 - TIME

- A. Contractor shall complete the Project no later than **90 Calendar Days** following WVWD's issuance of the Notice to Proceed (the "Contract Time").
- B. Contractor shall provide WVWD with scheduling information in a form acceptable to WVWD, including any changes made by WVWD in the scheduling of work. Contractor shall coordinate its work with that of all other contractors, subcontractors and suppliers so as not to delay or damage their performance.
- C. If Contractor fails to complete the Project within the Contract Time, WVWD will sustain damage. It is and will be impracticable to determine the actual damage which WVWD will sustain in the event of and by reason of such delay; therefore, Contractor will pay to WVWD the sum of \$1,000 for each and every calendar day beyond expiration of the Contract Time. Contractor agrees to pay such liquidated damages as herein provided, and in case the same are not paid, agrees that WVWD may deduct the amount thereof from any monies due or that may become due to the Contractor under the Contract.
- D. It is further agreed that in case Contractor fails to complete the Project in all parts and requirements within the Contract Time, WVWD shall have the right to extend the Contract Time or not, as may seem best to serve the interest of WVWD; and if it decides to extend Contract Time, WVWD shall further have the right to charge to the Contractor, his heirs, assigns or sureties, and to deduct from the final payment for the work, all or any part, as it may deem proper, of the actual cost of engineering, inspection, superintendence, and other overhead expenses directly chargeable to the Contract that accrue during the period of such extension.
- E. The Contractor will not be assessed with liquidated damages or the cost of engineering and inspection during the delay in the completion of the Project caused solely by acts of God or of the public enemy, fire, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and unusually severe weather or delays of subcontractors due to such causes, provided that the Contractor shall within three (3) days from the beginning of any such delay, notify WVWD, in writing of the causes of delay. WVWD shall ascertain the facts and the extent of delay, and his findings thereon shall be final and conclusive.
- F. As an express condition of any adjustment of the Contract Time or Contract Price on account of delay, including delay caused by acts of WVWD, Contractor must give WVWD written notice of the commencement of delay within three (3) days of its occurrence.

## SECTION 5 - LABOR

- A. Prevailing Wages. The Contract is subject to California Labor Code Sections 1720 et seq., and Contractor and any subcontractor shall pay not less than the specified prevailing rates of wage to all workers employed in performance of the Work. Pursuant to the provisions of Section 1770 of the California Labor Code, WVWD has obtained the general prevailing rate of wages and employer payments for health and welfare, vacation, pension and similar purposes, as determined by the Director of the Department of Industrial Relations, a copy of which is on file in the office of WVWD, and shall be made available for viewing to any interested party upon request. The Contractor and each subcontractor shall forfeit as a penalty to WVWD not more than Two Hundred Dollars (\$200) for each calendar day, or portion thereof, for each worker paid less than the stipulated prevailing wage rate in violation of the Labor Code. In addition, the difference between the prevailing wage rate and the amount paid to each worker for each calendar day or portion thereof for which each worker was paid less than the stipulated prevailing wage rate shall be paid to each worker by the Contractor.
- B. Employment of Apprentices. Contractor's attention is directed to the provisions in Section 1777.5 and 1777.6 of the Labor Code concerning the employment of apprentices by the

Contractor or any subcontractor under the Contractor. It shall be the responsibility of the Contractor to effectuate compliance on the part of itself and any subcontractors with the requirements for employment of apprentices. Information relative to apprenticeship standards, wage schedules, and other requirements may be obtained from the Director of Industrial Relations, ex-officio the Administrator of Apprenticeship, San Francisco, California, or from the Division of Apprenticeship Standards and its branch offices.

- C. Payroll Records. Pursuant to Labor Code Section 1776, the Contractor and each subcontractor shall maintain weekly certified payroll records showing the name, address, social security number, work classification, straight time and overtime hours paid each day and week, and the actual per diem wages paid to each journeyman, apprentice, worker or other employee employed in connection with the work. Contractor shall certify under penalty of perjury that records maintained and submitted by Contractor are true and accurate. Contractor shall also require subcontractor(s) to certify weekly payroll records under penalty of perjury. In the event of noncompliance with the requirements of this Section, the Contractor shall have ten (10) days in which to comply subsequent to receipt of written notice specifying any item or actions necessary to achieve compliance with this section. If Contractor or subcontractor does not comply after such ten (10)-day period, the Contractor shall, as a penalty to WVWD, forfeit One Hundred Dollars (\$100) for each day, or portion thereof, for each worker until strict compliance is effectuated.

In accordance with Labor Code section 1771.4, the Contractor and each subcontractor shall furnish the certified payroll records directly to the Department of Industrial Relations on a weekly basis and in the format prescribed by the Department of Industrial Relations, which may include electronic submission. Contractor shall comply with all requirements and regulations from the Department of Industrial Relations relating to labor compliance monitoring and enforcement.

- D. Public Works Contractor Registration

Pursuant to Labor Code sections 1725.5 and 1771.1, all contractors and subcontractors that wish to bid on, be listed in a bid proposal, or enter into a contract to perform public work must be registered with the Department of Industrial Relations. No bid will be accepted nor any contract entered into without proof of the contractor's and subcontractors' current registration with the Department of Industrial Relations to perform public work. Contractor and its subcontractors, of any tier, shall maintain active registration with the Department of Industrial Relations for the duration of the Project. To this end, Contractor shall execute the Public Works Contractor Registration Certification attached hereto as Attachment C, attesting to the facts contained therein. In addition, Contractor shall provide the registration number for each listed subcontractor in the space provided in the Designation of Subcontractors Form attached hereto as Attachment B.

This Project is subject to compliance monitoring and enforcement by the Department of Industrial Relations. In executing this contract, Contractor acknowledges that it has reviewed all applicable labor compliance requirements and included the cost of complying with such requirements in its bid.

- E. Hours of Work.

1. Eight (8) hours of work shall constitute a legal day's work. The Contractor and each subcontractor shall forfeit, as penalty to WVWD, twenty-five dollars (\$25) for each worker employed in the execution of Work by the Contractor or any subcontractor for each day during which such worker is required or permitted to work more than eight (8) hours in any one day and forty (40) hours in any week in violation of the provisions of the Labor Code, and in particular, section 1810 to section 1815, except as provided in Labor Code section 1815.

2. The Contractor shall perform all work during the hours of 7:00 a.m. to 3:30 p.m., Monday through Friday unless otherwise authorized by WVWD in writing. If the Contractor wishes to work during any other hours or on weekends, written permission must be received from WVWD. The request must be received at least two (2) working days in advance of any work. No work will be allowed on WVWD Holidays except in the case of an emergency. A listing of WVWD holidays is on file in the office of WVWD. If Contractor requests overtime work in which WVWD will incur costs, Contractor shall be responsible for payment of WVWD's costs incurred in connection with the overtime work. WVWD will invoice the Contractor at time and one half to cover the costs incurred. If Contractor does not pay the invoice within ten (10) days, WVWD may deduct the amount billed from other payments due or to become due to Contractor under the Contract.
- F. Labor Compliance. Contractor shall post, at appropriate conspicuous points on the Project site, a schedule showing all determined general prevailing wage rates and all authorized deductions, if any, from unpaid wages actually earned.
- G. Labor Certification. Pursuant to the requirements of Division 4 of the Labor Code, the Contractor will be required to secure the payment of worker's compensation to its employees in accordance with the provisions of section 3700 of the Labor Code. Prior to commencement of work, the Contractor shall sign and file with the Engineer a certification in the following form:
- "I am aware of the provisions of section 3700 of the Labor Code which require every employer to be insured against liability for worker's compensation or to undertake self-insurance in accordance with the provisions before commencing the performance of the work of this contract."
- H. Full compensation for conforming to the requirements of this section shall be considered as included in the Contract Price, and no additional compensation will be allowed therefore.

## SECTION 6 - CHANGES IN WORK

- A. Contractor shall make no changes in the Work without written direction from WVWD. Contractor shall not be compensated for any change made without WVWD's written direction. No changes in the work covered by this Contract shall exonerate any surety or any bond given in connection with this Agreement.
- B. If WVWD directs the Contractor in writing to make changes in the work that materially affect the cost of performing the work, the Contract Price will be adjusted based on one of the following:
1. Where the work involved is covered by unit prices contained in the Contract Documents, by application of unit prices to the quantities involved in the changed Work;
  2. By a combination of existing and new unit prices and related quantities for the changed work;
  3. Time and Materials, calculated as set forth in Section 6(C), below; or
  4. By mutual acceptance of a lump sum.
- C. The cost for extra or changed work performed on a Time and Materials basis shall be determined as follows:
1. Labor: Contractor will be paid cost of labor for workers used in actual and direct performance of extra work, including only actual wages paid shall include any

employer payments to or on behalf of workers for health and welfare, pension, vacation, and similar purposes.

2. Material: Only materials furnished by Contractor and necessarily used in performance of extra Work will be paid for. Cost of such materials will be cost, including sales tax and delivery charges, to purchaser (Contractor, Subcontractor or other forces) from supplier thereof.
3. Equipment: For Contractor-owned equipment, payment will be made at rental rates listed for equipment in the California Department of Transportation official equipment rental rate schedule which is in effect on the date upon which extra Work is accomplished and which schedule is incorporated herein by reference as though fully set forth herein. If there is no applicable rate for an item of equipment, then payment shall be made for Contractor-owned equipment at rental rate listed in the most recent edition of the Association of Equipment Distributors (AED) book.
  - (a) For rented equipment, payment will be made based on actual rental invoices. Equipment used on extra Work shall be of proper size and type.
  - (b) Rental rates paid shall be deemed to cover cost of fuel, oil, lubrication, supplies, small tools, necessary attachments, repairs and maintenance of any kind, depreciation, storage, insurance, and all incidentals. Unless otherwise specified, manufacturer's ratings, and manufacturer-approved modifications, shall be used to classify equipment for determination of applicable rental rates. Rental time will not be allowed while equipment is inoperative due to breakdowns.
  - (c) Individual pieces of equipment or tools having a replacement value of \$100 or less, whether or not consumed by use, shall be considered to be small tools.
4. Work Performed by Special Forces or Other Special Services: When WVWD and Contractor, by agreement, determine that special service or item of extra Work cannot be performed by forces of Contractor or those of any Subcontractors, service or extra Work item may be performed by specialist. Invoices for service or item of extra Work on basis of current market price thereof may be accepted without complete itemization of labor, material, and equipment rental costs when it is impracticable and not in accordance with established practice of special service industry to provide complete itemization. In those instances, wherein Contractor is required to perform extra Work necessitating a fabrication or machining process in a fabrication or machine shop facility away from Site, charges for that portion of extra Work performed in such facility may, by agreement, be accepted as a specialist billing. In lieu of overhead and profit provided in paragraph 5(a), below, fifteen percent (15%) will be added to specialist invoice price, after deduction of any cash or trade discount offered or available, whether or not such discount may have been taken.
5. Overhead Defined. The following constitutes charges that are deemed included in overhead for all Contract Modifications, including work performed on a Time and Materials basis. Contractor shall not invoice or receive payment for these costs separately: Drawings: field drawings, Shop Drawings, etc., including submissions of drawings; Routine field inspection; General Superintendence; General administration and preparation of cost proposals, schedule analysis, Change Orders, and other supporting documentation; Computer services; Reproduction services; Salaries of project engineer, superintendent, timekeeper, storekeeper, and secretaries; Janitorial services; Small tools, incidentals and consumables;

Temporary on-Site facilities (Offices, Telephones, Plumbing, Electrical Power, Lighting; Platforms, Fencing, Water, Home office expenses; vehicles and fuel used for work otherwise included in the Contract Documents; Surveying; Estimating; Protection of Work; Handling and disposal fees; Final cleanup; Other incidental Work; Related warranties.

6. Overhead and Profit for Time and Materials. For work Contractor performs on Time and Materials at WVWD's direction, the following markups will be added to the cost of labor, materials and equipment, calculated as described above.
- (a) Overhead and profit on labor shall be fifteen percent (15%).
  - (b) Overhead and profit on materials shall be fifteen percent (10%).
  - (c) Overhead and profit on equipment rental shall be ten percent (10%).
  - (d) On proposals covering both increases and decreases in Contract Price, overhead and profit shall be allowed on the net increase only as determined in this paragraph. When the net difference is a deletion, no percentage for overhead or profit will be allowed, but rather a deduction shall apply.
  - (e) The markup shall include profit, small tools, cleanup, supervision, warranties, cost of preparing the cost proposal, jobsite overhead, and home office overhead. No markup will be allowed on taxes, insurance, and bonds.
- D. If WVWD directs the Contractor in writing to make changes in the Work that materially affect the time required to perform the Work, WVWD will make a reasonable adjustment to the Contract Time.

## **SECTION 7 - CLAIMS AND DISPUTES**

- A. If any dispute shall arise between WVWD and Contractor regarding performance of the work, or any alleged change in the work, Contractor shall timely perform the disputed work and shall give written notice of a claim for additional compensation for the work to WVWD within three (3) days after commencement of the disputed work. Contractor's failure to give written notice within the three (3)-day period constitutes an agreement by Contractor that it will receive no extra compensation for the disputed work.
- B. If a claim cannot be resolved through direct discussions between WVWD and Contractor, disputes for \$375,000 or less shall be handled in accordance with Public Contract Code Sections 20104 et seq. WVWD shall respond in writing within the statutory time period(s), or, may request in writing within 30 Days of receipt of the claim, any additional documents supporting the claim or relating to defenses or claims WVWD may have against the claimant. If additional information is needed thereafter, it shall be provided upon request. WVWD's response shall be submitted within the statutory timeframe after receipt of the further documents, or within the same period of time taken by the claimant to produce the additional information or documents, whichever is greater. The Contractor shall make these records and documents available at all reasonable times, without any direct charge.
- C. If a claim is more than \$375,000, WVWD shall respond in writing within a reasonable period of time to review and analyze the claim. The parties also agree to participate in mediation with a mutually agreeable mediator following an exchange of documents reasonably necessary for resolution of the issues in dispute.
- D. If the claimant disputes WVWD's response, or if WVWD fails to respond within the statutory time period(s), the claimant may so notify WVWD within 15 Days of the receipt of the response or the failure to respond, and demand an informal conference to meet and confer for settlement. Upon such demand, WVWD shall schedule a meet and confer conference

within 30 Days.

- E. If following the meet and confer conference, the claim or any portion thereof remains in dispute, the claimant may file a claim pursuant to Government Code sections 900 et seq. and Government Code sections 910 et seq. For purposes of those provisions, the time within which a claim must be filed shall be tolled from the time the claimant submits the written claim until the time the claim is denied, including any time utilized for the meet and confer conference.
- F. Submission of a claim, properly certified, with all required supporting documentation, and written rejection or denial of all or part of the claim by WVWD, is a condition precedent to any action, proceeding, litigation, suit, or demand for arbitration by Contractor.
- G. Venue for any litigation arising out of or relating to this Contract shall be Riverside County, California.
- H. Pursuant to Public Contract Code section 9201, WVWD shall provide Contractor with timely notification of the receipt of any third-party claim relating to the Contract.

### **SECTION 8 - INSPECTION AND PROTECTION OF WORK**

- A. Responsibility for, and security of, all work and materials is the responsibility of the Contractor until final acceptance of the Project by WVWD.
- B. All Work shall be inspected by WVWD. The charges for inspection shall be in accordance with WVWD's regulations. If WVWD is unable to provide an inspector or inspectors, Contractor shall reschedule the Work for another time at no cost to WVWD. Work performed without inspection shall be rejected.
- C. Contractor shall make the work accessible at all reasonable times for inspection by WVWD. Contractor shall, at the first opportunity, inspect all material and equipment delivered to the jobsite by others to be used or incorporated in the Contractor's work and give prompt notice of any defect therein. Contractor assumes full responsibility to protect the work done hereunder until final acceptance by WVWD.
- D. When the Work is completed, Contractor shall request, in writing, a final inspection. Within ten (10) days of the receipt of such request, WVWD shall make a final inspection. The Contractor or its representatives may be present at the final inspection. The purpose of such final inspection shall be to determine whether the Work has been completed in accordance with the Contract Documents, including all change orders and all interpretations and instructions previously issued.
- E. WVWD may reject materials or Work that does not meet the requirements of the Contract Documents. If WVWD does so, Contractor shall promptly remove the rejected materials or work and replace it with materials or work that meet the requirements of the Contract Documents, at no additional cost to WVWD.

### **SECTION 9 - ASSIGNMENT AND SUBCONTRACTING**

- A. Contractor shall give personal attention to the performance of the Contract and shall keep the Work under its control.
- B. No subcontractors will be recognized as such, and all persons engaged in the work of construction will be considered as employees of the Contractor, who will be held responsible for their work which shall be subject to the provisions of the Contract and specifications.
- C. No subcontractor who is ineligible to bid work on, or be awarded, a public works project

under Labor Code sections 1771.1 or 1777.7 can bid on, be awarded or perform work as a subcontractor on the Project. The Contractor is prohibited from performing work on the Project with a subcontractor who is ineligible to perform work on a public works project under these sections of the Labor Code.

- D. When a portion of the work which has been subcontracted by the Contractor is not being prosecuted in a manner satisfactory to WVWD, the subcontractor shall be removed immediately on the request of WVWD in the manner required by law and shall not again be employed on the work.
- E. Contractor shall not assign any portion of the work to be performed under this Agreement or any of the rights or obligations under this Agreement, without the prior written consent of WVWD, which consent may be withheld in WVWD's sole and absolute discretion.

## **SECTION 10 - TERMINATION**

- A. Should Contractor fail within seven (7) calendar days from receipt of WVWD's written notice to correct any default, including but not limited to failure to perform the Work in accordance with the Contract Documents, failure to comply with the directions of WVWD, or failure to pay its creditors, WVWD may terminate this Contract and/or, in its sole discretion, make a demand on Contractor's performance bond surety. Following a termination for default, WVWD shall have the right to take whatever steps it deems necessary to complete the Project and correct Contractor's deficiencies and charge the cost thereof to Contractor, who shall be liable for the full cost of WVWD's corrective action, including reasonable overhead, profit and attorneys' fees.
- B. WVWD may at any time terminate the Contract at WVWD's convenience upon five (5) days written notice to Contractor. In the event of termination for convenience, Contractor shall recover only the actual cost of work completed to the date of termination, which costs are documented to WVWD's satisfaction, calculated in accordance with Section 6, above. Contractor shall not be entitled to any claim or lien against WVWD for any additional compensation or damages in the event of such termination.
- C. If WVWD terminates Contractor for cause, and if it is later determined that the termination was wrongful, such default termination shall automatically be converted to and treated as a termination for convenience. In such event, Contractor shall be entitled to receive only the amounts payable under this section, and Contractor specifically waives any claim for any other amounts or damages, including, but not limited to, any claim for consequential damages or lost profits.

## **SECTION 11 - HOLD HARMLESS AND INDEMNIFICATION**

- A. WVWD and all officers and employees thereof connected with the Work, shall not be answerable or accountable in any manner: for any loss or damage that may happen to the Work or any part thereof; for any loss or damage to any of the materials or other things used or employed in performing the Work; for injury to or death of any person; or for damage to property from any cause except losses due to sole or active negligence of WVWD's officers or employees.
- B. Contractor shall indemnify, defend with legal counsel approved by WVWD, and hold harmless WVWD, its officers, officials, employees and volunteers from and against all liability, loss, damage, expense, cost (including without limitation reasonable legal counsel fees, expert fees and all other costs and fees of litigation) of every nature arising out of or related to the Work or the Project, except such loss or damage which is caused by the sole or active negligence or willful misconduct of WVWD. Should conflict of interest principles

preclude a single attorney from representing both WVWD and Contractor, or should WVWD otherwise find Contractor's legal counsel unacceptable, then Contractor shall reimburse WVWD its costs of defense, including without limitation reasonable attorney's fees, expert fees and all other cost and fees of litigation. The Contractor shall promptly pay any final judgment rendered against WVWD (and its officers, officials, employees and volunteers) except for claims determined by a trier of fact to have been the result of WVWD's sole or active negligence or willful misconduct. The foregoing provisions are intended to be as broad and inclusive as is permitted by the law of the State of California and will survive termination of this Agreement.

- C. Contractor's obligations under this section apply regardless of whether or not such claim, charge, damage, demand, action, proceeding, loss, stop notice, cost, expense, judgment, civil fine or penalty, or liability was caused in part or contributed to by an indemnified party. However, without affecting the rights of WVWD under any provision of this agreement, Contractor shall not be required to indemnify and hold harmless WVWD for liability attributable to the active negligence of WVWD, provided such active negligence is determined by agreement between the parties or by the findings of a court of competent jurisdiction. In instances where WVWD is shown to have been actively negligent and where WVWD's active negligence accounts for only a percentage of the liability involved, the obligation of Contractor will be for that entire portion or percentage of liability not attributable to the active negligence of WVWD.
- D. In addition to any remedy authorized by law, contract funds sufficient to pay for any claim may be retained by WVWD until disposition has been made of such suits or claims for damage.

## **SECTION 12 - BONDS AND INSURANCE**

### **A. Bonds.**

1. Within fifteen (15) working days after being notified of the award of the contract, and before WVWD will execute this Agreement, the Contractor shall furnish and file with WVWD Performance and Payment Surety bonds as set forth below.
2. Contractor shall submit the bonds on the forms provided Attachment E, attached hereto, duly executed by a responsible corporate surety listed in the United States Department of the Treasury circular entitled "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies," authorized to do business in the State of California and acceptable to WVWD conditioned upon the faithful performance by the Contractor of all requirements of the Contract Documents. Each of the bonds shall be in a sum no less than one hundred percent (100%) of the Contract Price.

### **B. Insurance.**

1. Contractor shall obtain, at its sole cost and expense, all insurance required by Attachment A. Certificates of such insurance and copies of the insurance policies and endorsements shall be delivered to WVWD within fifteen (15) working days after being notified of the award of the contract, and before execution of this Agreement by WVWD.

### **SECTION 13 - WARRANTY**

Contractor warrants to WVWD that all materials and equipment furnished shall be new, free from faults and defects and of good quality and conform to the requirements of the Contract Documents.

Contractor hereby warrants its work against all deficiencies and defects for the period required by the Contract Documents or the longest period permitted by California law, whichever is greater. Unless otherwise stated in the Contract Documents, warranty periods shall begin upon the filing of the Notice of Completion and shall be for one year.

This Article shall not limit WVWD's rights under this Contract or with respect to latent defects, gross mistakes, or fraud. WVWD specifically reserves all rights related to defective work, including but not limited to defect claims pursuant to California Code of Civil Procedure section 337.15.

### **SECTION 14 - LAWS TO BE OBSERVED**

- A. Contractor shall keep itself fully informed of all existing and future state and federal laws and county and municipal ordinances and regulations that in any manner affect those engaged or employed in the work, or the materials used in the work, or which in any way affect the conduct of work, and of all such orders and decrees of bodies or tribunals having any jurisdiction or authority over the same.
- B. Contractor shall at all times observe and comply with, and shall cause all of its agents and employees to observe and comply with all such existing and future Federal, State and local laws, ordinances, regulations, orders, and decrees of bodies or tribunals having any jurisdiction or authority over the Project; and shall protect and indemnify WVWD, and all officers and employees thereof connected with the Project, against any claim or liability arising from or based on the violation of any such law, ordinance, regulation, order, or decree, whether by WVWD's representative or their employees. If any discrepancy or inconsistency is discovered in the plans, drawings, specifications, or contract for the work in relation to any such law, ordinance, regulation, order or decree, Contractor shall promptly report the same to WVWD in writing.
- C. This Contract shall be governed by and construed in accordance with the laws of the State of California.

### **SECTION 15 - CLEAN-UP**

Contractor will remove from the project site all debris resulting from performance of the Work no less often than daily. If Contractor fails to do so, WVWD may, after twenty-four (24) hours' notice to Contractor, clean up the site and deduct the cost from the Contract Price.

### **SECTION 16 - STATE LICENSE BOARD NOTICE**

Contractors are required by law to be licensed and regulated by the Contractors' State License Board which has jurisdiction to investigate complaints against contractors if a complaint regarding a patent act or omission is filed within four (4) years of the date of the alleged violation. A complaint regarding a latent act or omission pertaining to structural defects must be filed within ten (10) years of the date of the alleged violation. Any questions concerning a contractor may be referred to the Registrar, Contractors' State License Board, P.O. Box 26000, Sacramento, California 95826.

## SECTION 17 - COMPLIANCE WITH STATE STORM WATER PERMIT

Contractor shall be required to comply with all aspects of the State Water Resources Control Board (State Water Board) Water Quality Order No. 2009-0009-DWQ, including any and all subsequent amendments and National Pollutant Discharge Elimination System General Permit for Storm Water Discharges Associated with Construction Activity (Permit) for all projects that involve construction on or disturbance of one acre or more of land or which are part of a larger common area of development.

## SECTION 18 - MISCELLANEOUS

### A. Existing Utilities.

The location of known existing utilities and pipelines are shown on the Plans in their approximate locations. However, nothing herein shall be deemed to require WVWD to indicate the presence of existing service laterals or appurtenances whenever the presence of such utilities on the site of the Project can be inferred from the presence of other visible facilities, such as buildings, cleanouts, meter and junction boxes, on or adjacent to the site of the Project. Underground facilities not known to WVWD may exist, or be in a location different from that which is shown in the Contract Documents.

Contractor shall take all steps reasonably necessary to ascertain the exact location of all underground facilities prior to doing work that may damage such facilities or interfere with their service, including but not limited to calling Underground Service Alert to locate utilities in accordance with the procedures described in Government Code section 4215 et seq. Contractor shall protect from damage any utility facilities that are to remain in place, be installed, relocated or otherwise rearranged. The Contractor shall not be entitled to additional compensation nor time extensions for work necessary to avoid interferences nor for repair to damaged utilities if the Contractor does not expose all such existing utilities as required by this section.

After the utility survey is complete, the Contractor shall commence "potholing" or hand digging to determine the actual location of the pipe, duct, or conduit. Contractor shall notify WVWD before starting potholing operations. The Contractor shall uncover all piping and conduits to a point one (1) foot below the pipe, where crossings, interferences, or connections are shown on the Drawings, prior to trenching or excavating for any pipe or structures, to determine actual elevations. New pipelines shall be laid to such grade as to clear all existing facilities which are to remain in service for any period subsequent to the construction of the run of pipe involved.

The Contractor's attention is directed to the requirements of Government Code section 4216.2 (a)(2) which provides: "When the excavation is proposed within 10 feet of a high priority subsurface installation, the operator of the high priority subsurface installation shall notify the excavator of the existence of the high priority subsurface installation prior to the legal excavation start date and time, as such date and time are authorized pursuant to paragraph (1) of subdivision (a) of section 4216.2. The excavator and the operator or its representative shall conduct an onsite meeting at a mutually-agreed-upon time to determine actions or activities required to verify the location of the high priority subsurface installation prior to start time." The Contractor shall notify WVWD in advance of this meeting.

If the Contractor is required to locate, repair damage not due to the Contractor's failure to exercise reasonable care, and remove or relocate existing main or trunk line utility facilities, it shall be compensated under Section 6 of this Contract – Changes in the Work – including payment for equipment on the Project necessarily idled during such work.

The right is reserved by WVWD and the owners of underground facilities or their authorized

agents, to enter the job for the purpose of making such changes as are necessary for the rearrangement of their facilities or for making necessary connection or repairs to their properties. The Contractor shall cooperate with forces engaged in such work and shall conduct its operations in such a manner as to avoid any delay or hindrance to the work being performed by such other forces.

**B. Differing Site Conditions.**

1. The Contractor shall promptly, and before the following conditions are disturbed, notify WVWD in writing of any:
  - (a) Material that the Contractor believes may be material that is hazardous waste, as defined in section 25117 of the Health and Safety Code, that is required to be removed to a Class I, Class II, or Class III disposal site in accordance with provisions of existing law,
  - (b) Subsurface or latent physical conditions at the site differing materially from those indicated by information about the site made available to bidders before the deadline for submitting bids, or
  - (c) Unknown physical conditions at the site of any unusual nature, differing materially from those ordinarily encountered and generally recognized as inherent in work of the character provided for in this Contract.
2. Contractor shall give Notice in accordance with the Change Order provisions above.
3. WVWD shall promptly investigate the conditions, and if it finds that such conditions do materially so differ, or do involve hazardous waste, and cause an increase or decrease in the Contractor's cost of, or the time required for, performance of any part of the Work, it shall issue a change order under the provisions described in the Contract Documents.
4. No claim of the Contractor under this clause shall be allowed unless the Contractor has given the notice required in the Contract Documents.
5. In the event a dispute arises between WVWD and the Contractor as to whether the conditions materially differ, or involve hazardous waste, or cause a decrease or increase in the Contractor's cost of, or time required for, performance of any part of the work, Contractor shall not be excused from completing the Work as provided in the Contract Documents. The Contractor shall proceed with all work to be performed under the Contract. The Contractor shall retain any and all rights provided either by this Contract or by law, which pertain to the resolution of disputes and protests.

**C. Records and Audits.**

1. Contractor and its subcontractors shall establish and maintain records pertaining to this Contract. Contractor's and subcontractors' accounting systems shall conform to generally accepted accounting principles and all records shall provide a breakdown of all costs charged under this contract, including properly executed payrolls, time records, invoices and vouchers.
2. Contractor shall permit WVWD and its authorized representatives to inspect, examine and make copies of Contractor's books, records, accounts, and any and all data relevant to this Contract at any reasonable time for the purpose of auditing and verifying statements, invoices, or bills submitted by Contractor pursuant to this contract and shall provide such assistance as may be reasonably required in the course of such inspection. WVWD further reserves the right to examine and re-examine said books, records, accounts, and data during the four (4)-year period following the termination of this Contract; and Contractor shall in no event dispose

of, destroy, alter, or mutilate said books, records, accounts, and data in any manner whatever for four (4) years after the termination of this Contract.

3. Pursuant to California Government Code section 8546.7, the parties to this Contract shall be subject to the examination and audit of representative of the Auditor General of the State of California for a period of three (3) years after final payment under the contract. The examination and audit shall be confined to those matters connected with the performance of this contract including, but not limited to, the cost of administering the contract.

D. Clayton Act and Cartwright Act.

Section 7103.5 of the Public Contract Code specifies that in entering into a public works contract or a subcontract to supply goods, services or materials pursuant to a public works contract, the contractor or subcontractor offers and agrees to assign to the awarding body all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 U.S.C. Sec. 15) or under the Cartwright Act (Chapter 2 commencing with Sec. 16700) of Part 2 of Division 7 of the Business and Professions Code, arising from purchase of goods, services or materials pursuant to the contract or subcontract. Pursuant to Public Contract Code section 7103.5, the Contractor and all of its subcontractors hereby offer and agree to assign to WVWD all rights, title, and interest in and to all causes of action they may have under Section 4 of the Clayton Act (15 U.S.C. Sec. 15) or under the Cartwright Act (Chapter 2 commencing with Sec. 16700) of Part 2 of Division 7 of the Business and Professions Code, arising from purchase of goods, services or materials pursuant to this Agreement. This assignment shall become effective when WVWD tenders final payment to the Contractor without further acknowledgement by the parties.

E. Contractor Supervision.

The Contractor shall provide competent supervision and staffing of the Work as approved by WVWD. As necessary, the Contractor or designated representative shall be present at all times while work is actually in progress. Supervisor(s) must be able to proficiently speak, read and write in English.

F. Character of Workers.

If persons employed by the Contractor, including any subcontractors, shall appear to WVWD to be incompetent or to act in a disorderly or improper manner, he or she shall be discharged immediately on the request of WVWD, and such person shall not again be employed on the Work.

G. Cooperation.

Should construction be under way by WVWD, other agencies or other contractors within or adjacent to the limits of the work specified or should work of any other nature be under way by other forces within or adjacent to said limits, the Contractor shall cooperate with all such other contractors or other forces to the end that any delay or hindrance to their work will be avoided. WVWD reserves the right to perform other or additional work at or near the site (including material sources) at any time, by the use of other forces.

H. Notices.

All notices permitted or required under this Contract shall be given at the following address, or at such other address as the parties may provide in writing for this purpose:

**West Valley Water District:**

855 W. Baseline Rd.  
Rialto, CA 92377

**ATTACHMENT A**  
**INSURANCE REQUIREMENTS FOR MINOR PUBLIC WORKS PROJECTS**

1. Time for Compliance. Contractor shall not commence Work under this Contract until it has provided evidence satisfactory to WVWD that it has secured all insurance required under this Section. Contractor shall require and verify that all subcontractors maintain insurance meeting all the requirements stated herein. Contractor shall not allow any subcontractor to commence work on any subcontract until it has provided evidence to WVWD that the subcontractor has secured all insurance required under this Section.
2. Minimum Requirements. Contractor shall, at its expense, procure and maintain for the duration of the Contract insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the Contract by the Contractor, its agents, representatives, employees or subcontractors. Contractor shall also require all of its subcontractors to procure and maintain the same insurance for the duration of the Contract and shall verify subcontractors' compliance. Contractor's and subcontractors' insurance shall meet at least the following minimum levels of coverage:
  - (A) Minimum Scope of Insurance. Coverage shall be at least as broad as the latest version of the following: (1) *General Liability*: Insurance Services Office Commercial General Liability coverage (occurrence form CG 0001); (2) *Automobile Liability*: Insurance Services Office Business Auto Coverage form number CA 0001, code 1 (any auto) or if Contractor has no owned autos, Code 8 (hired) and 9 (non-owned); and (3) *Workers' Compensation and Employer's Liability*: Workers' Compensation insurance as required by the State of California and Employer's Liability Insurance, with statutory limits. The policy shall not contain any exclusion contrary to the Agreement, including but not limited to endorsements or provisions limiting coverage for (1) contractual liability or (2) cross liability for claims or suits by one insured against another.
  - (B) Minimum Limits of Insurance. Contractor shall maintain limits no less than: (1) *General Liability*: \$1 Million per occurrence, \$2 Million aggregate for bodily injury, personal injury and property damage. If Commercial General Liability Insurance or other form with general aggregate limit is used including, but not limited to, form CG 2503, either the general aggregate limit shall apply separately to this Agreement/location or the general aggregate limit shall be twice the required occurrence limit; (2) *Automobile Liability*: \$1 million per accident for bodily injury and property damage; and (3) *Workers' Compensation and Employer's Liability*: Workers' Compensation: statutory limits. Employer's Liability limits of \$1 million per accident for bodily injury or disease. Defense costs shall be paid in addition to the limits. Notwithstanding the minimum limits set forth above, any available insurance proceeds in excess of the specified minimum limits of coverage shall be available to the parties required to be named as additional insureds.
  - (C) Notices: Cancellation or Reduction of Coverage. At least fifteen (15) days prior to the expiration of any such policy, evidence showing that such insurance coverage has been renewed or extended shall be filed with WVWD. If such coverage is cancelled or materially reduced, Contractor shall, within ten (10) days after receipt of written notice of such cancellation or reduction of coverage, file with WVWD evidence of insurance showing that the required insurance has been reinstated or has been provided through another insurance company or companies. In the event any policy of insurance required under this Contract does not comply with these specifications or is canceled and not replaced, WVWD has the right but not the duty to obtain the insurance it deems necessary

and any premium paid by WVWD will be promptly reimbursed by Contractor or WVWD may withhold amounts sufficient to pay premium from Contractor payments. In the alternative, WVWD may suspend or terminate this Agreement.

3. Insurance Endorsements. The insurance policies shall contain the following provisions, or Contractor shall provide endorsements on forms approved by WVWD, to add the following provisions to the insurance policies:

(A) General Liability. The general liability policy shall include or be endorsed (amended) to state that: (1) using ISO CG forms 20 10 and 20 37 (including completed operations), or endorsements providing the exact same coverage, WVWD, its directors, officials, officers, employees, agents, and volunteers shall be covered as additional insureds with respect to the Work or ongoing and completed operations performed by or on behalf of the Contractor, including materials, parts or equipment furnished in connection with such work; and (2) using ISO form 20 01, or endorsements providing the exact same coverage, the insurance coverage shall be primary insurance as respects WVWD, its directors, officials, officers, employees, agents, and volunteers and any other Additional Insured named in the Special Conditions, or if excess, shall stand in an unbroken chain of coverage excess of the Contractor's scheduled underlying coverage. Any excess insurance shall contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of WVWD, before WVWD's own primary insurance or self-insurance shall be called upon to protect it as a named insured. Any insurance or self-insurance maintained by WVWD, its directors, officials, officers, employees, agents, and volunteers shall be excess of the Contractor's insurance and shall not be called upon to contribute with it in any way.

(B) Automobile Liability. The automobile liability policy shall include or be endorsed (amended) to state that: (1) WVWD, its directors, officials, officers, employees, agents, and volunteers shall be covered as additional insureds with respect to the ownership, operation, maintenance, use, loading or unloading of any auto owned, leased, hired or borrowed by the Contractor or for which the Contractor is responsible; and (2) the insurance coverage shall be primary insurance as respects WVWD, its directors, officials, officers, employees, agents, and volunteers and any other Additional Insured named in the Special Conditions, or if excess, shall stand in an unbroken chain of coverage excess of the Contractor's scheduled underlying coverage. Any insurance or self-insurance maintained by WVWD, its directors, officials, officers, employees, agents, and volunteers shall be excess of the Contractor's insurance and shall not be called upon to contribute with it in any way. Notwithstanding the minimum limits set forth above, any available insurance proceeds in excess of the specified minimum limits of coverage shall be available to the parties required to be named as additional insureds.

(C) Workers' Compensation and Employer's Liability Coverage. The insurer shall agree, using form WC 00 03 13 or the exact equivalent to waive all rights of subrogation against WVWD, its directors, officials, officers, employees, agents, and volunteers for losses paid under the terms of the insurance policy.

(D) All Coverages. Each insurance policy required by this Contract shall be endorsed to include the following provisions:

- (i) coverage shall not be suspended, voided, reduced or canceled except after thirty (30) days (10 days for nonpayment of premium) prior written notice by certified mail, return receipt requested, has been given to WVWD and all additional insureds,
  - (ii) any failure to comply with reporting or other provisions of the policies, including breaches of warranties, shall not affect coverage provided to WVWD and any other additional insureds,
  - (iii) standard separation of insureds provisions,
  - (iv) no special limitations on the scope of protection afforded to WVWD, and all additional insureds,
  - (v) waiver of any right of subrogation of the insurer against WVWD, its officials, officers, employees, agents, and volunteers, or any other additional insureds, or shall specifically allow Contractor or others required to provide insurance in compliance with these specifications to waive their right of recovery prior to a loss. By signing this agreement, Contractor hereby waives its own right of recovery against WVWD or any other additional insureds, and shall require similar written express waivers and insurance clauses from each of its subcontractors.
4. Deductibles and Self-Insurance Retentions. Any deductibles or self-insured retentions must be declared to and approved by WVWD. Contractor shall guarantee that, at the option of WVWD, either: (1) the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects WVWD, its directors, officials, officers, employees, agents, and volunteers and any other Additional Insured named in the Special Conditions; or (2) the Contractor shall procure a bond guaranteeing payment of losses and related investigation costs, claims, and administrative and defense expenses.
  5. Claims Made Policies. Claims made policies are not acceptable.
  6. Subcontractor Insurance Requirements. Contractor shall not allow any subcontractors to commence work on any subcontract relating to the work under the Contract until Contractor has verified that the subcontractor has provided evidence to WVWD that they have secured all insurance required under this Section. If requested by Contractor, WVWD may approve different scopes or minimum limits of insurance for particular subcontractors. The Contractor and WVWD shall be named as additional insureds on all subcontractors' policies of Commercial General Liability Insurance.
  7. Acceptability of Insurers. Insurance is to be placed with insurers with a current A.M. Best's rating no less than A:VII, licensed to do business in California, and satisfactory to WVWD.
  8. Verification of Coverage. Contractor shall furnish WVWD with original certificates of insurance and endorsements effecting coverage required by this Agreement on forms satisfactory to WVWD. The certificates and endorsements for each insurance policy shall be signed by a person authorized by that insurer to bind coverage on its behalf. All certificates and endorsements must be received and approved by WVWD before work commences. WVWD reserves the right to require complete, certified copies of all required insurance policies, at

any time.

9. Reservation of Rights. WVWD reserves the right to modify these requirements, including limits, based on the nature of the risk, prior experience, insurer, coverage, or other special circumstances.

### **END OF INSURANCE REQUIREMENTS**

**ATTACHMENT B  
DESIGNATION OF SUBCONTRACTORS**

In compliance with the Subletting and Subcontracting Fair Practices Act of the Public Contract Code of the State of California, sections 4100 et seq., Contractor shall set forth below: (a) the name and the location of the place of business and (b) the portion of the work which will be done by each subcontractor who will perform work or labor or render service to the Contractor in or about the construction of the work in an amount in excess of one-half of one percent (1/2%) of the Contractor's Total Bid Price. Notwithstanding the foregoing, if the work involves streets and highways, then the Contractor shall list each subcontractor who will perform work or labor or render service to Contractor in or about the work in an amount in excess of one-half of one percent (1/2%) of the Contractor's total Bid Price or \$10,000, whichever is greater. No additional time shall be granted to provide the below requested information.

If no subcontractor is specified, for a portion of the work, or if more than one subcontractor is specified for the same portion of Work, then the Contractor shall be deemed to have agreed that it is fully qualified to perform that Work, and that it shall perform that portion itself.

Portion of Work	Subcontractor Name	Location of Business	CSLB License Number	DIR Registration Number
	None

**PUBLIC WORKS CONTRACTOR REGISTRATION CERTIFICATION**

Pursuant to Labor Code sections 1725.5 and 1771.1, all contractors and subcontractors that wish to bid on, be listed in a bid proposal, or enter into a contract to perform public work must be registered with the Department of Industrial Relations. See <https://www.dir.ca.gov/PublicWorks/PublicWorks.html> for additional information.

No bid will be accepted nor any contract entered into without proof of the contractor's and subcontractors' current registration with the Department of Industrial Relations to perform public work.

Contractor hereby certifies that it is aware of the registration requirements set forth in Labor Code sections 1725.5 and 1771.1 and is currently registered as a contractor with the Department of Industrial Relations.

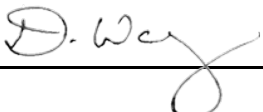

Name of Contractor: Golden Star Technology, Inc

DIR Registration Number: 1000002498

Contractor further acknowledges:

1. Contractor shall maintain a current DIR registration for the duration of the project.
2. Contractor shall include the requirements of Labor Code sections 1725.5 and 1771.1 in its contract with subcontractors and ensure that all subcontractors are registered at the time of bid opening and maintain registration status for the duration of the project.
3. Failure to submit this form or comply with any of the above requirements may result in a finding that the bid is non-responsive.

**ATTACHMENT D**  
**CONTRACTOR'S PROPOSAL**

CONTRACTOR is responding to the Request for Proposal from the West Valley Water District for the Board Room Audio Visual Systems installation. This scope of work serves the purpose of confirming our understanding of the Water District's needs, requests and requirements.

CONTRACTOR has attended the required walk through and understands the intended as described during the course of this walk through. CONTRACTOR has experience in the design, installation and programming of rooms such as this, and will leverage that knowledge and experience, along with strong relationships with manufacturers that support these installations. The AV industry recognizes the CTS (Certified Technology Specialist) certification as the baseline in AV related skills. CONTRACTOR has in house, and assigned to this project 2 individuals who have obtained the baseline CTS certification, as well as the advanced levels including the I (INSTALLATION) and D (DESIGN) endorsements. These endorsements play a critical role in all phases of the project.

CONTRACTOR is a preferred partner with the key manufacturers that are part of this proposal. As such, we have engaged with them on the design and suitability, and with that confirmation, we are proud to represent the various manufacturers.

CONTRACTOR understands that WVWD has requested that all 13 monitors that are positioned on the dais be removed and delivered back to district staff. CONTRACTOR shall provide and install 13 new 22" LCD monitors that are "kickstand" mounted. This will allow them to be reclined on an angle, and maintain visibility to the person sitting in front of it from the audience. Each of the 13 displays shall be set up to show the same image as the main projector in the room.

CONTRACTOR understands that WVWD has requested that all currently installed microphones (gooseneck and wireless) be removed and delivered back to district staff. CONTRACTOR shall provide and install 14 new wired 18" gooseneck microphones and 2 wireless microphones. The gooseneck mics shall have individual mute/unmute buttons on the base. The 2 wireless mics shall consist of 1 hand held microphone and one lapel style microphone with body pack.

CONTRACTOR understands that WVWD has requested that all existing ceiling recessed loudspeakers be removed and replaced with new ceiling recessed loudspeakers. CONTRACTOR understands the challenges of feedback and audibility that the district has experienced, and will address this using the newest technology, including digital signal processing, multiple audio zones and specific audio zone routing to achieve optimal audio quality for the entire room.

CONTRACTOR understands that WVWD has requested 5 HDMI inputs at the dais for digital video inputs. CONTRACTOR understands that the existing cable cubbies shall be reused and the HDMI connections shall be routed thru the cable cubbies. CONTRACTOR assumes that cubbies are currently installed in each of the 5 locations where input is desired. CONTRACTOR further understands that a connection for HDMI input shall be provided in the equipment rack for a resident desktop (house) PC.

CONTRACTOR understands that WVWD has an existing cable TV tuner mounted in the equipment rack and that its signal shall be integrated into the new system. CONTRACTOR assumes that the output of this cable TV tuner is digital (HDMI) and that no analog equipment is to be reinstalled.

CONTRACTOR understands that WVWD has requested that the existing equipment rack be reused in its current location, and that all equipment be removed and delivered to district staff. CONTRACTOR concurs with this and will repurpose the existing rack(s) in their current locations. CONTRACTOR assumes that power is adequate and sufficient for the new system.

CONTRACTOR understands that the existing assisted listening system is to be repurposed and reconnected to the new AV system.

CONTRACTOR understands that WVWD has requested 2 strategically positioned pan-tilt-zoom (PTZ) HD cameras. The subjects of these cameras shall be, generally, the podium location as well as the entire dais and seated areas of the board room. CONTRACTOR shall provide and install these 2 new cameras in locations that optimize these viewing angles, and provide control of the cameras thru the control system described below.

CONTRACTOR understands that that WVWD desires to continue use of the existing Epson projector. CONTRACTOR has no objection to this.

CONTRACTOR understands that WVWD desires to have the projection screen removed and replaced. CONTRACTOR shall remove the existing projection screen and reinstall a new 16:10 format 164" diagonal ceiling recessed projection screen. CONTRACTOR assumes the screen will be placed in the same location as the current screen.

CONTRACTOR understands that WVWD has requested integration of the audio system into the existing VOIP system. CONTRACTOR shall work with WVWD IT department to provide this functionality. CONTRACTOR assumes that the VOIP system can accommodate this addition.

CONTRACTOR understands that the existing Denon audio recorder is to be repurposed. CONTRACTOR shall reintegrate this recorder into the system and have customary controls (play, pause, stop, record) functions in the control system.

CONTRACTOR shall provide, program and install a control system that provides customary controls as requested. These controls shall include system on/off, video preview window, camera PTZ controls, video source selection and routing, volume level control and muting, microphone level control and muting, audio recording control, and VOIP dialer control. A 12" wired touchpanel shall be provided and installed into the rack where the AV equipment is housed and all control can be done with this touchpanel. This touchpanel shall have video preview as requested. A second 12" tabletop touchpanel shall be provided and installed at the back of the room where the operators are typically seated. This second touchpanel shall plug into the wall and be able to unplug from the wall and secured at WVWD staff discretion. This second touchpanel shall have identical function as the rack mounted touchpanel. Both panels shall track each other, and mirror.

CONTRACTOR shall provide and install an assisted listening system with 4 receivers. The assisted listening system shall be programmed to replicate any audio that is presented through the loudspeakers in the room. CONTRACTOR shall provide a charging carry case, 4 receivers, 4 ear pieces and 2 neck loops. The quantities are based on seated capacity of 100, per WVWD provided information. See the calculations below:

Products Support About Shop Contact Consultant

## California ADA Compliance Calculator

The calculator allows you to enter the number of seats in a venue and calculate the minimum number of assistive listening devices and neck loops needed to meet new 2014 ADA requirements.

Minimum number of required receivers

Minimum number of hearing-aid compatible required receivers

WVWD has informed CONTRACTOR that the projector is to be repurposed. No new projector is included.

No extended warranty is implied on any WVWD furnished equipment.

Power and data to be provided by WVWD.

CONTRACTOR is to coordinate the preparation of any hardware and/or software that is not included for this project. Ensure that existing hardware is fully functional and software/firmware is updated.

CONTRACTOR is to assure that the environment is 100% ready. If the environment is not 100% ready the scheduling of the implementation will not be finalized until it is.

WVWD is responsible for providing 24 hours or greater advanced notice for the rescheduling or cancellation of CONTRACTOR's onsite engineering services. If less than 24 hours is given the WVWD will be charged a half day of CONTRACTOR's engineers time at \$175/hr.

CONTRACTOR is to coordinate service deployment on third-party maintained hardware/software (if applicable).

Assign a designated person from the WVWD's staff who, on behalf of the WVWD will grant all approvals, provide information, and otherwise be available to assist CONTRACTOR to facilitate the delivery of this service.

WVWD is to ensure that all hardware, firmware, and software that the CONTRACTOR engineer will need in order to deliver this service are available.

WVWD to allow CONTRACTOR full and unrestricted access to all locations where the service is to be delivered.

WVWD to provide a suitable work area for delivery of the service, including access to an outside telephone line, power, any network connections, etc. that is required.

WVWD is to be responsible for all data backup and restore operations

WVWD is to provide one point-of-contact that will finalize decisions during the project.

WVWD is to provide necessary documentations, paperwork, schematics, line drawings, and information for CONTRACTOR to complete the project. Any delays in providing the necessary project documentation will delay the project.

Standard stock items purchased from CONTRACTOR may be returned for any reason within (14) fourteen days. Custom orders are non-returnable and non-refundable. All original packaging, accessories and documentation must accompany the item and be in unmarked condition. Items must be shipped via at least 2nd day freight with insurance for the full value of the item. Returned items are subject to a 25% restocking fee. Though rare, WVWD may need to return a defective product.

Defective product returns are not subject to the 25% restocking fee and will be exchanged in accordance with the manufacturer's policy within 30 days of purchase.

CONTRACTOR warrants that its Services will be of professional quality (performed in a good and workmanlike manner) and will conform to generally accepted industry standards for such Services and to the requirements specified in this Scope of Work. CONTRACTOR's personnel shall be competent and qualified to perform the tasks to which they are assigned. In the event of any breach of this warranty, CONTRACTOR, at its sole expense and without delay, shall re-perform the non-conforming Services to the applicable standard.

**BOND FORMS**

**PERFORMANCE BOND**

KNOW ALL PERSONS BY THESE PRESENTS:

THAT WHEREAS, the West Valley Water District (hereinafter referred to as "WVWD") has awarded to \_\_\_\_\_, (hereinafter referred to as the "Contractor") an agreement for \_\_\_\_\_ (hereinafter referred to as the "Project").

WHEREAS, the work to be performed by the Contractor is more particularly set forth in the Contract Documents for the Project dated \_\_\_\_\_, (hereinafter referred to as "Contract Documents"), the terms and conditions of which are expressly incorporated herein by reference; and

WHEREAS, the Contractor is required by the Contract Documents to perform the terms thereof and to furnish a bond for the faithful performance of the Contract Documents.

NOW, THEREFORE, we, \_\_\_\_\_, the undersigned Contractor and \_\_\_\_\_ as Surety, a corporation organized and duly authorized to transact business under the laws of the State of California, are held and firmly bound unto the WVWD in the sum of \_\_\_\_\_ DOLLARS, (\$ \_\_\_\_\_), the sum being not less than one hundred percent (100%) of the total amount of the Contract, for which amount well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH, that, if the Contractor, his or its heirs, executors, administrators, successors or assigns, shall in all things stand to and abide by, and well and truly keep and perform the covenants, conditions and agreements in the Contract Documents and any alteration thereof made as therein provided, on its part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their intent and meaning; and shall faithfully fulfill all obligations including the one-year guarantee of all materials and workmanship; and shall indemnify and save harmless the WVWD, its officers and agents, as stipulated in the Contract Documents, then this obligation shall become null and void; otherwise it shall be and remain in full force and effect.

As a condition precedent to the satisfactory completion of the Project, unless otherwise provided for in the Contract Documents, the guarantee obligation shall hold good for a period of one (1) year after the acceptance of the work by WVWD, during which time if Contractor shall fail to make full, complete, and satisfactory repair and replacements and totally protect WVWD from loss or damage resulting from or caused by defective materials or faulty workmanship the above obligation in penal sum thereof shall remain in full force and effect. However, anything in this paragraph to the contrary notwithstanding, the obligations of Surety hereunder shall continue so long as any obligation of Contractor remains. Nothing herein shall limit WVWD's rights or the Contractor or Surety's obligations under the Contract, law or equity, including, but not limited to, California Code of Civil Procedure section 337.15.

As a part of the obligation secured hereby and in addition to the face amount specified therefor, there shall be included costs and reasonable expenses and fees including reasonable attorneys' fees, incurred by WVWD in enforcing such obligation.

Whenever Contractor shall be, and is declared by WVWD to be, in default under the Contract Documents, the Surety shall remedy the default pursuant to the Contract Documents, or shall promptly, at WVWD 's option:

1. Take over and complete the Project in accordance with all terms and conditions in the Contract Documents; or
2. Obtain a bid or bids for completing the Project in accordance with all terms and conditions in the Contract Documents and upon determination by Surety of the lowest responsive and responsible bidder, arrange for a Contract between such bidder, the Surety and WVWD, and make available as work progresses sufficient funds to pay the cost of completion of the Project, less the balance of the contract price, including other costs and damages for which Surety may be liable. The term "balance of the contract price" as used in this paragraph shall mean the total amount payable to Contractor by WVWD under the Contract and any modification thereto, less any amount previously paid by WVWD to the Contractor and any other set offs pursuant to the Contract Documents.
3. Permit WVWD to complete the Project in any manner consistent with California law and make available as work progresses sufficient funds to pay the cost of completion of the Project, less the balance of the contract price, including other costs and damages for which Surety may be liable. The term "balance of the contract price" as used in this paragraph shall mean the total amount payable to Contractor by WVWD under the Contract and any modification thereto, less any amount previously paid by WVWD to the Contractor and any other set offs pursuant to the Contract Documents.

Surety expressly agrees that WVWD may reject any contractor or subcontractor which may be proposed by Surety in fulfillment of its obligations in the event of default by the Contractor.

Surety shall not utilize Contractor in completing the Project nor shall Surety accept a bid from Contractor for completion of the Project if WVWD, when declaring the Contractor in default, notifies Surety of WVWD 's objection to Contractor's further participation in the completion of the Project.

The Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Contract to be performed thereunder, shall in any way affect its obligations on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of Contract. including but not limited to the provisions of sections 2819 and 2845 of the California Civil Code.

**END OF PERFORMANCE BOND**

**PAYMENT BOND (LABOR AND MATERIALS)**

KNOW ALL PERSONS BY THESE PRESENTS:

THAT WHEREAS, the West Valley Water District (hereinafter referred to as "WVWD") has awarded to \_\_\_\_\_, (hereinafter referred to as the "Contractor") \_\_\_\_\_ an agreement for \_\_\_\_\_ (hereinafter referred to as the "Project").

WHEREAS, the work to be performed by the Contractor is more particularly set forth in the Contract Documents for the Project dated \_\_\_\_\_, (hereinafter referred to as "Contract Documents"), the terms and conditions of which are expressly incorporated herein by reference; and

WHEREAS, Principal is required to furnish a bond in connection with the contract described above; providing that if Principal or any of its Subcontractors shall fail to pay for any materials, provisions, provender, equipment, or other supplies used in, upon, for or about the performance of the work contracted to be done, or for any work or labor done thereon of any kind, or for amounts due under the Unemployment Insurance Code or for any amounts required to be deducted, withheld, and paid over to the Employment Development Department from the wages of employees of Principal and its Subcontractors with respect to such work or labor the Surety on this bond will pay for the same to the extent hereinafter set forth.

NOW THEREFORE, we, the Principal and \_\_\_\_\_ as Surety, are held and firmly bound unto WVWD in the penal sum of \_\_\_\_\_ Dollars (\$ \_\_\_\_\_) lawful money of the United States of America, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH that if Principal, his or its subcontractors, heirs, executors, administrators, successors or assigns, shall fail to pay any of the persons named in section 9100 of the Civil Code, fail to pay for any materials, provisions or other supplies, used in, upon, for or about the performance of the work contracted to be done, or for any work or labor thereon of any kind, or amounts due under the Unemployment Insurance Code with respect to work or labor performed under the contract, or for any amounts required to be deducted, withheld, and paid over to the Employment Development Department or Franchise Tax Board from the wages of employees of the contractor and his subcontractors pursuant to section 18663 of the Revenue and Taxation Code, with respect to such work and labor the Surety or Sureties will pay for the same, in an amount not exceeding the sum herein above specified, and also, in case suit is brought upon this bond, all litigation expenses incurred by WVWD in such suit, including reasonable attorneys' fees, court costs, expert witness fees and investigation expenses.

This bond shall inure to the benefit of any of the persons named in section 9100 of the Civil Code so as to give a right of action to such persons or their assigns in any suit brought upon this bond.

It is further stipulated and agreed that the Surety on this bond shall not be exonerated or released from the obligation of this bond by any change, extension of time for performance, addition, alteration or modification in, to, or of any contract, plans, specifications, or agreement

pertaining or relating to any scheme or work of improvement herein above described, or pertaining or relating to the furnishing of labor, materials, or equipment therefore, nor by any change or modification of any terms of payment or extension of the time for any payment pertaining or relating to any scheme or work of improvement herein above described, nor by any rescission or attempted rescission or attempted rescission of the contract, agreement or bond, nor by any conditions precedent or subsequent in the bond attempting to limit the right of recovery of claimants otherwise entitled to recover under any such contract or agreement or under the bond, nor by any fraud practiced by any person other than the claimant seeking to recover on the bond and that this bond be construed most strongly against the Surety and in favor of all persons for whose benefit such bond is given, and under no circumstances shall Surety be released from liability to those for whose benefit such bond has been given, by reason of any breach of contract between WVWD and original contractor or on the part of any obligee named in such bond, but the sole conditions of recovery shall be that claimant is a person described in section 9100 of the Civil Code, and has not been paid the full amount of his claim.

The Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Contract to be performed thereunder, shall in any way affect its obligations on this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of Contract. including but not limited to the provisions of sections 2819 and 2845 of the California Civil Code.

Signatures of those signing for the Contractor and Surety must be notarized and evidence of corporate authority attached.

IN WITNESS WHEREOF, two (2) identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and Surety above named, on the \_\_\_\_\_ day of \_\_\_\_\_ 20\_\_\_\_ the name and corporate seal of each corporate party being hereto affixed and these presents duly signed by its undersigned representative pursuant to authority of its governing body.

#### END OF PAYMENT (LABOR AND MATERIALS) BOND

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** **ADOPT RESOLUTION 2021-14, ADOPTING THE DESIGN BUILD DELIVERY METHOD FOR THE OLIVER P. ROEMER WATER FILTRATION FACILITY EXPANSION PROJECT**

---

**DISCUSSION:**

Due to projected population growth, peak summer usage and to provide a reliable long term water supply to supplement groundwater production, West Valley Water District (“District”) is planning to expand treatment capacity at the Oliver P. Roemer Water Filtration Facility (“Roemer WFF”) to allow the treatment of additional State Water Project water.

The increase in treatment capacity required an analysis of existing facilities and an evaluation and recommendation of feasible and cost effective treatment options and operational strategies. The delivery method will be a Design Build (“DB”) that will utilize an integrated team to develop the design and construct the facility.

Further to the “Oliver P. Roemer Water Filtration Facility Expansion” update provided to the Engineering, Operations and Planning Committee on November 13, 2019 (see Exhibit B attached), the follow project advancements have been completed:

- Owner’s Agent, GHD Inc., has been commissioned by the District.
- They have nearly completed a 30% design, and are finalizing the technical bridging documents which will comprise part of the contract documentation. Project and design advancement has seen previously identified high risk items be nullified to manageable risk. An example being the process treatment that is recommended.
- A Third Party legal firm, Hunt Ortmann, has been commissioned by the District.
- An Expression of Interest was released to the industry. Six (6) submissions were provided to the District.

Next Steps and Recommendations:

- The next step is to continue the procurement process.
- The recommendation is to proceed with a Design Build contract delivery method and adopt Resolution 2021-14 (Exhibit A) attesting to such. The procurement will be a 2 step process; a Request for Qualifications (“RFQ”) followed by a Request for Proposals (“RFP”). The anticipated timeline follows:

- o End June / early July: Issue RFQ
- o Early / mid-July: RFQ presentation, site visits (if necessary)
- o Early August: Interviews
- o End August: Finalize recommendation of short-listed DB teams
- o September / October: Committee and Board approvals
- o November: Issue RFP

**FISCAL IMPACT:**

No fiscal impact.

**STAFF RECOMMENDATION:**

That this item be submitted for consideration, and that the District proceed with a Design Build contract delivery method and that the Board of Directors adopt Resolution No. 2021-14, adopting the Design Build Procurement Method for the Oliver P. Roemer Water Filtration Facility Expansion project.

Respectfully Submitted,

*Shamindra Manbahal*

**RESOLUTION NO. 2021-14**

**RESOLUTION OF THE BOARD OF DIRECTORS  
OF WEST VALLEY WATER DISTRICT  
ADOPTING THE DESIGN BUILD PROCUREMENT METHOD**

**WHEREAS**, due to projected population growth with increased water demands, and to provide a reliable long term water supply to supplement groundwater production, West Valley Water District (“District”) is planning to expand treatment capacity at the Oliver P. Roemer Water Filtration Facility to allow the treatment of additional State Water Project water; and

**WHEREAS**, a Design-Build procurement method for the design and construction of the Oliver P. Roemer Water Filtration Facility expansion would provide a single point of accountability for both design and construction, removes conflict between designer and contractor, the Design Build entity is responsible for performance guarantees, encourages innovation in design and construction and provides an accelerated project completion.

**NOW THEREFORE BE IT RESOLVED**, the Board of Directors of the Water District hereby resolve as follows:

1. The Board of Directors finds that the use of the Design-Build procurement method for the Oliver P. Roemer Water Filtration Facility Expansion project instead of the Design Bid Build procurement is in the best interest of the District, as the District will benefit from a shorter procurement process, increased collaboration and innovation between the District and Design-Builder, reduction of risk to the District for design related issues, and an accelerated project schedule and completion.

**ADOPTED, SIGNED, AND APPROVED THIS 17th DAY OF JUNE, 2021.**

Peggy Asche  
Board Secretary

\_\_\_\_\_  
Channing Hawkins,  
President of the Board of Directors  
of West Valley Water District

# EXHIBIT B

# Oliver P. Roemer Water Filtration Facility Expansion

November 13, 2019

# Need for Expansion

- Existing treatment facility is 14.4 mgd
- Operating at near capacity
- Several wells are inactive due to various contaminants
  - MTBE
  - Nitrites
  - Perchlorate
  - 123 TCP
- Experiencing lowering groundwater levels
- Relax groundwater well pumping - basin level recovery
- Utilize additional State Water Project water to supplement our groundwater production

# Future Growth

- New development
- 66% of the District's service area is developed
- Need to construct expansion before development occurs
- North System - Projected peak day demand at buildout 32.8 mgd
- New 16.0 mgd water filtration facility expansion
- Ultimate 30.4 mgd treatment capacity

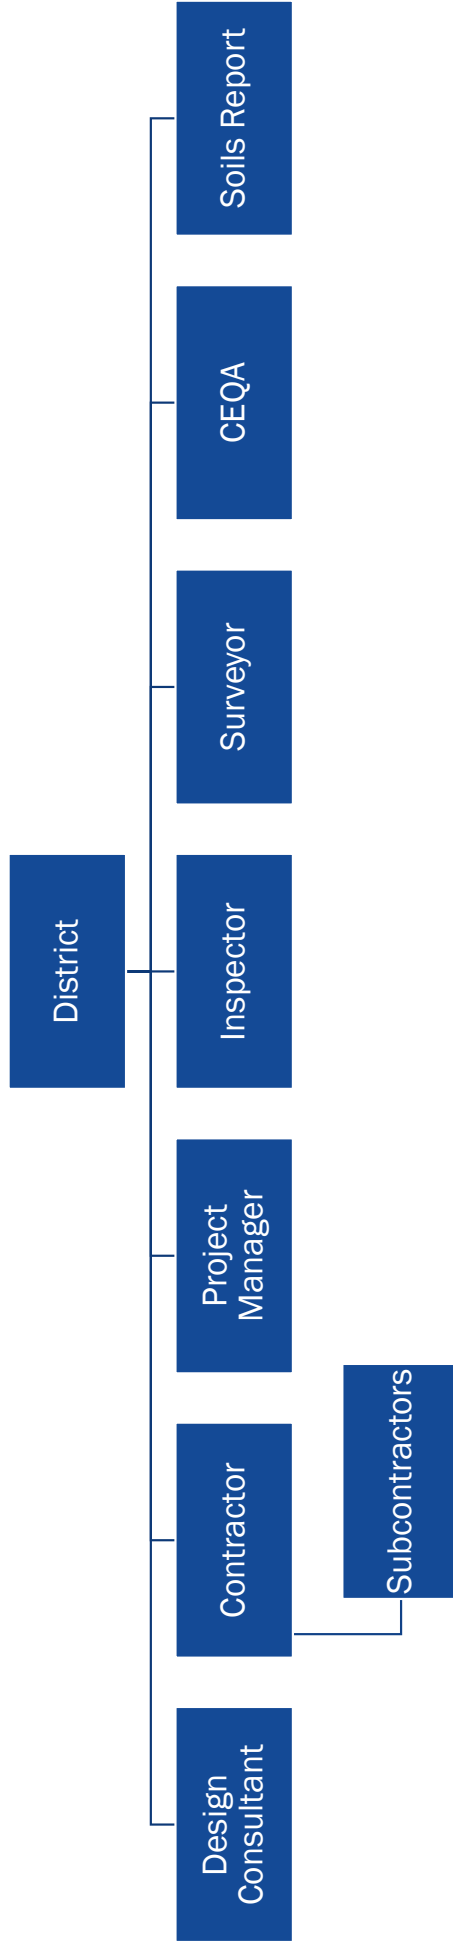

# Traditional Procurement

## Design-Bid-Build (DBB)

- Design - 100% plans and specifications
- Bid - Request Construction Bids for project
- Build - Construction contract awarded to lowest bidder

# Traditional Design-Bid-Build

## Multiple Contracts

# Drawbacks of Traditional Delivery

- District holds all contracts
- District in the middle of all disputes
- Low bid can lead to contentious environment, low quality and change orders

# Advantages of Traditional Delivery

- Design is not influenced by the contractor
- Less risk for total project cost

# Alternative Delivery

Also known as integrated project delivery

- Design Build (DB)
- Design Builder is both engineer and general contractor
- Typically design to 60% and begin construction
- Overlaps the design phase and the construction phase
- Contract pricing is set very early in project

# Why Design Build?

- Single point of responsibility
- Removes conflict between designer and contractor
- DB entity responsible for performance guarantees
- Accelerated project completion
- Encourages innovation in design and construction
- Cost containment, known upfront

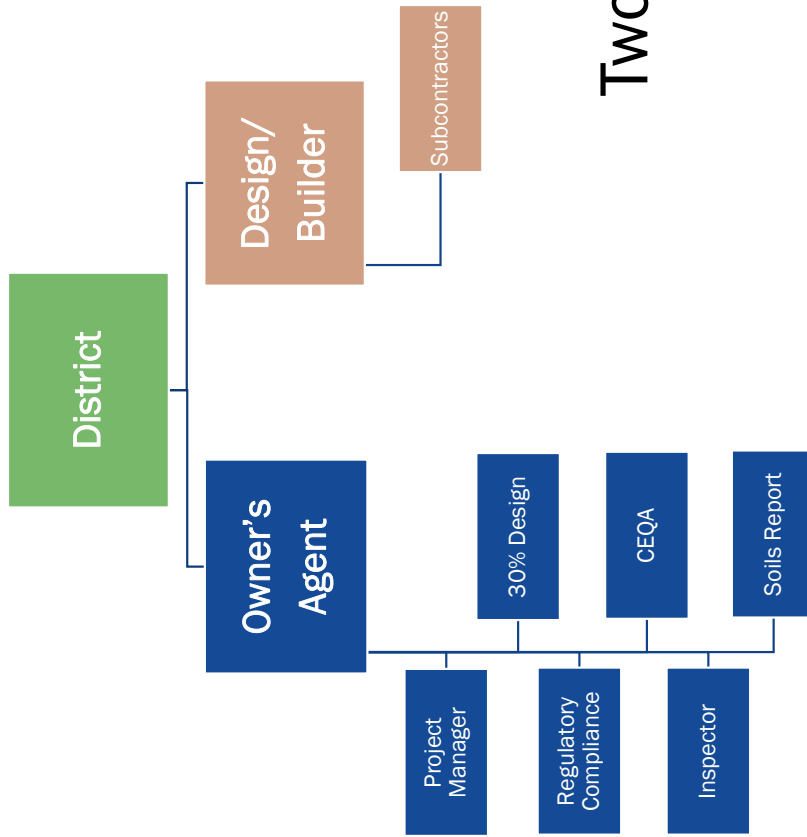

# Key Features – Design Build

- Simple and shorter procurement process
- Planned early communication of schedule and budget restraints
- Design to Price approach – set a firm budget for Guaranteed Maximum Price (GMP) – No change orders
- 3rd party “Owner’s Agent”

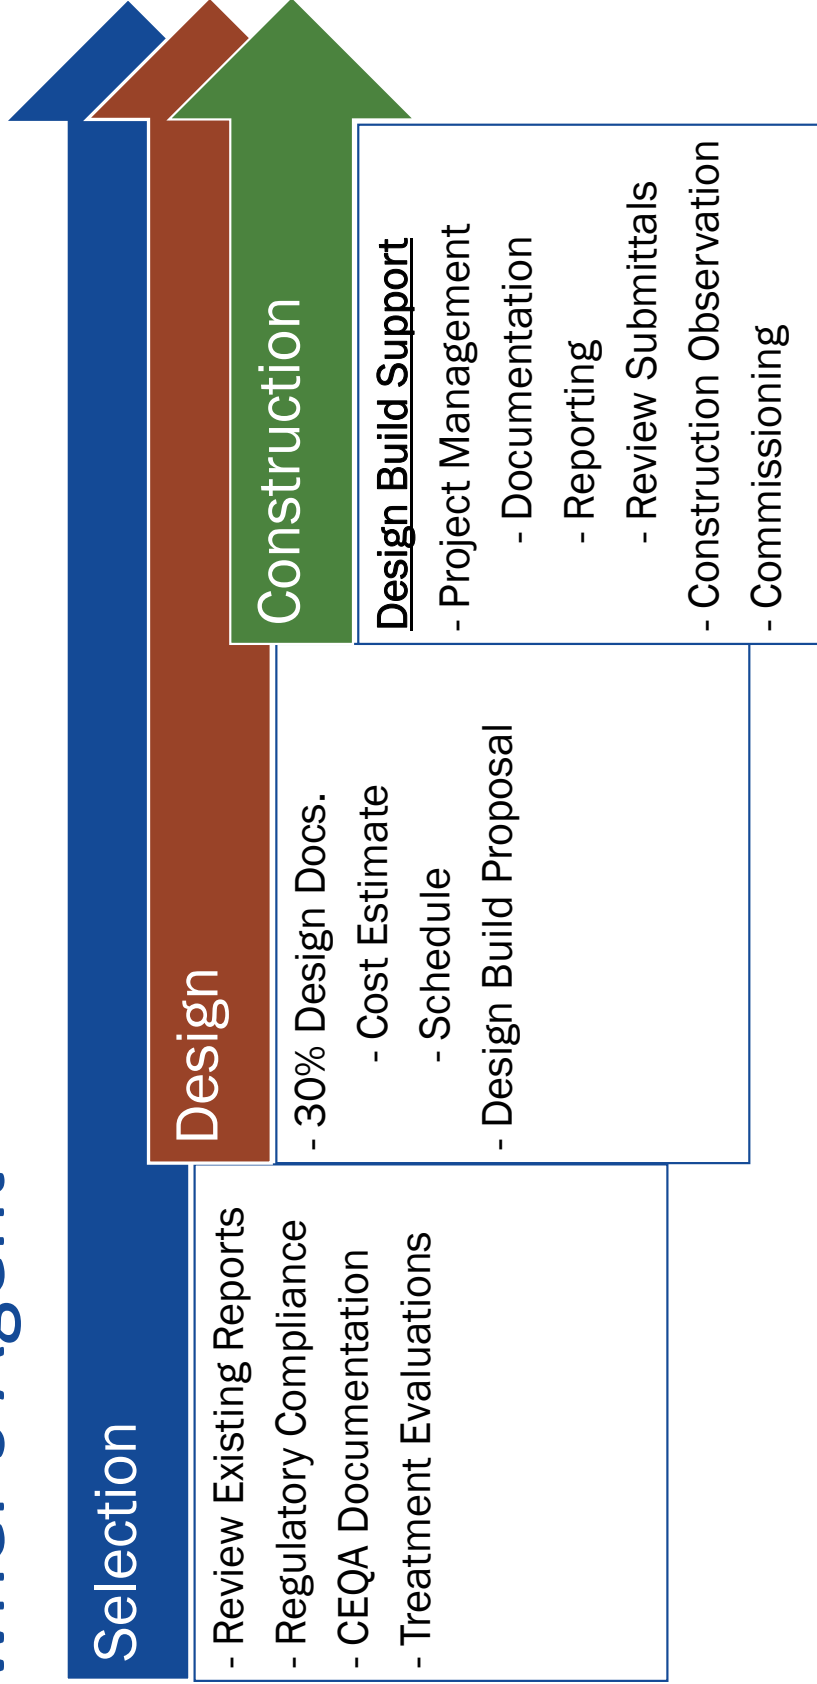

# Design Build

# Two Contracts

# Owner's Agent

# Summary

- Planning to use the Design Build process with an Owners Agent
- Finalizing the Request for Qualifications of the Owners Agent
- Will be sending it out to various consulting firms
- Qualifications of firms will be reviewed
- Short list of consultants will be formulated
- Interviews conducted
- Price for services negotiated
- Brought to the Engineering, Operations and Planning Committee

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** APPROVAL OF CHANGE ORDER NO. 3 FOR THE DESIGN OF LORD RANCH PUMP STATION 4-3 PROJECT FOR ENGINEERING RESOURCES OF SOUTHERN CALIFORNIA, INC.

---

**BACKGROUND:**

West Valley Water District (“District”) proposes to construct several projects at the Lord Ranch Facility which would allow the District to utilize additional capacity through the Base Line Feeder (“BLF”) transmission pipeline, the source of which is purchased groundwater from the San Bernardino Valley Municipal Water District. Water supplied through the BLF is boosted into the District’s northern service area.

**DISCUSSION:**

On December 9, 2014, the District entered into a contract with Engineering Resources of Southern California, Inc. (“ERSC”) for the Design of Pump Station 4-3 at Lord Ranch Project. On March 13, 2018, the District approved Change Order No. 1 for the design of the 30-inch waterline, which was not part of the original scope. On June 18, 2020, the District approved Change Order No. 2 based upon various delays, and an adjustment of the Professional Services Agreement to complete the project. On May 26, 2021, ERSC submitted a proposal to request Change Order No. 3. Additional funds are required to modify the electrical plans per the preliminary design prepared by Southern California Edison for the new meter and service and to revisions to advance to final design. The design revisions also include revisions to the emergency generator. ERSC has submitted Change Order No. 3 to cover the cost for this additional work. Attached as **Exhibit A** is a copy of the proposal received by ERSC.

**FISCAL IMPACT:**

This project is a budgeted item in the Fiscal Year 2020/21 Capital Improvement Budget under the W15004 Lord Ranch Pump Station 4-3 Project. The original contract amount of \$131,000.00 was adjusted by Change Order No. 1 for \$15,000.00 and Change Order No. 2 for \$33,500.00 for a current contract amount of \$179,500.00. This Change Order no. 3 will increase the contract amount by \$41,500.00 for a total of \$221,000.00. A copy of Change Order No. 3 is attached as **Exhibit B**. The project budget has available funds of \$2,812,686.00. Sufficient funds are available in the project budget to cover the cost of Change Order No. 3. A financial summary of the change order history is as follows:

CIP FY 2019-2020 Project Name	Available Budget	Design Cost	Change Order	Remaining Budget	New Contract Price
W15004 Lord Ranch Pump Station 4-3 Original Agreement	\$2,992,186.00	\$131,000.00		\$2,861,186.00	\$131,000.00
W15004 Lord Ranch Pump Station 4-3 Change Order No. 1	\$2,861,186.00	\$131,000.00	(\$15,000.00)	\$2,846,186.00	\$146,000.00
W15004 Lord Ranch Pump Station 4-3 Change Order No. 2	\$2,846,186.00	\$146,000.00	(\$33,500.00)	\$2,812,686.00	\$179,500.00
W15004 Lord Ranch Pump Station 4-3 Change Order No. 3	\$2,812,686.00	\$179,500.00	(\$41,500.00)	\$2,771,186.00	\$221,000.00

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

 855 W. Baseline Road (P.O. Box 920)  
 Rialto, CA 92377

**SUBJECT: ENGINEERING DESIGN SERVICES FOR PUMP STATION 4-3 @ LORD RANCH  
 REQUEST FOR CHANGE ORDER NO. 2 TO TASK ORDER NO. 13**

Dear Ms. Perez,

Per previous correspondence, *Engineering Resources of Southern California (ERSC)* described providing design services for subject project in accordance with Task Order No. 13 (as executed December 9, 2014). Based on our initial proposal dated November 20, 2014, Services included survey, preparation of plans and specifications, and electrical design for the sum of \$131,000. Intent of the original design scope & fees was based on mimicking previous layouts and equipment selection for Pump Stations 5-2, 6-2 & 8-2. Subsequent adjustments to the contract included a March 14, 2018 Amendment for \$15,000 and a July 8, 2020 Change Order for \$33,500. Substantially complete plans were submitted in the months of October and December of 2020, with accompanying specifications in early January 2021.

Southern California Edison (SCE) however rejected District's new meter request sometime in January 2021 and the project unfortunately stalled until District Staff and SCE could come to terms with how best to serve electricity to the proposed facilities. Based on our recent review of SCE's latest planning layout, *ERSC* will be required to update numerous design and electrical sheets to be compatible with the electrical feed system revisions. We are also in receipt of the standby generator information currently being installed at said Pump Station 6-2, and have been directed to specify a similar system at Lord Ranch. This again requires *ERSC* to make certain changes to the plans and specifications.

The succeeding table summarizes our latest Cost-to-Complete for the subject Pump Station 4-3, including the revised electrical design as well as requested bidding support services:

Cost-to-Complete (CTC) Estimate		\$22,000
Electrical Revisions (Balanced Cost + 15% ±)		\$19,500
<b>Total:</b>		<b>\$41,500</b>

Balan’s estimate is attached hereto, and a breakdown of our CTC Estimate is as follows:

STAFF:	Sr. Princ. Engr	Engr V	Engr III	Engineer Tech	TOTAL
RATE (\$/HR):	215	165	135	110	
HOURS:	36	24	36	48	
SUBTOTAL:	\$7,740	\$3,960	\$4,860	\$5,280	\$21,840
				(Rounded)	<b>\$22,000</b>

Therefore, we hereby request a Task Order amendment in the amount of \$41,500, and have accounted for separate updates to the Reservoir design and Grading and Paving design that are integral yet under different cover.

As always, we look forward to the opportunity of working with District on this matter and appreciate our continued relationship. If you have any questions or require additional information, please call me at 909.890.1255 (Ext. 126). Thank you.

Sincerely,

Erik T. Howard, PE, PLS  
Sr. Principal Engineer

**WEST VALLEY WATER DISTRICT  
SAN BERNARDINO, CALIFORNIA**

**ZONE 4-3 PUMPING STATION (LORD RANCH)  
ELECTRICAL/INSTRUMENTATION – FINAL DESIGN**

**ADDITIONAL SCOPE OF WORK**

**A. DESIGN PHASE:**

<b>TASK NO:</b>	<b>DESCRIPTION</b>
A.1	Revise Electrical site plan to accommodate SCE's revised plans.
A.2	Re-Design new SCE Transformer Pad and associated equipment per SCE Dwg 1398337
A.3	Provide assistance in locating 2000-gallon diesel tank, day tank and transfer pumps.
A.4	Revise Pump Station Electrical plans to accommodate Caterpillar C27 Emergency Generator with load bank etc.,
A.5	Provide electrical power, controls and grounding for day tank, pumps and interface for Load Bank.
A.6	Revise plans and specifications for bidding purposes
A.7	Project Management and Meetings (max. 1 meetings at 4 hrs. Each)
A.8	Bidding Phase Assistance (Only; No Construction Support)

**Assumptions:**

1. Assumes that SCE will provide Electrical Service as outlined in their drawing . 1398337
2. All necessary backgrounds will be provided to MB&A in AutoCAD Rel 2016 or later files.
3. The layout within the Pump Station will not be changed and building foot print is the same.

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** **ORDINANCE NO. 88: SETTING THE NUMBER OF SERVICE CONNECTIONS AND METERS TO BE PROVIDED BY SOUTHERN CALIFORNIA EDISON AT THE DISTRICT'S PUMP STATION 7-2 SITE**

---

**BACKGROUND:**

Pressure Zone 7 is north of Pressure Zone 6 in West Valley Water District's ("District") North System. Storage is provided by R7-1, R7-2, R7-3, and R7-4 Reservoirs on Lytle Creek Road. There is no source of supply within Pressure Zone 7. Water is boosted from the Lower Pressure Zones 4, 5, and 6.

The District owns Assessor Parcel No. 0239-112-26 of about 6.19 acres total. The Site is located on the south side of Riverside Avenue, in the City of Rialto, and is currently occupied by existing Pump Station 7-1 boosting water supplies to the upper pressure zone, reservoirs R6-2, R6-3, R6-4, and groundwater wells 23A, and 24. Pump Station 7-2 ("PS7-2") is needed to supply future demands and provide redundancy in the event the other pump station is out of service for maintenance or repair. The said infrastructure on Site is for the purpose of promoting public health and safety by providing reliable drinking water service to customers, residents, businesses, and visitors to the District service area and the Site is currently being serviced by four (2) SCE service connections and four (2) SCE meters.

On August 25, 2020, staff submitted the Southern California Edison ("SCE") application and corresponding documents requesting a new meter for PS7-2. On September 18, 2020, the application was revised and resubmitted to SCE for approval. On September 24, 2020, an SCE service planner was assigned to this project. and he informed the District the proposed service and the existing two (2) services would need to be consolidated to one point of service per Rule 16 similar to the Lord Ranch Pump Station 4-3.

On May 19, 2021, the SCE planner informed the District an Ordinance would be required to allow the District for the addition of the new SCE meter.

**DISCUSSION:**

Ordinance No. 88 has been developed to address some key concerns. Those concerns are as follows:

The Site is within a disadvantaged community boundary. The District has a fiduciary responsibility

to identify avenues to prevent unnecessary rate increases, especially during economic declines. If the District were required to comply with consolidating service connections, it would necessarily result in the expenditure of \$650,000 from the general fund and would necessarily cause a reduction in service and possibly a rate increase to the disadvantaged communities that the District serves.

For the purpose of enhancing its ability to promote public health and safety by providing reliable drinking water service, the District desires an additional SCE connection and meter for the new infrastructure which need electrical power service in order to operate. A single meter at Site would mean that the two (2) existing SCE service connections and two (2) existing meters shall be consolidated to one (1) SCE service connection and one (1) meter and any such changes would cause a drop in service levels and raise in rates.

The consolidation of service connections to the Site will increase project costs of new infrastructure project by \$650,000 and exacerbate the current financial crisis families in disadvantaged communities are struggling to overcome. The disconnection of any existing SCE service connections and any existing meters at the Site, denial of new connections, and the consolidation to a single connection and meter at the Site will result in an undue and unreasonable financial burden on the rate payers of the District.

As indicated in the ordinance, SCE shall maintain the existing two (2) SCE service connections and existing two (2) meters at the Site and grant new connection at Site at a location deemed mutually acceptable to the District and SCE and to which neither the District or SCE will unreasonably withhold their acceptance of such location. Attached as **Exhibit A** is a copy of Ordinance No. 88.

**FISCAL IMPACT:**

Anticipated cost to consolidate to one meter is approximately \$650,000 that is not budgeted and would therefore have to be funded by reserves if the District is not successful with adoption of Ordinance No. 88.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

## ORDINANCE NO. 88

### AN ORDINANCE OF THE BOARD OF DIRECTORS OF THE WEST VALLEY WATER DISTRICT, COUNTY OF SAN BERNARDINO, STATE OF CALIFORNIA, SETTING THE NUMBER OF SERVICE CONNECTIONS AND METERS TO BE PROVIDED BY SOUTHERN CALIFORNIA EDISON AT THE DISTRICT'S PUMP STATION 7-2 SITE

---

**WHEREAS**, the West Valley Water District (“WVWD”) is a public agency formed and operating under the California Water Code pursuant to California Water Code Section 30000 et seq; and

**WHEREAS**, the WVWD is governed by the Board of Directors, and the Board of Directors are elected public officials; and

**WHEREAS**, the WVWD owns Assessor Parcel No. (“APN”) 0239-112-26 is collectively an expansive site of about 6.19 acres total, and is commonly referred to by WVWD as the Pump State 7-2 Site (“SITE”); and

**WHEREAS**, the SITE serves a disadvantaged community boundary based on the California Office of Environmental Health Hazard Assessment, CalEnviroScreen 3.0 Disadvantaged Community Ranking Results; and

**WHEREAS**, WVWD remains committed to abiding by Executive Order N-42-20 by Governor Gavin Newsom, halting disconnections for nonpayment due to the financial crisis created by the COVID-19 pandemic to prevent further economic decline, and

**WHEREAS**, WVWD has a fiduciary responsibility to identify avenues to prevent unnecessary rate increases, especially during economic declines; and

**WHEREAS**, unemployment has reached 14.1% in San Bernardino County during COVID-19 pandemic per the State of California Employment Development Department; and

**WHEREAS**, the State of California Employment Development Department published a news release February 5, 2021, announcing nearly 20 million unemployment claims so far in the COVID-19 pandemic; and

**WHEREAS**, if the WVWD were required to comply with consolidating service connections, it would necessarily result in the expenditure of \$650,000 from the general fund and would necessarily cause a reduction in service and possibly a rate increase to the disadvantaged communities that WVWD serves; and

**WHEREAS**, there is currently two (2) drinking water production well, one (1) 1.0 million gallon drinking water reservoir, one (1) 4.0 million gallon drinking water reservoir, one (1) 6.0 million gallon drinking water reservoir, and one (1) booster pump station on SITE and said infrastructure on SITE is for the purpose of promoting public health and safety by providing reliable drinking water service to customers, residents, businesses, and visitors to the WVWD

service area and the SITE is currently being serviced by two (2) Southern California Edison (“SCE”) service connections and two (2) SCE meters; and

**WHEREAS**, the WVWD, for the purpose of enhancing its ability to promote public health and safety by providing reliable drinking water service, desires to incorporate an additive booster pump station (collectively “NEW INFRASTRUCTURE”) and NEW INFRASTRUCTURE needs electrical power service in order to operate; and

**WHEREAS**, WVWD desires an additional SCE connection and meter (“NEW CONNECTION”) be installed to service NEW INFRASTRUCTURE; and

**WHEREAS**, a single meter at each non-residential enterprise site would mean that the two (2) existing SCE service connections and two (2) existing meters shall be consolidated to one (1) SCE service connection and one (1) meter and any such changes would cause a drop in service levels and raise in rates; and

**WHEREAS**, WVWD has determined that any consolidation of service connections, as stated herein, to the SITE will increase project costs of NEW INFRASTRUCTURE project by \$650,000 and exacerbate the current financial crisis families in disadvantaged communities are struggling to overcome.

**NOW, THEREFORE, THE BOARD OF DIRECTORS OF WEST VALLEY WATER DISTRICT** does hereby ordain:

The disconnection of any existing SCE service connections and any existing meters at the SITE, denial of NEW CONNECTION, and the consolidation to a single connection and meter at the SITE will result in an undue and unreasonable financial burden on the rate payers of WVWD; and

SCE shall maintain the existing two (2) SCE service connections and existing two (2) meters at the SITE and grant NEW CONNECTION at SITE at a location deemed mutually acceptable to WVWD and SCE and to which neither WVWD or SCE will unreasonably withhold their acceptance of such location.

**ADOPTED, SIGNED AND APPROVED THIS 17 DAY OF JUNE, 2021.**

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** CONSIDER THE SELECTION OF A VENDOR FOR THE WEBSITE REDESIGN PROJECT

---

**BACKGROUND:**

In response to a request by the West Valley Water District (“District”) Board of Directors to improve the customer experience with our public-facing website, staff completed an evaluation of the current website and, upon completion, developed a scope of work to initiate the procurement of a web development consultant/firm.

The existing website does not best serve the needs of the District or its stakeholders. The website must support transparent communication between the District and the public. The current website requires an update to improve the delivery of services to customers, enhance data management and follow industry best practices.

An RFP was sent electronically to consultants/firms registered on PlanetBids for website redesign and development. The solicitation was issued in accordance with current District procurement policies and procedures.

Seven (7) proposals were received by the March 26, 2021 deadline as advertised in the RFP packet. A responsiveness review was conducted by the Purchasing Supervisor and found the proposals in compliance with the RFP requirements and with no extraordinary exceptions. After an internal Evaluation Committee evaluated the proposals, two firms were short-listed.

**DISCUSSION:**

Staff invited 360Civic and Planeteria Media to give brief presentations to the Safety and Technology Committee, which recommended that the presentations be provided to the full Board. The Request for Proposal, the quote from 360Civic, and the quote from Planeteria Media are included as Attachments A, B, and C respectively. The District’s standard Professional Services Agreement, (included as Attachment D), will be prepared for the selected vendor.

<b>Original Proposal</b>	
<b>360Civic</b>	<b>Planeteria Media</b>

**One-time Fees**

Redesign	\$79,340	\$32,560
Mobile App	Included	Not Included
Intranet	Included	Included
Total Project Costs	<b>\$79,340</b>	<b>\$32,560</b>

**Ongoing Fees**

Website Hosting	\$6,000 - \$9,000 Depending on amount of Traffic	\$1,500
Support	Included	\$2,640
Total Annual Costs	<b>\$6,000 - \$9,000</b>	<b>\$4,140</b>

**Other**

Approximate Timeline	4 months	4-5 months
Total Project Hours	764	296
Location	Orange, CA	Santa Rosa, CA
Content Editing	Full content creation.	Basic copy editing.
Water Agency Clients	West Basin Municipal Water District, the Central Basin Municipal Water District, Mesa Water District, Moulton Niguel Water District and Santa Clarita Valley Water Authority.	San Diego County Water Authority, Mojave Water Agency, and Sonoma Water.

To assist with the comparison, staff offers the following additional information:

- Planeteria Media has provided a separate quoted price of \$7,700 to develop a mobile app.
- Planeteria Media has provided a separate quoted price of \$6,600 for a full content re-write.

**FISCAL IMPACT:**

This item was included in the FY 2021/2022 CIP Budget, with a budgeted amount of \$80,000.

**STAFF RECOMMENDATION:**

Staff recommends that this item be submitted for consideration, and that the Board of Directors approve this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

## Request for Proposal

## REQUEST FOR PROPOSALS (RFP) WEBSITE REDESIGN & DEVELOPMENT

### INVITATION

West Valley Water District (WVWD) is requesting proposals from professional website design and development firms to provide website redesign and development services for a new website for WVWD.

All bids should be submitted online through the Planet Bids system. No proposals shall be submitted after **4:00 p.m. on Friday, March 26, 2021.** Late proposal documents will not be accepted.

During the RFP process, consultants shall submit all questions online through the Planet Bids System. Responses to questions received three (3) days prior to the RFP deadline may not be available. If there is any revision to the RFP, an addendum will be issued and made available to all firms receiving RFP documents.

## Section 1. General Information

### 1.01 Definitions

WVWD	West Valley Water District
Firm	The firm submitting the proposal and/or the firm awarded the contract.
Contract	The agreement to be entered into for services between WVWD and the firm who submits the proposal accepted by WVWD.
RFP	This Request for Proposal, including any amendments or other addenda hereto.
Website Committee	The RFP Website Committee is comprised of WVWD's staff.
Panel	WVWD will establish a Consultant Selection Panel including internal representatives from various departments.
Short list	Firms selected to proceed for further evaluation

### 1.02 Company Overview

WVWD is a Special District governed by a five-member Board of Directors providing retail water to approximately 70,000 customers in portions of Rialto, Colton, Fontana, Bloomington, an unincorporated area of San Bernardino County, and Jurupa Valley in Riverside County. Our mission is to provide a reliable, safe drinking water supply to meet our customers' present and future needs at a reasonable cost and to promote water-use efficiency and conservation.

Our history began on February 28, 1952, when our forbearer, West San Bernardino County Water District (District), became the owner and operator of three local mutual water companies. By the end of the 1980's, WVWD water facilities included 180 miles of pipeline, 12 reservoirs and 15 water wells. It was during this time that WVWD built its office and maintenance yard on Baseline Road in Rialto, where we are still located today.

In 1992, WVWD was a partner in building five miles of new pipeline to bring much needed water from the Bunker Hill Basin in San Bernardino to our area. Continuing the trend of working with our neighbors, in 1993 WVWD partnered with the City of Rialto to build a treatment facility for the water flowing from Lytle Creek. The Oliver P. Roemer Water Filtration Facility has been expanded twice and also accepts and treats State Project Water, which increases the amount of water available for our customers.

In 2003, the West San Bernardino County Water District changed its name to West Valley Water District (WVWD). We now have five treatment plants, 360 miles of pipeline, 25 reservoirs, 23 wells,

about 20,000 service connections, and serve drinking water to over 70,000 residents in four cities and two counties.

Our most ambitious project currently is a state-of-the-art bioremediation treatment plant that uses green technology to remove perchlorate from the water at a fraction of the cost of other methods. Bioremediation is the process of cleaning water biologically, allowing natural processes to remove potentially harmful contaminants in the water. This groundbreaking method of water treatment does not use harmful chemicals, costs less, and has proven safe. The treatment project represents the first full-scale permitted drinking water system to use this specific technology.

In terms of water supply WVWD utilizes three primary sources for drinking water supply: local surface water from flows on the east side of the San Gabriel Mountains, including North Fork Lytle Creek, Middle Fork Lytle Creek, and South Fork Lytle Creek; groundwater; and imported water from the State Water Project (SWP). Groundwater is extracted from groundwater production wells from five regional groundwater basins: Lytle Creek, Rialto-Colton, Bunker Hill, North Riverside, and Chino Basins. All five basins have been adjudicated and are managed. WVWD service area is divided into eight pressure zones; it currently has 25 existing reservoirs with a total storage capacity of approximately 72 million gallons and District also operates a 14.4 million gallons per day (mgd) water filtration facility.

WVWD receives State Water Project distributions from San Bernardino Valley Municipal Water District through the Lytle Turnout off the San Gabriel Feeder Pipeline. Newly constructed metering and transmission facilities will enable WVWD to purchase and treat up to 20.4 mgd (approximately 23,000 AFY) at final treatment plant expansion. SWP treated at WVWD's Oliver P. Roemer Water Filtration Facility (WFF) is used for potable supply and for groundwater recharge in the Lytle Creek Basin.

### **1.03 Project Background**

WVWD seeks a qualified, experienced web development firm to redesign, develop, and provide maintenance solutions for our website. Key priorities of the Board of Directors for the new website are to improve customer perceptions and increase awareness of WVWD projects, programs, and services. The website must support transparent communication between WVWD and the public. The current website needs to be updated to improve the delivery of services to customers, enhance data management, and follow best practices.

#### **MODERNIZE**

We need to modernize our communications, messaging, and technology in order to effectively reach our customers, businesses, visitors, and other government agencies. The new website should be visually appealing, easy to navigate, ADA compliant, and adaptable for visibility on mobile and tablet devices. The site must support integration with interactive applications such as social media.

#### **SIMPLIFY**

Our existing website functions are primarily interacting with the Board of Directors, Online Payments, Conservation Awareness, Employment Seeking, and RFP pages. The new website should improve the user’s experience to effectively obtain the information they seek and also to understand the goals of WVWD. The interface and user experience should be simplified, the information made easily (and quickly) available, and the site should be adaptable to serve mobile users with limited bandwidth. The website architecture should be sustainable and implement a content management solution that can be maintained by District staff.

**INFORMATIVE AND RELEVANT CONTENT**

The new website should offer us an intuitive and easy-to-maintain platform for publishing and distributing varied categorized content to target our customers. It should provide a method for "pushing" urgent content to our customers, such as water conservation information, water contamination/boil alerts and other time sensitive material.

**1.04 Preliminary Schedule**

*These dates are estimated and are subject to change by WVWD*

- RFP Posted to Planet Bids: .....March 15<sup>th</sup>
- Firm Questions Due to Planet Bids: .....March 18<sup>th</sup>
- Firm Questions Answered on Planet Bids: ..... March 23<sup>rd</sup>
- Proposal Due: ..... March 26<sup>th</sup> by 4:00 p.m.
- Finalists Selected & Contacted for Interviews: ..... Week of March 29<sup>th</sup>
- Winner Selected & Contacted: ..... April 2021
- Project Kick-off: .....April/May 2021

**1.05 Response Format**

Proposals should be prepared simply, providing a straightforward, concise delineation of the approach and capabilities necessary to satisfy the requirements of the RFP. The proposal shall not exceed forty (40) pages in length. Emphasis in the proposals should be on completeness, clarity of content and adherence to the presentation structure required by this RFP.

Firm proposals must be submitted in the format specified in Form #1 Proposal Form. Please provide responses in the format provided. This statement must identify any exceptions that the Firm takes to WVWD’s RFP, or declare that there are no exceptions taken to the RFP. Firms that fail to complete this step may be deemed unresponsive.

### **1.06 Proposal Response Date and Location**

Proposals must be submitted no later than March 26, 2021 , at 4:00 pm PST.

Online Only – Firms must submit their proposal online through WVWD’s vendor portal Planet Bids at [www.planetbids.com](http://www.planetbids.com).

### **1.07 Firm’s Cost to Develop Proposals**

WVWD shall not be liable for any pre-contractual expense incurred by the Firm. WVWD reserves the right to withdraw this RFP at any time and makes no representations to this RFP. WVWD reserves the right to postpone consideration of the proposals and to reject any and all proposals without indicating any reasons therefore.

## Section 2. Requested Services

### 2.01 Duration of Services

The term of the Contract with the selected Firm shall be from the date of execution of the Contract to the completion of the work defined within.

### 2.02 Firm Information

The forms referenced below must be submitted with the Firm's proposal. Please mark with an N/A those areas that do not apply to your proposal. Do not leave any space blank.

Proposal Form - Complete **Form #1**  
Firm Information – Complete **Form #2**  
Project Staff Information– Complete **Form #3**  
Client References - Complete **Form #4**

### 2.03 Cost Requirements

The budget must be broken down as to hours, hourly rates and expenses for each task and subtask. All prices are to be in U.S. dollars.

Firms must itemize the unit and extended price for each service proposed. In addition to the breakdown of costs described above, WVWD would like to have a quoted hourly rate for professional services that may be required to complete our project, but were not anticipated and included in this RFP. The quoted rate(s) is expected to be applied for the duration of the project (as described herein).

### 2.04 Timeline

The Firm shall include a timeline with its proposal showing when major milestones for tasks and subtasks will be completed considering the work start and completion dates as specified in section 1.04.

### 2.05 Scope of Services

#### **BACKGROUND**

##### **Our Audience**

The primary audience of WVWD's web site include WVWD customers, WVWD staff and elected officials. The secondary audience includes the media, educators, employment seekers, and other government agencies.

The WVWD's website will serve as the foundation for all of WVWD's current and future government services and as a platform for interactive public participation and information.

## **New Website Objectives**

There are four primary goals for the web site redesign:

1. Develop a visually appealing website that will be informative, cohesive and easy to use, up-to date, interactive and accessible to all users.
2. Be able to grow and expand without needing to plan a costly and time-consuming future redesign.
3. Utilize technologies and tools specifically relevant to the needs and capabilities of a water district web site, for example, self-service options, integrated social media, blogging features, embedded videos, and a robust document storage module.
4. Enable and train non-technical District employees to easily update and manage information on the web site in a timely and efficient manner.
5. Intranet webpage that can be utilized for newsletter, articles, employee resources, etc.
6. Continued tech support

## **Optional New Website Functionalities/Wish List**

We would love to have the following in our new website, depending on how these elements would impact timeline and/or budget. Please provide cost for these elements separately, and note if any additional design or development time would be required.

- Mobile/tablet app
- Offsite Hosting

## **SCOPE OF WORK**

The selected Firm will work closely with WVWD to:

- Plan the Redesign
  - Work with WVWD Website Committee to plan the redesign of WVWD web site. This includes preparation of a project plan and schedule, project assessments, research, goals and objectives definitions, site navigation, look and feel, content migration, site features and functionality, technologies and tools.
- Implement Redesign Plan
  - Implement redesign based on a plan agreed upon by WVWD. Implementation includes process and procedures, hardware and software installation, programming, graphic design, visual collateral, and more.

- Quality Assurance and Testing
  - Conduct quality assurance and testing on the redesigned web site. Product must meet, at a minimum, all project requirements (as detailed below) as well as any new requirements agreed upon during the planning of the redesign.
- Launch the new web site.
- On-going maintenance and support
  - A discussion of required/recommended ongoing maintenance and support, if any. Separate out any costs annually and hourly associated with ongoing maintenance and support.
- Documentation
  - Provide user-friendly documentation, training, guidelines and processes.

### **Technology Selection/Approach/Requirements**

Currently, WVWD contracts with a vendor to provide online bill presentment and payment services to its customers. Customers click on a link on WVWD's website, which takes them to the vendor hosted site. As WVWD continues its focus on increasing customer engagement, other online services are being contemplated. These additional services are likely to be provided by additional vendors. WVWD contemplates that a single sign on service may eventually be required to make its customers' online experience seamless. The successful Firm must clearly illustrate the proposed content management system's ability to address this issue.

The requirements of the web site redesign include:

1. Migration
  - a. Initiate and assist in website cleanup
  - b. Migrate website data
  - c. Perform quality assurance of data migration
2. Modernize
  - a. Review current content and assist with providing a new look and feel (update, optimize or even cut)
  - b. Create new graphics and/or photography
3. Web Content Management: Non-technical District employees must be able to easily and quickly update and manage content on WVWD web site through the following features:
  - a. Secure, browser-based administration
  - b. Audit trail/logging (change management)
  - c. Lifecycle management
  - d. WYSIWYG text editor

- e. Content approval process
  - f. Single-source web publishing
  - g. Style sheets
  - h. Spelling and grammar check
  - i. Content scheduling
  - j. Unlimited hosted content
  - k. Ability to upload content larger than 50 megabytes (MG)
  - l. Document Center
  - m. Blog
  - n. Social media integration (share buttons, follow buttons, etc.)
  - o. Email sign-up form
  - p. Homepage video
  - q. Image library
  - r. Printable pages
  - s. Site analytics
  - t. Customer self-service options
    - i. Forms (Online Submission and/or PDF formats)
      - 1. (i.e., New Service, Update Contact Information, Public Record Request, etc.)
      - 2. We request a workflow to accommodate these options be developed during the redesign and development process.
  - u. Backup/recovery
  - v. Group based permission system
  - w. Scalable
4. Intuitive Navigation
- a. The information architecture must be user-centric and easy for users to navigate the web site without requiring the use of the search engine tool to find information. The most important and requested information should be accessible from the home page. URLs should have intuitive names to promote pages and encourage easy access. Dynamic bread crumbs and a dynamic site map should be included, and the “3 clicks to content” rule should be followed.
5. Integrated Interactive Components
- a. Interactive components (i.e. calendars, e-subscription services, polls/surveys, photo albums/slideshows, interactive forms, video, GIS integration inclusive of embedding existing ESRI based web maps as a link or interactive map, JavaScript, and site search) should be implemented to make the web site more engaging and useful for web site visitors.
  - b. A system for delivering subscribed individuals real-time alerts about emergencies, alert conditions, or other important District information.
6. Accessibility
- a. The new web site must meet accessibility requirements so that users with disabilities have full access to the web site.

7. Multilingual Site
  - a. Website content must be able to translate properly to other languages.
8. Cross Platform/Browser Compatibility
  - a. The web site must be compatible with a wide range of web browsers (Internet Explorer, Firefox, Chrome etc.) No special plug-ins other than Flash, Acrobat Reader or Microsoft Office viewers should be required.
  - b. Optimized with SEO best practices
9. Quick loading
  - a. Web pages on both high speed and low speed internet connections should load quickly.
10. Documentation and Training
  - a. Complete web site documentation must be provided for installation, maintenance, disaster recovery, and training purposes.
11. Support online registrations and transactions
  - a. This includes secure processing of applications and other forms online as well as the integration of partner sites which process credit card transactions.
12. Mock-ups and Storyboards
  - a. At least three different graphical mock-up and storyboard options must be provided in the planning phase of the web site. The design must reflect the community served by WVWD as well as WVWD's mission, vision and values.
13. Hosting
  - a. Setup and configure a controlled hosting/server environment with proper backups in place or setup and configure website to be self-hosted by WVWD on premise. Please specify the recommended server configuration to operate the proposed solution.
14. Intranet
  - a. HR/Benefits Section
    - i. Forms
      1. (i.e., Vacation/Sick Leave request Direct Deposit, etc.)
    - ii. Employee Policies and Procedures
    - iii. Pay Stubs
    - iv. Vacation/Sick Time Accrual
  - b. Employee Directory
  - c. West Valley Water District News
  - d. Upcoming Events Calendar
  - e. Department Pages
  - f. Weather Feed

## Section 3. Selection Criteria and Process

### 3.01 Overview

Proposals will be evaluated by a Consultant Selection Panel (Panel). The Panel will consider the completeness of a Firm's proposal and how well the proposal meets the needs of WVWD. In evaluating the proposals, WVWD will be using a criteria evaluation process. Evaluations will be based on criteria as outlined in Section 3.02. All proposals will be evaluated using the same criteria and possible points.

### 3.02 Evaluation Criteria

The evaluation factors reflect a wide range of considerations. While cost is important, other factors are also significant. Consequently, WVWD may select other than the lowest cost proposal. The objective is to choose the Firm capable of providing quality vendor services that will help WVWD achieve the goals and objectives of the requested services within a reasonable budget.

Evaluations will be based on criteria as defined below. All proposals will be evaluated using the same criteria and possible points.

<b><u>Evaluation Criteria</u></b>	<b><u>Weight</u></b>
Completeness of Proposal (i.e., Were all the forms completed and everything included that was requested by the RFP?)	10%
Firm Qualifications: (i.e., Does the Firm have specialized experience, expertise, past performance, and competence that qualifies them to perform the services described in the Scope of Services? Does the Firm have experience with similar projects and agencies? Staff availability?)	25%
Project Approach (i.e., Does the Firm understand what it will take to successfully achieve the goals and objectives of the requested services? Did the Firm propose any revisions and/or changes to the draft Scope of Services that would better serve the WVWD? Can the scope of work be completed within a reasonable timeline? Is the Firm investing the appropriate project resources to complete the project within the timeline?)	45%
Budget (i.e., Does the budget seem reasonable for the Scope of Services proposed? does the budget provide the WVWD good value?)	20%
Total Points Possible	100%

### **3.03 Selection Process**

After the proposals are evaluated, the Panel will determine whether formal presentations and interviews are necessary, and if so, which Firms from the 'short list' may be invited to make a formal presentation and/or sit for a panel interview with the Panel. At this time, WVWD may choose to contact officials from other jurisdictions regarding the Firm, their prior work experience and their ability to successfully complete the scope of services. WVWD may request clarification or additional information from a specific Firm in order to assist in WVWD's evaluation of the proposed solution.

Three finalists are typically announced and, at WVWD's option, invited back for follow up demonstrations and questions. Proposed project managers and key team members, as named in the proposals, are required to be in attendance. Other team members are strongly encouraged to be present as well. The Panel will then formulate their recommendation to the Board of Directors for award of the Contract. The Board of Directors has the final approval authority to enter into a contact with the selected firm.

### **3.04 Communication with WVWD during Selection**

Communications between a Consultant and a member of the WVWD Board of Directors, or between a Consultant and a non-designated WVWD contact regarding the selection or award of this contract, is prohibited from the time the Specification is advertised until the item is posted on an agenda for the selection of a proponent of award of the contract. Questions pertaining to this Specification shall be addressed to the contact specified in the Specification document. Failure of a Consultant or any of its representatives to comply with this paragraph may result in rejection of any proposal submitted.

## West Valley Water District Website Redesign &amp; Development

**FORM #1 – PROPOSAL REQUIREMENTS**

Firm Name	
Firm Address	
Telephone	
Email Address	

In response to West Valley Water District's Request for Proposals for Website Redesign & Development, please include the following information in this order:

**1. Cover Letter****2. Table of Contents****3. Responses to Form #1 – Proposal Requirements**

- a) Please provide answers to information requested in Form #1 and signed by Firm's authorized representative.

**4. Executive Summary**

- a) A one-page overview of the proposal, including a summary of your experience with web site redesign with other government agencies of a similar size, what components would be included in our web site, your development approach, date of completion and cost. In addition, the firm shall provide information on the circumstances and status of any disciplinary action taken or pending against the firm during the past three (3) years with state regulatory bodies or professional organizations.

**5. Subcontracting Disclosure**

- a) Firms submitting proposals may subcontract portions of the project to other firms. If this is to be done, that fact, and the name of the proposed subcontracting firms, must be clearly identified in the proposal. Following the award of the contract, no additional subcontracting will be allowed without the express prior written consent of WVWD.

## 6. Proposal Content

- a) Demonstrate how your firm will meet the Scope of Services (Section 2.05)
  - i) List of 3 to 5 web sites that reflect your work and relevancy to this project
  - ii) Demonstrate experience in producing web sites for government agencies
  - iii) Overview of proposed web site redesigns features and functionality.
  - iv) Describe how your proposal will meet the current and future needs of WVWD's customers and stakeholders.
  - v) Description of your proposed development process and approach on this project.
  - vi) List of what WVWD would need to provide to you or assist you with, and a schedule of when it would be needed
  - vii) How you will involve and work closely with the Website Committee.
  - viii) Proposed technologies with justifications and benefits
  - ix) Proposed schedule
  - x) Provide a thorough description of your implementation process
  - xi) Describe the quality control procedures and testing methods you will employ
  - xii) Other value added approaches, ideas, recommendations, etc.

## 7. Identification of Anticipated Potential Problems

- a) Identify and describe any anticipated potential problems, the firm's approach to resolving these problems and any special assistance that will be requested from WVWD.

## 8. Responses to Form #2 – Vendor Information Requirements

- a) Please provide answers to information requested in Form #2.

## 9. Responses to Form #3 – Project Staff Information

- a) Please provide answers to information requested in Form #3.

## 10. Responses to Form #4 – Client References

- a) Please duplicate form to provide three to five current/former client references.

The undersigned hereby agrees to comply with all the terms and conditions put forth in West Valley Water District's Request for Proposals for Website Redesign & Development.

Print Name: \_\_\_\_\_

West Valley Water District  
855 W. Base Line Road  
Rialto, CA 92376

To Whom It May Concern:

The West Valley Water District is looking for a proven provider of technology and marketing services for websites that serve the public. We believe our experience and team of professionals make us the right company to deliver the successful website design and development you are seeking.

Your website is tasked with providing information to wide range of audiences, from a wide range of general public audiences and government officials. 360, a Certified Disadvantaged Business Enterprise, has been in business for more than 17 years, and has significant experience working with Southern California water districts. Our clients include the Central Basin Water District, the West Basin Water District, Mesa Water District, Moulton Niguel Water District and Santa Clarita Valley Water Agency.

We have the experience and ability to not only design and create innovative, practical technology solutions, but also to provide strategy, copywriting, ADA and Title VI recommendations and compliance monitoring, search engine optimization and training support to our clients. We also have experience designing mobile applications, and making sites work on popular mobile platforms.

Please let me know if you have any questions or would like additional information.

Thank you,

Bridget DiRico  
Director of Government Contracts

### 3. Form #1 – Proposal Requirements

West Valley Water District Website Redesign & Development

#### FORM #1 – PROPOSAL REQUIREMENTS

Firm Name	360Civic
Firm Address	1845 W. Orangewood Ave., Suite 101, Orange, CA 92868
Telephone	949.315.5068
Email Address	bdirico@360civic.com

In response to West Valley Water District’s Request for Proposals for Website Redesign & Development, please include the following information in this order:

1. **Cover Letter**
2. **Table of Contents**
3. **Responses to Form #1 – Proposal Requirements**
  - a) Please provide answers to information requested in Form #1 and signed by Firm’s authorized representative.
4. **Executive Summary**
  - a) A one-page overview of the proposal, including a summary of your experience with web site redesign with other government agencies of a similar size, what components would be included in our web site, your development approach, date of completion and cost. In addition, the firm shall provide information on the circumstances and status of any disciplinary action taken or pending against the firm during the past three (3) years with state regulatory bodies or professional organizations.
5. **Subcontracting Disclosure**
  - a) Firms submitting proposals may subcontract portions of the project to other firms. If this is to be done, that fact, and the name of the proposed subcontracting firms, must be clearly identified in the proposal. Following the award of the contract, no additional subcontracting will be allowed without the express prior written consent of WWWD.

**6. Proposal Content**

- a) Demonstrate how your firm will meet the Scope of Services (Section 2.05)
  - i) List of 3 to 5 web sites that reflect your work and relevancy to this project
  - ii) Demonstrate experience in producing web sites for government agencies
  - iii) Overview of proposed web site redesigns features and functionality.
  - iv) Describe how your proposal will meet the current and future needs of WVWD’s customers and stakeholders.
  - v) Description of your proposed development process and approach on this project.
  - vi) List of what WVWD would need to provide to you or assist you with, and a schedule of when it would be needed
  - vii) How you will involve and work closely with the Website Committee.
  - viii) Proposed technologies with justifications and benefits
  - ix) Proposed schedule
  - x) Provide a thorough description of your implementation process
  - xi) Describe the quality control procedures and testing methods you will employ
  - xii) Other value added approaches, ideas, recommendations, etc.

**7. Identification of Anticipated Potential Problems**

- a) Identify and describe any anticipated potential problems, the firm’s approach to resolving these problems and any special assistance that will be requested from WVWD.

**8. Responses to Form #2 – Vendor Information Requirements**

- a) Please provide answers to information requested in Form #2.

**9. Responses to Form #3 – Project Staff Information**

- a) Please provide answers to information requested in Form #3.

**10. Responses to Form #4 – Client References**

- a) Please duplicate form to provide three to five current/former client references.

The undersigned hereby agrees to comply with all the terms and conditions put forth in West Valley Water District’s Request for Proposals for Website Redesign & Development.

Print Name: Bridget DiRico

Date: 3.25.2021

## 4. Executive Summary

Founded in 2004, 360 is a Certified Disadvantaged Business Enterprise headquartered in Orange, CA at 1845 W. Orangewood Ave., Suite 101 in Orange, CA (this is the physical location responsible for your project) and have just under 50 employees. We have design and development experience helping water districts, school districts, cities and counties with their website and technology needs. Our current and former clients include the West Basin Municipal Water District, the Central Basin Municipal Water District, Mesa Water District, Moulton Niguel Water District and Santa Clarita Valley Water Authority.

In the past few years we noticed a dramatic increase in DDos attacks and have put into place advanced security measures to protect our clients' content management systems from disruptions. We are one of the few in our industry to have on staff a Chief Information Officer to monitor industry security trends and threats, and adjust our strategy as necessary.

We also implement the Scrum Methodology for our project management approach. The project manager who would be assigned to your project is a Scrum Master and is trained as a Project Management Professional (PMP). We have found that Scrum ensures regular communication among the entire team and quickly corrects any issues that could pose an obstacle to the successful launch of the website.

We have the experience and ability to not only design and create innovative, practical technology solutions, but also to provide copywriting, Board Agenda system, secure payment processing, ADA compliance, search engine optimization and training support to our clients. We also have experience designing mobile applications, and making sites work on popular mobile platforms.

Because we understand that resources are limited and as your consultant, we feel that our job is to provide you all the information you need to best allocate your resources. 360 also helps our clients with their budget by offering all of our expertise that complements our web design and development complementary throughout our engagement. Our copywriters and editors, as well as search engine optimization and social media experts, are available to consult at no extra charge.

We understand that ADA-compliance is not just a requirement, it is a civil right. Very few facilities managers would allow a public building to be built without accommodations for the handicapped, not just because it is the law, but because it is not fair to not provide access to needed facilities. But given the persuasiveness of the Web, not providing access in a usable way to people with disabilities is just as unfair, and harmful. Our strategy starts with creating a website that allows every one—even those with visual or physical impairments—to experience the full-range of services and experience from a website. And as more and more functions move online—as part of a digital front door—the need to serve all citizens with an accessible website is crucial.

No disciplinary action has been taken or is pending against our firm throughout our 17 year history.

## 5. Subcontracting Disclosure

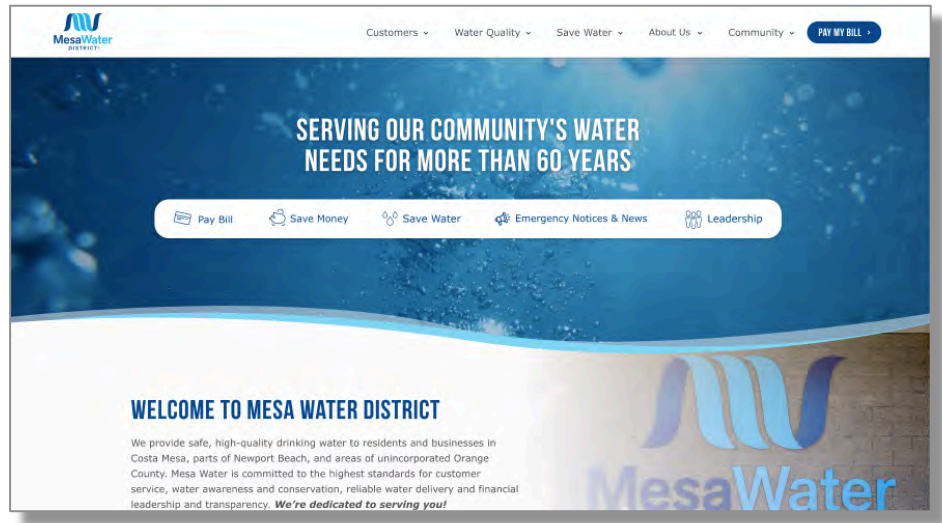

No subcontractors will be necessary.

## 6. Proposal Content

i) List of 3 to 5 websites that reflect your work and relevancy to this project.

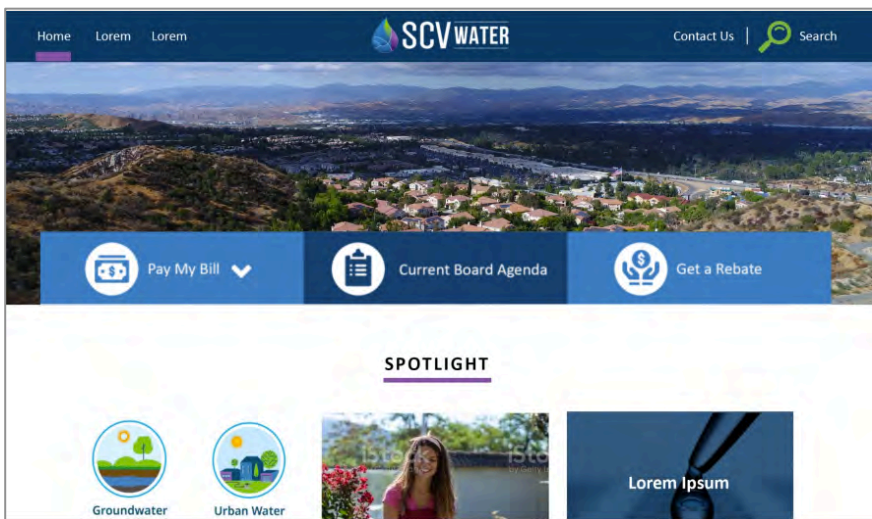

### 1. Mesa Water District

<https://www.mesawater.org> (This is their existing site. Please see below for screen captures of the approved new design for both mobile and larger screens that is currently in development.)

### 2. Santa Clarita Valley Water Agency

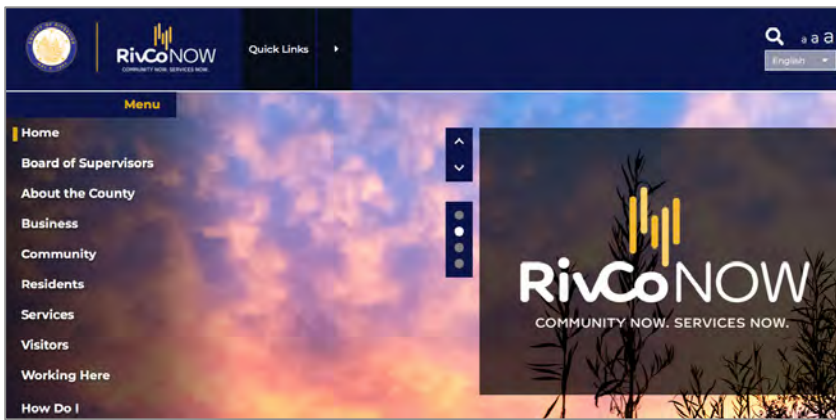

<https://yourscvwater.com> (This is their existing site. Please see below for screen capture of the new proposed home page design/mockup that is currently being reviewed by SCVWA.)

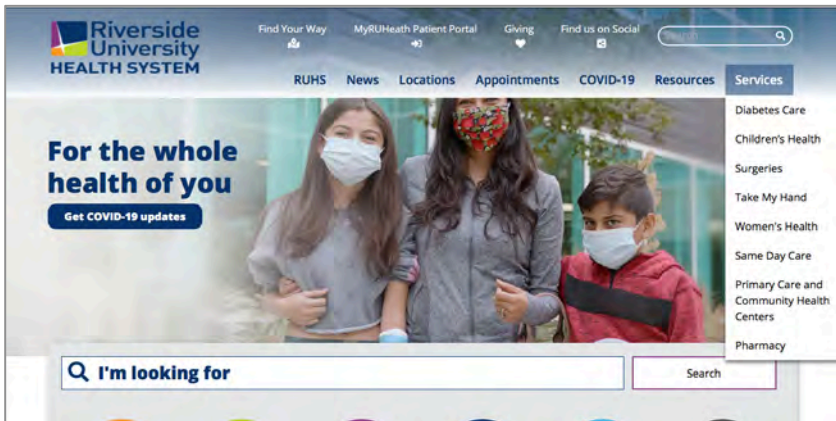

### 3. County of Riverside

<https://rivco.org>

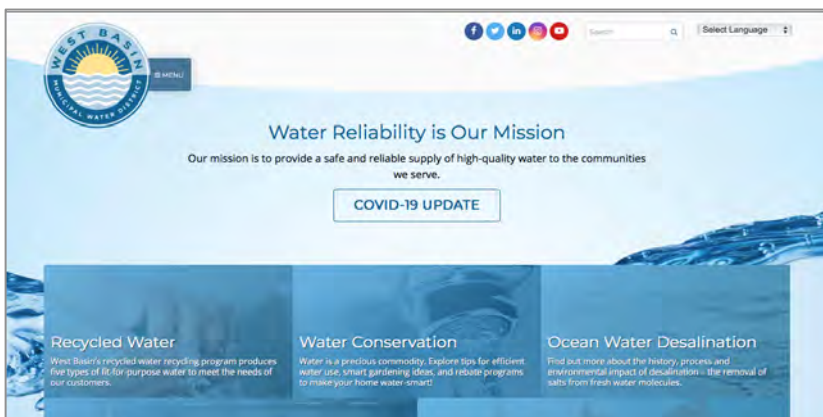

### 4. Riverside University Health System

<https://www.ruhealth.org>

### 5. West Basin Municipal Water District

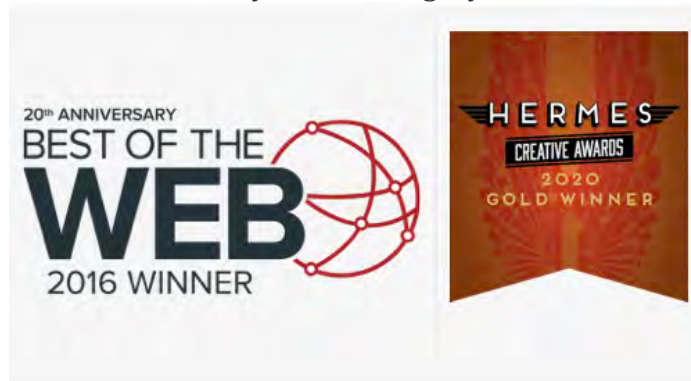

[www.westbasin.org](http://www.westbasin.org)

## ii) Demonstrate experience in producing websites for government agencies.

360Civic's philosophy on designing and developing websites is: understand the goals and priorities of the client, hire top writers, security experts and programmers with public sector experience, and customize our solutions to the specific requirements of each project. The following success stories are typical of the types of clients we serve, and the quality of results we achieve through our website and technology solutions.

- 360Civic was part of the team that worked on the new municipal website for the City of San Diego. This website finished second in the Center for Digital Government's Best of the Web Awards for the City Portal category.

- We created a new and more user-friendly website for the City of Santa Ana, California. The City has since reported that the number of users on the site has increased more than 10%, the number of pages visited is up nearly 80%, and the bounce rate has dropped 40%.
- 360Civic revised the website for the Superior Court of San Bernardino. As a result, its total traffic is up 25% and the number of page views increased 83%, while the bounce rate dropped significantly. The site is now engaging more effectively with more visitors.
- 360Civic created a mobile app for students and parents at Huntsville City Schools that provides a faster and easier way to stay up to date on events happening at each school in the District, customized for each child based on the school he or she attends. We integrated advanced technology to inform parents about locations of students and school buses with the most advanced GPS solution available. "The product 360Civic delivered exceeded our expectations," said Huntsville City School District's Webmaster.
- After we redesigned the website for Phoenix, Arizona's Paradise Valley School District, the site experienced a 78% increase in page views, a 60% increase in session times, and a bounce rate that dropped from 58% to 27%. This website was also a gold winner for the 2020 Hermes Creative Awards for public sector websites.
- The City of Santa Ana sought a comprehensive website redesign and implementation of a content management system that would make it easy for content contributors to add, delete and revise content as needed. Other key components of the project include an open government portal for public data, language translation, GIS mapping, calendaring, centralized

image and photo libraries, an RSS feed for news items, and compliance with all ADA requirements. Following weeks of interviews with content auditors from every municipal department, 360Civic created a vibrant new design, and added or updated content throughout the site. More than 1,000 pages and forms were checked and migrated into a new customized template.

- We were awarded the contract for website and intranet redesign, CMS and hosting management for the state's second largest school district, the San Diego Unified School District. We created a detailed administrator and user rights to accommodate the District's many different content editors, and a custom calendaring system. We migrated 100,000 pages from their existing platform into their new Drupal-based CMS and intranet.
- For the City of San Diego, we performed the content migration from their former site into their new Drupal-based system. Using both an automated and manual process, we migrated 35,000 pages and 90,000 pdfs.
- We redesigned the public-facing website for the Superior Court of San Bernardino. We customized their new Drupal-based CMS, provided content migration and interviewed 10 different contacts to create their new site's content. Our team managed scheduling and conducting the interviews, providing drafts for review and making the final changes to secure client approval. We also made sure the content was optimized for search engines. We are also beginning the development of their Intranet.
- We were selected by the West Basin Municipal Water District to redesign and host their website and customize their new CMS. This project was delayed due to circumstances beyond both our and our client's control. The role of the person managing the website project for West Basin changed several times over a two-year period, making it difficult to keep on the original anticipated timeline. Our client contacts were eager to get the project on track but the considerable turnover delayed approvals necessary for us to move forward. We kept in communication with our client and the temporary contact person until the role was filled.
- 360 provided website design and development services to the Paradise Valley Unified School District website and all individual school sites. We also created new content and migrated existing content to the new CMS and provided onsite training for 100 site editors. Because their existing contract was scheduled to end in three months, 360 expedited the schedule to accommodate the District's timeframe and remained on the original budget.
- 360 has been a pioneering agency in search engine optimization (SEO). We provide SEO services for many major web hosting companies, Fortune 500 companies, leading-edge online retailers and local businesses. We have presented to organizations and conventions, sat on industry panels and written two popular books on SEO. We were one of the first organizations, years ago, to focus on content versus site gimmicks, thus our changes, even ones made years ago, continue to be well-rated by major search engines.

*Social media savvy.*

- Social media is a key element of our clients' communication and relationship with their online audiences. Our design and development projects help our clients' integrate social media into their overall web strategy and designs.
- Using Facebook and Twitter we have created social media and marketing campaigns that drive target audiences to websites and communicate important information about using transportation services. Social media is a very effective medium for increasing awareness.
- Our experienced copywriters develop content for our clients' blogs, twitter feeds, and Facebook and Instagram posts. We're able to ensure a consistent feed of information and communication to key audiences.
- 360 is also able to deliver reporting and management that enables our clients to quickly and easily track the usage of your website. We frequently use Google Analytics to provide comprehensive tracking and management information to help better understand how your visitors are using your site.
- In addition to the actual numbers reported, we also provide our clients with monthly analytics and our analysis of what the data actually means for the site's users. In the Work Samples section you will find a sample of the information included in our web reports and executive summary.

*Adaptive and interactive website design and development.*

- All of the websites we created are responsive to the size of the device, and are adaptive to smart phones. We are experienced designing and developing responsive websites to accommodate users accessing the site from their larger mobile devices and adaptive to smaller screens. In addition to the look and feel, we adjust the mobile view to prioritize the behavior of most mobile users. Our term is "Mobile Smart" design.
- We have created many survey tools that enable our clients to seek and collect information from their audiences. In addition to providing flexibility to develop questions that require multiple choice, multiple select, ranking and written response options, you will also have real-time and archived reporting.

- 360 can create online registration, permission and/or education program request forms. Providing easy access to web forms, both static and dynamic, is a key part of making the website relevant to its users. 360 creates a basic form center for district administrators to quickly add and organize commonly required forms.
- We have developed many ecommerce solutions that support online payment processing in a secure, stable environment and we have a relationship with a partner company that allows us to provide aggressive rates and advanced reporting to public agencies.
- 360 has the ability to integrate with APIs for the major CRM programs and 3<sup>rd</sup> party providers including Facebook, Twitter, Vimeo, YouTube, Google Maps, Kaltura and SharePoint.
- We have worked with ExactTarget, Salesforce Marketing Cloud, Marketo, Act-On, Eloqua, Constant Contact and a variety of proprietary email systems. We have experience designing templates, and tweaking emails to increase click through rates, open rates and actions.
- Our experience exceeds successful design. It is focused on the evolving nature of email marketing and the design of effective CTA. Our templates are sent to more than 250k recipients each month.

#### *Leaders in ADA Compliance.*

- ADA-compliance — or compliance with Title II and III of the American with Disabilities Act — is generally seen as a check boxed item in the design and creation of many sites. But in reality, ADA-compliance is not a one-size fits all approach, nor is ADA compliance ever achieved without hard choices in design and usability.
- We understand that ADA-compliance is not just a requirement, it is a civil right. Very few facilities managers would allow a public building to be built without accommodations for the handicapped, not just because it is the law, but because it is not fair to not provide access to needed facilities. But given the persuasiveness of the Web, not providing access in a usable way to people with disabilities is just as unfair, and harmful.
- Our strategy starts with creating a website that allows every one — even those with visual or physical impairments — to experience the full-range of services and experience from a website. And as more and more functions move online — as part of a digital front door or even smart city strategy — the need to serve all citizens with an accessible website becomes more crucial.

#### *Experienced providers of website hosting and maintenance.*

- We are able to provide authentication, data collection and analytics, as well as secure off-site hosting. Our hosting services support development, stage and production environments. We can provide support for MS SQL server, Windows Servers 2008/2012, Linux or a supported Hyper V guest OS.

- Throughout our development engagement, and throughout the hosting of your website, 360 follows specific procedures to avoid losing any data or experiencing downtime in the event of a disaster. Specifically:
  - Redundant Hosting Servers;
  - Daily, Automated Back-ups;
  - Tier-One Hosting Facility;
  - Clustered failover database backends;
  - Errors and reliability;
  - 24/7 support;
  - 99.9% guaranteed uptime;
  - Online reports on bandwidth, traffic, mobile users, search engine placement and trends;
  - A monthly call to explain the statistics and usage for the site and areas of opportunities or concerns.
- We feel that reporting is one of the most important aspects of website management and maintenance. 360 will develop reporting that analyze website traffic, broken links and browser reports.
- Because we have much experience currently and through our 17 years of business providing website maintenance, our team is very aware of the needs of site users. This attention to detail ensures that we are always on the look out for plug-ins and links to additional resources when making any changes to the site.
- Software updates are included with our hosting services. All updates are done in development first, quality controlled and then pushed to production. We manage all software and critical updates on a predetermined priority algorithm, and do not make changes unless it is necessary for security or a specifically needed functionality.
- Our management strategy is built on keeping the platform as stable as possible and helping our clients by consulting with them when changes should be applied. Our clients are pleased by this strategy and it is proven to minimize interruptions and user frustration—while keeping current and up-to-date.

### **iii) Overview of proposed website redesigns features and functionality.**

The new site will launch with a full suite of features that both informs and seeks interaction with your audience and community.

**Opt-in eNewsletters and/or e-Notifications**—360 will develop this tool to be simple for staff to administer, creating up to 25 different e-newsletters, allowing subscriber additions and deletions and inclusion of links and images to compliment the content. For the user, the site will make it easy for them to sign up for the newsletters and notification and also to unsubscribe at any time. The site will also provide reporting of opt-outs and invalid email addresses for management purposes.

**Calendar**—Although the calendar section of the site will give the site user a clear and comprehensive look at your events or promotions, it will also offer the site’s editors an easy interface for management. For the users, they will be able to print pages of the calendar and view the calendar as monthly, weekly or daily. Your staff will be able to add events as single-time or recurring, add written descriptions and link to events. Editors will also be able to designate events to appear on the homepage and automate an RSS Feed. Calendars will include content sharing workflows, iCal support and blog support.

**Newsroom**—Finding news will also be easy to find and manage on your new site. 360 will provide your staff with the tools they need to post news to one or more pages of the site and set an expiration date for the news article to move from the site’s newsroom into the site’s news archive. You will also have the ability to set a date in the future for the article to be live to the public. The staff will be able to determine the order that the news articles appear on the site’s newsroom.

**Survey Tool**—This tool will enable you to seek and collect information from your audiences. In addition to providing flexibility to develop questions that require multiple choice, multiple select, ranking and written response options, you will also have real-time and archived reporting.

**Web Forms**—Providing easy access to forms is a key part of making the website relevant to its users. 360 will create a basic form center for administrators to quickly add and organize commonly required forms.

**Online Payment Processing**—We provide an integrated environment for ecommerce / credit card processing / PCI and reporting. While we can work and any merchant processor, we also the ability to provide value added services when working with our preferred, top-tier provider. These advantages include:

- A low processing rate, as low as 2.19% for Visa/MC/Discover
- End-to-end PCI security and compliance (when combined with our hosting services)
- Advanced reporting. Integrated dashboards are personalized to provide the metrics you need to understand your business, including total usage, types of products sold, time of day and day of week cycles, sales peak, effects of pricing or promotional efforts.
- Purchases by device, by account and by other criteria.
- Advanced security that checks for fraud patterns, fraudulent cards, trigger events and more
- Complete control of sales per card, per day, per product type, with ability to personalize by type of account or history on the card.
- Recurring purchases and integrated receipts.
- Receipts for businesses and major accounts on daily, weekly, monthly and yearly statements.
- The most flexible, easy-to-use and advanced shopping cart available.

**Directories**—Contact information will be easily accessed by users and updated by your staff, as necessary. This ensures that the most current and accurate contact information is always available.

**Site Map**—The site map will automatically be updated as your staff edits the website, ensuring that it always displaying the correct and current layout of the site’s pages.

**Search**—The Search feature of the site will make it easy for users to enter keywords or dates and search the entire website for specific news, information, documents, forms or events. We also employ a “smart search” functionality that eliminates the frustration of searches that retrieve irrelevant documents.

**Mobile Friendly**—360 is hired to create mobile apps for many clients, so we are very experienced in creating websites that are mobile-friendly and give users the same access from their mobile device as from their computer. The websites we create are intended for viewing on computers, tablets and smart phones.

**Security**—Throughout our engagement, the site will be protected by financial-grade security and infrastructure to protect your documents, logins and passwords for accessing the site’s management tools.

**Platform Compatibility**—We will be ensuring that the website appears and responds consistently, regardless of the operating system or browser used. We design, develop and maintain sites that are compatible with both PC and Mac platforms using commonly used browsers Explorer, Safari and Firefox. We follow a standard procedure for each change our team makes to ensure that the pages appear the same, regardless of user preferences.

For the duration of our engagement, 360 will facilitate project planning, including the project schedule and scope for completing key milestones in the development schedule. Following the initial meeting, if necessary, 360 will revise our implementation plan and scheduled the milestones that drive the project’s completion.

**ADA and Required Compliance Standards**—With the publishing of the Revised Section 508 Standards and Section 255 Guidelines (March 21, 2017), achieving compliance on websites is more important than ever. Which is why 360Civic employs a test and integrated process for ADA and 508 compliance. Our process involves the following steps:

#### Discovery

- An automated review of the all pages and documents on the current website to identify coding issues that might interfere with WCAG meaningful sequence success criteria, html validation and multiple ways of accessing information. Pages and existing documents that will be migrated to a new site will need to be compliant.
- Automated and semi-automated reviews to validate color-contrast issues for small text following Level A through AAA.
- User testing to document usability pitfalls in the current design: how easy is for users who are visually impaired or mobile impaired to complete a task. This are completed through a series of in-site workshops both on desktop and mobile devices.
- A report is provided to the client and along a plan to fix content that will migrate following the techniques proposed by WCAG 2.0 and other specific case-by-case scenarios (GIS maps, file naming conventions, PDF ADA checklist).

### Content Strategy phase

- Guidelines and recommendations are compiled together to achieve accessible content that complies with established reading levels.

### Information Architecture

- Sitemap and Navigation are compiled to avoid parameters in urls, create coherent breadcrumb trails, and simple labels for ease of navigation.
- Specific features are re-organized or prioritized following the user testing to improve accessibility. Consistency between platforms is established for greater ease.
- Wireframes are created and tested for user flows and usability issues that might affect ADA compliancy.
- From the initial designs, HTML templates are created and inserted into the CMS.

### Visual Design

- Existing brand guidelines are reviewed and adjusted to comply with ADA: color contrast ratios for small and large text following Levels A-AAA, appropriate color pairings for color deficiencies, active indicators, time intervals for sequential images and videos and text properties for headers, learning text, highlights, quotes, italics, bold, etc.
- Look and feel for wireframes are created. The images are reviewed by our ADA experts and adjusted to ensure their compliance.

### Implementation

- A review is conducted and any changes necessary are made.
- Content and documents are migrated into the CMS and we conduct an automated review of the pages. Our ADA reviews this report, identifies errors and exceptions and makes changes as needed. The interim and final reports are provided to the client.
- User acceptance test or usability tests are conducted to make sure the built complies with ADA.
- Prior to final launch, the site is reviewed one final time and certified ADA and 508 compliant prior to launch and a document and final report are provided to the client.
- If the site is under maintenance, a quarterly ADA report is generated and provided as part of maintenance agreement. Any changes needed to templates or content are fixed as part of the maintenance agreement.

**Data security practices**—Our policy is unequivocal: the data that we store and collect for you is not our property. It is your exclusive property, and your privacy and sharing policies are the only relevant ones.

We store data for backups, and will maintain them for that sole purpose and to manage your website. We do not share any data, other than as instructed by you. We follow best security practices to encrypt and protect your data. If your hosting relationship ends with us, we provide you your data and destroy any backups or redundancies as instructed by you. As part of any kick off meeting, we assign a security team to work with you to outline the policies for your data protection, before, during and after any engagement. We have suggested outlines that we then personalize for you.

We protect sensitive data for the Superior Courts of California, multiple school districts and state and municipal entities and have extensive protocols in place to protect this data. During our security meeting, we would also discuss emergency recovery and situation protocols.

**Aggressive security measures employed to protect data**—The site will be protected by financial-grade security and infrastructure to protect student information, your documents, logins and passwords for accessing the site’s management tools. We have an experienced and well-rounded development team who are also experienced on security and making sure API implementations are done so as to not endanger personal information.

**Security and Approval**—The website administrative system will allow multiple levels of roles as well as access and editing rights for staff, department managers and designated content editors for the entire site and specific pages. In addition, the CMS will offer the option to lock content for different levels of content editing permissions. The site will also include an approval process to ensure that all content is reviewed and approved by the necessary people before it is made live for public viewing.

Because the administration of the CMS is accessed via log-in and—and is password protected—all editing actions will be tracked by the time, date and user that made the change. The highest level administrator will be able to view editing activity in real-time or request a report for a specified date range or by a specific area of the website. The different levels of access can be determined to best accommodate your needs.

**Account Creation**—The CMS will be designed with an active directory and LDAP integration for automated account creation and application of designated roles, groups and permissions. The specific automation will be customized according to your specific needs.

**Editing Capabilities**—360 would provide you with a web-based editing and administration WYSIWYG interface that looks and feels similar to working in Word. The administrative interface will give your staff tools that they are comfortable using. These functions include undo/redo, table creation, image insertion and multiple file uploading. For image insertion, the CMS will have a built-in image editor that allows the editor to resize, crop, rotate and enhance sharpness. Additional features can be added based specific needs for image control.

Because the site content management system is password protected, content editing will be available for your staff to securely make edits from your offices or anywhere they have Internet connectivity. Regardless of whether they are accessing the CMS using a computer, mobile device or tablet using iOS or Android, designated content managers will be able to quickly make desired revisions. If selected, 360 will also develop an editing app for both Android and iOS that allows designated editors to add content and keep in touch with users.

Like the front-end of the website, the CMS editing will be supported for Internet Explorer 8+, Safari 5+, Chrome stable and Firefox ESR.

In addition, spell check, predetermined fonts and font colors will be locked in to ensure consistency and accuracy throughout the site—regardless of which administrator completes the updates.

When editing content, administrators will have several options for adding content on the website. Content can be shared to pages and subpages or deployed to other websites. When adding content, the editor can schedule it to appear live at a specific date and time and deactivated at a specific date and time. Deactivated, or content that is hidden from view on the public facing site, will remain on the CMS and the editor will be able to edit it as needed.

**File Storage**—The website will also accommodate your document storage and management in the CMS. Located centrally, the storage area will accommodate all major content, graphic and media file types, including at a minimum PDF, Word, Excel, PowerPoint, JPG, GIF, TFF, HTML5 video, WMA, MPEG, Quicktime, MP3, MP4, AVI.

**Integration**—360 has the ability to integrate with APIs for the major CRM programs and 3<sup>rd</sup> party providers including Vimeo, YouTube, Kaltura and SharePoint.

**Search Engine Optimization**—360 has an excellent track record for helping our clients maximize their SEO placement on the major search engines. Based on page name and information architecture, the design of the CMS and URL structure will ensure that content added to the website is SEO optimized.

**APIs and Extensibility**—Through the development of your CMS, we will provide clear documentation to reduce future support costs. We also understand that your needs will change at some point in the future. That's why all of our assignments are developed to be scalable to accommodate future growth.

**Removal of Unnecessary Formatting**—When importing documents, the CMS will strip out unnecessary formatting to eliminate the problem of inconsistent formatting on the web pages. We have created systems that know what to look for and remove any formatting that will impact the appearance of your online content.

#### **iv) Describe how your proposal will meet the current and future needs of WVWD's customers and stakeholders.**

We build websites on the Drupal platform. Drupal is a highly scalable, modular, and feature-rich CMS system and application development platform. It can be quickly deployed and can easily be enhanced with additional applications and modules to address future needs, such as data integration and visualization. This system is ideal for public sector organizations that want a powerful content management and web application platform without the cost of licensing fees.

Drupal has one of the largest and most active development communities, ensuring that your technology will be supported for the long-term. New modules and security enhancements are continually being contributed to the community to be customized for your future needs. We have successfully hardened the security for our Drupal implementations, protecting against DDoS and ransomware attacks.

Also, updating or refreshing the look of a Drupal-based website doesn't require an entire new website. The platform remains the same while allowing design changes to templates, maximizing your initial development investment.

#### **v) Description of your proposed development process and approach on this project.**

The success 360Civic has achieved in launching content management system (CMS) public sector websites is the result of a carefully crafted process, which will be adapted to the specific needs of every project.

This process streamlines development and implementation, while furnishing the team with a proven blueprint to follow. As a result sites can be completed more efficiently (measured in both time and cost), and clients have a clear idea of what to expect at each stage, and can track progress to completion. Utilizing this process, 360Civic has never gone over budget on a public sector project. The following is a sample Project Schedule with key tasks, activities and duration. The four stages are: Discovery, Design, Implementation and Development, and Prelaunch.

#### **1. Discovery Phase**

Immediately, your 360 project manager will contact you to schedule our initial meeting at your office. During this meeting, we will be initiating the Discovery Phase of the project by gathering more information from your team, as well as establishing mutual expectations for communication and reporting of project status.

Before 360Civic's designers create a logically organized and visibly appealing refresh for the websites design, they must first consider the needs of its visitors, as well as any preferences and issues those visitors may have with the current site. This information is collected from visitors by 360Civic through online surveys, interview questions and social media posts.

In addition to gathering and soliciting feedback, 360Civic will also conduct an internal review of all existing site content (following consultation with the client) to determine what should be migrated, what needs to be revised or deleted, and what new content should be created. The results of these efforts will be incorporated into an analysis and executive summary of findings/recommendations, as well as a content migration/creation spreadsheet, a URL spreadsheet listing all proposed pages, and a provisional site map.

This is also the stage during which 360Civic will perform a search engine optimization (SEO) review and analysis. This step is necessary to discover which aspects of the website and microsites are performing well, and which may need additional attention. This quantitative review is comprised of a keyword analysis and list of current keyword rankings, referral sources and a 12-month traffic history, with special attention paid to usage trends and the site's most visited pages.

Once the pre-design stage is concluded, 360Civic will deliver its results and recommendations in a document that outlines timetables and deliverables, with a list of the 360Civic team members responsible for each task. Specific implementations conducted during this phase are:

- 1. Survey Review:** We survey current users, stakeholders and visitors to the sites using social media, interviews and online surveys to determine their needs, advantages and issues of the current site and content. The goal is to define what will make the new site a success and address the needs of users.
- 2. Content Review:** We review all of the existing content on the sites to determine what should be migrated, what needs to be deleted or revised and what new content should be created. Our review will cover the current site map and taxonomy. Following our review, we'll provide an analysis and executive summary of our findings and recommendations as well as a spreadsheet to track content migration and creation.
- 3. SEO Review and Analysis:** We will identify the current traffic and key metrics for the sites including high exit pages, referral sources, 12-month traffic history and trends, and most visited pages. We will also include key word analysis and rankings.

At the end of this process we deliver our results, recommendations and the completed long-form document that outlines timetables, deliverables and team members. At this time we will be reviewing your web stats and analytics for all three sites, and comparing them to the survey results. We will also discuss the process of migrating the existing designs and functionality and making sure we have all the information we need to begin.

## 2. Design Phase

Based on pre-design data and consultations, 360Civic submits an initial design concept that fulfills project objectives. These are reviewed with the client, and revised as needed until a decision is made on home page and interior page designs.

Upon approval, the design will be reviewed to identify and address any user interface and user experience (U/I, U/X) concerns, and to make sure it is compliant with ADA and 508c. Only then will HTML templates be created for the CMS system. The finished templates are reviewed once more for ADA compliance and any revisions are incorporated for implementation. The client is shown finished templates for approval.

- 1. Initial Designs:** Based upon the input we received, we deliver two different designs that meet the objectives as stated in the previous stage. The goal is to provide designs for discussion and to arrive at a direction for the synthesis of the designs, resulting in a final home page design and interior page design.
- 2. U/I U/X Revisions:** Once the home page and interior page designs have been approved, they will be reviewed for user interface and user experience concerns. We will share any concerns we have and provide recommendations for changes we feel are necessary.

- 3. ADA Review:** At the same time as the UI/UX Review, we will also conduct the initial review of the designs for ADA and 508C compliance. We will share our findings, any revisions we recommend and share updates with you for approval and sign off.
- 4. Template Creation:** Upon client approval, HTML templates are created for the CMS system, based on the designs and sections needed.
- 5. ADA Review of Templates:** The finished templates are reviewed for ADA compliance once more and revised templates are sent for implementation.

### 3. Implementation Phase

Once the approved templates are transferred to the CMS system, 360Civic will begin the process of content migration, based on the content spreadsheet created in the pre-design stage. If new content is to be created, the 360Civic writing team will do so following interviews with appropriate personnel, research as needed and collecting associated documents from the client. All new pages are submitted to the client for approval.

If new functionality is required, it will be created, tested and implemented into the appropriate pages. Finished pages are reviewed once more for ADA compliance. A tracking document details which pages have been created, which have been changed and which have been moved.

- 1. Template Implementation:** Approved templates are transferred to the CMS system and section-ready pages in the CMS are ready for content migration and addition.
- 2. Content Migration:** Using an automated and manual process, we will move content from the site and import into the CMS based upon the approved content spreadsheet created in the Discovery Phase.
- 3. Content Creation:** Interviews are conducted, copy revisions are made, new documents are created and sent to the client for approval. Final versions of the documents are labeled with the proper position on the spreadsheet and sent to CMS production for inclusion and creation.
- 4. Functionality Development:** Any specific functionality not available through the CMS modules are created, tested and implemented into the appropriate pages.
- 5. ADA Review:** All finished pages are reviewed for ADA-compliance and revisions made to content as appropriate. All content updates are document in the content migration and creation spreadsheet.

### 4. Prelaunch Phase

In the prelaunch stage every aspect of the website is reviewed to make certain it meets the expectations of the client. QC testing is conducted on browsers and mobile platforms to confirm that all functionality is working as planned. Any items that do not are assigned to 360Civic staff for repair and review.

At the same time, all content is reviewed one last time for typos, style and grammatical issues. Changes are made as needed. However, there may also be some non-essential but suggested changes, such as a different way to communicate the functions of a department, or a less complicated way of explaining a procedure. These will be submitted to the client for feedback and/or approval.

When these tasks are completed the site is released to the client for review. Any revisions requested are noted on the testing document, along with those pages that receive final approval. The revised site is then once again QC and QA tested, and if no issues are discovered it is released to the client. Specifically:

- 1. Testing, Quality Control and Quality Assurance:** The site is tested—and key functionality is reviewed—on all major browsers and mobile platforms. We document testing results and any items assigned for repair and review are labeled “fail”. Once all testing is complete and finalized, we release it to your team for review.
- 2. Proofreading and Consistency Check:** Our team of editors review the final site for typos and issues with style and/or grammar. We will make required changes directly in the system (typos) and suggested changes (rewording) are tracked on a control document. We provide you with the document for your review and approval.
- 3. Client Testing and Review:** Any changes/revisions requested by your team are documented and approved pages are noted.
- 4. Testing, Quality Control and Quality Assurance:** We conduct another thorough review of the site after client changes have been made. This final check ensures that no other errors were made during the revision process. Again, this is documented on the control document. Once our final testing is complete, we release the site to your team.
- 5. Training:** We will develop and deliver comprehensive training about the website and how to use the tools created to manage the site. The training team assigned to your account will develop training materials that provide information your designated site administrators and editors need to implement the CMS. It includes on-site training sessions, training manual, phone and online support. 360Civic will train client personnel on the functionality and key features of the site through live seminars, conducted either in person or online. The client receives a personalized video for these sessions, as well as a personalized training manual for future consultation.
- 6. Security:** The finalized site is reviewed for security issues and the development environment is readied for hardening and transfer to the production environment. The site is audited for security issues, and the development environment is readied for hardening and transfer to the production environment. All passwords used to this point will be changed and turned over to the client. 360Civic also provides consultation on human element security after launch, which incorporates such topics as password creation, assigning access privileges and other best practices.

7. **SEO Review:** Before launch, final redirects are created and the 12-month baseline traffic document is prepared. Final redirects are created and listed on a spreadsheet prior to launch. 360Civic will also add and test code for Google Analytics. As the goals of these projects are typically to increase traffic and usability, reviews provide a baseline so improvement can be measured, and it can be confirmed that no previous traffic has been lost.
8. **Site Launch:** The production environment is readied and we conduct testing using the host changes. We also implement redirects, backup the existing site and change the IP. The website is now ready for launch. 360Civic will continue to monitor all aspects of the site for 90 days.

**vi) List of what WVWD would need to provide to you or assist you with, and a schedule of when it would be needed.**

At the start of our relationship, we will need access to your web statistics. This gives us important information about the site's current usage, what is working and isn't working for site users. It also helps us to understand the most used pages and features.

The most important contribution WVWD can make is timely approvals at each phase of the project. We are unable to move forward with development and launch without client approval on website design and content creation. In addition to approvals, we need your team to meet with our project manager once per week (mostly over the phone). We find these quick status updates to be effective at keeping on schedule.

During design, we need access to logos, graphics and images that you would like us to use in the design of your website(s). If we are creating content (included in our fee), we will need the names and contact information for the people responsible for different areas of the website.

**vii) How you will involve and work closely with the Website Committee.**

All of our assignments include access to a close-knit team of employees selected to work on your specific goals; An online ticket submission and job tracking system; Toll-free phone access to our team during work hours, with an after-hours emergency line that is always staffed; and weekly meetings with your 360 team.

Most of our clients prefer that our weekly meeting be via teleconference. We like to meet with you in person for a project kick-off meeting and at major milestones of the project, for example to review the initial home page designs. We are also happy to help the Website Committee present final designs to the board of directors and general public. That way we can assist in explaining the design and features of the site and CMS.

### viii) Proposed technologies with justifications and benefits.

We build websites on the Drupal platform. The main benefits of this technology include:

**User-Friendly Content Authoring**—Our solution’s content interface provides tools similar to Word, making it convenient for content editors of all levels of technical experience. The editorial workflow allows content editors to preview how content will look on any device before approval and publishing.

**Mobile Editing**—Content can be reviewed, edited and approved from mobile devices.

**Revision Control**—Our solution automatically tracks all changes by content editor, time and date. It also stores previous versions of documents that are updated.

**Workflows**—The system tracks a document’s history from creation to review and publication (and archival if content has expired).

**Tagging & Taxonomy**—Organization is a critical element of a user-friendly website, which is why Drupal’s tagging features organize content so that it easily searched, found, used and reused.

**Highly Scalable**—A reliable platform, our solution scales to handle more traffic, content and users to ensure that your site will be able to expand—or contract—based on your organization’s needs.

**Mobile-First**—Seamlessly deliver content to users, regardless if they are accessing your site on their desktop or laptop computer, table or phone.

**Multilingual**—We are able to implement multi-language search and translation capabilities.

**Multisite**—You are able to manage multiple sites on one platform.

**Content Architecture**—The admin interface allows users to create the right content architecture for each context. This includes a variety of media such as images, videos, pdfs, etc.

**Strong Stack Foundation**—We use a LAMP technology stack: Linux, Apache, MySQL and PHP.

**Secure Access**—Our solution offers highly secure access that encrypts account passwords and can support an array of password policies such as minimum length, complexity, or expiration.

**Granular User Access Control**—Chosen administrators have complete access and control over who can view and who can modify every part of the site. The platform is based on a system of user roles and access permissions that can extend and vary to your specifications.

**Database Encryption**—Our database encryption passes the strictest PCI, HIPAA and state privacy laws.

**Brute Force Detection**—Brute force password attacks are restricting by the number of login attempts from a single IP address over a defined period of time.

**Data security practices**—Our policy is unequivocal: the data that we store and collect for you is not our property. It is your exclusive property, and your privacy and sharing policies are the only relevant ones.

**ix) Proposed schedule.**

------------------------------	---

Please note that this schedule is a suggested timeframe for development. Schedule can be adjusted to accommodate client’s desired approval time, as well as the client’s preferences for launch date.

**x) Provide a thorough description of your implementation process.**

Although no technical experience or knowledge is necessary to fully administer the website, our team is ready to answer your questions and help you maximize the investment you have made in our services. After the site's rollout, we provide you with all the page template designs. Upon closure of the project, we turn over all materials to you, ensuring you always have ownership of what you paid for.

We will develop and deliver comprehensive training about the website and how to use the tools created to manage the site. The training team assigned to your account will develop training materials that provide information your designated site administrators and editors need to implement the content management system.

We estimate a one-week training period for your designated web administrators or content contributors from individual departments. 360 will provide up to five in-person (per COVID situation) training sessions and up to 20 web trainings by a 360 strategic team member as well as a technical team member.

Following our onsite training, we will be available during business hours to answer training questions via email and phone. We are also available to host GoTo trainings to demonstrate the software's functionality and features, or as follow up training.

**Training Manual and Documentation**—All 360-created software makes it faster, easier and more efficient to get the information you need when you need it. We will provide a comprehensive training manual and thorough documentation online that can be retrieved with the click. Once we have completed the training sessions, and the 90 days of post-launch support, 360 will have a thorough understanding of what additional training you may need or want. In addition to the actual numbers reported, we also provide our clients with monthly analytics and our analysis of what the data actually means for the site's users. We generally use Google Analytics

**xi) Describe the quality control procedures and testing methods you will employ.**

Throughout our development process, we will be testing for platform compatibility and security. This ensures that the website we are developing appears and responds consistently, regardless of the operating system or browser they are using.

We design and develop sites that are compatible with both PC and Mac platforms using Explorer, Safari and Firefox browsers. One of our largest clients is a global company and we make thousands of changes to their website each year. A standard procedure for each of those changes is to ensure that the pages appear the same, regardless of user preferences.

During our development of your site, the 360 quality control managers will each conduct weekly testing to ensure this compatibility and that there are no broken links. This testing will be documented through our online project ticketing system, as well as reviewed during our weekly status reports.

For the content migration, we employ both an automated and manual set of QA processes to ensure that the final content is reflective of the original content. Those processes include:

- A checksum-type comparison that checks the raw number of characters and documents with the finished project to ensure that we are not missing content. A loss of content would register on our automated system as a discrepancy between the original content and the final content on a page-by-page and directory-level basis.
- Next, we compare existing URLs with new URLs. Since we import the information into our development servers first, we then used a bot-like program that combs the original site for each URL and then replicates those URLs versus the development site. The final report will list the number of missing URLs and compare the base level of the URL (e.g., in the URL /content/reports/somepage.htm, the “somepage.htm” portion) with the original and new URLs and then compares the path for changes.

During the last week of our development time, all of our team members, and designated client team members, review the site. We provide the link to our secure development server and ask for email comments. Although invisible to the public and completely secure on our financial-grade services, this comprehensive testing ensures that the website is ready for public use prior to launch.

## **xii) Other value added approaches, ideas, recommendations, etc.**

**Content Creation and Editing.** In our experience, one of biggest roadblocks to a relevant and successful website is the content. That’s why we decided many years ago to provide content creation and editing to our clients—at no additional charge. We hire only writers with a background and training in journalism. They know how to conduct interviews and quickly draft content about a variety of topics in a consistent voice. First, we work with you to build a spreadsheet to track all content to be created. Next, we need you to tell us who at your organization is the contact for that specific page/topic. Our writers will contact them and schedule an interview. Once the interview is complete, our writers will create a draft and send to the designated contact for review and approval.

**Mobile Application.** In addition to content creation, we will provide the District with a mobile application that facilitates interaction with residents through these main functions:

- Integrated way for citizens to learn about and access WVWD resources (from education to water use efficiency) from the app.
- Report issues to WVWD using built in GPS and have that information routed to the correct WVWD department for service requests.
- Provide ongoing updates on local and/or major projects, such as COVID protocol updates.
- Integrates directly with your website so you can automatically publish alerts, news items, videos, events and content with no added input.
- Integrate with your billing system for bill payment and collect credit card information using our secure payment processing.

## 7. Identification of Anticipated Potential Problems

In our experience, the most common roadblock during a website redesign and development is timely client approvals. For client approvals, we are unable to move forward into development without your approval on the home page and interior page designs. To assist with getting consensus on final designs, we often facilitate the design meetings for our clients when the team has many members or different departments contributing.

Not as common, but sometimes clients don't have website analytics tracking the usage of their current site. This isn't a roadblock per se, but it doesn't give us the information about current usage to identify specific areas for improvement in the redesign. It also doesn't allow us to measure improvement with the new site.

Finally, high turnover of key decision makers can delay the project timeline. For example, when we worked with West Basin Water District, at no fault of the client, we had several different contacts—and gaps while hiring—during the design process. Although certainly not deliberate, unexpected circumstances can arise. However, we worked closely with West Basin to get the project on track through final launch on the original budget.

## 8. Response to Form #2—Vendor Information Requirements

West Valley Water District Website Redesign & Development

### FORM #2 – FIRM INFORMATION REQUIREMENTS

Firm Name & Website	360Civic www.360civic.com
Years In Business	17 years
Firm Parent Company (If Applicable)	360 BC Group, Inc.
Number and nature of the professional staff to be employed in this engagement on a full-time basis	Executive/Strategic—2; Project Management—2; Design—2; CMS Development—3; Content—2; Implementation and Security—2; and Training—2.
Number and nature of the professional staff to be employed in this engagement on a part-time basis	
Main Point of Contact Name, Title, Email & Telephone	Bridget DiRico, Director of Government Contracts <a href="mailto:bdirico@360civic.com">bdirico@360civic.com</a> 949.315.5068

## 9. Response to Form #3—Project Staff Information

### West Valley Water District Website Redesign & Development FORM #3 – PROJECT STAFF INFORMATION

Please copy the table below and complete for each key project staff members (including subcontractors) who will be involved in the project.

Staff Member Name	Ron Zayas
Title	Project Strategist
Length Of Tenure	17 years (company co-founder)
Previous Work Experience	FTG Solutions, Franchise Services, Inc.
Educational Background	Bachelor's Degree
Certifications	
Project Role And Responsibilities	Ron will be the Project Strategist and is responsible for understanding what you need, developing the strategy to meet your objectives and then guiding the team to implement the necessary work on a daily basis.
Technical Skills And Qualifications For The Project	Ron has more than 30 years of experience developing technology solutions. His expertise in both technology and marketing make him a valuable resource to our clients. While your project manager is your day-to-day contact, Ron is always coordinating efforts to make sure your objectives are met.
Hours To Be Worked On-Site	TBD, pending COVID-19.
Hours To Be Worked Remotely	

West Valley Water District Website Redesign & Development

**FORM #3 – PROJECT STAFF INFORMATION**

Please copy the table below and complete for each key project staff members (including subcontractors) who will be involved in the project.

Staff Member Name	Carlos Carrasco
Title	Project Manager
Length Of Tenure	3 years
Previous Work Experience	
Educational Background	Bachelor's Degree
Certifications	Carlos is a Certified Project Management Professional (PMP) and a Certified Scrum Master.
Project Role And Responsibilities	Carlos will be your single point of contact throughout our engagement. He is highly detailed, organized and responsive. His job is to make sure all items happen when and how they should. He reviews incoming job tickets and assigns them to the appropriate team member. He follows up with status updates and our team to make certain deadlines are met.
Technical Skills And Qualifications For The Project	Carlos is an experienced project manager for website development projects. He has successfully provided project management for major implementations for water districts, cities, counties, school districts and superior courts.
Hours To Be Worked On-Site	TBD, pending COVID-19.
Hours To Be Worked Remotely	

West Valley Water District Website Redesign & Development

**FORM #3 – PROJECT STAFF INFORMATION**

Please copy the table below and complete for each key project staff members (including subcontractors) who will be involved in the project.

Staff Member Name	Nicole Fellouris
Title	Chief Information Officer
Length Of Tenure	5 years
Previous Work Experience	Elite Development Group
Educational Background	PhD, Clinical Neuroscience
Certifications	Nicole is a graduate of both the FBI and ATC Citizen Academies, specializing in cyber counter intelligence operations and asymmetric warfare.
Project Role And Responsibilities	She brings her expertise to 360 clients to protect against hacking and intrusions. She ensures our clients are compliant with new GDPR regulations, secure credit card processing and PCI compliance.
Technical Skills And Qualifications For The Project	Our company’s commitment to safeguarding our client data is driven by our CIO. She has more than two decades of experience in cyber security and is responsible for remediation of more than 100 cyber security incidents and breaches.
Hours To Be Worked On-Site	TBD, pending COVID-19.
Hours To Be Worked Remotely	

West Valley Water District Website Redesign & Development

**FORM #3 – PROJECT STAFF INFORMATION**

Please copy the table below and complete for each key project staff members (including subcontractors) who will be involved in the project.

Staff Member Name	Rodrigo Gava
Title	Creative Director
Length Of Tenure	6 years
Previous Work Experience	Warner Bros., Paramount Pictures, Buena Vista International, Cartoon Network.
Educational Background	Bachelor’s Degree, Graphic Arts and Design
Certifications	
Project Role And Responsibilities	As 360’s Creative Director, Rodrigo transforms client input into sophisticated and user-friendly desktop and mobile websites. He has 18 years of experience in UI/UX front-end functionality, and was an early-adopter of designing to ADA Compliance. He understands how to integrate key design elements with intuitive functionality.
Technical Skills And Qualifications For The Project	Rodrigo is a highly talented creative strategist for print, digital and animated media.
Hours To Be Worked On-Site	TBD, pending COVID-19.
Hours To Be Worked Remotely	

West Valley Water District Website Redesign & Development

**FORM #3 – PROJECT STAFF INFORMATION**

Please copy the table below and complete for each key project staff members (including subcontractors) who will be involved in the project.

Staff Member Name	David Hofstede
Title	Director of Content
Length Of Tenure	17 years
Previous Work Experience	
Educational Background	Bachelor's Degree
Certifications	
Project Role And Responsibilities	David oversees the staff of writers who craft messages for our client's websites and SEO efforts. He leads the company's content creation strategy and implementation.
Technical Skills And Qualifications For The Project	With 25 years of copywriting, technical writing and editing, David has worked for large corporations and contributed articles to prominent national publications. As an author, he has written and published 17 books on travel, sports and popular culture.
Hours To Be Worked On-Site	TBD, pending COVID-19.

**FORM #3 – PROJECT STAFF INFORMATION**

Please copy the table below and complete for each key project staff members (including subcontractors) who will be involved in the project.

Staff Member Name	Emilee Beck
Title	CMS Specialist
Length Of Tenure	5 years
Previous Work Experience	
Educational Background	Bachelor’s Degree
Certifications	
Project Role And Responsibilities	Emilee turns our clients’ strategy into reality through the website implementation. She makes changes to CMS templates and conducts security updates to our clients’ websites.
Technical Skills And Qualifications For The Project	Skilled in Drupal and WordPress, Emilee is also an expert in ADA Compliance and attends annual training to maintain her knowledge.
Hours To Be Worked On-Site	TBD, pending COVID-19.
Hours To Be Worked Remotely	

West Valley Water District Website Redesign & Development

**FORM #3 - PROJECT STAFF INFORMATION**

Please copy the table below and complete for each key project staff members (including subcontractors) who will be involved in the project.

Staff Member Name	Sara Lopes
Title	Training Manager
Length Of Tenure	5 years
Previous Work Experience	The Walt Disney Company
Educational Background	Bachelor's Degree
Certifications	
Project Role And Responsibilities	Sara's role is to develop the training materials, videos and seminars that are customized to your website and your team who will be updating the website.
Technical Skills And Qualifications For The Project	Sara gained her experience in training and customer service at the world's happiest place—literally. A former marketing and training employee of Disneyland, Sara received training from one of the nation's most recognized companies for employee training and multi-level brand communication strategy. Sara is a published author and blogger.
Hours To Be Worked On-Site	TBD, pending COVID-19.
Hours To Be Worked Remotely	

# 10. Responses to Form #4 – Client References

West Valley Water District Website Redesign & Development

## FORM #4 – CLIENT REFERENCES

Client Name	Mesa Water District
Contact – Name, Title, Email & Telephone	Brittany Erdman <a href="mailto:brittanye@mesawater.org">brittanye@mesawater.org</a> Celeste Carrillo <a href="mailto:CelesteC@mesawater.org">CelesteC@mesawater.org</a> 949.631.1200
Services Provided and Dates	Website design and development. 2020-Current
Examples of Work (provide links)	Please see mock-ups of approved designs in Section 6 as the new website is not live yet.
Explain similarities in services to those requested by West Valley Water District	As a water district, Mesa would like to increase their ability to engage with citizens with a redesigned website that makes it easier to customers to find answers and resources they are seeking.
Explain differences in services to those requested by West Valley Water District	Mesa’s constituents are in a smaller geographic footprint that West Valley’s.

West Valley Water District Website Redesign & Development

**FORM #4 - CLIENT REFERENCES**

Client Name	Santa Clarita Valley Water Agency
Contact – Name, Title, Email & Telephone	Contacts: Lindsey Gibson <a href="mailto:lgibson@scvwa.org">lgibson@scvwa.org</a> Kathie Martin <a href="mailto:kmartin@scvwa.org">kmartin@scvwa.org</a> 661.297.1600
Services Provided and Dates	Website design and development. 2020-Current
Examples of Work (provide links)	Please see mock-ups of approved designs in Section 6 as the new website is not live yet.
Explain similarities in services to those requested by West Valley Water District	SCVWA services a population of 273,000 people over an area of 200 square miles. They need a new website that helps customers find information as well as incorporate secure online payment processing. At the same time, the site must be easy for non-technical staff to manage.
Explain differences in services to those requested by West Valley Water District	WVWD is seeking to modernize their current CMS technology to make it more efficient to transparently provide information.

West Valley Water District Website Redesign & Development

**FORM #4 – CLIENT REFERENCES**

Client Name	West Basin Municipal Water District
Contact – Name, Title, Email & Telephone	DeAnne Blackmon, Public Information Officer DeAnneB@westbasin.org 310.660.6236
Services Provided and Dates	We were selected to redesign and host their website and customize their new CMS. This project was delayed due to circumstances beyond both our and our client's control. The role of the person managing the website project for West Basin changed several times over a two year period, making it difficult to keep on the original anticipated timeline. We kept in communication with our client and the temporary contact person until the role was filled. 2014-2016
Examples of Work (provide links)	<a href="http://www.westbasin.org">www.westbasin.org</a>
Explain similarities in services to those requested by West Valley Water District	As Water Districts in Southern California, both sites provide similar services and need a website to help facilitate the delivery of those services.
Explain differences in services to those requested by West Valley Water District	Although both Water Districts, each has a unique culture and specific ways of communicating with the communities they serve.

West Valley Water District Website Redesign & Development

**FORM #4 – CLIENT REFERENCES**

Client Name	Superior Court of San Bernardino
Contact – Name, Title, Email & Telephone	Contact: Daniel Melendrez, Information Technology 909.269.8983 dmelendrez@sb-court.org
Services Provided and Dates	We redesigned the public-facing website for the Superior Court of San Bernardino. We customized their new CMS, provided content migration and interviewed 10 different contacts to create their new site's content. Our team managed scheduling and conducting the interviews, providing drafts for review and making the final changes to secure client approval. We also made sure the content was optimized for search engines. Our team helped our clients present the finished website to the Court's executive team. 2017-Current
Examples of Work (provide links)	<a href="http://www.sb-court.org">www.sb-court.org</a>
Explain similarities in services to those requested by West Valley Water District	This site is similar to WVW because both serve and provide information to the public. Both provide resources, updates and require site editing from multiple departments.
Explain differences in services to those requested by West Valley Water District	The Superior Court of San Bernardino didn't need us to build an intranet. Also, they have a significant amount of content and a high need for intuitive maps (making it easy for residents to find the locations of court houses).

## 11. Price Proposal

We endeavor to give our clients the full-support they need to achieve their projects on time and on budget. We understand the objectives outlined and organized the pricing proposal in the major milestones of the project lifecycle. Below is the pricing spreadsheet we used to determine our proposed, not-to-exceed price, based on our team's hourly rates and the amount of time required.

### Strategy

Included in the Strategy portion of the project is all time required for:

- All client contact and meetings.
- All public meetings, workshops and committee review meetings.
- Creation of technology requirements development timeline and workflow architecture.
- Creation of ADA guidelines for site design and features/functionality.
- Determine administrative and CMS editor privileges and access.

### Design

Included in the Design portion:

- All client contact and meetings.
- Redesign of public-facing website and intranet.
- Reporting structure/flow design.
- Ongoing review of designs, user tools and site assets for ADA compliance.
- Style guide creation for future implementations and revisions.

### Implementation

Included in the Implementation is all programming as needed to complete the functionality of the:

- Public-facing website, Intranet and CMS.
- Reporting functionality.
- Application Administrative features and functionality.
- Content migration.
- Creation of new content as needed.
- Integration with required APIs.

### Quality Control/Testing

- Comprehensive testing of all site applications functionality, features and reporting.
- Testing of CMS editing, permissions and publishing assets.
- Final ADA review of website public-facing pages, all content types and functionality of applications.

### Training/Launch

- Unlimited technical support after launch, including unlimited phone and email support during normal business hours.
- Training for in-person, and computer and training video sessions, and unlimited phone training.
- Delivery of training documentation, including Training and User Guide.
- Delivery of CMS documentation.

**TOTAL One-Time Fee: \$79,340.00**

**SaaS Model Pricing: \$25,000/year website. \$5,000/year mobile application.**

### 360 Line Item Budget

Team Member	Hourly Rate	Strategy		Design		Implementation		Quality Assurance/Testing		Training and Launch		Total Cost
		Hours	Cost	Hours	Cost	Hours	Cost	Hours	Cost	Hours	Cost	
Ron Zayas-Strategist	\$175.00	8	\$1,400.00	8	\$1,400.00	30	\$5,250.00	12	\$2,100.00	8	\$1,400.00	\$11,550.00

Developers	\$90.00	0	\$0.00	0	\$0.00	260	\$23,400.00	20	\$1,800.00	0	\$0.00	\$25,200.00
<b>Total</b>		<b>38</b>	<b>\$4,640.00</b>	<b>88</b>	<b>\$9,560.00</b>	<b>484</b>	<b>\$48,370.00</b>	<b>92</b>	<b>\$9,900.00</b>	<b>62</b>	<b>\$6,870.00</b>	<b>\$79,340.00</b>

#### Hosting and Maintenance Option:

**\$500—\$750/month to include (based on current traffic):** Redundant hosting servers; daily, automated back-ups; tier-one hosting facility or AWS; clustered failover database backends; support technical issues; errors and reliability; 24/7 support; 99.9% guaranteed uptime; online reports on bandwidth, traffic, mobile users, search engine placement and trends; and a monthly call to explain the statistics and usage for the site and areas of opportunities or concerns.

#### Mobile Application Option (Included in the One-Time Fee Pricing):

User access to WVWD resources (from education to water use efficiency) from the app; report issues to WVWD using built in GPS and have that information routed to the correct WVWD department for service requests—and integrate to existing systems for reporting and tracking; updates on local and/or major projects; automatically publish alerts, news items, videos, events and content using CMS; integrate with your billing system for bill payment and collect credit card information using our secure payment processing.

# West Valley Water District

## WEBSITE REDESIGN & DEVELOPMENT

**PROPOSAL ISSUED:** MARCH 26, 2021

### PREPARED FOR:

**Al Robles** - Purchasing/Inventory

West Valley Water District

855 West Baseline Road, Rialto, California 92376

**P:** 909.875.1804 **E:** arobles@wwwd.org

### PREPARED BY:

**Tyler Coffin** - Sales & Business Development Director

Planeteria Media

110 Stony Point Road, Ste 225, Santa Rosa, California 95401

**P:** 707.843.3773 **E:** tyler@planeteria.com

**HELLO MR. ROBLES AND WEST VALLEY WATER DISTRICT TEAM,**

The enclosed proposal responds to your request to redesign and develop your website. We understand the West Valley Water District would like the website to be a tool residents, customers, and WVWD staff can rely on to provide vital resources such as an online bill pay, meetings calendar, careers, forms, annual reporting, news, service area lookup, interactive maps, Covid-19 updates, and much more. The West Valley Water District is choosing to redesign your website at a very interesting and unique point in time, with a shift to remote work, closures, restrictions and other challenges, it is extremely important to provide a service centric website with online tools for your residents to rely on.

We recommend a revitalized digital presence that leverages enhanced functionality to allow for added online services, improved navigation/work flow, and a defined website style guide to dictate your visual style. We take extra time with art direction to select photos and imagery that represent the unique features of the West Valley Water District. This is the type of project Planeteria excels at delivering. We will become your technology partner, just like we have done for the San Diego County Water Authority, Mojave Water Agency, Sonoma Water and the San Bernardino County Transportation Authority.

At Planeteria we believe in flexible and modular websites. That means that as the WVWD grows and changes, the website can evolve easily with you. Utilizing an open-source, license free solution like Wordpress or Drupal CMS not only allows control of all content by non-technical staff, but also allows for global design and functionality changes without re-building the entire site. A flexible website keeps your brand fresh and your audience engaged without great expense or difficulty.

We are excellent at our craft and have an experienced team ready to deliver an exceptional web presence for the West Valley Water District. As we emerge from Covid-19 your website will become a pivotal resource for residents, visitors, staff and the community to lean on. We would be proud to help you launch your next website.

Warm Regards,

Tyler Coffin - Sales & Business Development Director

## West Valley Water District Website Redesign &amp; Development

**FORM #1 – PROPOSAL REQUIREMENTS**

Firm Name	Planeteria Media
Firm Address	110 Stony Point Rd #225, Santa Rosa, CA 95401
Telephone	707-843-3773
Email Address	tyler@planeteria.com

In response to West Valley Water District's Request for Proposals for Website Redesign & Development, please include the following information in this order:

**1. Cover Letter****2. Table of Contents****3. Responses to Form #1 – Proposal Requirements**

- a) Please provide answers to information requested in Form #1 and signed by Firm's authorized representative.

**4. Executive Summary**

- a) A one-page overview of the proposal, including a summary of your experience with web site redesign with other government agencies of a similar size, what components would be included in our web site, your development approach, date of completion and cost. In addition, the firm shall provide information on the circumstances and status of any disciplinary action taken or pending against the firm during the past three (3) years with state regulatory bodies or professional organizations.

**5. Subcontracting Disclosure**

- a) Firms submitting proposals may subcontract portions of the project to other firms. If this is to be done, that fact, and the name of the proposed subcontracting firms, must be clearly identified in the proposal. Following the award of the contract, no additional subcontracting will be allowed without the express prior written consent of WVWD.

**6. Proposal Content**

- a) Demonstrate how your firm will meet the Scope of Services (Section 2.05)
  - i) List of 3 to 5 web sites that reflect your work and relevancy to this project
  - ii) Demonstrate experience in producing web sites for government agencies
  - iii) Overview of proposed web site redesigns features and functionality.
  - iv) Describe how your proposal will meet the current and future needs of WVWD's customers and stakeholders.
  - v) Description of your proposed development process and approach on this project.
  - vi) List of what WVWD would need to provide to you or assist you with, and a schedule of when it would be needed
  - vii) How you will involve and work closely with the Website Committee.
  - viii) Proposed technologies with justifications and benefits
  - ix) Proposed schedule
  - x) Provide a thorough description of your implementation process
  - xi) Describe the quality control procedures and testing methods you will employ
  - xii) Other value added approaches, ideas, recommendations, etc.

**7. Identification of Anticipated Potential Problems**

- a) Identify and describe any anticipated potential problems, the firm's approach to resolving these problems and any special assistance that will be requested from WVWD.

**8. Responses to Form #2 – Vendor Information Requirements**

- a) Please provide answers to information requested in Form #2.

**9. Responses to Form #3 – Project Staff Information**

- a) Please provide answers to information requested in Form #3.

**10. Responses to Form #4 – Client References**

- a) Please duplicate form to provide three to five current/former client references.

The undersigned hereby agrees to comply with all the terms and conditions put forth in West Valley Water District's Request for Proposals for Website Redesign & Development.

Print Name: Tyler Coffin

## EXECUTIVE SUMMARY

## EXECUTIVE SUMMARY

3/26/2021

West Valley Water District  
855 West Baseline Road  
Rialto, California 92376

Subject: Transmittal of Proposal for Website Redesign & Development

We would consider it an honor to partner with the West Valley Water District on this project as we specialize in creating unique and functional website designs for municipal organizations. This project is similar to project we have completed for the San Diego County Water Authority, Sonoma Water, San Bernardino County Transportation Authority and Mojave Water Agency. The WVWD project will follow the same 8-phase approach used for these other projects and detailed later in this proposal. The projects listed above range from \$30,000 to \$90,000 in budget.

Authorized Officer: Tyler Coffin  
Legal Company Name: Planeteria Media LLC  
CA Micro Small Business Number: 1759443  
Phone Number: 707-843-3773  
Email: Tyler@planeteria.com

By signing this letter of transmittal, I attest that all information is true and correct. I acknowledge we have reviewed the full West Valley Water District RFP and will comply with all policies related to this solicitation. Planeteria has no disciplinary actions, litigation or pending actions, ever. If any additional information is needed or if I can answer any questions, please let me know. I will be happy to be of assistance. You may reach me at 707-843-3773 or tyler@planeteria.com. This proposal will remain valid for 120 days. Thank you in advance for your consideration.

Project Manager: Wyatt Benoit  
Account Manager: Tyler Coffin  
Technical Director: Sandeep Mehta  
Design Lead: Chloe Steinhoff-Smith  
Information Architect: Heidi Peyser

Regards,

Tyler Coffin  
Sales & Business Development Director

## **PROPOSAL CONTENT**

## SAMPLE RECENT PROJECTS & PROFESSIONAL REFERENCES

### SAN DIEGO COUNTY WATER AUTHORITY

4677 Overland Ave, San Diego, CA 92123

Andrea Mora P: 858.522.6600, E: amora@sdcwa.org

<https://www.sdcwa.org/>

Project Duration: 8 months Year: Launched March 2021 - Current

#### BACKGROUND

The San Diego County Water Authority sustains a \$245 billion regional economy and the quality of life for 3.3 million residents through a multi-decade water supply diversification plan, major infrastructure investments and forward-thinking policies that promote fiscal and environmental responsibility.

#### THE PROJECT

The site's focus is to better communicate with internal and external customers, including the public, member agencies, investors, media, contractors, water industry leaders and elected officials. The site serves as the primary source of information about the agency and regional water issues. Planeteria Media integrated interactive data and charts about water storage and usage from the present back to mid last century, Google-like predictive search with visual results, customized Google Maps to display current projects, member agency zip code search, and member agency clickable county map. The result is a visually appealing, mobile responsive ADA compliant solution.

#### THE SOLUTION

Site map, wireframes, web style guide (colors/typography), mood-boarding, mock ups, WordPress CMS, mobile responsive, hosting and managed maintenance.

#### SERVICES PROVIDED

News & events, social media integration, custom calendar integration, procurement, emergency alerts, site search functionality, video embedding/streaming, document archive, online forms, ADA compliant, Google Analytics, mobile responsive, language translation, ongoing maintenance and hosting.

## SAN BERNARDINO COUNTY TRANSPORTATION AUTHORITY

1170 West Third Street, 2nd Floor, San Bernardino, CA 92410

Nydia González P: 909-884-8276 E: ngonzaalez@gosbcta.com

<http://www.gosbcta.com>

Project Duration: 8 Months Launch: October 2019 - Current

### BACKGROUND

Serving more than 2.1 million residents of San Bernardino County, the SBCTA is responsible for cooperative regional planning and furthering an efficient multi-modal transportation system county-wide. Their mission is to enhance the quality of life for all residents in San Bernardino County by:

- Improving cooperative regional planning
- Developing an accessible, efficient, multi-modal transportation system
- Strengthening economic development efforts
- Exerting leadership in creative problem solving

### THE PROJECT

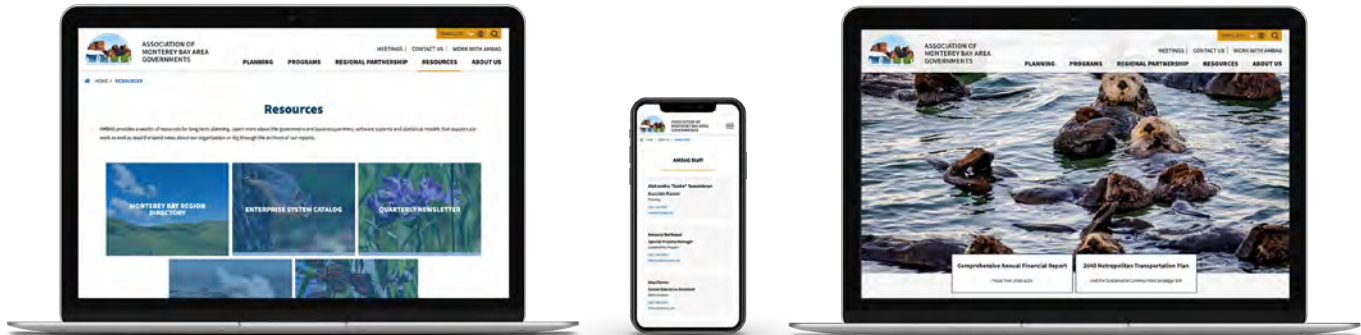

This project started with an ADA compliance audit to confirm the need for a brand new website. Fixing the ADA issues on the old site would be time consuming and expensive because of the old technology the site was developed with. SBCTA elected to start a website from scratch with a new site map, content organization, visual design and CMS technology to allow for control of content by non-technical staff utilizing SBCTA branding and style guide.

### THE SOLUTION

ADA Audit, Site map, wireframes, web style guide (colors/typography), mood-boarding, mock ups, WordPress CMS, mobile responsive, hosting and managed maintenance. This project were delivered on time and did not exceed the "not-to-exceed" original quote.

### FUNCTIONALITY

News & events, social media integration, custom calendar integration, emergency alerts, site search functionality, video embedding/streaming, document archive, online forms, ADA compliant, Google Analytics, mobile responsive, language translation, ongoing maintenance and hosting.

## ASSOCIATION OF MONTEREY BAY AREA GOVERNMENTS

24580 Silver Cloud Ct, Monterey, CA 93940

Gina Schmidt P: 831.264.5098, E: gschmidt@ambag.org

<https://www.ambag.org/>

Project Duration: 7 months Year: June 2020 - Current

### BACKGROUND

The Association of Monterey Bay Area Governments operates under a Joint Powers Agreement with local jurisdictions (cities) and the Counties of Monterey, San Benito and Santa Cruz. The Board is comprised of one representative member from each City and two supervisors from each of the counties. AMBAG is a public agency funded through a combination of federal transportation funds, grants and membership dues. Policy direction is provided by a twenty-four (24) member Board of Directors.

### THE PROJECT

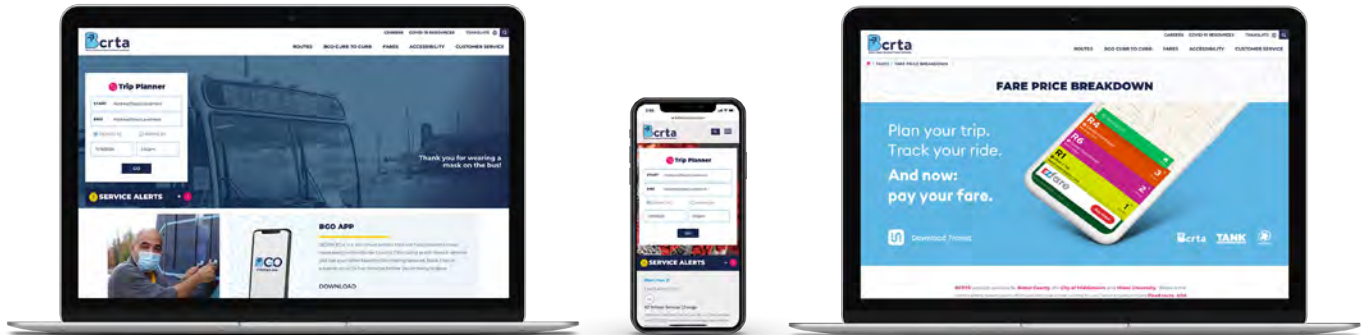

AMBAG maintains a primary web site, AMBAG.ORG, as well as several, smaller, specialty sites including but not limited to, PAJARORIVERWATERSHED.ORG, MOVINGFOWARDMB.ORG, CCJDC.ORG, and AMBAGSCS.COM. AMBAG required Planeteria to design and develop the new website utilizing Drupal 8 and provide ongoing support post launch to upgrade to new versions of Drupal as they are released.

### THE SOLUTION

Project questionnaire, in-person kickoff, site map, wireframes, web style guide (colors/typography), mood-boarding, mock ups, Drupal CMS, mobile responsive, hosting and managed maintenance.

### SERVICES PROVIDED

Site search functionality, video embedding, site admin roles/permissions, document archive, procurement, online forms, news/announcements, social media integration, rotating banners of photos/video, ADA compliant, multilingual and Google Analytics.

## BUTLER COUNTY REGIONAL TRANSIT AUTHORITY

3045 Moser Ct, Hamilton, Ohio 45011

John Gardocki P: 513.785.5378, E: gardockij@butlercountyrta.com

<https://www.butlercountyrta.com/>

Project Duration: 6 months Year: February 2020 - Current

### BACKGROUND

Butler County Regional Transit Authority (BCRTA), is the Butler County, Ohio transit system, providing service to residents and visitors in areas such as Hamilton, Middletown, Oxford, and Fairfield. Transit services include fixed and commuter routes, ADA paratransit, and BGO (door-to-door flex service)

### THE PROJECT

BCRTA needed Planeteria to design and implement a new website to enhance the user experience, simplify content management, and provide better information and customer service to users and potential users of the transit system. The emphasis is on incorporating extensive content management tools and database-driven architecture while providing a user-friendly and intuitive site structure as well as an interface that is attractive, accessible to people with disabilities (especially those with visual impairments) and offers users a choice of either English or other languages. Making the website mobile friendly is also desired so that users are looking at the same content in both web and mobile formats.

### THE SOLUTION

Project questionnaire, audience needs assessment, site map, wireframes, web style guide (colors/typography), mood-boarding, mock ups, WordPress CMS, mobile responsive, hosting and managed maintenance. This project were delivered on time and did not exceed the "not-to-exceed" original quote.

### SERVICES PROVIDED

Site search functionality, real time information, DoubleMap live bus tracking, GTFS schedules/maps, video embedding/streaming, site admin roles/permissions, document archive, procurement, online forms, news/announcements, social media integration, rotating banners of photos/video, ADA compliant, multilingual and Google Analytics.

# BRAND DEVELOPMENT

## MOJAVE WATER AGENCY

Branding and Logo Design

Project Duration: 4 months

Following the rebrand project for the Mojave Water Agency, we are currently developing a new website for the applied brand.

## ABOUT PLANETERIA

Since 1999, Planeteria has been designing, developing and supporting community-focused websites for municipalities and public agencies around the country. We've built over 500 sites serving millions of customers. We pride ourselves in offering modular solutions for government organizations who want the ability to make adjustments to their website without needing technical support. Additionally, we build our sites with the ability to be comprehensively re-designed without requiring a full re-development effort. This helps save our clients money while keeping your website flexible as the needs of your community and organization change.

We're also highly focused on providing content support. Our content specialists personally work with you to understand, organize, edit, and refine your content and its structure.

We design with your community as the priority. In fact, it's our mission statement:

---

**To design digital experiences that support communities in having positive and productive interactions with their local government.**

---

We are CMS agnostic but find that customized WordPress and Drupal solutions meet the needs of 90% of our projects. They are the two most widely used solutions in the world. Through 22 years of developing government websites, our team has created and refined a handful of proprietary tools specific to the needs of the public sector.

For Planeteria to create positive and productive digital experiences, we uphold three core values: service, diversity, and equity. We consider those values when proposing solutions for our clients, and we have considered those values as we've built our team. We have 25 employees distributed around the country, with most of our staff headquarters in Santa Rosa, California. Using a distributed work force allows us a broader access to talent with diverse life experience. It also provides our team with experience working in a wider variety of communities.

We leverage our staff size to provide excellent service. Our clients can speak directly with our technical director, our lead designer, and our content specialist without navigating a phone tree.

We are proud to say our team has won multiple design and development awards for work around the country.

### RECENT AWARDS

# MUNICIPAL EXPERIENCE

We have worked with local government organizations all over the country and below is a sampling. Each client below has their own unique technology stack and functionality requirements for their website. Often times Planeteria integrates third party functionality using best practices. In other times, we incorporate our own functionality stack such as calendar events, board meetings and more.

## WEBSITE CONTENT MANAGEMENT SYSTEM

We have developed websites for municipal organizations using open-source technologies and they have proven to be powerful, flexible and scalable. WordPress (version 5.4) and Drupal (version 9) are both web based, open-source content management platforms that are the best solution for the West Valley Water District . The functionality we incorporate will ensure that citizens and stake holders have easy access to information that is important to them and have the ability to interact with WVWD in numerous ways on the website.

As your technology partner, we are CMS agnostic. Both CMS options are written in PHP. The intricacy of both CMS platforms is the inspiration that drives our functionality plugins and modules. As such, our developers have developed custom technology for both platforms that the West Valley Water District can chose to incorporate with your new website. The main misconception is that WordPress and Drupal are template websites. While some website design companies use templates, ALL websites designed by Planeteria are 100% custom while using a CMS as the software.

### WordPress

It was initially developed in 2003 as a blogging tool and is the #1 CMS in the world. WordPress has grown and expanded over the last 15 years, and has become the world's most popular content management system with over 62 million installs. Over 30% of the Internet is now powered by WordPress. WordPress has made significant gains with municipal organizations and political leaders, Whitehouse.gov and 20 of the 22 democratic candidates for president all use WordPress.

### Drupal

With the recent release of Drupal 9, our team is trained to use the most current version of the software. The updated version delivers powerful new features and enhanced user experience. Drupal provides a back-end framework for at least 2.3% of all web sites worldwide ranging from personal blogs to corporate, political, government sites and is the #1 platform for enterprise CMS's. The Drupal community is composed of more than 1.3 million members, including 109,000 users actively contributing, resulting in more than 39,000 free modules that extend and customize Drupal functionality and over 2,500 free themes that change the website look and feel.

Both platforms are used for all types of websites and are the leaders for business & municipal content management systems (CMS). They have an easy-to-use, browser based application that allows you to publish pages and blog posts, edit and manage pages, upload images, embed videos and keep your site updated. WordPress and Drupal software can be fully optimized for search engines, which means your website gets found quickly and comes up in searches more often.

### PRODUCT DEMONSTRATION

It is recommended that Planeteria provides a CMS product demonstration for stakeholders. We will walk your team through the usability, functionality and administration of each platform. Our CMS selection process includes: analyzing who the editors are, what site elements will be edited regularly, hands on product demonstration and historical preferences.

## CMS CAPABILITIES

We understand you need a visually attractive, interesting, and dynamic website that represents your unique organization. From our experience the WVWD's website will also need to be mobile, accessible, reliable, highly functional and provide useful, relevant and current information. Below is a list of functionality options we have integrated for other clients. We will provide best practices for the implementation for each option below.

### CREATIVE DESIGN

#### Modern Design

Our Planeteria design and development process will allow for a vibrant, dynamic, attractive website that utilizes current logos and color pallets. If not already established, Planeteria will define the WVWD's style guides. Where gaps exist in the style guide, we will fill. WVWD departments will have distinct home pages/micro-sites. A great example can be found on the website for Clackamas County.

#### Mobile-Friendly

Presenting your audience with a mobile-friendly website is now a standard and Planeteria acknowledges this by designing mobile layouts first. We develop our designs beginning with the most restrictive mobile platforms, phones. From there we use a concept called progressive enhancement where we add design and functionality.

#### Full Page Slider

Home page can have large revolving imagery. It can be simple imagery and include text with a call to action or other content highlighting news, announcements or other critical information for customers. Looping video can also be used in this section. Updating the images in the slider is very simple.

#### Imagery

Good quality website imagery has the ability to grab our attention, trigger emotion and even compel us to take action. We will integrate imagery of happy customers and employees (photography provided by the WVWD's photo library and other visual assets). If no visual asset library exists, Planeteria has a staff photographer that can provide direction to a local photographer or help select appropriate, royalty free stock images.

### WVWD FUNCTIONALITY

#### Bill Pay & Start/Stop Service

Planeteria will modernize and streamline the bill pay process and the start/stop service process to be on par with private enterprise organizations.

#### RFP & Procurements

A RFP section will be included. Post RFPs, addenda and other documents as well as tracking/organizing proposers and bidders. These RFPs will be searchable and sortable. If desired, third-party procurement platforms like Public Purchase, PlanetBids or BidNet can be incorporated.

#### Board Meeting Minutes and Agendas

Easily post board meeting minutes and agendas to the site for public viewing or even live stream public forums or meetings. Third party solutions can be integrated.

#### Calendar & Events

Promote events throughout the site from one simple interface. Events are displayed conditionally based on the parameters you set. Calendars can be displayed in list format or monthly calendar format. Multiple calendars schedules can be integrated into one schedule and filtered by interests.

## Job Posting

Our job postings tool allows you to add listing information into your custom template, set an expiration date, feature the job post if desired, and receive applicant information and documents automatically into your email account.

## Third Party Widgets & APIs

We can develop interfaces to various third-party systems using APIs, embedding or outbound links.

## Email Subscriptions & E-Newsletter

Website visitors will have the ability to subscribe to specific email/notification lists based upon their interests. The website can also allow for electronic subscription, scheduled notifications for email and SMS.

## Staff Directory & WVWD Services Directory

A section of the website will be dedicated to the WVWD staff. If provided, staff photos, social media links and contact information can be included. We will also include important and useful business information for customers and staff to utilize.

## GIS Mapping

Our team has a lot of experience with customized Google Maps. They are a great solution to integrate throughout the site. We have implemented several customized GIS maps for Bend Parks & Rec. <https://www.bendparksandrec.org/parks-trails/trail-locator/>

## In-site Search

Searching the content on the site and searching the content in documents will be incorporated. In-site search will also allow for PDF documents to be searchable. If desired we can incorporate Google-like "predictive search".

## FAQ Tool

A searchable and easily editable frequently asked questions feature will be integrated.

## Interactive Maps

A map can be utilized in a number of ways. It can help website visitors navigate to a desired location, highlight points of interest, plan a trip using public transit or individual private transit using real-time data and much more.

## Alerts, Emergency Notifications, News Feeds & RSS

If you need breaking news bulletins to be displayed on your website as a customized banner, a news feed is a great solution to disseminate this information. Other display options: pop-up, fly-in, etc. Website visitors can also opt in to receive notifications via email or text based on subscription preferences. Through the CMS and automated workflows, these alerts can automatically be shared with customers who subscribe to alerts.

## Social Media

Easily link your social media channels (Facebook, LinkedIn, Twitter, etc.) to your website so you can pull in content from the community and display content feeds of your social platforms. This makes your site an active and up-to-date platform for community discussions. When content on the website is updated, it can be automated to be posted to social platforms creating an efficient content creation workflow.

## CMS CORE TECHNOLOGY

### Page Builder & Templates

Using drag and drop capabilities the page builder tool enables our clients to have complete control of the layout and uploaded content (videos, images, etc.) on the pages of their website. The WVWD can create an unlimited number of pages with no limit on the layout options using the page builder tool. In addition to the custom page types, Planetaria will train WVWD staff on how to administer page builders, and curate and set up to 3 page

---

builder templates.

## Content Scheduling

Content can be created with sunrise and sunset dates, allowing for content automation.

## User-Friendly URLs

Custom URLs and automated vanity URLs will be created based on page/post titles.

## WYSIWYG Editor

What you see is what you get content editing tool. Draft, review, publish, schedule, versioning and font characteristics. Photo resizing, spell-check and grammar check. This allows for a simple editing process.

## Workflow, Content Control & Approvals

Managers can control all content in a permissions-based interface with approval workflow. This makes it easy for several managers to work in the CMS together.

## Roles & Permissions / Approval Rights

With our permissions-based system, an administrator from each of your departments can login and see a simple, user-specific interface that displays only the tools they need to control their department's content. Page-level specific permissions and access will be integrated as well. Remote logins are available.

## Multi Browser and Operating System Support

Verified to work in the most recent browser versions of Internet Explorer/Edge, Firefox, Safari and Chrome. Additionally, the website will be compatible with all major operating systems (Apple, Windows, etc.).

## Document Archive

All documents that are published or not remain in the backend of the website. There will be a search functionality.

## Media Upload & Asset Management

Easily incorporate images, video, slide decks, and other content as well as company related documents that can be downloaded by third parties. Media can be displayed in many formats such as photo album slideshows. The CMS media tool allows for automatic image resizing and sharing through social media platforms.

## Website Analytics

Our integration with Google Analytics will generate charts and graphs that show who is visiting your site, what content they are most interested in, when the site is most visited, which platforms it is being loaded on, and much more. We will also help track progress and set metrics for success.

## Change Log

As part of the CMS, a change log will detail the date, time and the name of the user who makes all changes and additions to the website. This log will have search and filter options.

## SEO Tool

With each page you create you can see how the page will show up in search engines, see keyword recommendations, and make modifications accordingly (Included, not an additional fee). All migrated content will be properly tagged and optimized.

## Forms

We allow website managers to easily create an unlimited number of online forms for to collect information and verified with Captcha control. A completed form can be automatically directed to different departments. All printed forms will be digitized.

## OTHER PROJECT FEATURES

### Intranet

Collaborate internally using the same intuitive CMS as the main site and share content between instances to maximize efficiency. This password protected portal will give WVWD staff access to restricted documents, internal staff newsletters, articles, employee resources, HR documents and more information.

### Custom Mobile App

Planeteria can create a custom mobile app for Apple® iOS and Android® devices. The content of the app reflects the content on the website. The advantage is that content only needs to be edited in one place.

### Content Audit/Re-Organization

A content audit is the cornerstone of content strategy. The aim is to perform a qualitative analysis of all the content on a website. In doing so, we will identify redundant, outdated, out of place and inaccurate content to remove.

### Ownership

The WVWD will own all rights to the electronic files comprising any and all deliverables and will be considered the author of the content.

### Translation

Google Translate can be integrated for the WVWD's most popular spoken languages. Google Translate is a cost effective and efficient translation tool. If the WVWD provides native translation services, we can utilize this content as well.

### Broken Link Finder

On a set schedule the CMS will check for broken links. A report will be generated and delivered to WVWD Staff.

## FUNCTIONALITY OF THE FUTURE

Planeteria is dedicated to advancing municipal websites by creating new functionality options. Some of these functionality options are widely used in the private sector and need to be brought over to the municipal world. Below is a list of functionality that is currently in live or in research & development and will be available in the coming months.

### ChatBot

Customers can interact with a chatbot on the website. Customers can make selections using a flow chart to find information useful to them or by using artificial intelligence (AI) the chatbot can have a conversation with customers based on keyword intent and will continue to improve effectiveness and usefulness as more conversations take place.

### Audience Engagement Tool

We are able to embed a citizen sourcing tool into the website to allow customers to engage, informal online voting, fill out polls, submit ideas & feedback. We will integrate the Your Voice Matters platform into the WVWD's new website.

### E-Alerts

Communication with your customers is crucial. Planeteria will create an E-Alert system that customers can subscribe to. Customers will have the ability to select topics for notifications and the frequency at which they would like to be notified (immediately, daily, weekly or monthly). The benefit for the WVWD is this will be an automated process. When sections of the new site are updated, subscribed customers will receive their alerts automatically.

## ADA COMPLIANCE

The Americans with Disabilities Act (ADA) was introduced in 1990 to help the millions of Americans who live with disability. In everyday life, it ensures accessibility in public places and protects against discrimination. But did you know these requirements apply not only to public places, but cyber spaces as well?

### BENEFITS OF ADA COMPLIANCE

- It's the Law. It's better to be safe than sorry!
- Total Accessibility. Accessibility means everyone can visit your site and that content can be interpreted and consumed in various ways. It creates more visitors and an improved image for your firm or company.
- Enhanced Usability. ADA compliance also requires that website content flows in a logical manner and meets the latest coding standards. It can even improve Search Engine Optimization (SEO).

### HOW WE ACCOMPLISH COMPLIANCE

Accessibility often naturally flows from good design. This means that the WVWD website should be designed to deliver a great experience for all its visitors, whether or not they have a disability. Following are some principles we follow:

- Color Contrasting - design for sufficient contrast between the color of the text and the color of the background; Avoid putting a light font color on a light background;
- Fonts – use fonts that are easy to read; and make fonts larger
- Use Alt Image Text - Make sure the images on your website have descriptive alt tags. Alt tags are used by screen readers, players, and voiceovers to describe elements on a website to users.
- Analyze Site Logic Flow - make sure that forms on your site are labeled properly and make sure that form fields are in a logical tab order to make your site accessible to those who can't use a mouse
- Headings - Use headings correctly to organize the structure of your content.
- Links - Give your links unique and descriptive names. (Example: Try not to say: "Click here to read about our company."; instead say "To learn more about our company, read About Us."
- Add captions for Video & Audio Content- Videos or Audios on your site should be close captioned so that those with hearing disabilities can follow along
- Content Management System – if you are about to build a new website, choose a content management system that supports accessibility. Common examples include Drupal and Wordpress, but there are many other options available.

### RISKS OF NON-COMPLIANCE

Whether you are a digital publisher with massive web traffic, a small local business or a municipal organization you need to be aware of ADA compliance and the risks of not complying with the law. Simply put, WVWD could face a lawsuit if a person with a disability claims they cannot access your website. The result of this can range from:

- Legal fees
- Possible settlement
- Potential PR problems
- The cost of rebuilding your website

The most common non-compliance issues deal with plaintiffs with a disability not having access to content on your website, not being able to complete an ecommerce purchase and not being able to complete an online job application. ADA compliance lawsuits have been trending up for several years. In 2015 there were 57 website accessibility lawsuits. In 2016 there were 262. In 2017 there were over 432.

## CREATIVE & TECHNICAL STRATEGY

Our strategic approach is completely different than the template solutions offered by some of our competitors. We will implement a customized solution specifically designed to solve your most pressing needs based on these four core beliefs.

### CLEAR GOALS

First we understand your practices and strategies so we can come to a clear definition of success. This will be the north star for our work together.

### ROAD MAP TO SUCCESS

We begin by creating a clear project plan, identifying key players on both the client and Planeteria side. We clearly define roles, methods and systems for communication as well as clear timeline to keep the project on track and everyone in the loop. We understand that timelines can shift and plans can change; any adjustments to the project will be reflected in a modified Road Map. This ensures we all keep on top of things, no matter what.

### ONLINE PROJECT HUB

We keep our team and the client's team organized with an online project management tool called Basecamp. Basecamp centralizes all project discussions, meeting notes, to-do lists, calendars, and documents, giving you clear access and oversight to our progress at every step.

### WEEKLY MEETINGS

We believe the best work comes from strong relationships. We take the time to make presentations on a regular basis. We enjoy the robust discussions that come from spending time with our clients. When public health officials allow it, benchmark meetings can be held in-person including training.

Over the last 20 years, these four core beliefs have fueled hundreds of successful projects. They create a flexible structure that is a hybrid of strategic development and dynamic design. We've refined it into a succinct 8-phase process as follows:

#### DISCOVER

Work closely with you to understand the project goals and success factors.

#### DEFINE

Create comprehensive strategy to define website structure based on target needs.

#### DESIGN

Develop visual systems and creative concepts for a seamless user experience.

#### CONTENT

Coordinate with stakeholders to develop new content and/or migrate content from an existing site.

#### DEVELOPMENT

Programming and development of website using a suitable content management system.

#### REVIEW

Conduct design audits, quality assurance testing, and multi-browser and device testing.

#### TRAINING

Develop custom training material & conduct orientation. Planeteria will host an all day training bootcamp for WVWD staff.

#### LAUNCH & METRICS

Go live with an amazing new site! Install analytics to track progress post-launch.

---

## PROJECT MANAGEMENT TOOLS

As a company that serves customers all over the country, we have a streamlined project management process that allows for plenty of meeting time throughout the life cycle of the project. When it comes to weekly check-ins, bench mark reviews, and other checkpoints, we utilize video conferencing, where we can share wireframes, graphics, presentations, and mockups in real time. *Covid-19 meeting policy: At current time we are following advice from public health officials and have suspended in person meetings. We will be continuously reevaluating our company policy for in person meetings.*

We believe client engagement is critical to any projects success. All primary meetings and decision-making processes are overseen by the dedicated project manager assigned to your project. You'll also be able to communicate directly with design and technical leads, as well as any other key team members wherever appropriate. Throughout the project, we schedule weekly check-ins and communicate regularly between meetings. We have budgeted for two future in-person meetings. We establish a clear decision-making path early on. We are careful to define goals for each meeting, clearly record decisions, and frequently remind the team of feedback opportunities and deadlines. Below are a couple of tools we use to effectively manage our project communication with you:

### BASECAMP

All the projects are managed through an online project tool called Basecamp. With Basecamp, both our teams can share documents and media, track to-dos, stay up-to-date with schedules, and easily manage discussion topics. This tool will be used for the duration of the project and you will receive a quick training during the kickoff.

### BUGHERD

For the Quality Assurance phase of the project, we use BugHerd. This online tool allows you to report issues by making annotations right from the site being worked on. It allows us to effectively turn your annotations into full reports with all the info we need to fix the problem and make sure your site is executed perfectly.

### FRESHDESK

Our commitment is to ensure your team is fully supported post-launch. We use a client portal called Freshdesk that enables your to easily submit support tickets, or you can send a simple email to [support@planeteria.com](mailto:support@planeteria.com) to reach our dedicated team. Either way, we are quickly and easily available to help. Before we reach the projects end, we provide a run-through for you to learn the submission process.

## PROPOSED PROJECT PLAN

Here is an overview of the project in its phased project plan. We understand timelines overlap, and we are experts at balancing and prioritizing all of your needs. Throughout the lifetime of the project, we will provide deliverables and collect feedback with regular communication and documentation. Weekly meetings will help us stay on track. *Below is a sample schedule estimate:*

### PHASE ONE: DISCOVERY - 1 MONTH

*The Discovery Phase lays the foundation of the project by helping further identify the needs of your stakeholders, better define your audience and furthers clarify project goals.*

#### I. Questionnaire & Documents

WVWD will fill out and complete the provided digital questionnaire at least two weeks prior to kick-off date. Supplemental documents may be requested such as branded material or existing brand books.

**WVWD Deliverable:** Completed Questionnaire & Requested Documents

#### II. Surveys

Planeteria will create digital surveys for identified stakeholders of WVWD and report on findings. Surveys need to be deployed for a minimum of two weeks in order to collect adequate data.

**Planeteria Deliverable:** Surveys & Survey Report

**Versions:** 2

**Rounds of Feedback:** 1

#### III. Site Audit

Planeteria internally analyzes and audits the existing site content and architecture for each section of the current website. With a site mapping platform Planeteria creates an interactive sitemap of the existing site.

**Planeteria Deliverable:** Existing Sitemap

#### IV. Kick-Off

Over a 2 day period, Planeteria will conduct full site walk-through of WVWD's live website to solicit feedback from your primary stakeholders to further investigate the needs and opportunities for your existing site. Other agenda items may be discussed.

**Planeteria Deliverable:** Site Walk-Through

#### V. Moodboard

Planeteria will provide a digital collage that consists of examples from the pre-existing website that visually and functionally align with the goals of WVWD's site.

**Planeteria Deliverable:** Interactive Moodboard Link

**Versions:** 1

**Rounds of Feedback:** 1

**WVWD Deliverable:** Feedback

## PHASE TWO: INFORMATION ARCHITECTURE - 1 MONTH

*The Information Architecture Phase's primary function is to streamline your navigation and content for the new site.*

### I. Sitemap

Based on the findings from the Discovery Phase, we will create a sitemap outlining the high-level architecture and user flow for the website.

**Planeteria Deliverable:** [Interactive Sitemap Link](#)

**Versions:** 2

**Rounds of Feedback:** 1

**WVWD Deliverable:** Feedback & Approval

### II. Page Types

Based on the website and content audit we will identify the primary page types for the website. We will apply these page types to the pages on the sitemap to clarify which page types are assigned to which page content. This item serves as an internal process. Can be shared upon request.

**Page Types:** Up to 8

### III. Wireframes

We will create a wireframe per identified page type + homepage that establishes the layout, user interactions, and navigation structure of the two websites. This identifies what kind of content will be included and the most important call to action on each page type.

**Planeteria Deliverable:** [Interactive Wireframe Link](#)

**Versions:** 2

**Rounds of Feedback:** 1

**WVWD Deliverable:** Feedback & Approval

## PHASE THREE: VISUAL DESIGN - 1 MONTH

*During visual design we establish and/or confirm your organizational primary colors and secondary complementary colors along with your typography. Once established visual page mockups are created.*

### I. Colors & Typography

Based on the approved homepage wireframes, moodboard as well as a review of any existing branding or design precedents, we will provide homepage design options for the WVWD website with different type and color choices.

**Planeteria Deliverable:** [Interactive Homepage Design Link](#)

**Versions:** 2

**Rounds of Feedback:** 1

**WVWD Deliverable:** Feedback & Approval

## II. Page Type Designs

We will apply the approved design principles from the approved homepage design to the remaining approved page type wireframes.

**Planeteria Deliverable:** [Interactive Page Type Design Link](#)

**Versions:** 2

**Rounds of Feedback:** 1

**WVWD Deliverable:** [Feedback & Approval](#)

## PHASE FOUR: CONTENT STRATEGY & MIGRATION - 1 MONTH

*In the fourth phase we prepare content for thoughtful content migration.*

### I. Mapping Content

Through various exercises we will help WVWD map content from the existing site and where it goes on the new site based on the approved sitemap and designs. This process helps identify what content is and isn't being migrated to the new site, missing and needs to be edited. New content required for the website will be provided by WVWD.

**Planeteria Deliverable:** [Creation of Mapping Strategy Exercises](#)

**WVWD Deliverable:** [Complete Assigned Exercises](#)

### II. Content Sanctuary Creation

The content sanctuary is a folder system that enables you to upload new, edited, missing or remaining content, identified in the content mapping, to Basecamp. This process allows for easy migration of the content to the development site.

**Planeteria Deliverable:** [Content Sanctuary](#)

### III. Content Editing, Compiling and Upload to Content Sanctuary

WVWD will be responsible for editing, creating all new and existing content then appropriately uploading it to the content sanctuary per instructions provided by Planeteria.

**WVWD Deliverable:** [Complete Content Sanctuary](#)

### IV. Content Migration

Planeteria will migrate all identified content from the existing site as well as content from the completed Content Sanctuary.

**Planeteria Deliverable:** [Content Migration](#)

## PHASE FIVE: BETA DEVELOPMENT- 1.5 MONTHS

*At the completion of phase five, WVWD will have a fully functional website on a development server.*

### I. Server & CMS Setup

We create necessary accounts, set up GIT (version control), install plugins, create database and

modify CMS based on security best practices. All site functionality is integrated and customized in this phase.

**Planeteria Deliverable:** Server & CMS Setup

## II. Template Development

We will develop the page type templates based on the approved designs. Additionally Planeteria will curate and customize up to 3 flexible page builder templates using content blocks.

**Planeteria Deliverable:** Developed Templates and up to 3 page builder templates

## III. Quality Assurance

We will review the site in different browsers and devices to ensure that the pages with the content scale appropriately based on the approved desktop designs.

**Planeteria Deliverable:** Internal Quality Assurance

## IV. Beta Sites & Initial Training

You will be presented and provided access to a beta (draft) developed/interactive version of the website that is as complete as possible based on the content provided by WVWD. An initial training on how to use the backend of the site is provided.

**Planeteria Deliverable:** Beta Site & Initial Training

## PHASE SIX: QUALITY ASSURANCE & LAUNCH- 2 WEEKS

*Planeteria will conduct internal quality assurance checks in addition to soliciting feedback from WVWD.*

### I. User Feedback

Once you have been provided access to the beta site, you will log all defects and bugs as a support ticket or a document that prioritizes the items as high, medium or low priority (Priority level assigned by WVWD).

**WVWD Deliverable:** Internal Quality Assurance

### II. Implement User Feedback

Prior to launch, all high and medium tickets will be resolved by Planeteria. Low priority tickets will be resolved post-launch.

**Planeteria Deliverable:** High/Medium Tickets Resolved

### III. Content Edits

If initial training was initiated you will make any edits to the content migrated to the site before launch. If not, you will need to provide Planeteria with any content edits that need to be made and Planeteria will execute the changes.

**WVWD Deliverable:** Edit Content or Provide Content Edits

**IV. Launch**

The site is live and ready for public use and viewing!

**Planeteria Deliverables:** Launch Site

**PHASE SEVEN: MONITORING & TRAINING**

Post launch we provide proactive monitoring and in depth training.

**I. Monitoring**

For one week after launch, we carefully monitor the site and provide 24 hour support for any issues.

**Planeteria Deliverables:** Monitoring

**II. Training**

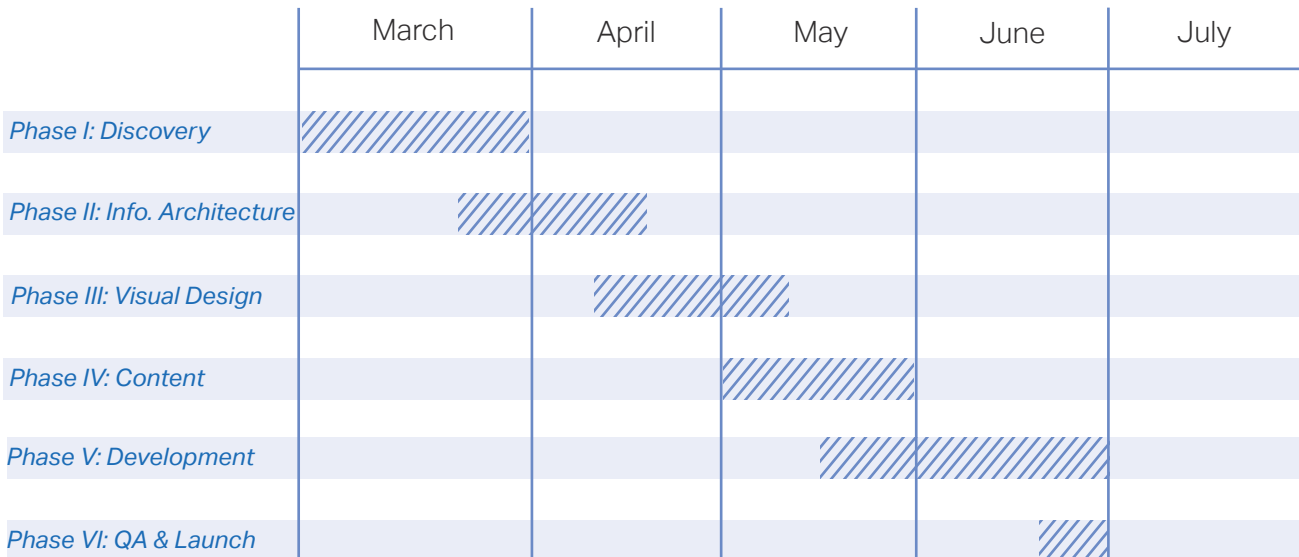

Planeteria hosts a hands-on training where WVWD staff can interact and practice modifying content in a testing environment. Post training we record and host screen cast tutorials explaining CMS functionality for your reference.

**Planeteria Deliverables:** Training Session & Content

**ESTIMATED IMPLEMENTATION PLAN**

Throughout the lifetime of the project, we will provide deliverables and collect feedback with regular communication and documentation. Weekly meetings will help us stay on track. We estimate this project will take approximately 4-5 months to complete. Below is a sample schedule estimate:

Client feedback is due within 2 days of receiving a deliverable. Otherwise, we will adjust the timeline accordingly.

## QUALITY CONTROL

Website quality control is typically known as a checklist of tasks that help with launching a functional website. Some of these tasks include browser testing, mobile review, ADA confirmation, performance testing, broken link check and more. But most people don't realize quality control is NOT over after you launch. Quality control is something that should continue to happen post launch. We conduct our quality control through the use of automated tools and manual visual and functional tests.

### BROWSER TESTING

- Your website will be viewed via different browsers (Firefox, Safari, Chrome, Opera, Internet Explorer).
- We test whether your design works well in every browser. We should also check for consistency in different elements of the layout.
- Planeteria tests functions of the website like trip planners, calendars, news, links, and search. So make sure all these functions work well.
- Finally we are able to open your website from all operating systems (Windows, Mac OS, Android, Linux, iOS).

### MOBILE REVIEW

- Cross test the website on mobile devices on multiple browsers (Firefox, Safari, Chrome, Opera, Internet Explorer), operating systems (Windows, Mac OS, Android, Linux, iOS).

### ADA CONFIRMATION

- ADA compliance is embedded in our design and development process, so during quality control, we are confirming compliance of: color contrast, fonts, technical code and image captions.

### PERFORMANCE TESTING

- It is important that page load times are within industry standards.
- Meta data, H1 tags, title tags and image alt text will be checked to ensure best exposure on search engines.
- All forms will be tested to confirm they are working properly and information is being delivered to the right the WVWD staff member and also a record stored in the CMS database.
- All third party tools will be fully activated and confirmed to be working properly.

### BROKEN LINK CHECK

- Planeteria checks for broken links on your website. Broken links can lead to a poor user experience

A sound quality control plan ensures a successful launch of the new WVWD website. We complete this comprehensive inspection prior to the launch of all our websites. After website launch our managed maintenance plan ensures on going quality control.

## HOSTING & SECURITY

### HOSTING

For hosting, we are recommending RackSpace or Codero for the WVWD. It is an excellent option for your requirements. We will determine the appropriate solution after a needs discussion with the WVWD's stakeholders.

- The hosting and management solution will be organized on a centralized dashboard designed to manage the site.
- Roles, permissions and user groups will be created to allow different access levels for different editors.
- Multiple site editors. Editors with the same access-level can edit, approve or make changes concurrently (if requested).
- Domain migration. Planeteria will assist with the domain migration when needed.
- Planeteria will assist in selecting the appropriate solution for the WVWD to fit your needs (GB Storage, visitors per month, peak traffic availability, bandwidth, number of servers and load balancing).

### SECURITY STANDARDS

- Redundant network monitoring will be provided 24x7x365 and an automated notification system can be implemented in the event of an interruption.
- Monitoring and reporting will detail response times, system use and capacity, concurrent users and system errors. Hacking, intrusions and other incident reports can be generated.
- Should a DDoS attack be detected and confirmed, we will provide a mitigation service.
- A DDoS solution typically involves: The first things to do in DDoS mitigation is to identify normal conditions for network traffic by defining "traffic patterns", which is necessary for threat detection and alerting.[2] DDoS mitigation also requires identifying incoming traffic to separate human traffic from human-like bots and hijacked web browsers. The process is done by comparing signatures and examining different attributes of the traffic, including IP addresses, cookie variations, HTTP headers, and Javascript footprints. After the detection is made, the next process is filtering. Filtering can be done through anti-DDoS technology like connection tracking and IP reputation lists.
- Planeteria will deploy updates across the platform, including 3rd party apps and modules. Some updates can break apps, so updates need to be performed with caution.
- Firewalls will be deployed when necessary to block ports to virtual platforms and web resources.
- Antivirus protection from malware.

## POST LAUNCH MAINTENANCE & TECHNICAL SUPPORT

We provide phone support, online ticketing, and email support. Our ticketing portal can be used for non-emergency issues with a one business day response time. It allows your staff to open a ticket and track all communications around that issue until the issue is resolved. All communications are archived and searchable for future reference. We do not require any additional hardware. Our support and maintenance package provides the following:

### MANAGED MAINTENANCE & SUPPORT

On going maintenance is highly recommended for all our projects with Planeteria's *Managed Maintenance Plan*. For one fixed cost your site will be protected, secure and monitored 24/7.

The *Managed Maintenance Plan* fees begin after the launch of the live website and includes:

- Planeteria staff is accessible via phone during normal business hours and tickets can be submitted 24/7 via the online ticketing portal. In the event of an emergency, City staff will have 24/7 emergency contact information for Tyler Coffin & Sandeep Mehta.

- Any client-requested site modifications requiring less than 30 minutes of time. Three (3) requests per month.
- Health check analysis reports will be sent on a monthly or quarterly basis.
- Trainings as requested up to three per year.
- Unlimited incoming bandwidth.
- Remove malicious code (if the site gets hacked).
- 99.9% uptime guarantee.
- Standard backups
- Online support and support materials are available 24/7.
- 1 week notice for any maintenance and 24 hours notice for any critical maintenance.
- Page load times. The service provided by Planeteria will support page load time of less than 1.5 seconds.
- SSL Certificate will be included.
- Warranty: repair, at no additional charge, of all bugs in code for the lifetime of the site as long as: 1). the code was not modified by a third party (client included), 2). the bug is not due to a change in technology including browser, plugin, and CMS updates, and 3). the bug was not caused by the addition of content.
- A Disaster Recovery (DR) plan is mission-critical for any organization. Planeteria offers DR options that meets the needs of your organization, ensuring business continuity. We offer Disaster Recovery as a service solution to help mitigate the downtime caused by server crashes, ransom-ware attacks, or natural disasters. Daily backups of the website are generated and maintained off-server for 30 days. In the event that the website is down due to website issues (hacked, corrupted, incorrect updates by user or developer, etc), the latest non-affected backup can be restored and any vulnerabilities/exploits patched and resolved. In the event of server down-time, the server provider would be contacted to help determine the issue. In the event that the server was non-salvageable, a new server would be set up and the website would be migrated to this new server (or if the old server is inaccessible, then the website would be restored from latest backup.
- Eliminate Downtime and Data Loss – whether it’s a routine server crash or a site-wide disaster, unplanned downtime comes with serious consequences. Our solution can dramatically reduce your downtime.
- You will also have peace of mind knowing that your site is backed up daily, ensuring no data loss. 24/7 emergency support, on-line status monitor, event notification emails and 5 minute recovery time. In the event the primary data center has an outage, the recover time objective (RTO) is 60 minutes, recover point objective (RPO) is 15 minutes, pre-emptive monitoring for disasters, multi geographic region redundant backup data center.

#### **SUPPORT TICKET RESPONSE TIMES:**

- All urgent requests are responded to within 2 hours.
- High priority requests - one business day
- Medium priority requests - two to three business days
- Low priority requests - five to seven business days

#### **IN WORDPRESS OR DRUPAL CMS:**

- Two-factor authentication system
- Change the pre-fix of the databases
- Restrict database user privileges
- Move and secure wp-config.php file
- Lock down directories when possible
- Change the default login URL
- Remove default admin user and regular review of registered users
- Use well-known and trusted plugins and modules

- Install security related and monitoring plugins and modules
- Make sure that any custom inputs in your CMS sanitize and validate data so malicious code can't be inserted or injected into your site

If there is a breach:

- Clean up the files or revert to backup if necessary (backups made daily)
- Identify and close out vulnerability

## SOFTWARE

- Drupal Version 9 or WordPress 5.4 (depending on discussions during discovery)
- No licensing fees required
- Software Version upgrades during the life cycle of the website
- All source code, graphics and any other web content will be the property of WVWD

## West Valley Water District Website Redesign &amp; Development

**FORM #4 – CLIENT REFERENCES**

Client Name	San Diego County Water Authority
Contact – Name, Title, Email & Telephone	Andrea Mora P: 858.522.6600, E: amora@sdcwa.org
Services Provided and Dates	Website launched March 2021. 8 Month project Website design, development and on-going services
Examples of Work (provide links)	<a href="https://www.sdcwa.org/">https://www.sdcwa.org/</a>
Explain similarities in services to those requested by West Valley Water District	The site's focus is to better communicate with internal and external customers, including the public, member agencies, investors, media, contractors, water industry leaders and elected officials. The site serves as the primary source of information about the agency and regional water issues. Planeteria Media integrated interactive data and charts about water storage and usage from the present back to mid last century, Google-like predictive search with visual results, customized Google Maps to display current projects, member agency zip code search, and member agency clickable county map. The result is a visually appealing, mobile responsive ADA compliant solution.
Explain differences in services to those requested by West Valley Water District	The main difference is SDCWA does not provide water services directly to the end customer.

## West Valley Water District Website Redesign &amp; Development

**FORM #4 – CLIENT REFERENCES**

Client Name	San Bernardino County Transportation Authority
Contact – Name, Title, Email & Telephone	Nydia Doolittle - 909-884-8276 - <a href="mailto:ngonzalez@gosbcta.com">ngonzalez@gosbcta.com</a> -
Services Provided and Dates	Website launched October 2019. 6 month project Website design, development and on-going services
Examples of Work (provide links)	<a href="http://www.gosbcta.com">http://www.gosbcta.com</a>
Explain similarities in services to those requested by West Valley Water District	This project went through the full website design process after an initial ADA audit.
Explain differences in services to those requested by West Valley Water District	This project started with an ADA compliance audit to confirm the need for a brand new website. Fixing the ADA issues on the old site would be time consuming and expensive because of the old technology the site was developed with. SBCTA elected to start a website from scratch with a new site map, content organization, visual design and CMS technology to allow for control of content by non-technical staff

## West Valley Water District Website Redesign &amp; Development

**FORM #4 – CLIENT REFERENCES**

Client Name	Butler County Regional Transit Authority
Contact – Name, Title, Email & Telephone	John Gardocki - 513-785-5378 - gardockij@butlercountyrta.com
Services Provided and Dates	Website lunched February 2020. 6 Month project Website design, development and on-going services
Examples of Work (provide links)	<a href="https://www.butlercountyrta.com/">https://www.butlercountyrta.com/</a>
Explain similarities in services to those requested by West Valley Water District	BCRTA needed Planetaria to design and implement a new website to enhance the user experience, simplify content management, and provide better information and customer service to users and potential users of the transit system. The emphasis is on incorporating extensive content management tools and database- driven architecture while providing a user-friendly and intuitive site structure as well as an interface that is attractive, accessible to people with disabilities (especially those with visual impairments) and offers users a choice of either English or other languages.
Explain differences in services to those requested by West Valley Water District	As a transit operator their technology stack included live bus tracking and integrated mapping and trip planning features.

## WEST VALLEY WATER DISTRICT PROJECT TEAM

Planeteria is made up of a dedicated team of 25 experts who are ready to take on your project. As a team, we value a positive company culture where we can foster each-others creativity. Our robust creative, technical, content, and management teams collaborate closely to ensure that projects are executed seamlessly, while our team leads remain committed to delivering quality and facilitating communication. Below is a list of key personnel assigned to your project who have worked on several water authority websites and have a deep understanding of the needs of different audience segments. As a team we are adamant about continually expanding our expertise in vital ways, including continued education, certificate programs etc. which keeps us relevant on the current trends of the market. Our teams versatility and concise work flow make us one of a kind.

### WYATT BENOIT

Project Manager, 9 years experience

Before joining Planeteria, Wyatt had mastered her project organization skills by building her own technology company. She designed systems operations pitch decks, and planned and oversaw the programming of the company's online interface. She has been Planeteria's project lead since 2015 and has a degree in Arts and Communication Design from Pacific Northwest College of Arts. Wyatt has also completed her Cornell University Project Management

Certificate. Because of her abilities juggling diverse stakeholder interests, she specializes in working with our Municipal clients. Recently she's conducted projects for Clackamas County, Solano Transportation Authority, AC Transit, San Bernardino County Transportation Authority, San Diego County Water Authority, Sonoma Water, Mojave Water Agency, Pajaro River Watershed Flood Prevention Authority and the City of Pleasanton.

Clients like Wyatt.

*"Wyatt and the team have been amazing to work with and (we) really appreciate their efforts, flexibility and willingness to help make our site look amazing."*

– **Solano Transportation Authority (California), Lloyd Nadal**

### TYLER COFFIN

Sales & Business Development Director, 14 years experience

Tyler has over 13 years of internet marketing experience helping businesses turn project ideas into a reality. Communicating website design needs can prove to be difficult, but Tyler prides himself on educating clients so they are co-creators with input and buy-in on the final product. He will initiate the scope of work, project contract/agreement and payment terms and will be the point of contact for post-launch support. Tyler is a graduate from University of California, Davis.

*"I take great pride in accurately estimating project costs and timelines to provide realistic and achievable project goals. It is my responsibility to provide exceptional customer service post launch"*

*"We have enjoyed working with Planeteria over the past year and have been happy with your team's communication and work ethic."*

– **LexTran (Kentucky), Austin Hughes**

## SANDEEP MEHTA

Technical Director, 24 years experience

Sandeep has over 20 years of international experience managing creative technology projects. Before Planeteria he served as director for process redesign at Citigroup and also as the managing director of a technology solutions company.

Sandeep has built over 150 websites for organizations across the country including many with a similar scope to Discover Monroe-West Monroe . Recent clients include: Clackamas County, Solano Transportation Authority, AC Transit, San Bernardino County Transportation Authority, San Diego County Water Authority, Sonoma Water, Mojave Water Agency, Pajaro River Watershed Flood Prevention Authority and the City of Pleasanton.

*"We see tremendous potential in this mapping analytics tool. Once fine-tuned, it will be a game changer for how we evaluate and modify Traffix Bus Routes! Thank you for your efforts on this enhancement!."*  
**– Traffix(California), Heidi Kenniston-Lee**

## HEIDI PEYSER

Senior Information Architect, 16 years experience

Heidi has over 16 years of experience with a unique blend of front-end development, UI/UX & Digital marketing. She is also very creative & has flair for writing. When sitting down with a client to map strategy, her end goal is to delivering the right solutions to support the clients needs and objectives as well as the unmet needs of the clients target audiences. Heidi is a Sonoma State graduate, & has a Masters degree in Arts. Recent municipal projects include: Clackamas County, San Diego County Water Authority, Sonoma Water, Mojave Water Agency and the Pajaro River Watershed Flood Prevention Authority.

*"Wyatt and Heidi - as we head into the launch of the new site, I just wanted to take a moment to thank you both for all your help on this project. I had a great time working with you both. You made the whole process a lot more fun!"*

**– New Hampshire Housing Finance Authority, Jane Law**

## BILL OLSON

Web Producer, 12 years experience

Bill has over 12 years of web development experience, his primary role is making sure new project designs and functionality meet expectations upon launch and beyond. He also serves as a main point of content for existing web site maintenance and support. Bill had part in a variety of recent Planeteria projects including Clackamas County, San Diego County Water Authority, Sonoma Water, Mojave Water Agency and the Pajaro River Watershed Flood Prevention Authority. Bill has an Associate degree in Interactive Media Design from the Santa Rosa Junior College.

*"Thanks for all your hard work and being so attentive and responsive to all our needs. We really appreciate it!"*

**– San Bernardino County Transportation Authority (California), Nydia Doolittle**

## CHLOE STEINHOFF-SMITH

Senior Visual Designer, 12 years experience

For over a decade Chloe has been developing her design skills toward the goal of clear and compelling communication. Chasing that goal has provided her with unique opportunities for growth.

She continues that drive as Planeteria's lead visual designer. She spearheads the implementation of our user-guided design process and approaches all our project with a focus on user experience. Municipal clients such as Clackamas County, San Diego County Water Authority, Sonoma Water, Mojave Water Agency, Bend Parks and the Pajaro River Watershed Flood Prevention Authority have benefited from Chloe's UX expertise.

*"Not only did Planeteria's design team deliver, the team made valuable suggestions on how to provide large amounts of dynamic content in an easy to find, uncluttered format. Our site has been well received by patrons of all ages and technological wherewithal."*

– **Basin Recreation (Utah), Justine Kadziel**

## KEEGAN ORTIZ-DEKRAMER

Senior Developer, 14 years experience

Keegan's philosophy in life is "talk a little, listen a lot, and then over-deliver on client expectations". He has been programming websites for eleven years, leading our development team since 2009, and brings a contagious enthusiasm to our projects.

He studied computer science at University of California Davis. His knowledge of server configurations has kept Planeteria's fully ADA compliant. Keegan has partnered with Sandeep on every recent Planeteria client including those listed in Sandeep's profile above.

*"There are about 3,000 moving pieces that have to come together in the right order to complete a comprehensive web design project for a large-scale website. Thanks to the wonderful team at Planeteria, all those moving pieces came together on time and on budget, and we couldn't be happier with the end result."*

– **Clackamas County (Oregon), Jessie Kirk**

## VICTORIA KOVATCH

Sales & Marketing Coordinator, 3 years experience

Victoria has a diverse background in sales, marketing, HR and business development. She was a collegiate soccer player at Azusa Pacific University and graduated in 2017 with a bachelors in Sociology. Out of college, she worked for a global government contracted aerospace and defense company in HR as a talent acquisition specialist. There, she discovered her knack for recruiting and business development. In the last few years, Victoria worked for a large consumer products distribution company in branding and marketing. In this role, Victoria excelled in creating strong client relationships, utilizing social media marketing, and creating eye catching digital content to boost brand awareness.

## **AGREEMENT FOR PROFESSIONAL SERVICES**

This AGREEMENT FOR PROFESSIONAL SERVICES (“Agreement”) effective as of this \_\_\_\_\_ day of \_\_\_\_\_, 2021 (“Effective Date”) is by and between West Valley Water District (“District”) and \_\_\_\_\_ (“Consultant”). The District and Consultant may be collectively referred to as the “Parties” and individually as a “Party.”

### **RECITALS**

**A.** The Parties desire to enter into this Agreement for the purpose of setting forth the terms and conditions upon which Consultant shall provide certain services to District.

**NOW, THEREFORE, THE PARTIES HEREBY AGREE AS FOLLOWS:**

#### **Section 1. Term of Agreement.**

(a) Subject to subsection (b) below, the term of this Agreement will be for a period of one (1) year commencing on the Effective Date and terminating one (1) year after the Effective Date.

(b) This Agreement shall renew automatically for continuous one (1) year periods for no more than two (2) additional years, unless either Party, prior to the end of the existing one (1) year period, delivers written notice to the other Party, that the Agreement shall not be extended.

#### **Section 2. Scope and Performance of Services.**

**2.1** (a) District may, from time to time, by written instructions from the general manager or assistant general manager of the District (“Authorized Representative”) issue task orders (“Task Orders”) to the Consultant. The Task Order shall be in such form and content as shall be set forth on Exhibit “A” attached hereto and by this reference incorporated herein. The Task Order shall set forth: (i) the scope of services to be performed by Consultant; (ii) the compensation to be paid to Consultant; and (iii) the time to complete the Task Order. The provisions of this Agreement shall apply to all such Task Orders.

(b) For each Task Order, Consultant shall confer, as requested, with District representatives to review progress of work elements, adherence to work schedule, coordination of work, scheduling of review and resolution of problems which may develop.

**2.2** Consultant will furnish all of the labor, technical, administrative, professional and other personnel, all supplies and materials, equipment, printing,

vehicles, transportation, office space and facilities, and all tests, testing and analyses, calculation, and all other means whatsoever, except as otherwise expressly specified in this Agreement, necessary or proper to perform and complete the services required of Consultant under this Agreement.

- 2.3** Consultant's designated representative(s) who are authorized to act on its behalf and to make all decisions in connection with the performance of services under this Agreement are listed in Exhibit "B" attached hereto and by this reference incorporated herein ("Key Personnel").
- 2.4** Consultant represents and warrants that it has the qualifications, experience and facilities necessary to properly perform the services required under this Agreement in a thorough, competent and professional manner. Notwithstanding Section 3 below, in the event Consultant utilizes the services of subcontractors or sub-consultants, Consultant assumes sole and complete responsibility for the performance of the subcontractor or sub-consultant to the specifications provided hereunder for Consultant's work, and no adjustment will be made to Consultant's requirements under this Agreement for timely completion of services, complete performance of services, or delivery of products or deliverables in a timely fashion, and no adjustment will be made to performance deadlines, or compensation due to Consultant, due to or arising from issues Consultant may have with any subcontractor or sub-consultant. Consultant will at all times faithfully, competently and to the best of its ability, experience and talent, perform all services described in this Agreement. In meeting its obligations under this Agreement, Consultant shall employ, at a minimum, generally accepted standards and practices utilized by persons engaged in providing services similar to those required of Consultant under this Agreement.

Consultant warrants it will perform its engineering and design under the Task Order, as more particularly described in Exhibit A ("Task Order") in accordance with the current standards of care and diligence normally practiced by recognized engineering and design firms in performing services of a similar nature. Further, Consultant warrants that the engineering and design performed has been performed in accordance with the then current standards of care and diligence normally practiced by recognized engineering and design firms in performing services of a similar nature. If within one (1) year after substantial completion of the engineering and design work it is shown that there is an error in that work as a result of the Consultant's failure to meet those standards and the District has notified the Consultant in writing of any such error within that period, Consultant shall re-perform such engineering and design work within the original scope of such services, as may be necessary to remedy such error. All costs incurred by Consultant in performing such corrective services shall be the sole responsibility of the Consultant and such costs shall not be reimbursable in any way.

**Section 3. Additional Services and Changes in Services**

- 3.1 Consultant will not be compensated for any services rendered in connection with its performance of this Agreement that are in addition to or outside of those set forth in the Task Orders, unless such additional services are authorized in advance and in writing by District.
- 3.2 If Consultant believes that additional services are needed to complete a Task Order, Consultant will provide the Authorized Representative with written notification describing the proposed additional services, the reasons for such services, and a detailed proposal regarding cost.
- 3.3 District may order changes to a Task Order, consisting of additions, deletions, or other revisions, and the compensation to be paid Consultant will be adjusted accordingly. All such changes must be authorized in writing, and executed by Consultant and District. The cost or credit to District resulting from changes in a Task Order will be determined by the written agreement between the Parties.

**Section 4. Familiarity with Services and Site.**

- 4.1 By executing this Agreement, Consultant warrants that Consultant shall, prior to undertaking a Task Order:
  - (a) investigate and consider the services to be performed;
  - (b) carefully consider how and within what time frame the services should be performed;
  - (c) understand the facilities, difficulties, and restrictions attending performance of the services under a Task Order; and
  - (d) possesses all licenses required under local, state or federal law to perform the services contemplated by a Task Order, and maintain all required licenses during the performance of such Task Order.
- 4.2 If services involve work upon any site, Consultant warrants that Consultant has or will investigate the site and will be fully acquainted with the conditions there existing, before commencing its services under a Task Order. Should Consultant discover any latent or unknown conditions that may materially affect the performance of services, Consultant will immediately inform District of such fact and will not proceed except at Consultant's own risk until written instructions are received from the District.

**Section 5. Compensation and Payment.**

- 5.1 Subject to any limitations set forth in this Agreement, District agrees to pay Consultant the amounts shown in a Task Order.
- 5.2 Each month during the existence of a Task Order, Consultant shall furnish District with an original invoice for all services performed and expenses incurred during the preceding month in accordance with the fee schedule set forth in the Task Order. The invoice must detail charges by the following categories: labor (by subcategory), reimbursable costs, subcontractor contracts and miscellaneous expenses. The invoice must list, as applicable, the hours worked and hourly rates for each personnel category, the tasks performed, the percentage of the task completed during the billing period, the cumulative percentage completed for each task, and the total cost of the services.
- 5.3 District will independently review each invoice submitted by Consultant to determine whether the work performed and expenses incurred are in compliance with this Agreement. In the event that no charges or expenses are disputed, the invoice will be approved and paid. In the event any charges or expenses are disputed by District, the original invoice will be returned by District to Consultant for correction and resubmission.
- 5.4 Except as to any charges for work performed or expenses incurred by Consultant that are disputed by District, District will use its best efforts to cause Consultant to be paid within thirty (30) days of receipt of Consultant's invoice.
- 5.5 No payment or partial payment to Consultant shall constitute acceptance of any work completed by Consultant or waive any claims by the District for any reason whatsoever.

**Section 6. Required Documentation Prior to Performance.**

- 6.1 Consultant will not perform any services under this Agreement until:
  - (a) Consultant furnishes proof of insurance ("Insurance") as required under Exhibit "C" attached hereto and by this reference incorporated herein; and
  - (b) Consultant provides District with a Taxpayer Identification Number.
- 6.2 The District will have no obligation to pay for any services rendered by Consultant in advance of receiving written authorization to proceed for each Task Order, and Consultant acknowledges that any such services are at Consultant's own risk.

**Section 7. Project Documents.**

- 7.1 All original maps, models, designs, drawings, photographs, studies, surveys, reports, data, notes, computer programs, files and other documents (collectively, "Project Documents") prepared, developed or discovered by Consultant in the course of providing services under this Agreement will become the sole property of District and may be used, reused or otherwise disposed of by District without the permission of Consultant. Consultant will take such steps as are necessary to perfect or protect the ownership interest of District in such Project Documents. Upon completion, expiration or termination of this Agreement, Consultant shall turn over to District all such original Project Documents in its possession; provided, however, that Consultant may retain copies of Project Documents.
- 7.2 Except as necessary for the performance of services under this Agreement, no Project Documents prepared under this Agreement, will be released by Consultant to any other person or entity without District's prior written approval. All press releases, including graphic display information to be published, must be approved and distributed solely by District, unless otherwise agreed to in writing by District.

**Section 8. Consultant's Books and Records.**

- 8.1 Consultant shall maintain any and all documents and records demonstrating or relating to Consultant's performance of services under this Agreement. Consultant shall maintain any and all ledgers, books of account, invoices, vouchers, canceled checks, or other documents or records evidencing or relating to work, services, expenditures and disbursements charged to District under this Agreement. Any and all such documents or records must be maintained in accordance with generally accepted accounting principles and must be sufficiently complete and detailed so as to permit an accurate evaluation of the services provided by Consultant under this Agreement. Any and all such documents or records must be maintained for three (3) years following the final payment for each Task Order.
- 8.2 Any and all records or documents required to be maintained by this section must be made available for inspection, audit and copying, at any time during regular business hours, upon written request by District or its designated representatives. Copies of such documents or records must be provided directly to District for inspection, audit and copying when it is practical to do so; otherwise, unless an alternative is mutually agreed upon, such documents and records must be made available at Consultant's address indicated for receipt of notices in this Agreement.

- 8.3** Where District has reason to believe that any of the documents or records required to be maintained by this section may be lost or discarded due to dissolution or termination of Consultant's business, District may, by written request, require that custody of such documents or records be given to a person or entity mutually agreed upon and that such documents and records thereafter be maintained by such person or entity at Consultant's expense. Access to such documents and records shall be granted to District, as well as to its successors-in-interest and authorized representatives.

**Section 9. Status of Consultant.**

- 9.1** Consultant is and will at all times remain a wholly independent contractor and not an officer or employee of District. Consultant has no authority to bind District in any manner, or to incur any obligation, debt or liability of any kind on behalf of or against District, whether by contract or otherwise, unless such authority is expressly conferred under this Agreement or is otherwise expressly conferred in writing by District.
- 9.2** The personnel performing the services under this Agreement on behalf of Consultant will at all times be under Consultant's exclusive direction and control. Neither District, nor any elected or appointed boards, officers, officials, employees or agents of District, will have control over the conduct of Consultant or any of Consultant's officers, subcontractors or sub-consultants, employees or agents, except as provided in this Agreement. Consultant warrants that it will not at any time or in any manner represent that Consultant or any of Consultant's officers, employees or agents are in any manner officials, officers, employees or agents of District.
- 9.3** Neither Consultant, nor any of Consultant's officers, employees or agents, will obtain any rights to retirement, health care or any other benefits which may otherwise accrue to District's employees. Consultant expressly waives any claim to any such rights or benefits.

**Section 10. Compliance with Applicable Laws.**

Consultant shall keep itself informed of and comply with all applicable federal, state and local laws, statutes, codes, ordinances, regulations and rules in effect during the term of this Agreement.

**Section 11. Conflicts of Interest.**

Consultant covenants that neither Consultant, nor any officer, principal nor employee of its firm, has or will acquire any interest, directly or indirectly, that would conflict in any manner with the interests of District or that would in any way hinder Consultant's performance of services under this Agreement. Consultant further covenants that neither Consultant, nor any officer, principal or employee of its firm will make, participate in the making, or in any way attempt to use the position of Consultant to influence any decision of the District in which Consultant knows or has reason to know that Consultant, or any officer, principal or employee of Consultant has a financial interest as defined in Government Code section 87103.

**Section 12. Confidential Information; Release of Information.**

- 12.1** All information gained or work product produced by Consultant in performance of this Agreement will be considered confidential to the full extent permitted by law, unless such information is in the public domain or already known to Consultant. Consultant shall not release or disclose any such information or work product to persons or entities other than District without prior written authorization from an Authorized Representative, except as may be required by law.
- 12.2** Consultant, its officers, employees, or agents, shall not, without prior written authorization from an Authorized Representative or unless requested by the District counsel, voluntarily provide declarations, letters of support, testimony at depositions, response to interrogatories or other information concerning the work performed under this Agreement. Response to a subpoena or court order will not be considered "voluntary" provided Consultant gives District notice of such court order or subpoena.
- 12.3** If Consultant, or any officer, employee, or agent of Consultant, provides any information or work product (including Project Documents) in violation of this Agreement, then District shall have the right to reimbursement and indemnity from Consultant for any damages, costs and fees, including attorneys' fees related to any unauthorized disclosure by consultant or, caused by or incurred as a result of Consultant's conduct.
- 12.4** Consultant shall promptly notify District should, Consultant, its officers, employees, or agents be served with any summons, complaint, subpoena, notice of deposition, request for documents, interrogatories, request for admissions or other discovery request, court order or subpoena from any party regarding this Agreement and the services performed under this Agreement. District retains the right, but has no obligation, to represent Consultant or be present at any deposition, hearing or similar proceeding. Consultant agrees to cooperate fully with District and to provide District with the opportunity to review any response to discovery requests provided by

Consultant. However, this right to review any such response does not imply or mean the right by District to control, direct, or rewrite such response.

### **Section 13. Indemnification.**

Consultant covenants and agrees that, during the term of this Agreement, any injury suffered as a result of Consultant's services shall be the sole responsibility of Consultant and its successors and assigns and District shall not be liable to Consultant, or any other person or persons whatsoever for any such injury, loss or damage to persons or property unless caused by the negligence or intentional acts of District or its Representatives (as solely defined below). Consultant shall defend, indemnify and hold District, its officers, directors and Representatives ("District Indemnitees") harmless from and against any and all claims, costs, liabilities, debts, demands, suits, actions, causes of action, obligations, proceedings, damages, judgments, liens and expenses of whatever nature, including attorneys' fees and disbursements (collectively, "Claims") which may be made against the District Indemnitees arising out of or in connection with (a) the retention by District of Consultant's services; (b) the performance of or failure to perform, the work covered by this Agreement which is caused or occasioned by any act, action, neglect on the part of Consultant, or its Representatives, in the performance of this Agreement and the work to be done under this Agreement; (c) the death and/or injury to any person or damage to any property (real or personal) and/or economic loss which may be caused or is claimed to have been caused, by the negligence, act or omission of Consultant or its Representatives or its or their property; (d) any violation or alleged violation by Consultant of any law or regulation now or hereafter enacted; and (e) any breach by Consultant of its obligations under this Agreement. The foregoing indemnity shall not apply to the extent any such Claims are ultimately established by a court of competent jurisdiction to have been caused by the negligence or willful misconduct of the District Indemnitees or any of them. District shall make all decisions with respect to its representation in any legal proceeding concerning this section. If Consultant fails to do so, District shall have the right, but not the obligation, to defend the same and charge all of the direct or incidental Claims of such defense, including attorneys' fees and costs, to Consultant and to recover the same from Consultant. The term "Representatives" shall mean employees, representatives, agents, contractors, subcontractors or any other persons directly or indirectly employed by any one of the foregoing or reasonably under the control of any of the foregoing or for whose acts any of the foregoing may be liable.

### **Section 14. Insurance.**

Consultant agrees to obtain and maintain in full force and effect during the term of this Agreement the Insurance coverages listed in Exhibit "C." All Insurance policies

shall be subject to approval by District as to form and content. These requirements are subject to amendment or waiver if so approved in writing by an Authorized Representative.

## **Section 15. Assignment.**

- 15.1** The expertise and experience of Consultant are material considerations for this Agreement. District has an interest in the qualifications of and capability of the persons and entities that will fulfill the duties and obligations imposed upon Consultant under this Agreement. Consultant may not assign or transfer this Agreement or any portion of this Agreement or the performance of any of Consultant's duties or obligations under this Agreement without the prior written consent of District. The District can withhold its approval/consent in its sole and absolute discretion. Any attempted assignment will be null and void, and will constitute a material breach of this Agreement entitling District to any and all remedies at law or in equity, including summary termination of this Agreement.
- 15.2** Consultant must obtain District's prior written approval before utilizing any subcontractors to perform any services under this Agreement, which approval may be withheld in District's sole and absolute discretion. This written approval must include the identity of the subcontractor and the terms of compensation. Approval by District does not imply any agreement to or endorsement by the District as to the competency or capability of any proposed subcontractor or sub-consultant, and District reserves any and all rights against both Consultant and such subcontractor or sub-consultant, for any failure to perform or other breach of any of the provisions of this Agreement, or the standards of performance defined herein, and no waiver is intended or to be implied by District's approval of any subcontractor or sub-consultant.

## **Section 16. Termination of Agreement.**

- 16.1** District may terminate this Agreement, with or without cause, at any time by written notice of termination to Consultant. In the event such notice is given, Consultant shall cease immediately all work in progress.
- 16.2** Upon termination of this Agreement, all property belonging exclusively to District which is in Consultant's possession must be returned to District. Consultant shall promptly deliver to District a final invoice for all outstanding services performed and expenses incurred by Consultant as of the date of termination. Compensation for work in progress not based on an hourly rate will be prorated based on the percentage of work completed as of the date of termination.

**16.3** Consultant acknowledges District’s right to terminate this Agreement as provided in this section, and hereby waives any and all claims for damages that might otherwise arise from District’s termination of this Agreement.

**Section 17. Notices.**

**17.1** All written notices required or permitted to be given under this Agreement will be deemed made when received by the other Party at its respective address as follows:

To District: West Valley Water District  
855 West Base Line Road  
P. O. Box 920  
Rialto, CA 92377  
Attention: Shamindra Manbahal  
Interim General Manager

*Mail: West Valley Water District  
Accounts Payable  
P.O. Box 920  
Rialto, CA 92377*

**17.2** Notice will be deemed effective on the date personally delivered or transmitted by facsimile. If the notice is mailed, notice will be deemed given three (3) days after deposit of the same in the custody of the United States Postal Service, postage prepaid, for first class delivery, or upon delivery if using a major courier service with tracking capabilities.

- 17.3 Any Party may change its notice information by giving notice to the other Party in compliance with this section.

## Section 18. General Provisions.

- 18.1 **Authority to Execute.** Each Party represents and warrants that all necessary action has been taken by such Party to authorize the undersigned to execute this Agreement and to bind it to the performance of its obligations hereunder.
- 18.2 **Binding Effect.** Subject to Section 15, this Agreement is binding upon the heirs, executors, administrators, successors and assigns of the Parties, including any subcontractors or sub-consultants of Consultant.
- 18.3 **Entire Agreement.** This Agreement, including the attached Exhibits "A" through "C," is the entire, complete, final and exclusive expression of the Parties with respect to the matters addressed in this Agreement and supersedes all other agreements or understandings, whether oral or written, between Consultant and District prior to the execution of this Agreement.
- 18.4 **Modification of Agreement.** No amendment to or modification of this Agreement will be valid unless made in writing and approved by Consultant and approved in writing by the Board of Directors of the District, or in writing by the General Manager, if such power has been delegated to General Manager. The Parties agree that this requirement for written modifications cannot be waived and that any attempted waiver will be void.
- 18.5 **Facsimile Signatures.** Amendments to this Agreement will be considered executed when the signature of a Party is delivered by facsimile transmission. Such facsimile signature will have the same effect as an original signature.
- 18.6 **Waiver.** Waiver by any Party to this Agreement of any term, condition, or covenant of this Agreement will not constitute a waiver of any other term, condition, or covenant. Waiver by any Party of any breach of the provisions of this Agreement will not constitute a waiver of any other provision, or a waiver of any subsequent breach or violation of any provision of this Agreement. Acceptance by District of any services by Consultant will not constitute a waiver of any of the provisions of this Agreement.
- 18.7 **Interpretation.** This Agreement will be interpreted, construed and governed according to the laws of the State of California. Each Party has had the opportunity to review this Agreement with legal counsel. The Agreement will be construed simply, as a whole, and in accordance with its fair meaning, and without resort to rules regarding draftsmanship. It will not be interpreted strictly for or against either Party.

- 18.8 Severability.** If any provision of this Agreement shall be ruled invalid, illegal or unenforceable, the Parties shall: (a) promptly negotiate a substitute for the provisions which shall to the greatest extent legally permissible, effect the intent of the Parties in the invalid, illegal or unenforceable provision, and (b) negotiate such changes in, substitutions for or additions to the remaining provisions of this Agreement as may be necessary in addition to and in conjunction with subsection (a) above to give effect to the intent of the Parties without the invalid, illegal or unenforceable provision. To the extent the Parties are unable to negotiate such changes, substitutions or additions as set forth in the preceding sentence, and the intent of the Parties with respect to the essential terms of the Agreement may be carried out without the invalid, illegal or unenforceable provisions, the balance of this Agreement shall not be affected, and this Agreement shall be construed and enforced as if the invalid, illegal or unenforceable provisions did not exist.
- 18.9 Venue.** The Parties agree any action or proceeding to enforce or relating to this Agreement shall be brought exclusively in the federal court located in Riverside County, California or state court located in San Bernardino County, California and the Parties hereto consent to the exercise of personal jurisdiction over them by such courts for purposes of any such action or proceeding.
- 18.10 Disputes.** If any disputes should arise between the Parties concerning the work to be done under this Agreement, the payments to be made, or the manner of accomplishment of the work, Consultant shall nevertheless proceed to perform the work as directed by District pending settlement of the dispute.
- 18.11 Cooperation.** Consultant shall cooperate in the performance of work with District and all other agents.
- 18.12 Time of Essence.** Time shall be of the essence as to all dates and times of performance contained in this Agreement.
- 18.13 Counterparts.** This Agreement may be signed and delivered in any number of counter parts, each of which, when signed and delivered, shall be an original, but all of which shall together constitute one and the same Agreement.

**IN WITNESS WHEREOF**, the Parties have caused this Agreement to be executed effective as of the day and year first above written.

**TASK ORDER**

**TASK ORDER NO.   1**

This Task Order (“Task Order”) is executed this \_\_\_\_\_ day of \_\_\_\_\_, 2021 by and between West Valley Water District, a public agency of the State of California (“District”) and \_\_\_\_\_ (“Consultant”).

**RECITALS**

- A. On or about \_\_\_\_\_, 2021 District and Consultant executed that certain Agreement for Professional Services (“Agreement”).
- B. The Agreement provides that the District will issue Task Orders from time to time, for the provision of certain services by Consultant.
- C. Pursuant to the Agreement, District and Consultant desire to enter into this Task Order for the purpose of setting forth the terms and conditions upon which Consultant shall render certain services to the District.

**NOW, THEREFORE, THE PARTIES HERETO HEREBY AGREE AS FOLLOWS:**

1. Consultant agrees to perform the services set forth on Exhibit “1” attached hereto and by this reference incorporated herein.
2. Subject to any limitations in the Agreement, District shall pay to Consultant the amounts specified in Exhibit “2” attached hereto and by this reference incorporated herein. The total compensation, including reimbursement for actual expenses, may not exceed the amount set forth in Exhibit “2,” unless additional compensation is approved in writing by the District.
3. Consultant shall perform the services described in Exhibit “1” in accordance with the schedule set forth in Exhibit “3” attached hereto and by this reference incorporated herein. Consultant shall commence work immediately upon receipt of a notice to proceed from the District. District will have no obligation to pay for any services rendered by Consultant in advance of receipt of the notice to proceed, and Consultant acknowledges that any such services are at Consultant’s own risk.
4. The provisions of the Agreement shall apply to this Task Order. As such, the terms and conditions of the Agreement are hereby incorporated herein by this reference.

**[SIGNATURES APPEAR ON FOLLOWING PAGE]**

**IN WITNESS WHEREOF**, the parties have caused this Task Order to be executed effective as of the day and year first above written.

EXHIBIT C  
INSURANCE

## INSURANCE

- A. **General Requirements.** Before commencing the performance of services under this Agreement, and at all other times this Agreement is effective, Consultant must procure and maintain the following types of insurance with coverage limits complying, at a minimum, with the limits set forth below:

<u>Type of Insurance</u>	<u>Limits (combined single)</u>
Commercial General Liability:	\$1,000,000
Business Automobile Liability	\$1,000,000
Professional Liability	\$1,000,000
Workers Compensation	Statutory Requirement

- B. **Commercial General Liability Insurance.** The amount of insurance set forth above must be a combined single limit per occurrence for bodily injury, personal injury, and property damage for the policy coverage. The insurance must be on an “occurrence” not a “claims made” basis.
- C. **Business Automobile Insurance.** Automobile coverage must be written on forms subject to the written approval of District.
- D. **Professional Liability Insurance.** This coverage must be on an “occurrence” basis, including coverage for contractual liability. The Professional Liability Insurance required by this Agreement must be endorsed to be applicable to claims based upon, arising out of or related to services performed under this Agreement.
- E. **Workers Compensation.** Consultant must have a State of California approved policy form providing the statutory benefits required by law with employer’s liability limits of no less than \$1,000,000 per accident for all covered losses, or Consultant must provide evidence of an approved self-insurance program.
- F. **Additional Insureds.** Each Commercial General Liability Insurance policy and Business Auto Insurance policy must provide that the District, its officials, officers, employees, agents and volunteers are “additional insureds” under the terms of the policy, and must provide that an act or omission of one the insureds will not reduce or avoid coverage to the other insureds.
- G. **Deductibles and Self-Insured Retention.** Any deductibles or self-insured retentions applicable to the insurance policies required under this Agreement must be declared to and approved by District. In no event may any required insurance policy have a deductible, self-insured retention or other similar policy provision in excess of \$50,000 without prior written approval by District in its sole discretion. At the option of District, either the insurer will reduce or eliminate such deductibles or self-insured retentions with respect to the District’s additional insureds or Consultant will procure a bond guaranteeing payment of any losses, damages, expenses, costs or settlements up to the amount of such deductibles or self-insured retentions.

- H. **Primary Insurance.** Each of the insurance policies maintained by Consultant under this Agreement must state that such insurance will be deemed “primary” so that any insurance that may be carried by District will be deemed excess to that of Consultant. This endorsement must be reflected on forms as determined by District.
- I. **Certificates of Insurance and Endorsements.** Prior to commencing any services under this Agreement, Consultant must file with the District certificates of insurance and endorsements evidencing the existence of all insurance required by this Agreement, along with such other evidence of insurance or copies of policies as may reasonably be required by District. These certificates of insurance and endorsements must be in a form approved by the Legal Counsel. Consultant must maintain current certificates and endorsements on file with District during the term of this Agreement reflecting the existence of all required insurance. Each of the certificates must expressly provide that no material change in the policy, or termination thereof, will be effective except upon 30 days’ prior written notice to District by certified mail, return receipt requested. The delivery to District of any certificates of insurance or endorsements that do not comply with the requirements of this Agreement will not waive the District’s right to require compliance.
- J. **Insurance Rating.** All insurance required to be maintained by Consultant under this Agreement must be issued by companies licensed by or admitted to conduct insurance business in the State of California by the California Department of Insurance and must have a rating of A or better and Class VII or better by the latest edition of A.M. Best’s Key Rating Guide.
- K. **Aggregate Limits.** The aggregate limits for each insurance policy required under this Agreement must apply separately and solely to the services performed under this Agreement. If the required policies do not have an endorsement providing that the aggregate limit applies separately to the services being performed, or if defense costs are included in the aggregate limit, then the required aggregate limits must be increased to an amount satisfactory to District.
- L. **Waiver of Subrogation Rights.** Consultant and each insurer providing any insurance required by this Agreement must waive all rights of subrogation against District, its officials, officers, employees, agents and volunteers, and each insurer must issue a certificate to the District evidencing this waiver of subrogation rights.
- M. **Failure to Maintain Required Insurance.** If Consultant, for any reason, fails to obtain and maintain the insurance required by this Agreement, District may obtain such coverage at Consultant’s expense and deduct the cost of such insurance from payments due to Consultant under this Agreement or may terminate the Agreement.
- N. **Effect of Coverage.** The existence of the required insurance coverage under this Agreement shall not be deemed to satisfy or limit Consultant’s indemnity obligations under this Agreement. Consultant acknowledges that the insurance coverage and policy limits set forth in this Agreement constitute the minimum coverage and policy limits required. Any insurance proceeds available to District

in excess of the limits and coverage required by this Agreement, and which is applicable to a given loss, must be made available to District to compensate it for such losses.

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** ADOPT RESOLUTION 2021-8, ADOPTING WATER SHORTAGE CONTINGENCY PLAN

---

**DISCUSSION:**

The California Urban Water Management Planning Act, Water Code Section 10610 et seq. (“the UWMP Act”), mandates that every urban supplier of water providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre feet of water annually, prepare and adopt, in accordance with prescribed requirements, a water shortage contingency plan (“WSCP”). In accordance with the UWMP Act, the Water District has prepared its WSCP with its own staff, with the assistance of consulting professionals, and in cooperation with other governmental agencies, and has utilized and relied upon industry standards and the expertise of industry professionals in preparing its WSCP, and has also utilized the California Department of Water Resources Guidebook for Urban Water Suppliers to Prepare 2020 Urban Water Management Plans, in preparing its WSCP.

Attached as Exhibit A is Resolution 2021-8, adopting the Water Shortage Contingency Plan which is Part 4 Appendix J-9 of the 2020 Integrated Regional Urban Water Management Plan. A copy of this document has been included in the information for the Public Hearing.

**FISCAL IMPACT:**

No fiscal impact.

**STAFF RECOMMENDATION:**

That this item be submitted for consideration, and that the Board of Directors adopt this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**RESOLUTION NO. 2021-8**

**RESOLUTION OF THE BOARD OF DIRECTORS  
OF WEST VALLEY WATER DISTRICT  
ADOPTING THE WATER SHORTAGE CONTINGENCY PLAN**

**WHEREAS**, The California Urban Water Management Planning Act, Water Code Section 10610 et seq. (“the UWMP Act”), mandates that every urban supplier of water providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre feet of water annually, prepare and adopt, in accordance with prescribed requirements, a water shortage contingency plan (“WSCP”); and

**WHEREAS**, West Valley Water District (“Water District”) meets the definition of an urban water supplier for purposes of the UWMP Act; and

**WHEREAS**, the UWMP Act specifies the requirements and procedures for adopting such Water Shortage Contingency Plans; and

**WHEREAS**, pursuant to recent amendments to the UWMP Act, urban water suppliers are required to adopt and electronically submit their WSCPs to the California Department of Water Resources by July 1, 2021; and

**WHEREAS**, The Water District has prepared a WSCP in accordance with the UWMP Act and SB X7-7, and in accordance with applicable legal requirements, has undertaken certain coordination, notice, public involvement, public comment, and other procedures in relation to its WSCP; and

**WHEREAS**, the WSCP references and incorporates the provisions of the Water District’s Article 24 - Water Conservation Ordinance No. 83 adopted on August 18<sup>th</sup>, 2016; and

**WHEREAS**, in accordance with the UWMP Act, the Water District has prepared its WSCP with its own staff, with the assistance of consulting professionals, and in cooperation with other governmental agencies, and has utilized and relied upon industry standards and the expertise of industry professionals in preparing its WSCP, and has also utilized the California Department of Water Resources Guidebook for Urban Water Suppliers to Prepare 2020 Urban Water Management Plans, in preparing its WSCP; and

**WHEREAS**, in accordance with applicable law, including Water Code sections 10608.26 and 10642, and Government Code section 6066, a Notice of a Public Hearing regarding the Water District’s WSCP was published within the jurisdiction of the Water District on June 3 and June 10; and

**WHEREAS**, in accordance with applicable law, including but not limited to Water Code sections 10608.26 and 10642, a public hearing was held on June 17<sup>th</sup>, 2021 at 7:00pm, or soon thereafter, in the boardroom of the offices of the Water District, 855 W. Base Line Rd., Rialto,

CA in order to provide members of the public and other interested entities with the opportunity to be heard in connection with proposed adoption of the WSCP and issues related thereto; and

**WHEREAS**, pursuant to said public hearing on the WSCP, the Water District, among other things, encouraged the active involvement of diverse social, cultural, and economic members of the community within the Water District's service area with regard to the preparation of the WSCP, encouraged community input regarding the Water District's WSCP; and

**WHEREAS**, the Board of Directors has reviewed and considered the purposes and requirements of the UWMP Act, the contents of the WSCP, and the documentation contained in the administrative record in support of the WSCP, and has determined that the factual analyses and conclusions set forth in the WSCP are legally sufficient; and

**WHEREAS**, the Board of Directors desires to adopt the WSCP in order to comply with the UWMP Act.

**NOW THEREFORE BE IT RESOLVED**, the Board of Directors of the Water District hereby resolve as follows:

1. The Water Shortage Contingency Plan is hereby adopted as amended by changes incorporated by the Board of Directors as a result of input received (if any) at the public hearing and ordered filed with the Secretary of the Board of Directors;
2. The General Manager is hereby authorized and directed to include a copy of this Resolution in Water District's WSCP;
3. The General Manager is hereby authorized and directed, in accordance with Water Code sections 10621(d) and 10644(a)(1)-(2), to electronically submit a copy of the WSCP to the California Department of Water Resources no later than July 1, 2021;
4. The General Manager is hereby authorized and directed, in accordance with Water Code section 10644(a), to submit a copy of the WSCP to the California State Library, and any city or county within which the Water District provides water supplies no later than thirty (30) days after this adoption date;
5. The General Manager is hereby authorized and directed, in accordance with Water Code section 10645, to make the WSCP available for public review at The Water District's offices during normal business hours and on The Water District's website no later than thirty (30) days after filing a copy of the WSCP with the California Department of Water Resources;
6. The General Manager is hereby authorized and directed, in accordance with Water Code Section 10635(b), to provide that portion of the WSCP prepared pursuant to

Water Code Section 10635(a) to any city or county within which The Water District provides water supplies no later than sixty (60) days after submitting a copy of the WSCP with the California Department of Water Resources;

- 7. The General Manager is hereby authorized and directed to implement the WSCP in accordance with the UWMP Act and to provide recommendations to the Board of Directors regarding the necessary budgets, procedures, rules, regulations or further actions to carry out the effective and equitable implementation of the WSCP.

**ADOPTED, SIGNED, AND APPROVED THIS 17th DAY OF JUNE, 2021.**

President of the Board of Directors  
of West Valley Water District

**BOARD OF DIRECTORS  
STAFF REPORT**

**DATE:** June 17, 2021  
**TO:** Board of Directors  
**FROM:** Shamindra Manbahal, Interim General Manager  
**SUBJECT:** **ADOPT RESOLUTION 2021-9, ADOPTING 2020 UPPER SANTA ANA RIVER WATERSHED INTEGRATED REGIONAL URBAN WATER MANAGEMENT PLAN**

---

**DISCUSSION:**

West Valley Water District and other water managers in the upper Santa Ana River watershed have long recognized the importance of regional collaboration and integration of single purpose efforts and regularly work across jurisdictional boundaries to implement regional multi-benefit projects and programs that address multiple water resource management issues, including local and imported water supplies, recycled water, stormwater management, groundwater management, water use efficiency, habitat and open space management, and many others.

The 2020 Upper Santa Ana River Integrated Regional Urban Water Management Plan (IRUWMP) is one cohesive document that meets all of the requirements of both the Urban Water Management Planning Act and the Integrated Regional Water Management Planning Act and is a regional collaborative effort. The document is organized into four parts: Part 1 – Regional Context, Part 2 – Individual Agency UWMPs, Part 3 – Regional Supporting Information and Part 4 – Individual Agency Supporting Information. As a participant in the 2020 IRUWMP, the District has prepared those portions of the IRUWMP applicable to the District to meet the requirements of the IRWM Act, the UWMP Act and other applicable laws and regulations.

Attached as Exhibit A is Resolution 2021-9, adopting Part 1, Part 2 Chapter 10: West Valley Water District UWMP, Part 3, and Part 4 Appendix J: West Valley Water District Supporting Information of the 2020 IRUWMP. A copy of these sections has been included in the information for the Public Hearing.

**FISCAL IMPACT:**

No fiscal impact.

**STAFF RECOMMENDATION:**

That this item be submitted for consideration, and that the Board of Directors adopt this item and authorize the Interim General Manager to execute the necessary documents.

Respectfully Submitted,

*Shamindra Manbahal*

**RESOLUTION NO. 2021-9****RESOLUTION OF THE BOARD OF DIRECTORS  
OF WEST VALLEY WATER DISTRICT  
ADOPTING THE 2020 UPPER SANTA ANA RIVER WATERSHED  
INTEGRATED REGIONAL URBAN WATER MANAGEMENT PLAN**

**WHEREAS**, West Valley Water District (“Water District”) and other water managers in the upper Santa Ana River watershed have long recognized the importance of regional collaboration and integration of single purpose efforts and regularly work across jurisdictional boundaries to implement regional multi-benefit projects and programs that address multiple water resource management issues, including local and imported water supplies, recycled water, stormwater management, groundwater management, water use efficiency, habitat and open space management, and many others; and

**WHEREAS**, the State lawmakers created the Integrated Regional Water Management Planning Act (“IRWM Act”) in 2002 to encourage integrated, regional strategies for managing water resources; and

**WHEREAS**, in 2005, 16 agencies in the upper Santa Ana River watershed decided to develop the region’s first Integrated Regional Water Management Plan (“IRWMP”) to collaborate on regional water management issues; and

**WHEREAS**, the Upper Santa Ana River Watershed IRWMP was completed in 2007 and updated in 2015; and

**WHEREAS**, the Water District participated in the development of the 2007 and 2015 IRWMPs and adopted the 2007 and 2015 IRWMPs; and

**WHEREAS**, the IRWMP established an update schedule of every five years and is due to be updated; and

**WHEREAS**, the California Department of Water Resources (“DWR”) has established Program Guidelines for the IRWM Program, which were most recently updated in 2016 (“2016 IRWM Guidelines”); and

**WHEREAS**, The California Urban Water Management Planning Act, Water Code Section 10610 et seq. (“UWMP Act”), mandates that every urban supplier of water providing water for municipal purposes to more than 3,000 customers or supplying more than 3,000 acre feet of water annually, prepare an Urban Water Management Plan (“UWMP”); and

**WHEREAS**, the Water District meets the definition of an urban water supplier for purposes of the UWMP Act; and

**WHEREAS**, the UWMP Act requires that said UWMP be updated and adopted at least once every five years on or before July 1, in years ending in six and one; and

**WHEREAS**, the UWMP Act allows for water suppliers to work together to develop a cooperative regional UWMP and in 2010 and 2015, the San Bernardino Valley Regional UWMP (RUWMP) was prepared by ten different water suppliers to collectively meet the requirements of the UWMP Act; and

**WHEREAS**, the Water District participated in the 2010 and 2015 RUWMP; and

**WHEREAS**, both the IRWMP and RUWMP are both due to be updated; and

**WHEREAS**, the Water District and nineteen other water suppliers and water management organizations in the upper Santa Ana River watershed decided to combine the IRWMP and the RUWMP into a single comprehensive planning document known as the 2020 Upper Santa Ana River Watershed Integrated Regional Urban Water Management Plan (“IRUWMP”) which is the first of its kind in California; and

**WHEREAS**, valuable synergies are realized by combining these two documents into one, including reduced preparation costs, a single integrated dataset, a consolidated reference document, enhanced collaboration, and more robust integrated planning and decision-making; and

**WHEREAS**, the 2020 IRUWMP document is organized into four parts: Part 1 – Regional Context, Part 2 – Individual Agency UWMPs, Part 3 – Regional Supporting Information and Part 4 – Individual Agency Supporting Information; and

**WHEREAS**, as a participant in the 2020 IRUWMP, the Water District has prepared those portions of the IRUWMP applicable to the Water District to meet the requirements of the IRWM Act, the UWMP Act and other applicable laws and regulations which include Part 1, Part 2 Chapter 10: West Valley Water District UWMP, Part 3, and Part 4 Appendix J: West Valley Water District Supporting Information; and

**WHEREAS**, in accordance with applicable legal requirements, the Water District has undertaken certain coordination, notice, public involvement, public comment, and other procedures in relation to the 2020 IRUWMP; and

**WHEREAS**, in accordance with the UWMP Act, The Water District has prepared the 2020 IRUWMP with staff from its own agency, with the assistance of consulting professionals, and in cooperation with other governmental agencies, and has utilized and relied upon industry standards and the expertise of industry professionals in preparing its 2020 IRUWMP, and has also utilized the DWR Guidebook for Urban Water Suppliers to Prepare 2020 Urban Water Management Plans, including its related appendices and the 2016 IRWM Guidelines; and

**WHEREAS**, in accordance with applicable law, a Notice of a Public Hearing regarding the Water District’s adoption of Part 1, Part 2 Chapter 10, Part 3 and Part 4 Appendix J, of the

2020 IRUWMP was published within the jurisdiction of the Water District on June 3 and June 10; and

**WHEREAS**, in accordance with applicable law, including but not limited to Water Code sections 10608.26 and 10642, a public hearing was held on June 17<sup>th</sup>, 2021 at 7:00pm, or soon thereafter, in the boardroom of the offices of the Water District, 855 W. Base Line Road, Rialto, CA, 92377 in order to provide members of the public and other interested entities with the opportunity to be heard in connection with proposed adoption of the 2020 IRUWMP and issues related thereto; and

**WHEREAS**, pursuant to said public hearing on the 2020 IRUWMP, The Water District, among other things, encouraged the active involvement of diverse social, cultural, and economic members of the community within the Water District's service area with regard to the preparation of the Plan, encouraged community input regarding the 2020 IRUWMP; and

**WHEREAS**, the Board of Directors ("Board") has reviewed and considered the purposes and requirements of the IRWM Act and the UWMP Act, the contents of the 2020 IRUWMP, and the documentation contained in the administrative record in support of the 2020 IRUWMP, and has determined that the factual analyses and conclusions set forth in the 2020 IRUWMP are legally sufficient; and

**WHEREAS**, the Board desires to adopt Part 1, Part 2 Chapter 10, Part 3 and Part 4, Appendix J, of the 2020 IRUWMP in order to comply with the IRWM Act and UWMP Act.

**NOW THEREFORE BE IT RESOLVED**, the Board of West Valley Water District hereby resolve as follows:

1. Part 1, Part 2 Chapter 10, Part 3 and Part 4 Appendix J, of the 2020 IRUWMP is hereby adopted as amended by changes incorporated by the Board as a result of input received (if any) at the public hearing and ordered filed with the Secretary of the Board;
2. The General Manager is hereby authorized and directed to include a copy of this Resolution in the Water District's 2020 IRUWMP;
3. The General Manager is hereby authorized and directed, in accordance with Water Code sections 10621(d) and 10644(a)(1)-(2), to electronically submit a copy of the Water District's portions of the 2020 IRUWMP to DWR no later than July 1, 2021;
4. The General Manager is hereby authorized and directed, in accordance with Water Code section 10644(a), to submit a copy of the 2020 IRUWMP to the California State Library, and any city or county within which the Water District provides water supplies no later than thirty (30) days after this adoption date;
5. The General Manager is hereby authorized and directed, in accordance with Water Code section 10645, to make the 2020 IRUWMP available for public review on the

Water District’s website no later than thirty (30) days after filing a copy of the 2020 IRUWMP with DWR;

- 6. The General Manager is hereby authorized and directed, in accordance with Water Code Section 10635(b), to provide that portion of the 2020 IRUWMP prepared pursuant to Water Code Section 10635(a) to any city or county within which the Water District provides water supplies no later than sixty (60) days after submitting a copy to DWR;
- 7. The General Manager is hereby authorized and directed to implement the 2020 Plan in accordance with the IRWM Act and UWMP Act and to provide recommendations to the Board regarding the necessary budgets, procedures, rules, regulations, or further actions to carry out the effective and equitable implementation of the 2020 IRUWMP in collaboration with the regional partners.

**ADOPTED, SIGNED, AND APPROVED THIS 17th DAY OF JUNE, 2021.**
